LITERATURE

Collected Works of William Morris. With Introductions by his Daughter, May Morris. Vols. I.—IV. (Longmans & Co.)

To judge in any way the true value of a poet's work, one must put oneself in his environment. In 1858, when Morris's first volume was published, Tennyson had written 'Maud,' and shared with the author of 'Aurora Leigh' and Martin F. Tupper the honours and rewards of popularity. The evil tradition of the obscurity of Browning was firmly established, and Matthew Arnold had just been appointed Professor of Poetry at Oxford. The seeds of a new movement had, indeed, been sown. Ruskin was consolidating his position as a Dictator in the world of art, and a few judges had welcomed some of the finest poems of Rossetti in *The Germ* or *The Oxford and Cambridge Magazine*; but there was as yet no public for such romance as was offered at the end of February, 1858. 'The Defence of Guenevere' was so new in our poetry as to be absolutely out of touch with the readers of its day, and the marvel of it only grows as we steep ourselves in all that is best and most typical of the period. Many years had to pass before a public was created capable of appreciating its excellence.

The fourteen years since the death of William Morris have done much to put his achievement in its true perspective. In the case of many who have taken a leading place in public estimation during

their lifetime, the decade following it has been marked by a tendency to depreciate not only the superficial qualities to which they owed their popularity, but also the real endowments which, we hold, generally underlie any widespread success. Morris's fame, on the other hand, was in his lifetime somewhat blurred by the variety of his undertakings: death, which removed him from among us, has in a manner crystallized them, and allowed us to form a definite opinion as to their extent and permanent value. His literary achievement in particular has grown in estimation by being seen as a whole, and the doubt entertained by many of his admirers, whether the bulk and sustained level of merit of his verse would not detract from popular appreciation, has turned out to be groundless. The demand for a complete and uniform edition of his works issued in a style worthy of his fame, yet within the well-understood limits of purchase by the average buyer of books, endorses this opinion. Morris's leading share in the revival of the art of printing makes the task of those issuing a memorial edition of his works particularly delicate, especially at a time when the tendency of the best typography is towards a page much lighter in colour than he would himself have approved, and personally we should have preferred a heavier impression, while somewhat uneven inking emphasizes a certain disproportion of the face of the type to the surface of the paper; otherwise, typographically, these volumes are models of what such books should be. The illustrations, too, are unexpectedly novel and well chosen.

The reissue is fortunate in its editor, whose filial devotion has published a great part of those remains of the poet's work which are worthy of his fame or of interest to students of his art, and whose opportunities for obtaining access to them are unrivalled. The publication of unfinished works is always a matter for delicate consideration, but Morris's ruthless taste condemned so much fine work to extinction that we cannot but feel thankful for what has escaped. The fragments preserved by Mr. Mackail were among the chief attractions of his excellent book; it is pleasant to learn that much more will be given us than we expected. We are especially grateful to Miss Morris for some of the fragments which show the poems in the making: they will be of paramount value to the critical reader of English poetry and the student of verse. Her comments and the numerous unpublished letters she gives will go far to destroy the "Topsy" legend, and to supply a picture of the real William Morris.

A facile and authoritative critic, himself a verse-writer of some distinction, attempted some years ago to dispose of Morris's claim to be a poet by calling him an *improvisatore*. One might reasonably have asked whether all fine poetry must not be to some extent of the nature of an improvisation; whether the conception must not spring complete from the poet's brain and heart like Athene from the brain of Zeus; and whether there is any parity between the experience of a verse-

writer and that of a poet; but the fragments Miss Morris publishes in her Introductions show that her father was a stern critic and a ruthless corrector of his own work. The question of second thoughts, of corrections after the publication of a poem, is a different matter, and raises problems of great difficulty to an editor; and though some of the alterations Morris intended to make in 'The Chapel in Lyonesse' are improvements on the verses we know so well, we are glad they are not here substituted for the earlier text.

I sung, my singing moved him not;
I held my peace; my heart grew hot,

is certainly finer than

All my singing moved him not;
As I sung my heart grew hot;

but it is quite different.

William Morris's correction of his earlier poetry was in the main limited to omission and total rewriting. Miss Morris has printed in her Introduction to vol. I an abandoned opening for 'The Defence of Guenevere,' as well as the incident in 'Sir Peter Harpdon's End' hitherto known from the account of it by Mr. Watts-Dunton in our columns. The authority of Swinburne in favour of including it in the body of the poem is high, yet we cannot but approve the judgment of the author in refusing to eloge the hurrying intensity of his fine tragedy by an incidental episode, however good in itself. 'The Desolate Damsel' on p. xxx., vol. I, while it is not a specially noteworthy piece, is well worth preservation. We hope that Miss Morris will continue her judicious selection among the treasures of the Blue Closet—now, alas! dispersed—and lean to the side of generosity when the question of printing arises. The prose reprints from *The Oxford and Cambridge Magazine*—the canon of which, we suppose, is now closed—take up the remainder of Vol. I. They are, naturally, unequal in merit: the best have fine passages, and foreshadow the surpassing prose of later years, and none of them lacks interest.

'The Earthly Paradise' was begun soon after the poet settled down in the Red House, and a large number of its tales were written in their earliest form before that of Jason was begun. Among these was 'The Proud King,' a subject, curiously enough, handled by Longfellow quite independently in a volume published in 1863. The first draft of 'Jason' grew in length and importance until it was selected to be the opening tale of 'The Earthly Paradise,' and the introductory verses were written for it. A facsimile of these is given, but the tale still grew, and it was at last determined to publish it as a separate work, to test in some measure the feeling of the public. It was at once recognized, and not only by Swinburne, that "a new thing of great price had been cast into the English treasure-house." Little public attention had been given to 'The Defence of Guenevere'—Joseph Knight's just and brilliant appreciation of its merits in *The Literary Gazette* of March 6th, 1858, stood almost alone; its successor was welcomed by a chorus of praise, diversified by one sole complaint that an English poet

should have represented a princess as visiting a single gentleman in his bedroom.

It should not be forgotten that this change in taste had been brought about by the success of narrative poetry in the 'Idylls of the King,' and that even the harmless 'Tales of a Wayside Inn' were not without their influence on a wide circle of readers. A public had been created for finer work.

Miss Morris's Introduction to 'The Earthly Paradise' informs us that no fewer than five unused stories for this work are still in existence, with fragments of two others. The story of the struggle with the refractory prologue is especially interesting. The book was to be called 'The Terrestrial Paradise'—even 'The Fool's Paradise' was thought of; and three times was a prologue written before the glorious verses were found—

Forget six counties overhung with smoke,
Forget the snorting steam and piston stroke,
Forget the spreading of the hideous town;
Think, rather, of the pack-horse on the down,
And dream of London, small, and white, and clean,
The clear Thames bordered by its gardens green;

whose early foreshadowing was—

I tell of times long past away
When London was a grey-walled town,
And slow the pack-horse made his way
Across the curlew-haunted down.

Another interesting fragment is that from the early form of 'The Man born to be King,' where the familiar Peredur motive of the black of the raven's wing, the white of the snow, and the crimson blood is modified into the white, red, and golden of the hoped-for child. Among the more striking of these fragments is the superfluous fourth verse for August, describing Sinodun Hill above the Oxford Dorchester:—

In this sweet field raised high above the Thames
Beneath the trenched hill of Sinodun
Amidst sweet dreams of disembodied names
Abide the setting of the August sun,
Here where the long ridge tells of days now done;
This moveless wave wherewith the meadow heaves
Beneath its clover and its barley sheaves.

One sees the reasons for its omission, but when all is said, how rich must be the treasure which throws this rough gem on one side as faulty! It is rich indeed: the twelve little poems of the months in 'The Earthly Paradise' rank with the finest achievement in our poetry, and nothing more characteristically English exists in our language; the lyrics are delightful in their ease and freshness; the narrative is compressed, direct, picturesque; the content is poignant and enthralling—the conception large; the treatment manly and vigorous. We shall have other opportunities for speaking of the development of William Morris's genius and of his personality; let us here congratulate ourselves on the good fortune which has placed the issue of the final edition of his works in such pious and capable hands.

Life in the Roman World of Nero and St. Paul. By T. G. Tucker. (Macmillan & Co.)

PROF. TUCKER has given us a learned and competent book on Roman life in the early Empire, with the "catchpenny" addition of Nero and St. Paul in his title,

for neither of these, during his life, made any difference in the general complexion of the Roman world. The idea of such a book is as old as Becker's 'Gallus,' which classical students used to read, and wonder how Roman life could be so dull. Prof. Tucker is far better than that; he tells us valuable things about water supply, about furniture, and the like, with illustrations, in addition to the clear and able survey of the political condition of Imperial Rome. Perhaps he does not give weight enough to the imitation by Augustus of the Hellenistic sovereignties where the king was outside the Constitution, often in name a democracy, but used his power as a benefactor (*εὐεργέτης*) of the State. Such was eminently the case at Pergamum.

There is, of course, nothing in this book which cannot be found in the classical dictionaries of most libraries. Pauly-Wissowa's six volumes contain most of the information in a fuller form, so far as they go. But it is well to have these things in a handy shape, and put in a clear and vigorous style. From this point of view we commend the book heartily. Yet we cannot conceal from the reader that the absence of references, which the encyclopædias and dictionaries are bound to give, is a serious loss to the student. Even allowing that we have every confidence in Prof. Tucker's scholarship, we find him conflicting with our recollections of classical authorities, and then we do not like to accept his correction without a reference to his source. A few instances will illustrate our meaning, and help him to fortify himself in his next edition against such criticism. He notes the somewhat savage law which ordained that in the case of a murder of the master of a Roman household, the whole *familia* of slaves was liable to be executed. He refers to a case where the revolt in public opinion saved this law from being carried out. Our recollection is of a case (Tac., 'Ann.' xiv. 44) where the public indignation and protest were checked by the Emperor, and the law took its course. At all events, our author does not give sufficient weight to the fact that the citizens of Rome were a small minority in the midst of a host of slaves, where terrorism is sure to be employed as a means of repression. *Quot servi, tot hostes*, was a Roman proverb.

A much larger question is that of the nature of primitive religion among the Romans. There is a popular theory—due, we presume, to Prof. Wissowa's now classical book on the subject—that in the earliest and rudest days, this people worshipped not personal gods, but powers or influences. They certainly had no anthropomorphic tastes, and did not imagine a river, for example, under the guise of a fair youth dwelling in it. Janus, according to this theory, was not so much the Door-God as the God-door, the actual door, worshipped as an influence. If this were true, then the psychology of the ancient Romans or Latins differs from that of the primitive peoples we know. The

savages all over the world who try to appease invisible powers, generally conceived as malevolent, with sacrifices, may not, indeed, conceive them in human form, or even as having any beast or bird form; but they certainly always conceive them as personalities, with a will to injure or befriend, and moreover a will that can be appeased or changed by sacrifice. And so, when contact with the Greeks brought in anthropomorphic ideas, the Romans adopted them without the smallest difficulty. The moral aspects of the Roman religion Prof. Tucker has handled with great justice and good sense, and it is easy to see from his sketch how clearly "the fullness of time" was come for a new and deeper faith. Though he knows very well that the pictures of satirists may be, and generally are, exaggerated, yet he cannot resist the temptation of using Martial and Juvenal more freely than those authors deserve in a sober estimate of their age.

In giving a sketch of the Roman villa it is a pity Prof. Tucker had not at hand some reproduction of those instructive mosaic floors preserved in the museum at Tunis, which provide representations of such villas far more life-like than any thing at Pompeii or elsewhere, so far as our knowledge extends. He says the population of the Empire was much thinner over its western parts than it is now. He should have added that in its eastern parts—Asia Minor, Syria, Egypt—the reverse was the case. His phrase "the somewhat desolate interior of Asia Minor" is not based on history. He writes that "generally there was no such thing as a pirate in the Mediterranean at this moment" (close of the first century A.D.). We think that their common occurrence in the Greek novels, some of which (as we know) are as old as this time, disproves this statement. He thinks Roman nobles were usually brought up in childhood by Greek nurses. We wish he had given us his evidence for this. He might have added to his statement about the popularity of Nero the fact that for years after his death false Neros were springing up in various provinces—a distinction accorded to no other emperor of that time. Seeing that the official toga was, according to our author, a very hot, and therefore uncomfortable, dress, we wonder at his statement that men threw over it an embroidered mantle. He says that the Romans objected to Greek running and wrestling "on the grounds of decorum, because they were innocently nude." The fact seems strange to those who reflect that naked statues of Gods and heroes often had their heads knocked off, and the heads of Roman magistrates set on them, so as to pretend to be portrait-statues. Here again we cry out for his evidence. No doubt his greater learning could dispose of his critic in most of these cases, and we invite him to add to this book at least an appendix of references wherewith to satisfy the doubts of those who have imbibed definite views from their school and college days, which they treasure with pride. Meanwhile, we

advise him not to print "*cavaliere servente*," or to talk of wandering about the "squares" of ancient Rome.

We might have added a large number of points, in all of which we could show some grounds for our views; but we would not for one moment appear to give an ungenerous and carping account of so highly useful, learned, and well-written a compendium of the current knowledge about Roman private life.

Letters of Edward John Trelawny. Edited, with a brief Introduction and Notes, by H. Buxton Forman. (Frowde.)

Is there any other figure of the last century so well worth knowing and so knowable as Edward Trelawny? The volume before us is a picture of the man by himself, historically still unfinished, but, from a post-impressionist point of view, final. All that is most significant, all that distinguishes Trelawny from other men, is given; as the catalogue at the Grafton Galleries might say, the Trelawniness of Trelawny is completely expressed. For such a volume Mr. Buxton Forman was the obvious editor; in matters concerning Shelley, Keats, and their friends it is to him we look first for information. By combining these new letters with some of those already published he has given us a coherent story, and produced a book to entertain the frivolous, engross the learned, and enchant the curious in humanity.

"Vigour and directness," "transparent honesty and complete fearlessness," are the qualities that impress Mr. Buxton Forman as he reads the letters of the man who, in his opinion, "was less tainted with the sordid commercialism and ever-increasing snobbery of that century [the nineteenth] than almost any man one could name as having lived through so large a part of it." We agree heartily; but, of course, there is more to be said—for instance, that Trelawny sometimes reminds us of an extraordinarily intelligent schoolboy, at others of a rather morbid minor poet. Only, the vitality of few schoolboys amounts almost to genius, and minor poets are not always blest with feelings fundamentally sound. Most of his vices were the defects of good qualities. A powerful imagination may be fairly held accountable for his habit of romancing, and a brave vocabulary for some of his exaggeration. His vanity and violence—as childish as his love of mystery, and often as childishly displayed—were forms in which his high spirits and passionate nature expressed themselves. Art, in the shape of a bad education, aggravated his faults; but his honesty and imagination, his generosity and childlike capacity for admiration and affection were from nature alone. He was a schoolboy who never grew old; cultivating his cabbages at Worthing in 1875, he is essentially the same shrewd, passionate, romantic scape-

grace who deserted his ship in Bombay harbour soon after the battle of Trafalgar, and burnt Shelley's body on the foreshore at Via Reggio.

Like all boys, Trelawny was exceedingly impressionable, and at the beginning of this book we find him under the influence of the learned ladies of Pisa. Left to himself, he wrote with point and vigour prose as rich in colour and poetry as it is poor in grammar and spelling. His letter to *The Literary Gazette*, published in this volume, is a good example of his narrative style. But even his style could be perverted:—

"I must give you the consolation of knowing—that you have inflicted on me indelible tortures—that your letter has inflicted an incurable wound which is festering and inflaming my blood—and my pride and passion, warring against my ungovernable love, has in vain essayed to hide my wounded feelings—by silently submitting to my evil destiny."

So he wrote to Claire Clairmont in December, 1822; but under the language of the minor romantic throbs the lusty passion of a man in love.

Shelley's influence was great; with him Trelawny was always natural and always at his best; but Shelley was a wizard who drew the pure metal from every ore. With Byron it was different. Trelawny was almost as vain as "the Pilgrim of Eternity," as sensitive, and, when hurt, as vindictive. He was jealous of Byron's success with women—they were two of a trade—and especially of his relations with Claire. When Byron posed Trelawny posed, and when the one sulked the other sulked; but was any man except Shelley big enough to brook his lordship's moods? That Byron valued Trelawny is certain; he invited him to Greece because he knew his worth. Once arrived, Byron had the wit to perceive that Mavrocordato, albeit the meanest of masters, was the best and most serviceable to be had at the moment. Trelawny, as was to be expected, fell under the spell of Odysseus, at that time in more or less open revolt against the provisional government, but an adventurer of fierce and reckless spirit, in manner and appearance a romantic outlaw, a man after his own heart. Henceforth Byron is reckoned at best a dupe, and at worst a sluggish poltroon; while Trelawny, it is said, imitated his hero so loyally that "he ate, dressed, and even spat in his manner." When the poet died Trelawny spoke with characteristic feeling:—

"With all his faults I loved him truly. . . . If it gave me pain witnessing his frailties, he only wanted a little excitement to awaken and put forth virtues that redeemed them all."

But the iron had entered into his soul, old sores rankled, he could not forgive; to the last he was willing to pay back his rival in his own coin—sneers and abuse.

As Trelawny could scarcely write to a woman without making love to her, and as his relations with Mary Shelley were necessarily emotional and intimate, an

ambiguous proposal and a handful of affectionate letters will not persuade us that he ever cared more seriously for her than for scores of others. Though some letters must have been written when he was courting the sister of Odysseus or keeping a harem at Athens, and others when his heart was disengaged, can any one decide which are sincere and which are not? Or, rather, are they not all equally sincere? The following extract may help us to a conclusion:—

"I say! the poet [Shelley] was a thorough mormon—why did he not declare himself and anticipate the sect? I would have joined him and found him a settlement—it would not hold together without a superstition—for man all over the world are (*sic*) superstitious—it's the nature of the animal—your mother was a simpleton to have never heard of a man being in love with two women; when we are young we are in love with all women—the bible would call it by its proper name, lust."

So wrote Trelawny in 1869 (he had recovered his style) to Claire Clairmont. His letters to her, now published for the first time, compose the largest and liveliest part of the volume. If he cared for one woman more than another, we believe that woman was Claire. She was not good, but she has been more than sufficiently reviled. For Trelawny, that she was beautiful sufficed; let it satisfy the vindictiveness of virtue that she suffered horribly. What precisely was the degree of their intimacy is not clear; but, in view of Claire's reputation and certain passages in these letters, it is perhaps not unfair to suppose that for a short time in the year 1822 she was his mistress. Be that as it may, after Shelley's death they parted, and doubtless it will be said she treated her lover ill. To us it appears that he gave as good as he got. She was mercenary, and he was inconstant. If we read Letter XX. aright, when she did offer, after some months of prudent dalliance, to live with him at Florence, he replied that he had but 500*l.* a year, which was not enough for two. An establishment on the confines of respectability was the last thing he desired. Neither ever loved truly; but Trelawny, for a time, felt violent physical passion for the woman whose head and shoulders remind us of a Giorgione. Such is the story, so far as we can deduce it from these letters; each, if our conjecture serve, was partially satisfied, for in money matters Trelawny always treated his lady handsomely, though he could not or would not give her what she wanted most—material security.

He never lost his taste for Claire; and on the ruins of their bitter and agitated relations was built a kind of friendship, in which expansion and intimacy and malice were all possible, and which is aptly commemorated by these vivid and entertaining letters. As for Mary, her character deteriorated, and Trelawny's judgment grew more acute. Her corners grew more brutally protuberant beneath the tissue of glamour cast over them by a name. To her also Trelawny's

purse was open, but long before the quarrel over 'Queen Mab' his generous spirit had begun to groan under her prim banality and to express itself in ungenerous backbitings. His final estimate he imparted to Claire when he was seventy-eight years old, and it remains for those who dislike to disprove it:—

"Mary Shelley's jealousy must have sorely vexed Shelley—indeed she was not a suitable companion for the poet—his first wife Harriett must have been more suitable—Mary was the most conventional slave I ever met—she even affected the pious dodge, such was her yearning for society—she was devoid of imagination and Poetry—she felt compunction when she had lost him—she did not understand or appreciate him."

There are two big gaps in the correspondence with Claire: one from 1838 to 1857, the other from 1857 to 1869. At the age of seventy-seven we find Trelawny still unchanged: "All my early convictions and feelings harden with my bones—age has not tamed or altered me." He had lived through the wildest adventures: in a cave on Mount Parnassus he had been shot through the body and had pardoned one of his assailants; he had swum the rapids below Niagara; he had played the pirate in the South Seas and flirted with Mrs. Norton in Downing Street; and now, a veteran and something of a lion, he astonished London parties with his gasconade, and the Sussex fisher-folk with his bathing exploits. We can believe that his conversation was "brilliant," but "most censorious"; his letters to Claire give some idea of it: "Women have taken to gin—men have always done so, now it's women's turn"; "— is as gross and fat as — and from the same cause—gluttony and sotting—it's all the fashion" (the discreet editor has suppressed the names). Poor Claire became devout in old age, and provoked a comprehensive growl from Shelley's untamed friend: "I am not one of that great sect whose vanity, credulity, and superstition makes them believe in God—the devil—souls and immortality." Yet with what cheerful wisdom he laughs away the fancy, which threatened to become an obsession, that Allegra was still alive in 1869:—"My dear Clare, you may be well in body; but you have a bee in your bonnet." He suggests raking up "some plausible cranky old dried-up hanger-on" of fifty-two or so, who "should follow you about like a feminine Frankenstein," as he carelessly puts it. He tried to mitigate the crazy malevolence she cherished for her earliest lover: "Your relentless vindictiveness against Byron is not tolerated by any religion that I know of"; while through the rack of jibes, malisons, and ebullitions of wilfulness shines steadily his veneration for the great poet he loved:—

"You say he [Shelley] was womanly in some things—so he was, and we men should all be much better if we had a touch of their feeling, sentiment, earnestness, and constancy; but in all the best qualities of man he excelled."

Through these letters—through all Trelawny's writings—runs a wonderful sense of power. He was not one to seek out the right word or prune a sentence; his strength is manifest in his laxities. He believed that no task, intellectual or physical, was beyond him; so he wrote as he swam, taking his ease, glorying in his vitality, secure in a reserve of strength equal to anything. Power and imagination—these are the pillars of his fame. He read Shakespeare and Shelley, and it is not clear that he cared greatly for much besides; he liked Swinburne, and was profoundly interested in Darwin. Late in life he discovered Blake, and was fascinated. The inference is not obscure: what Trelawny cared for in literature was Imagination, the more sublime the better. He sympathized with her most desperate and dizzy flights; he appreciated Shelley and Blake. Indeed, he was truly imaginative, and in the light of that supreme compliment other eulogy seems irrelevant, while obloquy stands disarmed.

The Cambridge Modern History.—Vol. XII.
The Latest Age. (Cambridge University Press.)

THE editors of this History send forth the present volume with something like a sigh of relief; for when they have produced two volumes of maps, genealogical tables, and so forth, their labours will be at an end. They are also entitled to a smile of self-congratulation, for not only has the work planned by Acton been faithfully carried out on the lines he originally laid down, but also in point of regularity of publication they have almost equalled the fine record of the 'Dictionary of National Biography.' If this volume, announced for the autumn, appears in the winter, the illness of a contributor is a sufficient reason; while the editors have exercised a wise discretion in leaving their text as it stood before the death of King Edward. Occasion has also been taken to make good a gap or two, and to round off the survey with chapters on the modern law of nations, social movements, science, exploration, and the growth of historical study.

"The latest age" has for the editors and contributors more than one beginning. In Great Britain they set out with the formation of the Gladstone Ministry in 1868; in France with the summer of 1871; in Austria-Hungary they embrace a period of fifty years, starting from 1859. This arrangement, though rather confusing for purposes of reference and instruction, will please the historical purist, since the stories of each national development are taken up at a definite point of departure. The difficulties of telling those stories are set forth in the Preface with conspicuous honesty. The inner history, in spite of Bismarck's ebullitions, is for the most part unrevealed, and much that passes for fact is no more than journalistic surmise. Another diffi-

culty, that of rising above transitory prejudices and impressions, has been conquered by all the contributors, though one or two of them fall into the opposite fault of colourlessness. Mr. Stanley Leathes's introductory remarks on modern Europe, for example, hardly surpass the level of the "sound, three-paragraph article"; they are far from profound and rather timid. "It is perhaps too soon," we read, "to cast the balance and to set the advantages against the evils of European rule [over natives]." Again, Dr. Sandwith's accurate, but somewhat uninspiring chapter on Egypt and the Egyptian Sudan might have been more "documented" than it is, particularly when he comes to Gordon's mission, while such trivialities as the fact that one distinguished person took Gordon's ticket while another held open the door of the railway carriage might have been omitted. The crude statement that the success of Egyptian finance is due to Lord Cromer himself does considerably less than justice to Sir Edgar Vincent and the other able administrators whom the Consul-General gathered round him.

"Co-operative history," as it has been called, inevitably involves a variety of treatment, but we do not know that it is much the worse for that. While Mr. Stanley Leathes restricts himself to a concise summary of British affairs, Prof. Pares plunges into the Russian revolution with great vigour and picturesqueness. We are bound to say that his animated sketch makes by far the better reading; but a good deal of it must be taken as provisional, and we get rather too much preciseness, even though indebtedness to Russian sources is acknowledged, about the parts played by the reformers, and, for that matter, by the assassins. The examination into the merits and demerits of Witte's finance is uncommonly well done. As a worthy complement to Prof. Pares's politics comes an admirable chapter by Major Maurice on the Russo-Japanese War. This is a spirited, well-informed specimen of military writing, and the fullness of its bibliography is in favourable contrast with the lists relating to other sections of the book, which are meagre.

Coming nearer home, we cannot help noting that, while the patriotism of Prof. Bourgeois leads him to glide over the Panama scandals in France, Mr. Thomas Okey is a very candid friend to Italy, and has a good deal to say about "Panamino," as similar revelations there were called. Prof. Hermann Oncken's survey of the German Empire co-ordinates Bismarck's foreign and domestic policies with luminous insight, yet it scarcely takes into account the one weakness, the persistent overrating of the power of Russia for offensive purposes. The dissolution of the union between Sweden and Norway, which this country allowed to pass almost unnoticed, has a singularly fair historian in Prof. Ludvig Stavenow of Göteborg University; while a matter that may intimately concern us before

long, the international position of the Latin American races, has its thoughtful commentator in Señor Triana, the Minister for the Republic of Colombia.

The supplementary chapters, if we may call them so without offence, have all been entrusted to competent hands. Sir Frederick Pollock, like Jean Bon St. André in 'The Anti-Jacobin,' talks to us of

Wicquefort
And Puffendorf and Grotius;
And proves from Vattel
Exceedingly well—

before he descends on the Geneva Arbitration and the Hague Conferences. Mr. Sidney Webb's paper on 'Social Movements' is honestly written from his familiar standpoint, but we think there might be more discussion of the effects of trade-unionism as a new force in the world of labour.

Science is in the hands of Mr. Dampier Whetham, who, however, fails to take into account some of its discarded frivolities, possibly from limitations of space. What has become of "protoplasm," that sweet word which, not so very long ago, was held to be the final answer to the enigma of life? Finally, Mr. G. P. Gooch's chapter on 'The Growth of Historical Science' brings the text of 'The Cambridge Modern History' to a dignified conclusion. He pays due recognition to the labours of the great German writers, and says the right things about our own, though the name of Dr. James Gairdner should not have been omitted, even from a sketch of some thirty-four pages.

CHINA.

China under the Empress Dowager: the History of the Life and Times of Tzū Hsi. By J. O. P. Bland and E. Backhouse. (Heinemann.)—For half a century or more the name of the Dowager Empress of China has been the target for "the jests and riddles" of the Eastern world. From the time when she deposed the regents appointed by the Emperor Hsien-fêng on his death-bed to the time of her own decease she was watched with curiosity and alarm by all who were interested in the fate of the 400,000,000 composing the population of China. Many fables have gathered round her career, as must be the case in a country where the Court records find no authenticated utterance, and where historians are dependent on palace gossip for the foundation of their "facts."

In the present work the historians have, for the most part, a more substantial foundation to build on; happily for them, they became possessed of the diary of a Manchu nobleman, Ching-shan, who had exceptional opportunities of knowing what went on within the pink walls of the Forbidden City. This diary and the edicts issued to the public, form the substance of the present work. But from whatever source the details related in the volume are derived, they throw a lurid light on the Court life. Human existence is regarded as of little account, and the capital sentences carried out upon persons who happen to hold views opposed to those favoured by the possessors for the

moment of the reins of power form a ghastly record.

An instance of the extent to which personal ill-will is allowed to hold sway within the walls of the Forbidden City is furnished in the narrative of the *coup d'état* of 1898 contained in chap. xiv. It was a matter of common knowledge that Jung-lu, the Viceroy of Chihli, was and always had been a political ally of the Dowager Empress, and was therefore an opponent of the Emperor and of all his reform schemes. This being the position of affairs in 1898, the Emperor determined that it was necessary to remove the Viceroy from his path. Just at this time Yuan Shi-kai asked for an audience from the Emperor, and was received in secret conclave; the result was that Yuan was commissioned to go secretly to Tientsin, where Jung-lu was living, and to behead him in his yâmen. Without delay, Yuan took train and presented himself at Jung-lu's yâmen. But instead of executing him, he laid bare the plot before him, which included the imprisonment of the Dowager Empress. Without loss of a moment, Jung-lu presented himself at the palace of the Dowager Empress, and, kowtowing thrice, exclaimed, "Sanctuary, your Majesty." "What sanctuary do you require in these forbidden precincts, where no harm can come to you?" replied the old Buddha (*i.e.* the Dowager Empress); upon which Jung-lu proceeded to lay before her all the details of the plot. "Grasping the situation, she directed him to send word secretly to the leaders of the conservative party, summoning them to an immediate audience in the palace by the lake." In the midst of these congenial surroundings the Dowager Empress described the plot concocted by the Emperor, and induced them to support the order she had given for the arrest of his Imperial Majesty, who at 5.30 the next morning was arrested and imprisoned in the Ocean Terrace, a wing of the palace. The events which followed are known to all those interested in the Far East. The principal actors in the tragedy, with the exception of Yuan Shi-kai, are all dead, and he is living in official disgrace in his native home in Anhui.

This is a specimen of the history of palace intrigues related in 'China under the Empress Dowager.'

The contents of *Gleanings from Fifty Years in China*, by Archibald Little (Sampson Low & Co.), suffer detriment from the circumstances in which, of necessity, they are presented to the public. Consisting of scattered articles which—with the exception of the last two, on Christianity and Confucianism—have appeared from time to time in magazines at home and abroad, they offer opinions and reasonings which the author would have modified, had he lived to see them through the press. But Fate decided otherwise, and it fell to the lot of Mrs. Little to revise them for publication.

Mr. Archibald Little's name is mainly associated with Western China, and particularly with the attempt to make practicable for steam navigation the rapids which separate Ich'ang from Chung-ch'ing on the frontiers of Szech'uan and Hupeh. As matters stand, these rapids form an almost impassable barrier to all vessels which attempt to carry cargo up the troubled waters of the Yangtze Kiang. In the seventies the only traffic possible was by native boats hauled over the rocky bed by trawlers at an infinite expenditure of time and labour. At certain seasons of the year it used to take as long to drag a cargo boat

over this broken water as it did for a swift steamer to make its way from Hankow to London via the Suez Canal. In view of such a disparity of time and labour Mr. Little determined to try to replace the native junks by British steamers. He had already started a steamer service on the Yangtze below the rapids, and in 1876 the Chefu Convention gave him the opportunity he desired for making the attempt. It will be remembered that this Convention was the chief outcome of the negotiations which were brought about by the murder of Mr. Margary in Yunnan; and by its terms Chung-ch'ing was to be opened to trade as soon as it should have been proved accessible to steamers.

This was not a promising condition, but Mr. Little did not heed the obstructiveness of Chinese mandarins, and, having got that conditional permission to navigate the desired waterway, he returned to England; and in 1887 he dispatched from the Clyde a steamer which was specially designed "to navigate the rapids above Ich'ang, and so open out the road to Chung-ch'ing." Here Mr. Little's difficulties began, and he found that the buying the new steamer was the least arduous part of his task. The Chinese mandarins offered every conceivable form of obstruction, from the arguments which might legitimately be adduced in political discussions to the absurd threat of danger arising from the monkeys which are said to swarm on the cliffs overhanging the rapids, and to throw down rocks on any new form of vessel which attempts to pass up or down the stream. Suffice it to say, these arguments prevailed over the utilitarian reasonings of Mr. Little, and it remained for the Japanese treaty of Shimonoseki to do away once and for all with the diplomatic difficulties in the way of this reform.

Like most Europeans who have lived many years in China, Mr. Little was a confirmed and powerful advocate for the Chinese in their disputes with European Governments, while, like those who feel with him, he was obliged to refute his arguments by the stern logic of facts. For example, on p. 306 he gives it as his conclusion "that the average Chinaman is more forbearing, more tolerant, and in his social relations as much, if not more, Christian than the average Westerner." On p. 110 he relates a common experience of travellers in China:—

"You design to alight at some townlet; all the inhabitants turn out *en masse* and pelt you through it, as if you were a Derby dog with a tin kettle tied on behind."

Coming to facts, he describes how on one occasion he had strolled on alone, and was

"standing by the open door of a monastery, admiring the elegant proportions of the architecture, when, without a sound of warning, I suddenly found myself thrown to the ground—a dozen strong men holding me down, and rapidly tying me up with strong cord. The previous unbroken silence was changed for the roar which only excited Chinese voices can raise.....a roar above which it was impossible for me to get in an audible word. Shouts of 'Ta, Ta!'—'Kill, kill!'—were all I could distinguish."

Happily, more peaceful counsels prevailed, and he was finally released.

Contradictions are frequently to be met with in Mr. Little's pages, but, if due allowances are made for them, the volume will be found to contain much valuable information on Western China.

Fascicule III. of Prof. H. A. Giles's *Chinese-English Dictionary* (Quaritch) has appeared with commendable speed, and

subscribers are to be congratulated on its publication so soon after that of Fascicule II. It is to be assumed that the delay in the appearance of Fascicule I. is due to the fact that it will contain much of an introductory character which will refer to the whole of the Dictionary. The complicated nature of this prefatory matter will be understood by all those who have any acquaintance with Chinese; and even those who are not so happy will realize the position when they remember, as Prof. Giles points out in his Preface to the first edition, that his

"Dictionary deals with 10,859 separate characters in the body of the work, besides a large collection of abbreviated or shorthand characters and a few other uncommon characters occurring in the list of 'The Family Surnames.'"

These figures are large enough, but they sink into insignificance when compared with the 40,000 and more characters described in the celebrated dictionary compiled by order of the Emperor K'ang-hsi (1662 to 1723).

There are two obvious ways in which Chinese characters can be arranged for dictionary purposes: under the 214 radical characters of the language, or according to their phonetics. K'ang-hsi chose the first, and for his purposes no doubt his choice was wise; but since his day much water has run under the bridges, and the arguments in favour of the phonetic arrangement are so obvious that it is difficult to imagine that—for the use of European scholars, at all events—the radical system will be commonly reverted to.

Prof. Giles tells us that he regarded K'ang-hsi as

"a Bucephalus on whose tail a foreign fly might safely get an advantageous lift. But I soon found myself," he adds, "unable to follow the manifold vagaries of my guide, and determined to treat the characters in general solely with a view to the practical utility of my book."

Of the two methods available, the phonetic, as mentioned above, is obviously the preferable. There are, however, so many dialects in Chinese that it is impossible to take any one as representing the language, and Prof. Giles has endeavoured to combine the advantages of both the phonetic and the radical methods. While the body of his Dictionary is arranged on the phonetic system, a full and complete index of characters under the radicals will be furnished at the end of the Dictionary, to each of which a number from 1 to 10,859 will be attached, corresponding to numbers in the body of the Dictionary.

It is almost unnecessary to add that the scholarship displayed in this fascicule maintains the high level of the previous part.

OUR LIBRARY TABLE.

In the Fifth Series of his *Interludes* (Macmillan) Mr. Horace Smith treats us to yet another pleasant medley of reminiscence and reflection, seasoned with kindly, unobtrusive humour and a multitude of anecdotes both old and new. Of the three essays which take up the greater portion of this slim volume, though all display the charm, discernment, and solid sense which the preceding series have taught us to expect, we fancy that the second, 'An Autobiographical Sketch,' will be widest in its appeal to lawyers and laymen alike.

Mr. Smith's early educational experiences—his succession of tutors culminating in the excellent clergyman in whose establishment

he spent "a very happy three years," and of whom it is written, "He never even attempted to teach us anything, and" (a grave magisterial confession in view of recent legislation) "I, being about fifteen years old, used to smoke with him in his private study or out on the lawn"—seem to have engendered a spirit of precocity, speedily to manifest itself in a pretty turn for parody. The most delightfully shameless example vouchsafed to us in these pages—conceived in a vein worthy of the traditions attached to the author's name—was inspired by the commissariat of a certain Cambridge college, and, though first penned and published many years back, deserves quotation, at least in part, some crudeness in execution notwithstanding:—

O Lord, O dear, how thin and queer
The pea-soup is,—and getting thinner!
The beef is raw and tries the jaw!
The mutton's hard, as heart of sinner!
O students, O,—it is no use repining,
O students, do not mention—dining,—dining,—dining!
O friends, we dine like filthy swine!—
It tells on stomach and on liver!—
To mend the fare, our course is clear—
Let's chuck the cook into the river!
O, Fuller, O, the Cam is sweetly shining,
And we will surely pitch you in in lieu of dining—dining.

There is much entertaining gossip on literary predilections, and the abnormally rapid development of religious thought during recent years—as well as the nowadays scarcely credible conservatism of the Mid-Victorian period—is brought home to us anew when we read that Mr. Smith found himself regarded, in some quarters, as "a heretic beyond the pale of salvation," because he took delight in Tennyson's poetry.

The author's legal career up to the year 1888, when he was appointed a metropolitan magistrate, is narrated with many genial recollections of judges past and present, the Old Midland Circuit, and the Circuit Mess; while his own forensic achievements—such as that of persuading a Lincoln jury

"to acquit an old woman who had clearly stolen some goods in the market by alluding to the fact that it was the Saturday before Easter Sunday, and it would be very hard upon her that she should not go home and hear the 'Easter joy bells' ringing in the morning—"

seem sufficiently remarkable.

The remaining two essays deal with the subjects of 'Old Men and Boys' and 'Selfishness' respectively. From the latter, which contains a scrupulously logical disquisition upon the precise significance of tithes, we must single out the story of the clergyman who

"was reading the service before one of the royal dukes in the days of George III., and when he arrived at the text, 'Zacchæus stood forth and said, "Behold, Lord, the half of my goods I give to the poor,"' the royal duke broke out, 'Too much! too much! don't mind tithes, but can't stand that.'"

We venture, in passing, to hope that the word "Ameliorization," which occurs in the same essay (p. 62), is not seriously intended.

In the concluding 'Farrago of Verses' Mr. Smith once more shows his ability to write well in widely divergent strains, for there are two hymns, simple, direct, and sincere—models of what hymns should be—a stirring patriotic poem, 'Old England,' reprinted from *The Spectator*, and sundry humorous pieces, of which the most felicitous is a brief burlesque of the present political situation, based on 'As You Like It,' and here included by permission of the proprietors of *Punch*.

The volume cannot fail to delight educated readers.

It is a pleasant intrusion on the world of letters that is made by a naval officer and his wife—Commander and Mrs. E. Hamilton Currey—in their *Sea-Wolves of the Mediterranean* (John Murray), which in a popular and readable style tells the story of "the Grand Period of the Moslem Corsairs." Capt. Currey's acquaintance with the Mediterranean has stood him in good stead, for it adds much to the reality of a picture to have it presented by one to whom the scene is no mere geographical lesson. On the other hand, it would almost seem that his familiarity with things nautical has sometimes led him into error, as in attributing an impossible size and impossible accuracy of fire to ships' guns of the early sixteenth century. Modern literature has led him astray in describing the old-time galleys and their chain-gangs. He has quoted the 'Mémoires d'un Protestant' of the eighteenth century as illustrating a galley of the fifteenth, which is almost as absurd as it would be to illustrate the appearance and fitting of the Victory at Trafalgar by a description of the modern Dreadnought. Not content with introducing a galley—a *scaloccio*—with large oars about 1480, he puts nine men to an oar, a number, we think, never adopted, even in the last days. In 1480 galleys were still a *zenzile*, with numerous small oars, one man to each. These small oars gave place to the big ones early in the sixteenth century, and in the beginning of the seventeenth Pantero Pantera expressed his inability to conceive how the small oars could have been fitted. It is one of the many instances of the difficulty—sometimes the impossibility—of reconstructing the small, commonplace details of an obsolete mode of life.

Capt. Currey derives the "Moslem Corsairs" from the Moslems driven out of Spain in 1492, and seems to imply that corsairs—Moslem corsairs, at any rate—were previously unknown. A reminiscence of Lausulus of Urge might have checked this, as well as the instance which we have just referred to, in 1480 or thereabouts. Barbarossa, too, was no Spaniard, and though it has been said that he was French, the best accounts trace him to Mytilene. Capt. Currey has perhaps rather lost an opportunity of adding to his list the English renegades, Ward, Walsingham, and others, who were more strictly corsairs than Barbarossa or Occhiali. But as it is, we thank him for an interesting and readable book.

Venice in the Thirteenth and Fourteenth Centuries, by F. C. Hodgson (Allen & Sons), is a continuation of the author's 'Early History of Venice,' published nine years ago, and brings the story down to 1400. He has wisely taken a wide view of his subject, and his interesting chapters on Eastern affairs and on the trade with China enable us to see Venice in her true perspective. It would be impossible, within the compass of a short notice, to do justice to the learning and research of which this book is the result. The views on the closing of the Great Council are perhaps the most interesting contribution to the history of Venice it contains. This Mr. Hodgson regards, with the continuator of Dandolo, as "mainly the admission of a democratic element," and quotes Caroldo's unprinted chronicle to the effect that one of the causes of the conspiracy of Querini and Tiepolo was the feeling that Gradenigo's reforms had lessened the dignity of the ruling families. The fear of a despotism—a danger to which Venice was peculiarly liable, as many of her nobles had

been virtually independent rulers in the East—may also help to account for these democratic changes. Our author traces the conventional view, that the "serrata" meant the establishment of a narrow oligarchy, to Daru, a partisan of the Revolution who sought to justify Napoleon's action.

We wish we could speak as highly of the way in which Mr. Hodgson displays his wares as of the wares themselves. One could hardly find more inspiring subjects than the careers of Marco Polo and Ecelino da Romano, or the stories of the Catalonian Company, the great conspiracies, and the war of Chioggia. Yet even the specialist will find him difficult reading, and he does not give himself a chance with the general reader.

VERNON LEE, in reprinting with Mr. John Lane the three "Polite Stories" which make up the greater part of *Vanitas*, has added a fourth tale, not hitherto published. She has done well, for 'A Frivolous Conversion' possesses both a deeper human interest and a finer literary quality than its companions. The motive of this story—the presentation of a soul become, by continuous concentration of its every faculty upon the superficialities of existence, incapable of any "conversion" that shall be other than "frivolous"—although not wholly new, is developed with a freshness and individuality which lend all the charm of novelty to Vernon Lee's narrative. Her picture of the young Austrian noble, hero of drawing-rooms and battues—who, inspired by the teaching of an unworldly woman of the world, seems for a moment capable of following the highest ideals, yet perishes miserably in a duel of his own seeking with an hotel acquaintance for whom he has conceived a childish dislike—is singularly lifelike and pathetic. Madame Nitzenko, the good angel whose influence fails in the end to overcome the moral irresponsibility born of a life's trifling, is a noble figure; and her relations with Kollonitz—relations not merely platonic, but maternal, as of a twentieth-century Catherine of Siena with a young disciple—are beautifully described.

Beside this remarkable story, 'Lady Tal,' with its too frequent reminiscences of Mr. Henry James, and 'The Legend of Madame Krasinska'—in which Vernon Lee attempts, less successfully than on some previous occasions, an excursion into the realm of the supernatural—seem perhaps feebler than they are.

Seven Great Statesmen. By A. D. White. (Fisher Unwin.)—The statesmen considered in this volume are an interesting group—Sarpi, Grotius, Thomasius, Turgot, Stein, Cavour, and Bismarck. On some of them, especially on Sarpi and Thomasius, the author writes ably and with learning. The reader will find, indeed, throughout a considerable amount of information, and a lucid, if unattractive style. Some of Dr. White's views seem to be ill-considered. He extols in one breath Grotius and Bismarck, though the contempt of the latter for the principles of the great moralist was open and undisguised. He denounces Machiavelli as a foe of right reason, yet extols Cavour, in whom, as Acton said, Machiavelli "came to his own." The author is so greatly enamoured of what he regards as "modernity" that he lumps together indiscriminately many people of diametrically opposite standpoints and temperament, while he has the characteristic frequently exhibited by the teacher to whom the book

is dedicated, an intolerance of all ideas not his own. The present writer recalls the tone of Goldwin Smith's 'History of England,' which reflects the academic Liberalism of the sixties, with its individualistic prejudice, its rationalism, and its economic narrowness; and attempts to put the whole of English history on the Procrustean bed of the principles then considered the last word of "enlightenment." Dr. White's mentality is rather of the same sort, but he has not the gifts of style which made everything that Goldwin Smith wrote a delight to read. Still his book has valuable and interesting features.

E. NESBIT's unflagging imagination has found a new field in *The Magic City* (Macmillan) for the adventures of her youthful hero and heroine. She tells us of delightful and thrilling experiences which may fall to the lot of boys and girls in all the toy cities and houses they have built, and the countries they have created in their happiest flights of fancy, if once they can find their way into them. Philip is handsomely rewarded for the desolate hours in which he has utilized the books and ornaments of a strange drawing-room, as well as bricks, to rear that magic city which is to be the starting-point for those seven deeds of valour prompted by Mr. Noah which are to make him a king. He is accompanied in his adventures by Lucy, the little girl whom previously he has tried to dislike, but who becomes his valued coadjutor and companion; while the nurse, as the "Pretenderette," is naturally their sworn enemy. The author refrains at the conclusion from making the obvious admission that the children have been dreaming. They are restored to their guardians without fuss or question, and the Noah's-ark dogs of their travels are actually awaiting them in the flesh.

Mendelssohn's South African Bibliography. By Sidney Mendelssohn. 2 vols. (Kegan Paul & Co.)—These two portly volumes (each over 1,000 pages), embodying the labour of years, will be a boon to any one engaged in African research. They were at first intended to be a *catalogue raisonné* of Mr. Mendelssohn's own collection, but this "has since developed until it forms a reasonably complete Bibliography of Literature relating to South Africa, in the wider sense of the term, from the earliest period up to the present time." The Introduction by Mr. I. D. Colvin, and Mr. Mendelssohn's numerous and instructive notes, provide a fund of interesting reading which one scarcely expects in a work of this nature; and an additional attraction is supplied by the plates, beautifully reproduced from old sketches and engravings.

In a work of such magnitude it is impossible to avoid slips and omissions, and we have noted a few. On p. 357 of vol. i. the article 'Zululand' in 'British Africa' (1899) is wrongly attributed to Frances Ellen Colenso, who died in 1888, instead of to Miss H. E. Colenso. On p. 806 of vol. ii. Frances Colenso has been confused with her brother Francis, whose initials were the same. On p. 498, vol. i., Lieut.-Col. Edward Durnford is credited with a share in the authorship of 'The Ruin of Zululand,' an error which may have arisen from a too hasty perusal of the previous (and correct) entry on p. 356. Among misprints which have escaped correction we find "Aftebro" for "Oftebro" (vol. i. p. 73), "Dombasi" for "Domasi" (vol. i. p. 709), and several others. The title of the Zulu book in the last entry on p. 647 of vol. ii. should run:

'Izindatyana zabantu, kanye nezindaba zas'e Natal.' On p. 993, vol. ii., the Gwamba and Tumbuka languages have been erroneously classed under the heading of Zulu.

The 'Orthographical Note' (vol. i. pp. xiii-xvi) is a highly laudable feature; but we cannot agree that in all cases Mr. Mendelssohn has adopted the correct form, e.g. "Cetywayo" for Cetshwayo, "Eshowe" for Etshowe, "Lorenzo Marquez," "Nyassa," and "Usibepu" (for u Zibebu).

Among the more important omissions (noticeable where Dutch and German works are so fully represented) are the linguistic works of Prof. Meinhof; Viehe's 'Herero Grammar'; P. H. Brincker's great German-Herero, Ndonga, and Kwanyama Dictionary; Felix Meyer's 'Recht der Herero'; and Dr. Passarge's valuable monograph 'Die Buschmänner der Kalahari.'

DR. S. H. BUTCHER, M.P.

THE death of Dr. Samuel Henry Butcher at the age of 60 on Thursday of last week is a great loss to the world of letters and scholarship. He was one of the few masters of the classics who have made their mark in public life.

He had a career of exceptional distinction. The eldest son of a Bishop of Meath, he was educated at Marlborough and Trinity College, Cambridge. He obtained two University Scholarships, and the Powis Medal for hexameters twice, and was Senior Classic in 1873, the Chancellor's Medals being divided between him and two other scholars of exceptional brilliance. In 1874 he was made a Fellow of his College, and was for two years a tutor there. He then married a daughter of Archbishop Trench, and vacating his Cambridge fellowship, was elected to a similar post at University College, Oxford. He left his work here to succeed Blackie in the Professorship of Greek at Edinburgh in 1882, and kept that position for eleven years, when he retired.

In the latter part of his life, however, he was busy with Commissions and various Boards, and had in Parliament as member for Cambridge University, and in the world at large, a position and influence like those of Jebb before him. He spoke with less humour, but with a similar precision of phrase and a delicate choice of English such as few could attain. In the House of Commons the fervour of his views on Ireland shocked some people, but he always secured the attention due to his accomplishments. His position in the world of letters was recognized by the acquisition of many honours and duties. He was an excellent chairman, with abundant patience and no trace of the superiority of the don.

One could not, however, but feel that, useful as all this work was, it might have been performed by other men who had not Dr. Butcher's admirable powers of classical translation and commentary, for he belonged to the small band of scholars of the highest rank—small in England, and indeed everywhere—who are able to translate the fine flower of their erudition into their own language. His rendering of the 'Odyssey' into English prose, done jointly with Mr. Andrew Lang (1879), has become an English classic. His book on 'Some Aspects of the Greek Genius,' and his lectures delivered at Harvard in 1904 on Greek subjects, are the best of their kind. His discussion and translation of Aristotle's 'Poetics' are models of knowledge, lucidity, and graceful English, appreciated by other

than classical students, to whom his work on Demosthenes chiefly appeals.

A great scholar, he was also a great citizen in his quiet and disinterested work for higher education in many phases. He did not seek after popularity, but all who came into contact with him felt the charm of his personality, his high seriousness and frankness, and his steadfast enthusiasm for his work.

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the first part of a list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth and death should be given, together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15, Waterloo Place, S.W.

Abbott, Evelyn (1843-1901), classical scholar.
 A'Beckett, Arthur William (1844-1909), journalist and comic writer.
 Abel, Sir Frederick Augustus, K.C.B. (1827-1902), chemist.
 Abraham, Charles John, D.D. (1815-1903), 1st Bishop of Wellington.
 Absolon, Charles (1818-1908), cricketer.
 Acton, John Adams (1836-1910), sculptor.
 Acton, John Emerich Edward Dalberg, 1st Baron Acton (1834-1902), historian.
 Adam, James (1860-1907), classical scholar.
 Adams, James Williams, V.C. (1840-1903), army chaplain.
 Adams, William Davenport (1851-1904), journalist and compiler.
 Adams-Acton, John. See Acton, John Adams.
 Adamson, Robert (1852-1902), philosopher.
 Adderley, Charles Bowyer, 1st Baron Norton (1814-1905), President of the Board of Trade.
 Agnew, Sir James Wilson, K.C.M.G., M.D. (1815-1901), Prime Minister of Tasmania.
 Agnew, Sir William, 1st Bt. (1825-1910), art dealer.
 Agnew, Sir William Fischer (1847-1903), legal writer.
 Aidé, Charles Hamilton (1830-1906), author.
 Aikman, George, A.R.S.A. (1830-1905), artist.
 Ainger, Alfred (1837-1904), Master of the Temple.
 Aitchison, George, R.A. (1825-1910), architect.
 Aldenham, 1st Baron. See Gibbs, Henry Hucks.
 Alderson, Sir Henry James, K.C.B. (1835-1909), major-general.
 Alexander, Mrs. (pseud.). See Hector, Annie French.
 Alexander, Boyd (1873-1910), explorer.
 Alger, John Goldworth (1837-1907), journalist and author.
 Alington, 1st Baron. See Sturt, Henry Gerard.
 Alison, Sir Archibald, G.C.B. (1826-1907), general.
 Allan, Andrew (1822-1901), shipowner.
 Allan, Sir William (1837-1903), engineer and politician.
 Allen, George (1832-1907), publisher.
 Allen, John Romilly (1847-1907), archaeologist.
 Allen, Robert Calder, C.B. (1812-1903), captain R.N.
 Allies, Thomas William (1813-1903), theologian.

Allman, George Johnston, F.R.S. (1824-1904), mathematician.
 Almond, Hely Hutchinson (1832-1903), head master of Loretto School.
 Amherst, William Amhurst Tyssen, 1st Baron Amherst of Hackney (1835-1909), bibliophile and connoisseur.
 Anderson, Alexander ("Surfaceman") (1845-1909), labour poet and librarian.
 Anderson, George (1826-1902), cricketer.
 Anderson, Sir Thomas M'Call (1836-1908), Regius Professor of Medicine in Glasgow University.
 Andrews, Thomas, F.R.S. (1847-1907), metallurgical chemist.
 Angus, Joseph, D.D. (1816-1902), Baptist minister and Biblical scholar.
 Annandale, Thomas (1838-1907), surgeon.
 Arbuthnot, Sir Alexander John (1822-1907), Anglo-Indian official and author.
 Arbuthnot, Forster Fitzgerald (1833-1901), Oriental scholar.
 Archer, James, R.S.A. (1824-1904), artist.
 Archer-Hind, Richard Dacre (1849-1910), classical scholar.
 Ardagh, Sir John Charles (1840-1907), major-general.
 Arditi, Luigi (1822-1903), musical composer and conductor.
 Arnes, Philip (1836-1908), musical composer.
 Armour, John Douglas (1830-1903), Chief Justice of Supreme Court of Canada.
 Armstead, Henry Hugh, R.A. (1828-1905), sculptor.
 Armstrong, Sir George Carlyon Hughes, 1st Bt. (1836-1907), newspaper proprietor.
 Arnold, Sir Arthur (1833-1902), Radical politician and writer.
 Arnold, Sir Edwin (1832-1904), poet and journalist.
 Arnold, George Benjamin (1832-1902), organist and composer.
 Arnold-Forster, Hugh Oakeley (1855-1909), Secretary of State for War.
 Arthur, William (1819-1901), Wesleyan divine.
 Ashley, [Anthony] Evelyn [Melbourne], (1836-1907), biographer of Lord Palmerston.
 Ashmead-Bartlett, Sir Ellis (1849-1902), politician.
 Atkinson, Robert (1845-1908), President of the Royal Irish Academy; Irish scholar.
 Austen. See Roberts-Austen.
 Austen-Leigh, Augustus (1840-1905), Provost of King's College, Cambridge.
 Austin, Charles Sumner (1838-1903), Anglo-Indian journalist.
 Ayerst, William (1830-1904), Bishop of Natal and theologian.
 Ayrton, William Edward, F.R.S. (1847-1908), electrical engineer and inventor.
 Bacon, John Mackenzie (1846-1904), scientific lecturer and aeronaut.
 Badcock, Sir Alexander Robert, K.C.B. (1844-1907), general.
 Baddeley, Mountford John Byrde (1843-1906), compiler of guide-books.
 Bailey, Philip James (1816-1902), author of 'Festus'.
 Bain, Alexander (1818-1903), philosopher.
 Bain, Robert Nisbet (1855-1909), writer on Swedish and Russian history.
 Baird, Andrew Wilson, F.R.S. (1842-1908), colonel R.F.
 Baker, Sir Benjamin, K.C.B. (1840-1907), engineer.
 Baker, Shirley (1835-1903), Wesleyan missionary and Prime Minister of Tonga.
 Bale, Sir Henry (1854-1910), Chief Justice of Natal.
 Balfour, George William (1823-1903), physician.
 Balfour, John Blair, 1st Baron Kinross of Glasglune (1837-1905), President of the Court of Session.
 Banks, Sir John (1811-1908), physician.
 Banks, Sir William Mitchell (1842-1904), Liverpool surgeon.
 Bannerman, Sir Henry Campbell. See Campbell-Bannerman.
 Bardsley, John Wareing (1835-1904), Bishop of Carlisle.
 Baring, Sir Thomas George, 1st Earl of Northbrook (1826-1904), Viceroy of India.
 Barlow, William Hagger (1833-1908), Dean of Peterborough.
 Barlow, William Henry, F.R.S. (1812-1902), engineer.
 Barnardo, Thomas John (1845-1905), philanthropist.
 Barnes, Robert (1818-1907), obstetric physician.
 Barrett, Wilson (1846-1904), actor.
 Barrington, Sir Vincent Hunter Barrington Kennett. See Kennett-Barrington.
 Barrow, Arthur Frederick, C.M.G. (1850-1903), colonel.
 Barry, Alfred (1826-1910), Primate of Australia; Canon of Windsor.
 Bartlett. See Ashmead-Bartlett.
 Bartley, Sir George Christopher Trout, K.C.B. (1842-1910), founder of the National Penny Bank.

Barton, John (1846-1908), missionary.
 Bass, Sir Michael Arthur, 1st Baron Burton (1837-1909), brewer and benefactor.
 Bateson, Mary (1865-1906), historical writer.
 Bauerman, Hilary (1833-1909), metallurgist.
 Baxter, Lucy E., "Leader Scott" (d. 1902), writer on art.
 Baylis, Thomas Henry (1817-1908), lawyer and antiquary.
 Bayliss, Sir Wyke (1835-1906), artist.
 Bayly, Ada Ellen, "Edna Lyall" (d. 1903), novelist.
 Beale, Dorothea (1831-1906), Principal of Cheltenham Ladies' College.
 Beale, Lionel Smith, F.R.S. (1828-1906), Professor of Medicine and biologist.
 Beattie-Brown, William, R.S.A. (1831-1909), Scottish landscape painter.
 Beckett, Sir Edmund, 1st Baron Grimthorpe (1816-1905), lawyer and controversialist.
 Bedford, William Kirkpatrick Riland (1826-1905), antiquary and genealogist.
 Beecham, Thomas (1821-1907), pill-maker.
 Beevor, Charles Edward (1854-1908), physician.
 Beit, Alfred (1853-1906), financier and benefactor.
 Bell, Sir Isaac Lowthian, F.R.S. (1816-1904), ironmaster.
 Bell, James, C.B., F.R.S. (1825-1908), chemist.
 Bell, Valentine Graeme, C.M.G. (1839-1908), railway engineer.
 Bell, William Charles (1831-1904), enamel-painter.
 Bellamy, James, D.D. (1819-1909), President of St. John's College, Oxford.
 Bellows, John (1831-1902), printer and lexicographer.
 Bemrose, William (1831-1908), writer on wood-carving.
 Bendall, Cecil (1856-1906), Sanskrit scholar.
 Benham, William, D.D. (1831-1910), hon. Canon of Canterbury and author.
 Bennett, Alfred William (1833-1902), botanist.
 Bennett, Edward Hallaran (1837-1907), surgeon.
 Bent, Sir Thomas (1838-1909), Prime Minister of Victoria.
 Bentley, John Francis (1840-1902), architect.
 Bergne, Sir John Henry Gibbs, K.C.B., K.C.M.G. (1842-1908), diplomatist.
 Berkeley, Sir George, K.C.M.G. (1819-1905), colonial governor.
 Bernard, Sir Charles Edward (1837-1901), Chief Commissioner of Burma.
 Bernard, Thomas Dehany (1815-1904), Chancellor of Wells Cathedral.
 Berry, Sir Graham, K.C.M.G. (1822-1904), Prime Minister of Victoria.
 Besant, Sir Walter (1836-1901), novelist.
 Bevan, William Latham (1821-1908), Archdeacon of Brecon.
 Bewley, Sir Edmund Thomas (1837-1908), legal writer and professor.
 Bickersteth, Edward Henry (1825-1906), Bishop of Exeter.
 Biddulph, Sir Michael Anthony Shrapnell, G.C.B. (1825-1904), general.
 Bidwell, Shelford, F.R.S. (1848-1909), pioneer of telephotography.
 Bigg, Charles, D.D. (1840-1908), Regius Professor of Ecclesiastical History, Oxford.
 Birch, George Henry (1842-1904), architect and archaeologist.
 Bird, Henry Edward (1830-1908), writer on chess.
 Birdwood, Herbert Mills (1837-1907), Anglo-Indian judge.
 Birrell, John, D.D. (1836-1902), Orientalist.
 Bishop, Mrs. Isabella Lawson, born Bird (1832-1904), traveller and author.
 Blackburn, Helen (d. 1903), pioneer of woman suffrage.
 Blackley, William Lewery (1830-1902), social reformer.
 Blackwell, Elizabeth, M.D. (1821-1910), physician.
 Blackwood, Frederick Temple Hamilton-Temple-, 1st Marquis of Dufferin and Ava (1826-1902), Viceroy of India and diplomatist.
 Blair, James, C.B., V.C. (1828-1905), general.
 Blaney, Thomas, C.I.E. (1824-1903), physician and philanthropist of Bombay.
 Blandford, William Thomas, F.R.S. (1832-1905), naturalist.
 Blaydes, Frederick Henry Marvell (1818-1908), classical scholar.
 Blennerhassett, Sir Rowland, 4th Bt. (1839-1909), President of Queen's College, Cork, and political writer.
 Blind, Karl (1826-1907), political refugee and author.
 Bloomfield, Georgiana, Lady (1822-1905), author.
 Blouët, Paul, "Max O'Reil" (1848-1903), author.
 Blount, Sir Edward Charles, K.C.B. (1809-1905), banker in Paris.
 Blumenthal, Jacques (1829-1908), musical composer.

Bodda-Pyne, Louisa Fanny (1828-1904), vocalist.
 Bodley, George Frederick, R.A. (1830-1907), architect.
 Bompas, William Carpenter, D.D. (1834-1906), Bishop of Selkirk.
 Bond, William Bennett (1815-1906), Archbishop of Montreal.
 Bonwick, James (1818-1906), writer on Australian history and geography.
 Boothby, Guy Newell (1867-1905), novelist.
 Borthwick, Sir Algernon, 1st Baron Glenesk (1830-1908), proprietor of *The Morning Post*.
 Boswell, John James, C.B. (1835-1908), major-general.
 Bosworth Smith, Reginald. See Smith, Reginald Bosworth.
 Boucherett, Emilia Jessie (1825-1905), advocate of women's rights.
 Boughton, George Henry, R.A. (1836-1905), artist.
 Bourinot, Sir John George, K.C.M.G. (1837-1902), writer on Canadian constitutional history.
 Bourke, Robert, 1st Baron Connemara (1827-1902), Governor of Madras.
 Bousfield, Henry Brougham (1832-1902), 1st Bishop of Pretoria.
 Bowen, Edward Ernest (1837-1901), assistant master at Harrow and song-writer.
 Boyd, Sir Thomas Jamieson (1818-1902), publisher and Lord Provost of Edinburgh.
 Boyle, Sir Courtenay, K.C.B. (1845-1901), Permanent Secretary to the Board of Trade.
 Boyle, George David (1829-1901), Dean of Salisbury.
 Boyle, Richard Vicars (1822-1908), engineer.
 Braddon, Sir Edward Nicholas Coventry, K.C.M.G. (1829-1904), Prime Minister of Tasmania.
 Bradley, George Granville, D.D. (1821-1903), Dean of Westminster.
 Brady, Sir Francis William, 2nd Bt. (1824-1909), musical composer.
 Brampton, Baron. See Hawkins, Sir Henry.
 Bramwell, Sir Frederick Joseph, F.R.S. (1818-1903), engineer.
 Brand, Henry Robert, 2nd Viscount Hampden and 24th Baron Dacre (1841-1906), Governor of New South Wales.
 Brand, Herbert Charles Alexander (d. 1901), commander R.N.
 Brandis, Sir Dietrich, F.R.S. (1824-1907), organizer of Indian forestry.
 Bray, Mrs. Caroline, born Hennell (1815-1905), friend of George Eliot and author.
 Braybrooke, 6th Baron. See Neville, Latimer.
 Brereton, Joseph Lloyd (1823-1901), educational reformer and author.
 Brett, John, A.R.A. (1832-1902), seascape painter.
 Brickwood, Edwin Dampier (1838-1905), oarsman.
 Bridge, Thomas William, F.R.S. (1848-1909), zoologist.
 Bridges, John Henry (1832-1906), Positivist.
 Briggs, John (1863-1902), cricketer.
 Bright, William, D.D. (1824-1901), ecclesiastical historian.
 Brightwen, Mrs. Eliza (1831-1906), writer on natural history.
 Brinsmead, John (1815-1908), piano manufacturer.
 Broadbent, Sir William Henry, 1st Bt., F.R.S. (1835-1907), physician.
 Brodrick, George Charles (1831-1903), Warden of Merton College, Oxford.
 Bromby, Charles Henry, D.D. (1814-1907), Bishop of Tasmania and author.
 Brough, Bennett Hooper (1860-1908), mining expert.
 Brough, Lionel (1836-1910), actor.
 Brough, Robert (1872-1905), painter.
 Brown, J. T. (1869-1904), cricketer.
 Brown, William Haig. See Haig-Brown, William.
 Browne, Sir James Frankfort Manners, K.C.B. (1823-1910), general R.E.
 Browne, Sir Samuel James, V.C. (1824-1901), general.
 Browne, Tom, R.B.A. (1872-1910), black-and-white artist.
 Brunel, Henry Marc (1842-1903), engineer.
 Brydon, J. M. (1840-1901), architect.
 Buchan, Alexander, F.R.S. (1829-1907), meteorologist.
 Buchanan, George (1827-1906), surgeon.
 Buchanan, Robert Williams (1841-1901), poet and novelist.
 Buckton, George Bowdler, F.R.S. (1817-1905), naturalist.
 Buller, Sir Redvers Henry, G.C.B., V.C. (1839-1908), general.
 Buller, Sir Walter Lawry, K.C.M.G., F.R.S. (1838-1906), ornithologist.
 Bulwer, Sir Edward Earle Gascoyne, G.C.B. (1829-1910), general.
 Bunsen, Ernest de (1819-1903), author.
 Burbidge, Edward (1840-1903), writer on liturgies.
 Burbidge, Frederick William (1847-1905), botanist.

Burdett-Coutts, Angela Georgina, Baroness Burdett-Coutts (1814-1906), philanthropist.
 Burdon, John Shaw, D.D. (1827-1907), Bishop of Victoria, Hong Kong, and Chinese scholar.
 Burdon-Sanderson, Sir John Seott, 1st Bt. (1828-1905), Regius Professor of Medicine at Oxford.
 Burn, Robert (1829-1904), classical archaeologist.
 Burn-Murdoch, John (1853-1909), lieutenant-colonel.
 Burne, Sir Owen Tudor, G.C.I.E., K.C.S.I. (1837-1909), major-general and author.
 Burns, Dawson (1829-1909), Baptist minister and temperance advocate.
 Burns, George, 1st Baron Inverclyde (1830-1901), shipowner.
 Burroughs, Sir Frederick William Traill, K.C.B. (1831-1905), lieutenant-general.
 Burrows, Montagu (1819-1905), Chichele Professor of Modern History at Oxford.
 Burton, 1st Baron. See Bass, Sir Michael Arthur.
 Bushell, Stephen Wootton, C.M.G. (1844-1908), physician and Chinese archaeologist.
 Busk, Rachel Harriette (d. 1907), writer on folklore.
 Butcher, Samuel Henry (1850-1910), scholar and politician.
 Butler, Arthur Gray (1832-1909), 1st head master of Haileybury.
 Butler, Arthur John (1844-1910), Italian scholar.
 Butler, Mrs. Josephine, born Grey (1831-1906), social reformer.
 Butler, Samuel (1835-1902), author of 'Erewhon.'
 Butler, Sir William Francis, G.C.B. (1838-1910), general.
 Byrne, Sir Edmund Widdrington (1844-1901), judge.

THE BOOK SALES OF 1910. PART I.

It is a sign of the times that the five most important sales of books held during the year which has just drawn to its close should have been of a miscellaneous character, that is to say, made up of volumes gathered from a variety of sources. To argue from this and similar instances in the past that there are now no large and important libraries left in private hands would be absurd, even if it were not known that the contrary is the case; but there is little doubt, nevertheless, that the practice of book-collectors, apart altogether from their inclinations, is very different from what it once was. The massing together of large quantities of books with the object of forming a library of a general character capable of affording information on most topics is almost entirely a thing of the past, and what may be called fashionable books have now become so expensive that to obtain any considerable number of them is entirely out of the question for the vast majority of those who—to borrow a word used by Evelyn—set about "erecting" a library.

Most modern book-collectors are specialists who seldom expect the results of their activities to outlast them for long, and in that they are rarely mistaken. It is not often that one sees an ancestral library in the making, or any collection of books that does not look doomed. There is no necessity to trace the steps which lead to the inevitable end—it is enough to say that this sufficiently explains why most collections of books sold by auction nowadays come from many sources rather than from one. There are, of course, exceptions, but they so rapidly diminish as time goes on that to see a library sold which has existed intact even for such a comparatively short space of time as two generations is most unusual. The Ashburnham Library—extensive and important as it was—existed but little longer than eighty years, and it was very old in the light of everyday experience.

The present tendency, then, is to be satisfied

with little, whatever its quality may be, and most of the sales which took place last year prove this to be so. The most important of them all was held by Messrs. Sotheby on July 21st and following day, and realized 7,559*l.* Some of the books, exceedingly good of their kind, but few in number, belonged to Mr. Ruston of Lincoln: all the rest were "other properties," and these included the books bought in at Bishop Gott's sale two years ago, among them being the four Shakespearian folios withdrawn at 3,850*l.*, and afterwards sold for sums of 1,800*l.*, 210*l.*, 850*l.*, and 76*l.* respectively—this disparity causing one critic to remark, somewhat irreverently, at the time, that a "slump in Shakespeares" had set in.

Most of the sales held during the year point a similar moral. The library of Mr. J. W. Ford of Winchmore Hill was an exception. Two portions of this extensive collection had already been sold, one in 1902 and the other in 1904, and another instalment is apparently yet to come. This was a very large library, catalogued, so far, in 2,523 "lots," realizing rather more than 10,000*l.* Mr. Robert Hovenden's library, sold by Messrs. Puttick & Simpson in February, was also of an exceptional character, consisting almost entirely of genealogical and archaeological works. This, with some Americana added, fetched very nearly 3,000*l.*, as also did the late Mr. Thomas Gray's library sold at Messrs. Sotheby's in June. Then we have the Britwell Court library (1,085*l.*); the Radway Grange library (779*l.*); the final portion of the Earl of Sheffield's collection (991*l.*), the first part having been sold for 3,223*l.* in November, 1907; and the libraries of Mr. Elliot Stock (639*l.*), Mr. Alfred Trapnell (963*l.*), the late Mr. T. W. Waller (1,447*l.*), the late Dr. George Watson (413*l.*), and the late Mr. W. H. Hilton (3,480*l.*). These sales, all of which—with one exception—were held at Messrs. Sotheby's, were of single libraries: about sixty other sales held at Wellington Street and elsewhere were of a composite character, and in many instances of greater importance. That is the position as it is to-day, and moreover it is found on analysis that books may now be divided into three main classes so far as their selling properties are concerned. First come those which are exceedingly rare and very much sought for; next, those for which there is a steady demand by reason of their coming within certain classes of literature; and thirdly, those of a medium character such as are met with on numerous occasions. Books belonging to the first class have a tendency to advance in price, owing to keen competition and the fact that the few available copies are being slowly but surely absorbed by the large libraries of Europe and the United States; those belonging to the second class about hold their own; while those belonging to the third have of late fallen away to a very considerable extent, and are much cheaper now than they were a few years ago.

The vast majority of the books sold during the year belonged to the third class above mentioned, and the general effect of this activity may be seen at a glance by the simple process of comparing the results with others which are available. Between January and December more than 70 important sales were held in London, the total amount realized being considerably less than 100,000*l.* for about 40,000 "lots." This discloses an average of about 2*l.* 9*s.* the smallest for ten years, and very much smaller than that for 1907, when an unusually large number of very important and valuable books raised it to 4*l.* 4*s.*, the highest since

1893, and, apparently, during recent times. This much-reduced average suggests that not only did fewer expensive books come into the market during the year just closed, but also that the value of medium-class books fell during the period in question. That was undoubtedly the case—though why it should be so raises a question not easy to determine. Whatever the answer may be, the book sales held during the year have, as a rule, been in favour of buyers, who in their turn find themselves affected by the prevailing adverse conditions, so it must not be assumed that when the buyers are book-sellers—as they generally are—they necessarily gain largely, or indeed at all, by the depreciation, and are consequently glad of it. That would seem to depend upon the kind or class of books under review—whether they are readily resaleable, and upon a consideration of the position as a whole, which, according to all accounts, has not been very favourable of late. It would be safer to assert that private buyers have, as a result of the year's sales, nothing to complain of, and that is apparent enough in many isolated instances as well as on a comprehensive review of the market.

On January 13th and following day Messrs. Puttick & Simpson held the first sale of the year, but there is not much to chronicle, and the same may be said of that of January 26th, when Mrs. Hartmann's library was sold by Messrs. Christie. In the latter collection there was a fine copy of the *Biblia Sacra Latina*, 1475, folio, the first Bible printed at Venice, and this realized 99*l.* 15*s.* (oak boards, covered with velvet), and an equally fine example of 'La Divina Commedia,' printed in 1484, folio, also at Venice, 22*l.* (morocco extra). On January 26th Messrs. Hodgson sold a number of important books, among them Philip van Marnix's *Chronicle*, printed by Anthony de Solempne, the first Norwich printer, 1579, 12mo, 19*l.* (vellum, some head-lines cut); Dresser and Sharpe's 'History of the Birds of Europe,' in 84 parts, with the title-pages and Supplement, 41*l.*; a run of Cobbett and Hansard's 'Parliamentary Debates' in 678 vols., 1806–1909, 121*l.* (half-russia, cloth, and boards); and a very scarce *Masque* variously attributed to Ben Jonson, Thomas Lodge, and T. Jones, entitled 'Luminalia, or the Festivall of Light,' 1637, small 4to, 13*l.* (sheep). The Radway Grange library sold by Messrs. Sotheby on February 1st was chiefly remarkable for a collection of 27 maps and plans relating to Canada and the United States, published between 1775 and 1781, bound up in a folio volume. This realized 84*l.*, while the first edition of Beaumont and Fletcher's 'Comedies and Tragedies,' 1647, and the first edition of 'The Wild-Goose Chase,' 1652, bound together, fetched 36*l.* Hennepin's 'New Discovery of a Vast Country in America,' 1699, 8vo, realized 15*l.* (old calf, a plate torn); and a complete set of the 271 original numbers of *The Tatler*, April 12th, 1709, to January 2nd, 1711, with the additional numbers 272 to 330, all in folio, 14*l.* 10*s.* The first edition of Alken's 'National Sports of Great Britain,' 1821, folio, has been increasing in value for some time, and a good copy sold for as much as 70*l.* (morocco, gilt edges) on February 3rd at Messrs. Sotheby's, precisely the same amount being obtained for another copy, bound in the same way, on March 21st. Coloured plates of military costumes are also increasing in value, and 56*l.* was paid for a series of 51 plates of this character published by Spooner between 1833 and 1836, notwithstanding the fact that they had been cut round and mounted on brown paper.

Mr. Robert Hovenden's library and the "Americana" sold on February 7th and three following days realized, as stated, nearly 3,000*l.*, but this was a large collection, and the prices were very evenly distributed. A set of the *Visitations and Registers* issued by the Harleian Society between 1869 and 1908 in 92 vols., 8vo, fetched 36*l.* (cloth, as issued); the first 35 vols. of the *Index Library*, issued by the British Record Society, 12*l.* 5*s.* (mostly roxburgh, gilt tops); Legros's 'L'Art de la Coiffure des Dames,' 1767–8, small 4to, 18*l.* 10*s.* (half-morocco); Meyrick's 'Heraldic Visitations of Wales,' 2 vols., 1846, folio, 12*l.* 5*s.*; Reynolde Scot's 'Perfite Platforme of a Hoppe Garden,' 1574, small 4to, 13*l.* (old half-calf); Manning and Bray's 'History of Surrey,' 3 vols., 1804–14, 17*l.* (boards, uncut); and vols. i. to li. of the 'Sussex Archaeological Collections,' with *Index* to the first 24 vols., 15*l.* (cloth). The collection of "Americana" was of comparatively little importance. A French-Huron Lexicon, comprising 270 manuscript pages, by Father Chaumonot, Jesuit missionary to the Huron tribe, was bought in at 190*l.*, but appeared again two months later, when the price dropped to 60*l.* Another collection of "Americana," once belonging, partly at least, to Christopher Marshall, known as "The Fighting Quaker," sold at Messrs. Sotheby's on February 14th, was also unimportant, and realized only 322*l.* The largest amount obtained was 14*l.* 5*s.* for William Smith's 'History of the Province of New York,' 1757, 4to (half-calf). On February 17th Smollett's 'History and Adventures of an Atom,' 2 vols., 1749 (for 1769), in the original mottled boards (backed), the edges entirely uncut, fetched 63*l.*; and Evelyn's 'Silva,' 2 vols., bound together, 1786, 4to, 23*l.* (old morocco, a view of Wotton painted on the fore-edge). The Dunstan Hill library and another property sold on February 17th were of little account, and it is not until we come to February 23rd that anything noticeable occurs. On that day Messrs. Christie sold a portion of the libraries of the late Sir Arthur Bateman Scott and his wife and another property. The 'Heures à l'usage de Rome,' printed by Simon Vostre in 1489, 8vo, fetched 47*l.* (old stamped calf); a similar book printed on vellum by Hardouyn (almanac, 1500–20), 35*l.* (original calf), and a copy of Pigouchet's edition (almanac, 1488–1508), 36*l.* (old calf). Ralf's 'Naval Chronology,' 3 vols., 1820, realized 20*l.* 10*s.* (morocco extra); Shaw's 'History of Staffordshire,' 2 vols., 1798–1801, 44*l.* (half-calf, with 14 original drawings inserted); and another copy of Hennepin's 'New Discovery of a Vast Country in America,' this time dated 1698, 2 parts in 1 vol., 8vo, 14*l.* (original calf).

At the sale of the Britwell Court library already alluded to, Dryden's 'To my Lord Chancellor, presented on New Year's Day,' 1662, folio, fetched 15*l.* 10*s.* (unbound). This is an unusual price, and the same remark applies to Gay's 'Wine—a Poem,' a pamphlet of 8 leaves, published in 1708, 19*l.* 5*s.* (unbound), and the same author's 'Epistle to her Grace Henrietta, Duchess of Marlborough,' 1722, folio, 31*l.* 10*s.* (unbound). It is seldom indeed that an unopened copy of the first edition of Milton's 'Areopagitica,' 1644, 4to, is met with, but one almost in that state realized 63*l.* at this sale; and several pieces by Waller also sold for substantial amounts. These were 'A Poem on St. James's Park,' 1661, folio, 11*l.* (unbound, stained); 'Instructions to a Painter,' 1666, folio, 5*l.* (unbound); and 'To the King upon His Majesties Happy

Return,' first edition, n.d. (1660), and a later edition published in the same year, 13*l.* (sewn together). On February 24th Shelley's 'Address to the Irish People,' a very badly printed pamphlet published in Dublin in 1812 at 5*d.*, brought 75*l.* (unbound); and on the first day of March the remaining portion of the late Earl of Sheffield's library realized 991*l.* The attraction here consisted of a specially prepared presentation copy of Gibbon's 'Decline and Fall,' 6 vols., 1777–88, with inscription in the author's autograph, 60*l.* (morocco extra), and Gibbon's 'Pocket Diary' for 1776, with numerous entries in his autograph, 38*l.* Apart from these books there was little to attract attention, and less still in the collection of Bibles and Service Books formed by the late Dr. George Watson of Tunbridge Wells, for they were nearly all imperfect or defective in some way or other. I pass them to draw attention to Sir Walter Gilbey's collection of sporting books sold by Messrs. Knight, Frank & Rutley on March 9th. At this sale a full set of *The Sporting Magazine*, bound in half-calf, with Sir Walter's *Index*, made 378*l.*; *The New Sporting Magazine*, 30 vols., 1831–46, with additional *Index*, 194*l.* 5*s.*; *The Sporting Review*, 15 vols., 1839–46, 44*l.* 2*s.*; and *The Annals of Sporting and Fancy Gazette*, complete in 13 vols., with the scarce No. 78 for June, 1828, 73*l.* 10*s.* All the above were well bound and in good condition, though not to be compared with the full sets of these and other periodicals of a similar character belonging to Col. Hargreaves, which in July realized the highest price known, 1,010*l.*, at Messrs. Sotheby's.

The remaining sales held during March were all of a miscellaneous character, that of the 21st and 23rd being one of the most important of the year. It was catalogued by Messrs. Sotheby in 662 lots, and the total amount realized was 5,318*l.* A hitherto unknown edition of Bacon's 'History of Henry VII.,' printed by Haviland in 1628, folio, fetched 6*l.* 5*s.* (original calf); Blake's 'Poetical Sketches,' 1783, 8 vols., formerly Heber's copy, 52*l.* (old morocco extra); the artist's working cabinet, containing his tools, 30*l.* 10*s.*, a small price for such an interesting relic, one would think; Cervantes' 'Don Quixote,' second issue of the first edition of the first volume, and first edition of the second, together 2 vols., 4to, 1605–15, 250*l.* (old vellum and old calf); Charles I.'s own copy of the *Book of Common Prayer*, 1634, folio, 60*l.* (old morocco); Eliot's 'Indian Grammar Begun,' 1666, 4to, 200*l.* (morocco, some leaves repaired); the *editio princeps* of Homer, 1488, folio, 245*l.* (morocco); two tracts of the 'Anti-Bossicon,' by William Lilly, the grammarian, printed by Pynson in 1521, with some other pieces in the same volume, 125*l.* (Cambridge binding by Garret Godfrey); Catherine of Aragon's copy of the 'Textus Magistri Sententiarum,' printed by Berthelet in 1527, small 4to, 55*l.* (leather, arms of Henry VIII. and the Queen); a large-paper copy of Nichols's 'History of Leicestershire,' 4 vols. in 8, 1795–1815, folio, 96*l.* (original half-calf); and a copy of the first edition of FitzGerald's 'Rubáiyát of Omar Khayyám,' with a misprint corrected in his own hand, 1859, 4to, 51*l.* (wrapper, quite clean). Other notable books sold on the same occasion comprised the rarest of the early issues of the first *Prayer Book* of Edward VI., printed by Grafton in June, 1549, 70*l.* (original calf); Mary Shelley's 'Frankenstein,' 3 vols., 1818, with corrections in her hand, 35*l.* (old calf); Watteau's 'Figures de Différents Caractères,' 2 vols., c. 1735–40, folio, 131*l.* (old russia); the first edition of the New Testament in Welsh,

1567, 4to, 180l. (morocco extra); and Williams's 'Key into the Language of America,' 1643, 12mo, 94l. (original calf). The last-named work supplies many interesting particulars of the manners and customs of the Massachusetts and neighbouring Indians, and is the earliest printed attempt to give the language of the aborigines of New England a literary form. The previous copy sold fetched 50l. in June, 1905 (original sheep).
J. HERBERT SLATER.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Book of Common Prayer in the Brass Language, S. Nigeria, 1/10; with Hymns, 2/6
Gowen (Rev. Herbert H.), Pioneer Church Work in British Columbia, being a Memoir of the Episcopate of Acton Windeyer Sillitoe, 3/6 net.
Great Texts of the Bible: St. Mark, 10/
Edited by James Hastings.

Literary Gossip.

MESSRS. LONGMAN have in the press 'The Evolution of Sea Power,' by Mr. P. A. Silburn. His object is to examine the growth of sea power from the time of the Phœnicians up to the maritime nations of the present day, placing in relief the part it has taken in the delimitation of territory and the rise of various races.

MESSRS. MACMILLAN'S forthcoming books include 'An Autobiography, 1835-1911,' by the Poet Laureate; 'The First Civil War in America, 1775-7,' by Dr. H. Belcher; 'England in the Sudan,' by Yacoub Artin Pasha, translated by Mr. George Robb; and 'Marie Antoinette as Dauphine,' by Lady Younghusband.

AMONG contributions to classical studies promised by the same firm are 'The Amazing Emperor Heliogabalus,' by Mr. J. Stuart Hay, introduced by Prof. J. B. Bury; 'Hellenistic Athens: an Historical Essay,' by Mr. W. S. Ferguson; and 'The Lay of Dolon (the Tenth Book of the Iliad): some Notes on its Language, Verse, and Contents,' by Mr. Alexander Shewan, a learned American scholar.

THE REV. S. BARING-GOULD has written a book on the rock-dwellers and troglodytes of Europe under the title of 'Cliff Castles and Cave Dwellings of Europe.' In his well-known style the author opens up a comparatively little-known subject, describing the purpose for which these dwellings were used, and giving the history of many of them. The book contains numerous illustrations and diagrams, and will be published immediately by Messrs. Seeley & Co.

THE same firm will shortly publish a book on India by Sir Andrew Fraser, late Lieutenant-Governor of Bengal.

MESSRS. KEGAN PAUL will issue next Monday 'A Chesterton Calendar.' This will be an ingeniously arranged selection of extracts, long and short, from Mr. G. K.

Chesterton's prose, together with characteristic specimens of his verse. It will be a perennial calendar, not merely meant for 1911, and will include a section devoted to Easter, Whitsuntide, and other movable feasts.

MISS A. WERNER has recently been recognized by the University of London as a teacher of African (Bantu) languages at King's College. Miss Werner has held on informal appointment of this nature for some ten years past, lecturing principally on Zulu and Swahili, though occasional applications are made for instruction in other languages, e.g. Sechuana and Chizwina, the latter being spoken in Rhodesia by the Mashona.

At the annual meeting of the New Spalding Club, held in Aberdeen on Thursday of last week, the programme of the Club from which the issues for 1911 will be selected was stated to be as follows: (1) 'The House of Gordon,' Vol. III.; (2) 'Folk Music and Song of the North-East of Scotland'; (3) 'Selections from the Records of the County of Banff'; (4) 'Records of the Society of Advocates in Aberdeen'; (5) 'The Records of Inverness,' Vol. II.; (6) 'Records of the Scots Colleges'; (7) 'Bibliography of the Shires of Aberdeen, Banff, and Kincardine'; (8) 'The Rise of Natural Science in the North of Scotland'; and (9) 'The Register of Baptisms in St. Andrew's Catholic Church, Braemar.'

THE death is announced of the Rev. James Anderson, United Free Church Minister of Dyce, Aberdeenshire, who, under the pen-name of "Fergus Mackenzie," was well known to the reading public of Scotland. His principal works, dealing chiefly with Northern rural life, were 'Cruisic Sketches,' 'The Humours of Glenbruar,' and 'Sprays of Northern Pine.'

THE obituary of the week also includes the names of Mr. Frederick Whitting, late Vice-Provost of King's College, Cambridge, and an excellent worker for the University; and Prebendary William Baker, for thirty years Head Master of Merchant Taylors' School, who published two books of devotion for schoolboys, lectures on the Church of England, and verse translations into Latin and Greek.

MR. F. W. CORNISH writes to point out that his history of the English Church reviewed a fortnight ago "does not profess to go further than the Lambeth judgment. To have carried it to 1900 would have meant a year's labour and probably another volume."

DR. HERMANN V. HILPRECHT resigns this week his position as Professor of Semitic Philology and Archæology and Assyrian in the University of Pennsylvania. He complains that the Temple Library of Nippur and other antiquities presented by him, of which he is Curator, were tampered with during his absence abroad, in spite of the conditions for their use arranged by the Board of Trustees.

A CORRESPONDENT writes:—

"It will be of interest to students of Buddhism to learn that a reissue of the Siamese edition of the 'Tripitaka' is under contemplation by the Government in Bangkok, which has ordered new Cambodian types from Europe for the purpose. The marked increase in scholarly activity which the last few years have witnessed in the kingdom appears also in two important projects: a regular Archæological Survey, and a systematic catalogue of the MSS. belonging to the National Library. It is to be hoped that these designs, which are said to owe much to the encouragement of Prince Damrong, will be carried into execution. They can hardly fail in that case to result in throwing light upon the obscure history of the Indo-Chinese peninsula, and they will also tend to bring the native scholars into touch with the literary science of Europe."

THE analysis of the year's books in *The Publishers' Circular* shows a total of 10,804, as compared with 10,725 in 1909, and this in spite of two Elections and the death of King Edward, which have affected the issues of three months. There is an increase in 'Religion and Philosophy,' 'Social Science,' and 'Voyages and Travels'; while 'Poetry and Drama' show 115 books in advance of 1909. That 'Fiction' and 'History and Biography' have been less abundant few will regret.

AMONG interesting books now appearing in Paris are 'Les Lettres inédites de Talma à la Princesse Pauline Bonaparte'; 'Les Réquisitoires de Fouquier-Tinville'; and 'Dingo,' an account by M. Octave Mirbeau of his dog.

M. MIRBEAU has read the first chapters of a new book by Madame Audoux, and regards them as even better than 'Marie-Claire.' Good books, however, are not written in a hurry, and we shall have to wait for some time for 'Marie-Claire à Paris.'

M. GEORGES OHNET is publishing shortly in Paris his first historical novel, 'Pour tuer Bonaparte.'

MADAME JUDITH GAUTIER, who has received the decoration of Chevalier of the Legion of Honour, has an hereditary right to the distinction, for she is the daughter of Théophile Gautier, as well as a writer and critic of distinction.

THE philologist and historian Prof. Gustav Wustmann, whose death in his 67th year is announced from Leipsic, where he was head librarian of the town library, was the author of a number of works on the history of Leipsic, and of the well-known 'Allerlei Sprachdummheiten,' which has proved of great service to all interested in the simplification of the German language. He was also for many years one of the editors of the *Grenzboten*.

THE death is announced from St. Petersburg, at the age of 53 years, of Baron David de Gunzburg, who was the author and editor of various works on the Jews.

AMONG recent Parliamentary Papers of some interest we note Judicial Statistics of Scotland for 1909 (post free 1s. 8d.).

SCIENCE

The Call of the Snowy Hispar : a Narrative of Exploration and Mountaineering on the Northern Frontier of India. By William Hunter Workman and Fanny Bullock Workman. (Constable & Co.)

WHEN the late Capt. T. G. Montgomerie, R.E., was in charge of the Survey of Jammú and Kashmir from 1855 to 1864, triangulation was extended over the North-Western Himalaya, and valuable information about various routes aggregating over 2,000 miles was obtained; but detailed surveys of the highest and most inaccessible places were not within the scope of his instructions. Indeed, such could not be expected, for important work in India had prior claim; consequently, qualified travellers who bit by bit fill in the blank spaces on the maps or correct the rough sketches are welcome.

Amongst those to whom a debt is due for assistance of this sort, specially in respect to the great glaciers, the names of Dr. W. H. Workman and his indefatigable wife are conspicuous. These distinguished Americans have since 1898 made many expeditions into the territories of the Maharaja of Jammú and Kashmir, perhaps even beyond them in the direction of the Mustagh and Karakoram ranges. The principal results have been communicated to the Royal Geographical Society in the form of papers illustrated by photographs and accompanied by well-drawn maps.

In addition to visiting the Karakoram range in 1899, the authors explored the Chogo Lungma glacier in 1902, and other parts of Baltistan in 1903, when some very high peaks were ascended. In 1906 the Nun Kun range was examined, and in 1908 the travellers turned their attention to the great Hispar glacier at the eastern end of the Nagar State; it drains into the Hunza or river of Kanjút, which falls into the Gilgit river some thirty miles above its junction with the Indus. The book before us contains an account of the expedition, which came about somewhat in this fashion.

On a former occasion Dr. and Mrs. Workman had seen the great glacier from the pass between it and the Biafo glacier, and more recently their attempt to reach it had been defeated. Their camp equipment stored at Srinagar would stand the wear and tear of another season; the call of the snows became irresistible, and it was soon decided to attack the Hispar again, this time from the side of Gilgit and Nagar. The necessary permission of the Government of India having been obtained, supplies were collected and the party was formed. Besides the authors, it consisted of two scientific surveyors, Drs. Cesare Calciati and Mathias Koneza, who have

separately reported on the basin of the glacier, the rocks and sand, and the vegetation of the locality; the Italian guide Cyprien Savoye, tried and trustworthy; three European porters; Mr. A. Hogg, an ex-police officer of Calcutta, in charge of the camp; and native coolies as required, or rather as they could be got.

The expedition started in May, 1908, for Gilgit; thence the valley of the Kanjút river was ascended, Chalt was passed, and soon after the magnificent mass of the snow mountain Rakaposhi was seen. It is 25,550 feet high, and being not more than twelve miles distant, it filled "a long gap between lesser mountains, a glorious 18,000 feet of steep, broken snow-slopes, culminating in pointed icy summits." Thence to Hispar the country is described as wild and savage; the valleys narrow and covered with the *débris* from the side gorges and glaciers. A halt *en route* at Nagar was made in order to pay respects to the Mir, or ruler, from whom coolies must be got; on June 30th the march was resumed, and after many trials from bad water, heat, and flies, Hispar, a village near the lower end of the glacier, was reached.

From this place various routes were followed and perils were incurred; these were chiefly avalanches of snow or stones, and what is locally called *swas* or *shwas*, a stream of stones and rocks set in liquid mud, sweeping everything movable before it, leaving a track behind till brought up by comparatively level ground, and capable of following the windings of a torrent bed with the facility of water. Besides these dangers, which had to be considered when choosing camping-ground, there was occasional climbing, of which Mrs. Bullock Workman had a full share, and which she has admirably described (pp. 137-48). The passage is too long for quotation, but an extract may be made. With Savoye she had to climb over some unpleasantly sharp snow pinnacles:—

"He drew the rope, a light silk one used on all our hardest climbs, taut, and remarked, 'Don't be surprised, madame, at the precipices, and turn the arête rather quickly.' I had made my mind up against surprises, for I knew the ascent of this mountain meant meeting a series of precipices in all directions. Making two long leaps, I stood in his place on the arête, while he moved on a step or two. And what an arête! a foot and a half wide at most, and completely ice-glazed at this hour.

"While as moral support the snow-wall fell to the right, to the left sank a much deeper, seemingly endless precipice filled with the gloom and warning such abysses possess, before sunlight has turned their yawning depths into mountain tangibility. Giving only a glance at this demoniac chasm, we moved on slowly but sharply heavenward. Step-cutting soon began in deadly earnest.

"'C'est beau, n'est-ce pas?' said the guide after twenty minutes, stopping to take breath, with one foot in an ice-step, the other dangling in the air.

"'Peut-être pour un Chamois,' I replied. Ever upward we went, *sempre avanti*, the shoulder never widening, but growing

sharper, and the side-precipices deepening until they appeared lost in a bottomless pit or the root of the mountain."

The top was reached, and the labour rewarded by what appeared to be the most beautiful and comprehensive view in the Himalaya. Eventually the Hispar pass was crossed, and the explorers returned by the Biafo glacier to Srinagar.

Chap. XII., respecting the height of Mount Huascaran in the Andes, has nothing to do with the rest of the book, and is introduced apparently to show that its lower summit, "ascended by Miss Peck, is some 1,500 feet lower than the highest altitude attained by Mrs. Bullock Workman."

An interesting comparison between the glaciers of the Himalaya and those of the Alps is made by Drs. Calciati and Koneza. What struck them most was the enormous size of the former:—

"The Aletsch is but a small thing compared with the Hispar-Biafo. The classical Grindelwald glaciers at most compare with the main tributaries.

"Moraines, torrents, and erratics are equally gigantic. Here, as for all Himalayan glaciers, the lower section is buried under a layer of granite moraine a few metres thick. On the whole, it compares with the Norwegian fjords. The horizontal surface of the sea is fairly well represented by the apparently motionless surface of the ice, and the slopes on each side have a similar upright profile."

A word must be said in praise of the illustrations: the portrait of the authors (p. 4) is excellent; the view of Nanga Parbat (p. 10) is most artistic; and, indeed, all are meritorious, though in some the rock is shown of an exaggerated blackness which rather detracts from pictorial effect.

OUR LIBRARY TABLE.

The Geology of Building Stones. By J. Allen Howe. (Arnold.)—As the technological literature of this country is but poor in works on building stones, Mr. Howe's well-written volume, which forms part of "Arnold's Geological Series," is decidedly welcome. The author, as Curator of the Museum of Practical Geology in Jermyn Street, has official custody of the fine collection of building and ornamental stones which is exhibited there—a collection not infrequently consulted by architects and surveyors, builders and engineers.

Mr. Howe deals more or less fully with all the stones commonly used for constructive purposes, though naturally enough his selection of materials for detailed notice is for the most part British. About these materials he offers much useful information: he has something to say about their mineralogical constitution, their chemical and physical characters, their geological relations and mode of occurrence; nor does he omit to specify in most cases the buildings in which they have been used. In an interesting chapter the author traces the action of the various natural agencies—chemical, mechanical, and organic—which are ever silently at work in bringing about the decay of exposed stonework; but here we miss, unfortunately, any reference to the

methods that have been used from time to time for the preservation of stone, such, for instance, as the ingenious process of Sir Arthur Church. It must be admitted, however, that these methods are chemical, whilst the work before us is professedly devoted to stones in their geological relations.

The last chapter of Mr. Howe's volume introduces the reader to the methods of testing building stones, as carried out at the Charlottenburg Institute at Berlin and elsewhere. After all, it may be doubted whether elaborate physical tests and chemical analyses, though of great scientific interest, are of much practical value to the architect: at any rate, such tests are usually conducted under conditions that may not unfairly be described as more or less unnatural.

The Great White North: the Story of Polar Exploration from the Earliest Times to the Discovery of the Pole. By Helen S. Wright. (New York, the Macmillan Company.)—The author of this book seems from her subtitle to have forgotten that there is more than one Pole—a mistake not unnatural, perhaps, to an American, but impossible for "Britishers." As a record of thrilling adventures and achievements in the White North, her book is an excellent compilation, lucid and comprehensive, though not free from minor errors; she has not, however, written an exhaustive history of Arctic discovery, for she shows little grasp of the Scientific problems which have confronted, and still confront, the Arctic explorer. For instance, in telling the story of the Jeannette she has not a word to say of the warm current supposed to set northward through Behring Strait, which led to the adoption of that route. Nor does she lay much stress on the gradual improvement in methods and equipment which has alone rendered the attainment of the Pole possible. Her chief interest is in exploits of strength and endurance, in sufferings patiently and heroically borne; and her presentation of this aspect of Arctic work should be popular, if only because few fields of human endeavour have been more rich in tragic incident, and in the noble deeds of self-sacrifice that dignify our nature. She is occasionally hazy on small points of geography; and her volume would be improved by a map on a larger scale, or still more by sectional maps of the Arctic area. It is unfortunate, too, that there is no bibliography; for the chief value of this kind of book is in sending the reader to the original authorities, from which quotations are here freely made, but without references. The illustrations, many of which are from old engravings, are well reproduced, but the list of them is not complete.

SOCIETIES.

FOLK-LORE.—Dec. 24.—Miss C. S. Burne, President, in the chair.—Mr. W. Crooke read a paper entitled 'King Midas and his Ass's Ears.' Mr. Crooke said that the story occurred in different parts of the world, and gave Celtic variants from Ireland, Wales, and Brittany, and other versions from Asia Minor, Morocco, Portugal, India, &c. In the greater number of these cases the secret of the king's deformity is betrayed by a flute or other instrument which tells the tale whenever it is played. The difficulty of keeping a secret forms the central theme of all the tales, the confidential servant of the king or his barber becoming so ill on account of the possession of the secret that he is finally obliged to divulge it to a hole in the ground. Reeds afterwards grow out of the hole, and it is from these reeds that the tell-tale flute is cut. In what Mr. Crooke considers to be the most primitive form of the myth, however, the king's barbers are put

to death immediately after they have shaved the king, and a tree from which the flute is cut grows over their graves—the tree, and hence the flute cut from it, being thus represented as the spirit of the murdered man. Mr. Crooke suggested that the myth started in the region of the Eastern Ægean, and spread thence over Europe and Asia. He produced evidence of the existence of horse and ass cults in the Mediterranean, and of the priest-king as a feature of the social and religious life of Asia Minor, and thought that the myth arose out of a misunderstanding of that primitive ritual according to which worshippers dressed themselves in the skins of animals.—Miss Hull, Dr. Gaster, and others took part in the discussion which followed the paper.

Mr. Edward Lovett then exhibited and explained a large collection of charms and other objects of folk-lore interest which he had made during the year in Devonshire. Among the many objects shown should be mentioned two hearts stuck with pins, made for Mr. Lovett by an old woman who formerly practised as a witch; some stone toothache charms (with parallels, including the exact geological formation, from Belgium), and a series of amulets given to sailors to preserve them from shipwreck.

FARADAY.—Dec. 13.—Mr. F. W. Harbord in the chair.—Mr. James Swinburne, President, read a paper entitled 'Separation of Oxygen by Cold.'—A paper on 'A New Apparatus for the Rapid Electro-Analytical Determination of Metals: a Glass-Frame Anode for use with Silver and Nickel Cathodes,' was communicated by Dr. H. J. S. Sand and Mr. W. M. Smalley.

MEETINGS NEXT WEEK.

Ramsay; 'The Charges on Ions in Gases, and some Effects that influence the Motion of Negative Ions,' Prof. J. S. Townsend; and other Papers. |
| — | London Institution, 6.—'Cretan Discoveries,' Mr. D. G. Hogarth. |
| — | Institution of Electrical Engineers, 8.—Discussion on 'Submarine Cables for Long Distance Telephone Circuits.' |
| FRI. | Astronomical, 5. |

Science Gossip.

MESSRS. MACMILLAN'S announcements in science include 'Man and Beast in Eastern Ethiopia,' by Mr. J. Bland-Sutton; 'The Baganda: a General Survey of their Country, Life, and Customs,' by the Rev. John Roscoe; and 'The Naga Tribes of Manipur,' by Mr. T. C. Hodson.

MR. F. W. F. FLETCHER is publishing with the same firm 'Sport in the Nilgiris,' and Dr. J. D. Falconer a book on the 'Geology and Geography of Northern Nigeria.'

NEXT Wednesday the Mathematical Association will hold its annual meeting at the London Day Training College, Southampton Row, and on the same day the Association, and that of Public School Science Masters, will join in a dinner at the Criterion Restaurant.

THE REV. T. H. E. C. ESPIN detected a Nova (stated to be at the time of the eighth magnitude) in the constellation Lacerta at his observatory at Tow Law (co. Durham)

on the 30th ult. He telegraphed his discovery to the Astronomer Royal, and a photograph of the star was obtained at Greenwich the same night.

A SERIES of articles is appearing in the *Rivista di Astronomia* (the organ of the Italian Astronomical Society) on the Italian observatories. No. 10 of the fourth annual volume gives an interesting history, by Signor Loviselmi, of that at the Collegio Romano. That number has also an article (with drawings) on Halley's comet by Signor Mazzini of the Ximenian Observatory; and one on 'Newton at Cambridge' by Signor Spranger, illustrated with a portrait and a view of his rooms at Trinity College.

THAT useful work of reference, M. Flammarion's *Annuaire Astronomique*, has appeared for 1911, and is replete with information, containing also reviews of astronomy and meteorology during the past year, and several special articles of interest.

FINE ARTS

The Dawn of Mediterranean Civilisation. By Angelo Mosso. Translated by Marian C. Harrison. (Fisher Unwin.)

IN this ambitious volume Prof. Mosso not only proposes to give the actual results of his own and other scholars' excavations in various Mediterranean lands; he also claims to have laid before us a picture of the life and manners—nay, even the religious and moral sentiments—of the race or races that inhabited the great area comprising Northern Africa and Asia Minor (at least near their coasts), Greece, Italy, and the coasts of Southern France and Spain. Perhaps this catalogue has narrowed his limits, but it is wide enough to excite not a little astonishment. For according to this author all the civilization in these lands was at one time homogeneous, and it was all anterior to the arrival of the Semites and the Aryans in Europe. We used to think that the people of Europe were savages till the enlightened sons of Shem and Japhet brought better arts, higher languages, and many practical discoveries from their homes somewhere in Asia or Northern Europe. But now, chiefly owing to the discoveries of Dr. Arthur Evans in Crete, our views have been remodelled, and all honest inquirers will agree that the invading races, who have stamped their languages on Arabia, Palestine, Syria, and most of Europe, were not the originators of European civilization, but found a great deal to learn from their predecessors in Mediterranean lands. Where did these earlier races come from? Probably from nowhere. As they were there from Neolithic, possibly from Palæolithic times, it is possible that they were *autochthones* in the strict sense of the word. For we will not subscribe to the opinion (or perhaps only the phrase) of Prof. Mosso, that they "brought with them" this or

that industry from somewhere else. It also seems certain that these peoples discovered navigation very early, and consequently that a brisk trade sprang up between all these coasts and islands, so that the industries of the one were bartered for those of the others in every direction. Hence perhaps arises the general sameness in the character of the remains now unearthed from many tombs and kitchen-middens.

We think our author has gone beyond his evidence in asserting any identity of race among all these various societies or groups of people. In similar conditions primitive men make similar tools, weapons, and ornaments; and if their materials are similar, these common attempts to supply the same wants lead to strange uniformities even in elaborate details. The boat, for example, of the Solomon Islander in the far Pacific is made exactly on the lines we see in the rude pictures in Egypt or Crete; and now we learn that both used alike the ornament of a bird or beast on the high point of the prow. The *pintaderas* from Mexico for printing patterns on the human body the author himself adduces as a parallel. The case is clear in pottery, where not only the same material, the same forms, but very similar designs are used all over the world. We do not suppose that for such reasons our author would assert the common origin of the Fijians and the Cretans. As for hand-made pottery, it seems to be nearly the same everywhere; and if there were such work still produced in the Greek islands (and there was lately), it would be exactly like what was made 5,000 years ago in the same and other places. Thus the Nubian women about Wadi-Halfa now make baskets of Halfa grass which can be exactly matched in form and coloured design from the Pyramid tombs. The natives of the islands off the west coast of Ireland make beehive houses for their cattle exactly as their ancestors made them in prehistoric times.

This is a very different estimate of our evidence from that of Prof. Mosso. He thinks the old Mediterranean culture so advanced that he will hardly allow the Aryans and Semites any credit except for having learnt from their unwilling hosts, and he thinks they even helped to destroy much antique and splendid culture. As far as the palaces at Cnossus are concerned, there is no doubt that they were full of fine things, and what ignorant people would call barbaric splendour. There is also evidence (as at Troy) that this splendour came to a violent end by conflagration, which we assume to have followed capture by bitter or barbarous enemies. But both the origin and the duration of this civilization are matters, so far, of mere conjecture, and when our author assumes as fixed a date of 1400 or 1700 B.C. because Sophus Müller or Montelius has said so, he is arguing on a basis that not even these eminent men would consider trustworthy. In spite of his interesting researches and wide learning,

he seems to us lacking in a knowledge of common logic—in fact, of the nature of an argument—and a perception of what is sound and what is fallacious.

We will give a few examples: "The cemetery discovered near Knossos by Dr. Evans has taught us the *beliefs* and the funeral rites of the Minoan people." It has not taught one definite belief by which they can be distinguished from other primitive people. But Prof. Mosso says in vindication of his position (p. 169): "That a terra-cotta figure, &c., had been placed on the altar to preserve the memory of their act of devotion is *proved* by the position of a figure turning its head to one side to contemplate the symbol of the divinity beside her." This is only one of a dozen conjectures which might be made concerning this very rude figure and its attitude. "No other religion of Antiquity rose to greater heights in the realm of *mental abstraction*, no so early people ever had, so far as we know, *a more ideal and purer religion*." What proof does he give for this bold statement? Nothing but negatives: "no temples, no fetishes, no anthropomorphism, no animal worship." Even if this were certain, it would afford no proof that the race did not practise human sacrifices; and who can tell that many of the clay images we have found are not fetishes? We find more deduction in this passage which seems no better. After such speculations we are not surprised at the following: "Dædalos, the celebrated architect and sculptor of Crete, built a temple at Cumæ, and therefore we must allow that when the Hellenes came there 1,000 years before Christ, the Gulf of Naples was already an important commercial station." What evidence does he cite? Only Virgil, 'Æneid,' vi. 14! The evidence for the early date of Cumæ is also poor, being founded, we may tell him, merely on the statement of Ephorus, a patriotic historian of the Asianic Cyme.

We could give a dozen more examples of this loose thinking, but the above must suffice. It is much more interesting to consider how far this undoubtedly old and even artificial civilization merged, or did not merge, into early Greek and Roman culture. From what we now know, it would seem that "Homer" felt Troy and the Trojans to be something ethnically different from the Greeks. They meet and fight and trade together as people of equal culture—nay, the wealth and refinement of Ilium are described as greater than those of the Greeks; yet there is a clear difference. In this case the 'Iliad' may represent one of the many conflicts by which the newer race destroyed the early Mediterranean culture; for we may assume Ilium to have possessed such. But then what about Mycenæ and Tiryns? For Tiryns especially must surely be classed among the Minoan cities, and perhaps also Mycenæ, yet the latter is spoken of as the very centre of the Hellenic power, and the home of the most cultivated Greeks. Here at least one culture seems to have passed into the other

so long before Homer that these cities of the Argolid differ widely in most respects, except perhaps in their architecture, from the sacred Ilium. We long to know in the same connexion what the Tyrians found at Carthage, whether there also they did not find an old Minoan city, which they first destroyed, and then reconstructed. For, if Prof. Mosso be right, it is rather to Africa than to Asia that we must look for the origins of European civilization. He will not admit that the Egyptians ever came from Asia, because of the shape of their heads. The general similarity of Egyptian pronouns and numerals to those of the Semites affords, however, arguments which have persuaded many that the author of Genesis x. is right, and that Hamites came from Mesopotamia in vastly remote ages.

But be that as it may, it seems really established, in spite of much loose thinking, that Aryan and Semitic culture were not brought to savages, but introduced to an earlier race or races which had already progressed a long way in the arts and the use of metals. The only nationalities that remain in Europe in historic times of which we can say that they were neither Aryan nor Semitic are the Etruscans in Italy, the Basques in Southern France, and the Finns (discounting such modern invaders as Hungarians and Turks). But the Etruscan language has hitherto resisted all our efforts to decipher it, and whether the considerable specimens of more than one script found in Crete will ever be read seems very uncertain. Our principal chance, as Prof. Mosso points out, is a bilingual text of Egyptian and Cretan. There have also recently appeared some traces of a non-Aryan language in Lemnian inscriptions. But until these riddles are solved, all attempts at giving a sketch of the ideas and feelings of the Minoan people must be inadequate.

Nevertheless, we would not be considered for one moment to undervalue the vast collection of facts which the author has provided. When he speaks of dolmens as evidence of races, and we find dolmens all through Europe, and finest in Ireland and the Orkneys, we begin to wonder how far a single race can reach, even in its influence. Or shall we not hold that in Palæolithic days the human race developed on similar lines in many far-apart regions of the globe? Such are some of the suggestions of this interesting book.

OUR LIBRARY TABLE.

Notes on the Post-Impressionist Painters. Grafton Galleries, 1910-11. By C. J. Holmes. (P. Leo Warner.)—It is greatly to the credit of Prof. Holmes that, in spite of an official position, he has not hesitated to express his favourable opinion of "the revolutionaries." These notes are the weighty judgments of a powerful, cultivated, but somewhat uninspired mind: in the case of one artist—Cézanne—they are, we think, certainly wrong; as regards the others, inconclusive. Prof. Holmes is so strong in technical

criticism that he tends to neglect that to which technique is a means. He sees that simple linear design and flat colouring can produce, and generally do produce, more beautiful patterns than elaborate modelling and chiaroscuro; but, if he imagines that the Post-Impressionists adopted their peculiar technique to make beautiful patterns, he mistakes. They adopted it because they felt that, so long as painters continued to show their cleverness by creating illusions of reality, they would never express anything worth expressing. No poet whose reading of life was limited to something of this sort,

Three ducks on a pond,
And a field beyond
With poppies and corn—
Lo! The Autumn is born,

would be tolerated for long, no matter how cleverly he said it. Yet this is what thousands of painters have been saying, and have been encouraged to say, for the last four hundred years. Amongst the many services rendered to art by the Post-Impressionists, the greatest is this—they have insisted on painters, like other artists, using their minds as well as their fingers. They have promoted painting from the menial office of providing handsome furniture for the dining-room and pretty knick-knacks for the boudoir. Also they have shown those who are neither great artists nor great craftsmen that, if, instead of imitating the work of their predecessors, they will try honestly to express what they feel about life, they may well do something of considerable interest.

Prof. Holmes has hardly realized the full significance of this revolution; but what he has to say is so sensible and so well expressed that all who hope to profit by the movement will be anxious to read his book.

The Picture Printer of the Nineteenth Century, George Baxter, 1804-67. By C. T. Courtney Lewis. (Sampson Low & Co.)—This is, in effect, an enlarged edition of 'George Baxter, Colour Printer: his Life and Work,' which the author published rather more than two years ago, and of which a notice appeared in *The Athenæum* of September 19th, 1908. Whilst Mr. Lewis has been able, in the short interval, to make considerable additions to the story of Baxter's life, and to add to the already long list of plates which he published, we cannot say that our opinion of Baxtertypes has undergone any change. We can well believe the author's assertion that "the labours of George Baxter are daily interesting an ever-increasing circle," for which, there can be little doubt, Mr. Lewis is himself responsible, as he placed the whole study on a firm basis. The author's pen-portrait of Baxter "as a man" is not very pleasant, for his hero quarrelled with his own and his wife's relations, and with many of those whom he met in the course of business; he died "a financial failure" and "an undischarged bankrupt," largely as the result of his lack of business ability.

Mr. Lewis would seem to have exhausted the subject of Baxter prints; but there are some details of which he is apparently unaware. The portrait of Jenny Lind (No. 218) by "H. Gubbins" is doubtless the miniature which Miss H. Gubbins exhibited at the Royal Academy of 1849, as "a sketch from recollection of Jenny Lind at Leamington." The Reynolds portrait of Edmund Burke "as a boy with long hair" (No. 223) will not bear analyzing: it certainly cannot represent the great orator, and is probably the portrait of his only son Richard, who sat to Sir Joshua in

1767. The painter of the two really fine portraits of Mr. and Mrs. Chubb (No. 231) could probably have been ascertained from the present head of the family. The 'Christmas Time' (No. 261) "after a painting by Fitzgerald" is probably the picture of 'Christmas' exhibited at the Royal Academy of 1858, No. 900, by John Austen Fitzgerald. With reference to Baxter's successful pair of 'The Reception of the Rev. J. Williams at Tanna' and 'The Massacre' (Nos. 82a and 82b), Mr. Lewis will find in *The Art Union* of May, 1841, an advertisement announcing that this pair "shortly will be publicly published," the prints at 1l. 5s. each, and the proofs at 1l. 11s. 6d. each. From a passage in *The Christian Examiner* for April of the same year we gather that "the sum of fifty guineas, as a kind of 'first fruits,' has already been generously presented by Mr. Baxter—an act just as honourable to him as a man, as his pictures are creditable to him as an artist."

Mr. Lewis's portly volume is handsomely got-up and generously provided with reproductions in colour, as well as many in black.

THE only thing that can be urged against the *Fifth Book of Pilgrimages to Old Homes*, by Fletcher Moss, published by the author from his home The Old Parsonage, Didsbury, is the weight of the volume, due to the use of the paper for the illustrations. When these, however, are so excellent as they are in these pages, the complaint is of no moment. The 212 pictures show the admirable taste of an accomplished lover of old things, with a keen eye for the survivals which savour of earlier days. As his own publisher, Mr. Moss has been at a disadvantage in making his books known, but they have by now fairly made their way among those who appreciate a good thing. The author's style is all his own, unconventional and delightfully humorous. He is no longer young in years, but essentially youthful in spirit, and keen to appreciate the humours of the country as well as its old houses.

In the pages before us he includes accounts of the Plowdens of Plowden in a Crusader's home, the Roman Wall from Newcastle to Carlisle, many beauties of obscure parts of Wales, Temple Newsam with 600 years of history, the Crewes of Crew Hall, and 'Some Family Relics' which are well worth treasuring. We hope there will be yet further series of so attractive a work, for Mr. Moss lends freshness even to familiar districts like those of Hexham and Naworth Castle.

Britain B.C. as described in Classical Writings. By Henry Sharpe. (Williams & Norgate.)—This is not an easy book to review. The writer has the merits of sense and lucidity; but he combines them with an almost complete indifference to the more recent literature of his subject, and he frankly confesses that he is not a classical scholar. The two best books on Cæsar's invasions, he tells us, are Mr. Vine's 'Cæsar in Kent' and Mr. Lewin's 'Invasions of Britain by Cæsar.' Of the Greek language he adds: "I have forgotten all I ever knew, and have to trust to translations from that language, which is a drawback." It is, certainly. In consequence of such limitations as these—though not these only—his volume will not be found very helpful by scholars of any sort. Yet it is written with such a straightforward admission of these defects, and so much sense and modesty, that one wishes the author had been fully acquainted with the large literature of a subject which itself is larger than he imagines.

Cyzicus: some Account of the History and Antiquities of that City and of the District adjacent to it, with the Towns of Apollonia, as Rhyndacum, Miletupolis, Hadrianutherae, Priapus, Zeleia, &c. By F. W. Hasluck. (Cambridge University Press.)—In this modest, but very learned and careful monograph Mr. Hasluck has gathered all the material available up to the present about the region south of the Sea of Marmora, where Cyzicus was once a flourishing commercial centre. He has not even contented himself with its classical history, but has followed it down through Byzantine and Turkish times. So far as we have been able to verify his statements, we find nothing inaccurate or careless. We cannot, however, but lament that the outcome is so small, and that he has been able to find so little that is distinctive in the life of this great city. Its similarity to Rhodes externally does not seem to have made it anything like so interesting as that famous city. Its position in a nook off the Bosphorus and the Euxine made it safe from the returning 10,000 under Xenophon, whose adventures at the end of his famous retreat are so interesting regarding the Southern Euxine. It was not far from the battle on the Granicus, which was one of the most important of ancient times, yet Mr. Hasluck, who describes the course of the river and gives good maps, does not condescend to make any digression on this most striking passage in Greek history. A few years ago we read in *Olio* a masterly article on its tactics. We should have also preferred a few actual inscriptions to the immense catalogue he gives of those found, which we must seek in various collections. But these are only regrets, not criticisms. We cordially congratulate Mr. Hasluck on his work.

THE WINTER EXHIBITION AT THE ROYAL ACADEMY.

OF the five deceased painters whose work is represented at Burlington House, it is Orchardson who is shown keeping most constantly to his own high-water mark of success. Most accurately for purposes of individual achievement, he took his own measure, gauging how much of the experience of others he could assimilate, and how much independent inquiry he could unite with it in the short span of a single life. Swan had not so just an estimate of inevitable limitations, or rather, belonging to a slightly later generation, and brought up in the freer atmosphere of Continental studios, he had to bear the full brunt of the modern spirit which questions the validity of every tradition. It was thus impossible for him, like Orchardson, to visualize habitually in terms of an inherited technical method; research was in the air, so that most of his life as a painter was spent in questioning Nature, with admirable modesty and sincerity, for some suggestion of how her charms might be summed up in paint. He never pressed unduly for an answer, but remained tentative—experimental, full of respect for the robe of mysterious atmosphere in which the goddess draped herself. Doubtless the influence of Matthew Maris (whose portrait by his friend appears on the walls) confirmed Swan in the tendency to fumble over the surface of a picture which grew upon him in later years. We do not deny the delicate charm of some of these pictures, but if genius be, as defined by Mr. Sickert, "the instinct for self-preservation in a talent," then his genius deserted Swan

when he threw over Courbet's example for that of Matthew Maris.

The *Leopard Wounded* (33), hanging from the branch of a tree against a background of luxuriant forest growth, is now exhibited, we believe, for the first time in England, and shows Swan's painting at an unexampled pitch of virility. We see how splendidly adapted is Courbet's method of building up a picture from dark to light (modelling as much by weight of pigment as by mixture of pigments) for realizing the plastic conceptions of an artist whose knowledge of animal structure is admirably displayed in his superb drawings from life, but as a rule is inadequately utilized for purposes of painting. Here for once we see the structure of the paint based frankly on the structure of the things represented, and we have a powerful design, compact of the essentials of nature, beside which every other picture in the room looks weak pictorially and trifling as an interpretation of life. The intimacy of rendering of light, which is the strength of Matthew Maris, has never quite the same genuineness with Swan, who dealt with subjects which obviously could not really offer him the prolonged opportunities of study needed. His election, too, to the Academy came at an inopportune moment, in that it probably blinded the painter to the false delicacy of his later pictures by showing them always in a *milieu* which made them look by comparison sincere and thorough. This may explain the inferiority of the *Nymphs Bathing* (16) to the *Piping Fisherboy* (2) of 1890 or earlier. In his later pictures the painter sank often to the devotion to "quality" in detail typical of British painting of the end of the nineteenth century. Careful that no passage of line should be unmodulated and no square inch of surface lack gradation, he gradually in his oil paintings lost his hold on form, till the pupil of Gérôme became guilty of shockingly loose draughtsmanship.

As a modeller Swan was on the whole more fortunate, though here, again, he was too sensitive to the influences around him to be able to resist the recent fashion for picturesque and "atmospheric" modelling. He was not as a rule severely sculptural, but such works as the little *Bacchus* (187) or the *Orpheus* group (173) show a considerable power of graceful plastic design. The figure of Orpheus is in detail poor, but that is a minor fault in a work expressing so much of the rhythm of movement. On the other hand, unnumbered drawings of animals attest Swan's supreme sensitiveness to subtlety of form when brain and hand were in a purely receptive condition, accepting whatever momentary observation offered. In this admittedly lower plane of artistic achievement he has probably never been surpassed. We may cite Nos. 128 and 175 as very fine examples. No 164 is a drawing of a different kind, an impressive composition for painting of a more massive sort than he ultimately chose to practise.

If Swan may be described as an artist who never really matured, never gathered together the results of his "tâtonnements" this way and that, Macbeth, on the other hand, arrived almost immediately at a complete solution of all the problems he set himself, and spent the rest of his life in genial decadence. The kinship of his method with that of Orchardson is evident. Neither was allured for a moment by modern examples from the traditional Scottish technique, handed down, probably, from Rubens its originator. Macbeth was influenced (principally for ill) by Walker, who confirmed him in his complacent practice of planting an overmodelled painting upon a design conceived purely as line: in Orchardson we may

see slight traces of the example of Millais (68, 84, and 99), and perhaps of Whistler in the fine portrait of *Mrs. Pettie* (87); but in each case it is transitory, though advantageous while it lasts. Virtually, however, the two painters are of the same school, and, like Macbeth, Orchardson came early into his kingdom, being almost at the first master of a domain in which he moved at will. He became, however, more and more exacting in his standards, so that its full exploration sufficed to keep his powers healthily on the stretch all his life. He seemed, except for a few pictures, always in his prime. Swan gave evidence, perhaps, of more general culture, but hardly ever achieved the compact, well-rounded performance which with Orchardson was the rule.

Devotees of the latest fashion in art, whatever it may be, may instructively compare Frith's *Pope and Lady Wortley Montagu* (54) with certain interiors recently exhibited by our younger painters of the New English Art Club. The whirligig of time is complete, and the resemblance striking. This is an unusually fine example of the painter, but in No. 35, No. 37, and even in No. 42, each passage is brushed in with admirable decision and technical solidity. Frith's treatment of the third dimension is detestable, and his pictures will certainly never return to the exaggerated esteem they for a time enjoyed; but, like all works of real quality, they are sure of a modest appreciation now that the generation capable of producing such things is passed. Much modern work is entitled to a like esteem, and to refuse it is as unjust as it would be to appraise it as fantastically as Frith's work was appraised at its apogee. D. Farquharson's *Full Moon and Springtide* (115) is an unusually strong picture by a painter whose talent rarely emerged into anything so definite and characteristic.

While we have thus given to some extent in detail our impression of the relative merits of these painters of yesterday, it cannot be denied that the outstanding impression is not one of difference but of similarity. Far more than one would have expected, they seem to share a common nineteenth-century ideal of picture-making, and we realize that the livelier among tomorrow's painters will none of them express themselves in the same mode. They will aim at greater intensity and conciseness of expression, and Orchardson's designs will appear "overtrimmed" with detail decoratively extraneous, and even as illustrations they may be judged diffuse. As in most artistic movements, we may look forward to considerable excesses. Already there is a section of critical opinion which contemplates as a "necessity" the throwing-over, in Mr. Roger Fry's words, of all "the machinery of the Renaissance," and a return to the simple life. So we have seen nervous students get their study into a muddle, and run in panic to another canvas, to make the same mistakes all over again. Doubtless the later development of painting has largely forgotten its function of expression, and sunk to that of representation; but much of the "machinery" of Renaissance painting was invented for purposes of abstract expressiveness, and highly adapted for that purpose. Shorn of these means, we are indeed speechless. It seems more reasonable to go back to the point at which the heresy of realism began, and discriminate, even at the cost of some intellectual effort, between the right and wrong use of the means at our disposal, rather than to throw our wealth away for fear of spending it ill. To do this is not the same thing as blindly to follow a decadent mode. We are reminded of Swift's tale of certain coats, in which instance also wisdom was attributed to the middle way.

OTHER EXHIBITIONS.

At the Fine-Art Society's Gallery the exhibition of Mr. Brangwyn's work has been reinforced by a considerable number of fresh drawings, many of which are more beautiful than the clever, but rather sensational series of "Earthquake pictures" which we noticed in a recent issue. *Nature's Temple, Longpré*, a dignified design of quiet colour, is perhaps the best. Mr. Egerton Hine's series of water-colours are somewhat commonplace, but exhibit some technical accomplishment, most noticeable in Nos. 40 and 67.

At the Baillie Gallery the exhibition of work by Mr. W. J. Leech is the first collected show of an artist whose work we have several times favourably noticed in mixed exhibitions. He displays a sure eye for natural colour, and a taste for massive disposition of its main elements, which offer promise for fine work when he has acquired greater insight into plastic design. At present his use of form is rather a passive acceptance of what Nature offers, without even any very great cleverness in selecting a pattern. No. 2, with the rather futile title *Waving Things*, is the finest work in the show, but the pair of studies of nets (4 and 19) are well placed on the canvas. *A Little White Island* (35) is an excellent small picture; and there are numerous small notes of colour (34, 37, 38, 41, 42) charming in their delicacy.

The water-colours of Mr. William A. Wildman in the same Gallery are not unlike those we have just mentioned—their notation of colour-relations is not quite so unerring, but they display rather more aptitude, or else more care for composition. Nos. 7, 17, and 21 are among the best.

Fine Art Gossip.

WE congratulate the following gentlemen, well known to the world of the artist and the antiquary, on their knighthoods: Mr. Sidney Colvin, Mr. George Frederic Warner, and Mr. George Laurence Gomme.

THE January number of *The Burlington Magazine* is illumined by a special colour frontispiece, representing the portrait of Leonello d'Este by Roger Van der Weyden, now in the possession of Messrs. Colnaghi. This painting is interesting not only as a perfect example of Van der Weyden's handling, but also as combining two widely different associations—Netherlandish art and the culture of the Italian Renaissance. The subject is fully discussed by Mr. Roger Fry.

ANOTHER interesting feature is the championing of the Post-Impressionists by Mr. Clutton Brock. Mr. Borenius writes on a 'Sacra Conversazione' at the Hermitage, and M. Paul Lafond on the ox-yokes of Portugal; while among other contributors are Sir Martin Conway, Mr. Lionel Cust, and M. Van der Put.

THE "editorial" with which the magazine opens has some very sensible suggestions concerning the memorial statue of King Edward.

THE death is announced, at the age of 83, of M. Gustave Colin, who was one of the first to discover the artistic possibilities of the "pays basque." He studied art with Couture, and was a member of the Barbizon School, concerning which he recently contributed some interesting memoirs and studies

to the *Revue Bleue*. The Luxembourg contains some of the works of his earliest manner. In later years he resided chiefly in the Basque country.

IN addition to M. Colin, French art in various departments has suffered considerably during the last fortnight. The well-known sculptor M. Eugène Jean Boverie, who died at the early age of 40, had exhibited at the Salon since 1893. His best-known public monument is that of Camille Desmoulins in the Palais Royal. M. Paul Lucas, who is dead at the age of 80, was a painter of note in his day, and a member of the Société des Artistes Français. M. Ernest Paul Brigot, who was born in 1836, had exhibited landscape and still-life subjects at the Salon since 1863. M. Édouard Lœvy was a well-known book-illustrator, and executed a great number of miniature portraits for the biographical notices in 'Larousse Illustré': M. Lœvy was 53 years of age.

ONE of the best known of French collectors, M. Adolphe Schloss, died on Friday night in last week at his house in the Avenue Henri Martin. M. Schloss, who was a wealthy merchant, was not much over 60 years of age, but for about a half of his life was a keen collector of old masters, chiefly Dutch and Flemish, for which he only recently erected a fine gallery at his residence. His collection comprises about 300 pictures, among which are examples of many rare and little-known artists, selected with excellent judgment. It is almost certain that the collection will be sold in Paris during the ensuing season.

AN important memorial exhibition is being held at the Boston Museum of Fine Arts of the works of the late John La Farge, and comprises oil paintings, water-colour drawings, and work in stained glass. A similar exhibition of works by Winslow Homer will be held at the same place during the present month.

IN the series "Musei e Gallerie d'Italia," published in Rome, a well-illustrated little volume has recently appeared on the 'Accademia di San Luca,' by the painter Signor Aristide Sartorio, this being the first book worthy of note dealing with the collection. The writer corrects many current attributions, and refers to numerous important pictures which are still hidden away in the attics or otherwise inaccessible to the public. The Gallery is now one of the most neglected of all the Roman collections, but Signor Sartorio's book may serve to direct more attention to it.

DR. HELMUTH BOSSERT, writing in the last number of the *Monatshefte*, ascribes three paintings belonging to Prince Waldburg at Schloss Wolfegg to Hans Multscher on the strength of their close connexion with Multscher's only thoroughly authenticated paintings, the eight panels of the altarpiece in the Kaiser-Friedrich Museum at Berlin, dating from 1437. The pictures at Wolfegg—two scenes from the legend of the Holy Cross, with the Entombment on the reverse (the last-named almost ruined by repainting)—once formed the shutter (probably the right) of a large altarpiece. The left shutter, now missing, would have contained two more scenes from the legend of the Holy Cross, and possibly the Crucifixion as the pendant to the Entombment. The central compartment, which is also missing, may have been a plastic composition, as in the Sterzinger altarpiece, the paintings of which were once ascribed to Multscher, but are now regarded as due to an anonymous master. In date the Wolfegg pictures

belong to a later period than the Berlin altarpiece, and the writer places them about 1445. It is interesting to learn that the Berlin altarpiece also came originally from the Waldburg family (namely, from the Wurzach branch); it was brought to London, and sold there in 1803.

DR. BOSSERT, it may be noted, has recently proved that Konrad Witz was a sculptor as well as a painter, a view which has now been accepted in the last edition (1910) of the official catalogue of the Basle Museum; and there is no doubt that Hans Multscher, who is principally known by his plastic works, was also a painter.

THE death of Mr. Joseph Bishop Pratt on December 23rd, at the age of 57, removes one of the small remaining band of English mezzotint engravers. Mr. Pratt was apprenticed at the age of 15 to David Lucas. His first commission was a plate after Samuel Carter's 'Maternal Affection,' which led to many other engagements on the work of Landseer, Rosa Bonheur, Briton Rivière, Peter Graham, and other artists. In 1896 he engraved a Raeburn and a Lawrence for Messrs. Agnew, the success of which led to constant commissions from the firm up to the time of his death.

POSSESSORS of Vol. I. of the Georgian Society publication will be interested to know that a Dublin man has offered 15*l.* for a copy of it. It was issued two years ago to subscribers at a guinea.

THE GOVERNMENT OF ITALY, with the active encouragement of the King, have begun the publication of a work of the highest importance to numismatists, a 'Corpus Nummorum Italicorum,' or a general catalogue of coins of the Middle Ages and modern times struck in Italy or by Italians in other countries.

EXHIBITIONS.

- SAT. (Jan. 7).—The late Miss Sarah Dodson's Paintings, Private View, Goupil Gallery.
— Mr. Arthur Garratt's Pictures of Eton, Private View, Fine-Art Society's Gallery.
— Landscapes in Water-Colour by Artists of the English School, Private View, Leicester Galleries.
— Mr. W. J. Leech's Paintings and Mr. W. Wildman's Water-Colours, Baillie Gallery.
— Mr. R. Little's Landscapes in Water-Colour, Private View, Leicester Galleries.
— Paintings by Modern Artists, Private View, Victoria Gallery.
— Senefelder Club's Second Exhibition of Lithographs, Private View, Goupil Gallery.
— Mr. Walter Sickert's Drawings, Carfax Gallery.
— Miss Rosa Wallis's Water-Colours, 'Flower-Time in Highlands and Lowlands,' Private View, Fine-Art Society's Gallery.

Musical Gossip.

WE congratulate Sir Henry J. Wood on the honour conferred on him. It is sure to meet with general approbation. Early in life he studied at the Royal Academy of Music under the late Prof. Prout, and for a time thought of devoting himself to composition. Several engagements with opera companies proved to him, however, that he would do better to devote his attention to conducting rather than composition. In 1895 Queen's Hall was built, and Mr. Wood was engaged to conduct a series of Promenade Concerts. An opportunity presented itself—a golden one, as it turned out—and there was the man, ready to hand, and with the ability to make the most of it. What he has since accomplished is known to the whole musical world. He has gradually taught the greater public to appreciate, and enjoy works which before his time interested only professional musicians and educated amateurs.

THE CLASSICAL CONCERT SOCIETY announces a series of ten chamber concerts to take place at Bechstein Hall on the following dates: January 11th and 25th, February 1st, 8th, 15th, and 22nd, and March 1st, 8th, 15th, and 22nd. The first, third, fifth, seventh, and ninth will be in the evening, the other five in the afternoon. The programmes are largely devoted to Bach, Mozart, Beethoven, Schubert, Schumann, and Brahms, but it is pleasant to find more modern names in them. At one of the concerts of the last series Max Reger's Quartet in D minor was performed. In the present series we find one concert (the fifth) devoted (with the exception of Isaac Albeniz, represented by two short pianoforte solos) to modern French music. The programme includes Debussy's Quartet in G minor, and César Franck's Pianoforte Quintet in F minor. Moreover, the opening number of the first concert is a Sonata in A minor for pianoforte and 'cello by Emanuel Moór, the Hungarian composer, two of whose short operas have been selected by Miss Marie Brema for her new season at the Savoy. The composer and Señor Casals will be the interpreters. The English and Klingler Quartets have been engaged; and among other instrumental artists may be named Frl. Gabriele Wietrowetz, Miss Marie Motto, Señor Pablo Casals, and the pianists Miss Fanny Davies and Messrs. L. Borwick and Donald F. Tovey.

THE programme of the concert of the New Symphony Orchestra at Queen's Hall on Wednesday evening, the 18th, will be devoted to the music of foreign composers. A first performance will be given of a Symphonic Poem, 'The Mystic Trumpeter,' by Mr. Fred. S. Converse, an American, who has written a Symphony in D minor, and other works for orchestra.

A CONCERT will be given on the 13th inst. at Queen's Hall by the Leeds Philharmonic Chorus and the London Symphony Orchestra under the direction of M. Safonoff, at which will be heard a 'Requiem on the Death of Queen Victoria' and 'The Passing of King Edward,' by Margaret Meredith.

IN the absence of Sir Henry J. Wood, Sir Edward Elgar has consented to conduct the orchestral concert at Queen's Hall on the 16th inst. The programme will include his Violin Concerto in B minor (with Herr Kreisler as soloist), also Beethoven's in D.

AN interview with Mr. Thomas Beecham has been published in which the conductor is stated to have expressed great disappointment at the result of his three seasons of opera last year. It would have been more satisfactory to have received some announcement emanating directly from Mr. Beecham himself, but we have no ground for doubting the correctness of the statements attributed to him. After all the time and money which he has spent, he has discovered that there is "no audience at all for opera"; also that to put on a new opera "is to raise the most deadly danger signal." Perhaps, when Mr. Beecham has had time for reflection, he may find that, though his intentions were very good, his scheme was not altogether free from reproach. Was his method of testing whether the public cared for opera the best? As he knew by experience how little interest the public takes in novelties or unfamiliar works, was it wise to select such operas as 'Le Chemineau' and 'Werther,' or to revive 'Ivanhoe,' which was not truly representative of Sullivan? Would it not have been better to give

all-round good performances, rather than some excellent, and others which in comparison were indifferent?

'ELEKTRA' and 'Salome' drew large audiences, but for this there were two reasons. Special artists were engaged, and further, curiosity attracted many to hear operas about which so much had been written and reported. Producing them was a daring experiment, and it succeeded. Many musicians and amateurs were undoubtedly eager to hear the works. The success, however, was not any real test of the attitude of the general public towards opera.

WE were in sympathy with Mr. Beecham's undertaking from its beginning, and should be glad if it had proved financially successful; moreover, we still hope that he may see his way to attempt another season. Many schemes for national opera have been proposed, but few have the courage and enterprise to get beyond talk.

THE inaugural address at the Twenty-Sixth Annual Conference of the Incorporated Society of Musicians, held at Edinburgh from December 27th to 30th, was delivered by Prof. Niecks. It was entitled 'New Ideas and Ideals of Music Teaching,' and he drew attention to the importance of ear-training, for which, until recently, so little had been done. Mr. Charles Manners, who was unable to be present, contributed a paper on 'National Opera,' which was read by Mr. F. E. Barrett. The subject is not new, neither is Mr. Manners's way of finding the money (by a company and low-priced shares) to establish such an institution; his paper, however, was interesting. Mr. J. A. Rodgers of Sheffield spoke about 'Musical Festivals, their History, Purpose, and Prospects.' With regard to the last named, the fact that nearly all festivals in the country were making less profits, or actually incurring loss, was to him a clear sign that change was necessary. He suggested smaller fees to "star" singers, and reduction in the number of days. We must also mention an interesting paper on 'Spanish Music' by the Rev. Henry Cart de Lafontaine.

THE production of Richard Strauss's 'Rosenkavalier' at Dresden will take place, not on the 25th inst., as originally announced, but on Thursday the 26th.

JOHANN FRANZ WEBER of Bonn has just published the score of a Sinfonia composed by Wilhelm Friedemann Bach for the birthday of Frederick II. Dr. Erich Prieger of Bonn, in a preface full of interesting details concerning W. F. Bach's works in general, and this one in particular, shows that the Sinfonia must have been written between August 29th, 1756, and February 15th, 1763. Dr. Prieger regards it not only as the finest of all the known works of the composer, but also as a work calculated to excite more than antiquarian interest at the present day. The Sinfonia, or Overture, consisting of an Adagio and Allegro, probably formed the introduction to a cantata, the text of which has been preserved.

A PERFORMANCE of Verdi's 'Requiem' will be given in London on the 24th inst. by the Brighton Festival Chorus, under the direction of its founder, Mr. Joseph Sainton.

ON Monday afternoon Madame Edyth Walker made her first appearance at the Palladium. She sang in German, and in costume, the Adriano *scena* from the third act of Wagner's 'Rienzi.' This was delivered with dramatic force, but on the programme

there were no words, either in German or English, to help the large audience to enter into the spirit of a scene from an opera with which most of those present were probably unfamiliar. As an encore Madame Walker gave Sullivan's 'The Lost Chord.'

SIR HUBERT PARRY is publishing with Messrs. Macmillan a book on 'Style in Musical Art.'

MR. JOHN LANE will publish next Tuesday 'The Oldest Music Room in Europe: a Record of an Eighteenth-Century Enterprise at Oxford,' by Dr. John H. Mee, with 25 illustrations. Few people are aware that from the year 1748 Oxford possessed a resident professional orchestra which gave once a week what we should now call "Symphony Concerts."

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	Sunday League Concert, 7, Queen's Hall.
MON.	London Trio, 8.30, Aeolian Hall.
WED.	Classical Concert Society, 8.15, Bechstein Hall.
THURS.	Orchestral Concert for Young People, 3, Steinway Hall.
FRI.	Grand Concert, Leeds Philharmonic Chorus, 8, Queen's Hall.
SAT.	Chappell Ballad Concert, 2.30, Queen's Hall.
—	Mozart Society, 3, Portman Rooms.

DRAMA

Dickens and the Drama. By S. J. Adair Fitz-Gerald. (Chapman & Hall.)—Like all dramatic work of mediocre quality, the few plays from the pen of Dickens age rapidly. It would, indeed, be difficult to find more melancholy testimony to the flight of time and the comparative inspiration of the modern play with lyrics than is supplied by Mr. Fitz-Gerald's comment (p. 59) on 'The Village Coquettes': "Three other songs in the burletta were great favourites, viz., 'Love is not a Feeling to pass away,' 'Autumn Leaves,' and 'There's a Charm in Spring.'" Great as was the histrionic talent of Dickens—he may be regarded as the forerunner of the "quick-change" artist, for when 'Mr. Nightingale's Diary' was performed at Tavistock House in 1855, he played six parts himself, and played them well—he yet lacked the constructive sense which by its presence or absence makes or mars the playwright, as such; and even in the boisterous fun of 'The Lamplighter' we are conscious of an essentially discursive humour, docked as it were, and distorted, by the rigid confinement of the dramatic form. It is, therefore, with the greater pleasure that we turn, as well from 'The Strange Gentleman,' 'No Thoroughfare,' and the rest, as from the records of theatricals, private and otherwise, of which Forster has already told us much, to the numerous stage versions of the novelist's work. With the discussion of these Mr. Fitz-Gerald's valuable and painstaking volume is mainly concerned, and his pages teem with information.

The predatory enterprises of William T. Moncrieff—said to have been the original of the "literary gentleman" in 'Nicholas Nickleby' who had "dramatized in his time two hundred and forty-seven novels as fast as they had come out—some of them faster than they had come out"—play an important part in the earlier pages of this volume; but we doubt if the wildest efforts of that wayward genius could have surpassed 'The Peregrinations of Pickwick' (being the first Pickwickian adaptation), by one William Leman Rede, produced, as we are told, "at the Adelphi Theatre in October,

1836—exactly six months after the first number of the novel appeared!" "Songs are introduced," says Mr. Fitz-Gerald, "and Wallace's 'Killarney' is sung in Act I. by Norah"; while the grand finale represents "a fête at Old Wardle's, with a country dance 'Ceremony of Mistletoe,' and a verse to 'St. Patrick's Day,' with all the company joining in the chorus." In addition to "Norah" we have another mysterious character in "Clutchley," a miser who, when the curtain rises, is "discovered counting his gold"; and Mr. Snodgrass, in consequence of an attempt to import a serious plot from the story of "The Queer Client," is made to inaugurate his "wild career by borrowing money at the rate of twenty-seven per cent. interest."

A still more remarkable production, founded, presumably, on 'David Copperfield,' was that performed at the Oliver Theatre, Lincoln, Canada, in January, 1906, to which Mr. B. W. Matz drew attention at the time in *The Dickensian*. This striking achievement was described as "a Cyclone of Merriment"; numbered among its characters "Hiram Peggotty," "Sheriff Dudley," and "Mrs. Peggotty"; included "Specialities" introduced at a country dance, and a scene in Emily's apartments in Paris; and went by the name of 'What Women Will Do.'

Edward Stirling, stage manager of the City of London Theatre, and a "theatrical adapter" who at one period shared with Moncrieff the Master's displeasure, narrates a poignant story touching a performance of 'Nicholas Nickleby' at Worthing. Owing to parental scruples on the subject of stage plays, the supply of children necessary for the representation of the Dotheboys Hall scholars was not forthcoming; and the production itself stood thereby in some peril. The situation was saved by the inhuman resourcefulness of an eccentric barber, who was also, like Mr. Sweedlepipe, a bird-fancier, and, unlike that artist, a performer on the French horn. He undertook to provide fifty infants for the purpose, and did so in the following manner:—

"Lured from the by-streets and alleys by his horn, like the children in the 'Pied Piper of Hamelin,' the small fry followed him to the theatre yard; once there, Figaro closed the gates upon Mr. Squeers's children. Amidst crying and moaning they were placed on the stage, sitting on benches, and kept in order by Figaro's cane—poor children!—completely bewildered. When the treacle was administered most of them cried. This delighted the audience, thinking it so natural (so it was)."

Notwithstanding the flood of worthless versions which inundated the stage, to the wrathful indignation of Dickens, the popularity of his stories in dramatic form has throughout been considerable, and though to-day far below the level attained on January 11th, 1846, when 'The Cricket on the Hearth' was being played at no fewer than twelve London theatres, shows still indubitable vitality. If proof be desired, let the doubter reflect upon the perennial attraction of 'The Only Way,' Sir Herbert Tree's elaborate presentations of 'Oliver Twist' and 'Edwin Drood,' the popular impersonations of Mr. Bransby Williams, or the fact, ascertained by Mr. Fitz-Gerald on good authority, that 'David Copperfield' in ten tableaux "really will be produced" in Paris at the Odéon, "in May, 1911—perhaps before." Paris contemplates, too, a French version of 'Pickwick,' which, we are told, is "down for production by M. Gémier at the Théâtre Antoine... this year (1910)."

As a conscientious exposition of a fascinating aspect of Dickensian research, the

volume, plentifully illustrated, and diversified with casts and playbills (in facsimile), is worthy of all praise; as a literary contribution to the subject, it leaves something to be desired. The style is slipshod and exclamatory—wavering between the bald and the exuberant—and obscurities are not wanting. Thus of 'Nicholas Nickleby,' played at the Strand Theatre in September, 1885, the author observes: "Smike did not die, but tried to pronounce a 'tag' to the concoction"—a statement which may well bewilder any who are without special knowledge of the piece in question. On the version of the trial scene from 'Pickwick,' described on the programme as "by John Hollingshead and Charles Dickens," given at the Lyceum on December 10th, 1879, we have as sole comment: "The cast was extraordinary." Clumsy, too, is the declaration attributed to Mr. Charles W. Dickens—the novelist's grandson—concerning the site of the "Old Curiosity Shop," that "the Portsmouth Street shop, Lincoln's Inn Fields, was not the place at all, but one simply invented by Dickens"; while on the subject of 'The Battle of Life,' produced by the Keeleys at the Lyceum in 1846, Mr. Fitzgerald pens this complete sentence, duly bounded by full stops: "Mr. Meadows was Mr. Snitchey, with several others." Again, *Punch*, having waxed facetious over the performance of 'Tom Pinch' at the Vaudeville in 1881, and animadverted mildly on the representatives of "Cherry" and "Merry," is here rebuked by our author with a gravity almost sufficient to impugn the whole-heartedness of his Dickensian faith. "Now," he writes, "there are no characters in the play called 'Cherry and Merry.' *Punch* purposely perverted Charity and Mercy, and these parts were most admirably acted," &c. Allusion is made to Mr. Perch "and his prolific progeny"; such a phrase as "the great heart of the palpitating public" (p. 246) might have delighted Dickens himself; and "Procrastes" (p. 285), even if the author be blameless, is a tempting substitute for Procrustes. We would observe in passing that "Mr. Henry Hawkins," afterwards Lord Brampton, was not destined—as stated on p. 25—"to be Lord Chief Justice of England." Misprints are strangely numerous, but, these and other drawbacks notwithstanding, we have derived much enjoyment from the book, and do not doubt that all good Dickensians will do likewise.

Dramatic Gossip.

JUST for a little while the new play at the Globe, written by the Baroness Orczy and Mr. Montague Barstow, authors of 'The Scarlet Pimpernel,' imposes on and puzzles the spectator. 'Beau Brocade,' as it is called, with its highwayman-hero, who is a gallant in the broad light of day and the terror of Brassington Heath by night, seems at first sight to belong to the category of the romance of crime, and the piece appears to resemble 'Raffles' and 'Stingaree.' Then gradually you recognize that any resemblance it has to these stories is accidental, and you begin to understand why you were mystified by it, and what the element was which more or less unconsciously you felt was missing.

THE fact that Mr. Bertram Wallis, hero of many a musical comedy, was here trying a flight in what purports to be romantic drama ought to have given you the clue. But when you come across the village beadle, time-honoured exponent of comic

relief in a certain class of piece—when you watch the periodical appearances of a chorus of rustics, silently imploring to be permitted to burst into song—the truth flashes into your mind. Why, here is a comic opera, with all the apparatus complete except the music.

GRANTED a score; granted sentimental duets for the highwayman and the girl of rank whom he compels to dance a minuet on the heath, and of course to fall fathoms deep in love with him; granted ballads and concerted numbers and choruses of villagers—then the artificiality of the libretto (for that is all the play is) would be tolerable. That packet of letters, which is supposed to exculpate the heroine's brother from the charge of Jacobitism, and passes from hand to hand after the manner of 'A Scrap of Paper,' could then be considered an allowable basis for a plot; and the hero's embroidered Georgian silks, and the heroine's eighteenth-century gowns, and the beadle's scarlet and gilt, and any number of familiar situations and clichés, would take their place as part of the conventional machinery. But the music is certainly wanted.

MR. WALLIS, who has been richly endowed by Nature and knows how to wear eighteenth-century costume, gives every appearance of having the makings of a romantic actor. His chief support comes from Miss Grace Lane, a player who has been trained in the sound Kendal school, and really deserves some better vehicle for the display of her talent than this musical comedy without music.

BOHN'S LIBRARIES.

"Bohn has soared beyond criticism. It is a national institution."—DAILY CHRONICLE.

SPECIAL OFFER.

This famous Series now includes nearly 750 volumes in all departments of Literature.

THE NEW CATALOGUE

of the Libraries, giving full particulars as to recent and forthcoming additions, together with details of A SPECIAL OFFER of selections from the Series at greatly reduced prices, will be sent post free to any address.

"Bohn's Libraries still hold first place in the estimation of those who value scholarly accuracy of text rather than ornateness of binding, and the comprehensiveness of the scope has never yet been excelled in a uniform series."—*Outlook*.

"The new series of Bohn's Libraries, on which judicious book-buyers have long learned to keep a careful eye."—*Athenæum*.

RECENT ADDITIONS.

Uniform with the Prose Works of Jonathan Swift.

2 vols. 3s. 6d. each.

THE POEMS OF JONATHAN SWIFT.

Edited by W. ERNST BROWNING.

"This edition may be taken as the most authoritative edition of the verses of the author of 'Gulliver,' and it is made complete by a short but illuminative introduction, and by an index that enables the student to find ready access to any particular poem."—*Scotsman*.

IN ONE VOLUME. 5s.

MORE'S UTOPIA. RALPH ROBINSON'S.

Translation; together with Roper's Life of Sir Thomas More, and some of his Letters. Edited, with Notes, by GEORGE SAMPSON. With an Introduction and full Bibliography by A. GUTHKELCH, M.A., and a Portrait.

The Latin Text of the 'Utopia,' reprinted from the first edition, is given as an Appendix to this volume.

"A very acceptable reprint.... Mr. George G. Sampson has edited the volume with great care, his notes on More's phraseology being exactly what are wanted. Mr. A. Guthkelch's introduction runs only to a page or two, but in this he says exactly the right word and no more."—*Yorkshire Post*.

NEW EDITION, complete in 1 vol. 3s. 6d.

DANTE'S DIVINE COMEDY.

Translated by the Rev. HENRY CARY. New Edition by MARIE LOUISE EGERTON CASTLE. With Introduction, Chronological View of his Age, Additional Notes, and a Portrait.

"Cary's translation has proved one of the most satisfying volumes of the famous Bohn Library, and in a new edition, carefully revised by such a Dantean scholar as Miss Egerton Castle, it should go forward to fresh conquests.... Lovers of Dante who cannot read the 'Divine Comedy' in the original will appreciate the enterprise of Messrs. Bell in sending out such a trustworthy reprint."—*Dundee Advertiser*.

Dr. Headlam's Aeschylus.

THE PLAYS OF AESCHYLUS.

A New Prose Translation from a Revised Text by WALTER HEADLAM, Litt.D., and C. E. S. HEADLAM, M.A. With Portrait. 3s. 6d.

A New Translation of Homer's Iliad.

In 2 vols. 3s. 6d. each.

Vol. I. containing Books I.-XII. ready.

THE ILIAD OF HOMER. Trans-

lated into English Prose by E. H. BLAKENEY, M.A., Head Master of the King's School, Ely. With Portrait.

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

The attraction of the new Encyclopædia Britannica (11th Edition).

SINCE Christmas, advance copies of the new Encyclopædia Britannica (11th edition) have been in course of delivery to over 8,000 subscribers, whose applications (in response to an announcement first made in November) had been received by The Cambridge University Press up to that time.

If these first 8,000 subscribers were asked to say in virtue of what quality they recognized the new Encyclopædia Britannica to be a desirable possession—if they were asked what great promise was confirmed by their first glance into the volumes, to be reconfirmed on further examination—the answers, varying in form according to individual idiosyncrasies, would, upon analysis, resolve themselves into this, that the work **was essentially written to be read.** The service which it performs goes far beyond the limits of a work of reference.

A book written to be READ.

To describe a book as consisting of some 40,000 articles upon every conceivable topic is inevitably to suggest that in each case it gives but a modicum of information; that it can claim to possess, therefore, no more than the restricted utility which belongs to a work of reference—and of reference only in respect of the more obvious points in connexion with any subject. In the case of the new Britannica, however, its 40,000 articles, while they answer all the questions as to which an inquirer might expect to find satisfaction in an encyclopædia, were not intended merely to be consulted in this way. They are the work of leading authorities, *written to be read*, as other books dealing with only one subject are read, *for the instruction and the interest they afford.*

The value of the service which it performs.

Such is the characteristic which gives the Encyclopædia Britannica its great attraction, which recommends it as beyond question a desirable possession. Were it merely a dictionary of abbreviated information, many of those who are now reading in its pages would have argued that, useful as such a book might well be, they could only look forward to occasionally consulting it. One may recognize that there would be utility in a book which tells the inquirer the area of Japan, or the dates of Aristotle, and yet feel by no means confident that it would be often in use, or greatly valued. To such questions, indeed, the Encyclopædia Britannica, as of course, provides an immediate answer; but it performs an immeasurably more valuable service when it meets the need of the reader who would *know about* Japan, or who would understand what manner of teaching it was that makes Aristotle still the most quoted among philosophers.

This very claim, however, to perform so large a service might perhaps raise a

doubt as to whether the attempt were not too large, whether it could succeed in affording more than a smattering of knowledge. As to the standard of scholarship maintained by the new Encyclopædia Britannica, the subscriber doubtless finds some assurance in the fact that its articles are such as commend themselves as sufficient to the distinguished scholars who contribute them. It is enough that the philosophy of Aristotle should be discussed in an article of many thousands of words by the late Prof. Case, and that the country and history of Japan should be described and related by Capt. Brinkley in an article of about 180,000 words.

An essential characteristic.

Here, then, is to be sought the secret of the Encyclopædia Britannica's greatness, and the attraction it exercises. At no period in its history was the purpose which its editors proposed to themselves that merely of reference. They intended always a book that should be *read*, that should carry out the promise of the name "encyclopædia"—a word which means "a circle of instruction," and connotes *reading*, not reference. The first edition (1768) did not even propose to make a complete circle; but, within its limited range, its essential character was that of a collection of treatises to be read for the instruction they afforded. And the Encyclopædia Britannica, during a century and a half characterized by an astounding expansion of knowledge, has been able to carry out its purpose, because it allowed, for the treatment of every subject, space enough to attract the services of the most distinguished scholars.

A photograph which is to the point.

It is to its *extent*, therefore, that the Encyclopædia Britannica owes its great attraction as a *book to be read* on any subject. In the past, however, this attraction was discounted by the very circumstance which promoted it. Its volumes were written, indeed, to be read; but they were too big and too heavy to hold with comfort. In too many cases, therefore, their possessor never reaped the full value of his possession; he used the Encyclopædia Britannica only for reference—even then finding its cumbersome volumes an inconvenience. As 90 per cent of those whose orders have already been received have elected to take the new edition in the new form, *i.e.*, printed upon India paper, it is evident that the attraction of the book, as one to be read for its instruction and its interest, is greatly enhanced by the fact that the employment of India paper makes light and readable volumes.

The photograph reproduced on the next page, therefore, is very much to the point in a consideration of the new Encyclopædia Britannica as a book to read. A volume of the 11th edition contains at least 100 pages more than did a volume

of the 10th edition; yet, printed upon India paper, its bulk and weight are less by two-thirds. Moreover, India paper permits of a flexible leather back, and thus the quarto volume can be doubled right back, cover to cover, and held comfortably in the hand, while the reader sits back at ease.

The intention of the contributors.

The new Encyclopædia Britannica will prove to be a valuable resource for reference;¹ yet, it is primarily intended to be read. It sets out to deal with every subject; yet its treatment everywhere maintains a high standard of scholarship. As representing two extremes, there may be instanced an extraordinarily interesting study contributed by Mr. Sheppard, of the Board of Education, under the heading 'Arithmetic,' and an illuminating description, by Dr. Mirbt, Professor of Church History at Marburg, of what took place at the "Vatican Council" which made Papal infallibility an article of faith. These two treatises are part of the same book, and between them lies the whole field of knowledge, covered by an alphabetical series of some 40,000 articles. Yet the distinguished authority in either case wrote his article, not for reference, but to be *read*—read through, re-read, studied, as would be a book dealing with one subject instead of with many thousands.

The knowledge that he was contributing to a book of universal information exercised an important influence, however, upon his writing. For he knew that his article was to meet with readers who are unpractised in mathematical speculations and have, perhaps, never heard of the Vatican Council. If his article was to be read, as he hoped it would be read, it must be comprehensible, and thus reveal the interest of its subject even to those who have never thought about it. Indeed, had the new Encyclopædia Britannica been written, not for the benefit of the public at large, but solely for circulation among its own learned contributors, the virtue of "making things clear" would have been no less necessary. The greatest authority upon Church History may need to be led by the hand in approaching the conception of number, and a writer upon the Vatican Council is not justified in taking any knowledge of Papal history for granted though his reader enjoy a European reputation as a mathematician.

Its fascination for the reader.

The possessor of the new Encyclopædia Britannica, indeed, has at his disposal the equivalent of such a library as he could by no means hope to collect. Here is information provided for his reading by the best authorities. His use of the work does not wait upon the asking of questions (though its articles together claim to answer all that can reasonably be put).

¹ How full the new edition is as a work of reference may be gathered from the fact that the Index (volume 29, which is now on the eve of completion) contains some 500,000 references.

for from its pages he may instruct himself upon any subject. The systematic manner of its preparation, moreover, will enable the reader to pursue a topic, from one article to another, through all its aspects and ramifications. And since to understand—to make ever so small a beginning of understanding—is also to be interested, a volume of the new Encyclopædia Britannica will stand even the test which the reader puts it to when he opens it at random, and reads on, page after page, from one article to the next, under no stronger compulsion than a sense of curiosity. Even from desultory reading in such a book he cannot but gain something that is permanent.

The contents of the work.

Hitherto the Encyclopædia Britannica has been regarded, in this article, purely from a general point of view. But an enquirer may well wish for more detailed information as to its actual contents. *Of what character, he may ask, are the articles themselves?* Upon what scale are they written? Is it possible, by means of an instance here and there, to indicate the actual results of the methods pursued,

to suggest *what manner of information the reader will find under the words to which he turns?*

9,000 biographical articles.

Of the 40,000 words to which articles are attached, more than half are names of persons and places. Since these are entries of the most evident usefulness and interest, a glance at the contents of the new edition may well begin here, and from among the biographies (of which there are probably 9,000) a very obvious one may first be taken as an example of the longer and more elaborate articles upon persons. If he look up SHAKESPEARE, for instance, the reader will find an article occupying 26 pages (over 40,000 words) and divided into four sections. The first relates the known facts of the poet's life, deals with the early editions, discusses the chronology of the plays and the question of the sonnets, in pages which are packed with information and give the reader the best results of recent scholarship. There follows a *résumé* of all the plays, a piece of analysis valuable also as revealing the ordered working of the poet's mind.

The quality of usefulness.

In respect of its articles there are two conditions which an encyclopædia so extensive as is the Britannica may with some confidence hope to fulfil. An article should be adequate to its subject, and the treatment adopted should be such as to omit no information of the kind which the reader desires when he turns to the article. The fulfilment of these two conditions depends partly upon the editorial planning, and still more, in the case of each an article as "Shakespeare," upon the quality of the contributor. The choice of writers, therefore, is a matter of prime importance, not only for the originality, the interest, the authority of the articles, but also for their usefulness. In this case, for instance, the editor was fortunate in enlisting the services of Mr. E. K. Chambers, than whom there is no closer and more critical student of Elizabethan drama.

In a second section of the article, the editor, Mr. Hugh Chisholm, offers a very clear presentation of the Shakespeare-Bacon theories; while, in a third, Mr. M. H. Spielmann discusses the question of Shakespeare portraits—a subject illustrated by twenty reproductions. The fourth section—and in its way perhaps the most valuable of all—is a bibliography extending over four pages by Mr. H. R. Tedder, secretary of the Athenæum Club. This is not the place in which to describe the bibliographies which are so important a feature of the new edition. The critical labour which in all departments has been expended in this direction renders the new Encyclopædia Britannica not only a direct source of information, but also such a guide to further reading as will make it indispensable to the student.

"Important" articles.

"Shakespeare" has been taken as the most obvious illustration of biographies necessarily full and elaborate, and its quality may be paralleled by such articles as GOETHE by Prof. Robertson, DANTE by Prof. Butler, CAESAR by Mr. Stuart-Jones, BEETHOVEN by Mr. Donald Tovey, NAPOLEON by Dr. John Holland Rose¹. Such articles one may be tempted to describe as "important"; but the epithet is misleading, if it be taken to suggest that others, which are properly written on a smaller scale, are less adequate to the reader's needs, less authoritative, or less valuable. Indeed, it may be said with some truth that the shorter biographies, dealing with persons who figure less largely in the imagination of posterity, constitute an even more valuable feature of the book, as affording information which the reader would be entirely at a loss to find from any other source.

The employment of INDIA PAPER makes a volume of the new Encyclopædia Britannica light and slender enough to read with pleasure, while its flexible leather back, as this reproduction from an actual photograph shows, permits the reader to bend the volume double, cover to cover, and hold it easily as he sits at his ease.

¹ It should be mentioned, as characteristic of the specialization exercised in making the new edition, that a separate article (30,000 words) upon the Napoleonic campaigns is contributed by Colonel Maude.

Where, for instance, would he turn to find out about CARACCILOLO, whom Nelson hanged; about CARAN D'ACHE, the caricaturist (grandson, as the *Encyclopædia Britannica* notes, of one of Napoleon's officers settled in Russia); about CARAUSIUS, the Belgian pilot, who made himself the independent ruler of Britain, and struck coins in his own name and that of his "brothers," the Roman emperors; about the amazing EARL OF CARDIGAN, who led the charge at Balaclava; about CARISSIMI, the composer who definitely established oratorio; about CARLILE, the freethinker, who spent nine years in prison; about DON CARLOS, the pretender who died a year and a half ago; about the Greek philosopher, CARNEADES, whom Cato the Elder dismissed from Rome?

The articles attached to some of these names—taken at haphazard from the contents of 60 out of 1,000 pages in a single volume—are only 200 words long, and none exceeds 2,000 words; but the presence in the new edition of thousands of such biographies is a factor of the utmost importance in its usefulness. *There is, indeed, no book in existence comparable with the new Encyclopædia Britannica in the range of its biographical articles alone.*

The new edition as gazetteer.

Nor is the new edition less remarkable as a gazetteer, if such a name apply where the information under ENGLAND, for example, runs to some 60,000 words. This article, which may be taken as a type of the longer and more elaborate gazetteer articles, is divided into a number of sections, each contributed by a specialist—Topography, Physical Geography and Geology; Climate; Population; Communications; Industries; Territorial divisions. Two other sections call for special mention—a rare and very interesting one on English place-names, by Prof. Allen Mawer; and a wonderfully clear exposition of local government in England, a contribution extending to some 20,000 words, in which Mr. Alexander McMorran, K.C., unravels the various powers of county, borough, urban councils, and the like.¹

The general information given in the article "England" is filled out and localized in the articles upon the several counties, and upon more than 1,000 towns and villages in England. No hard and fast rule was made as to the limit of inclusion in this matter, and it may be said that every place of interest has its article, the length of which may vary from the 50,000 words of LONDON (by Mr. H. B. Wheatley) to the 200 words assigned to FOTHERINGHAY.

Above the article "England," as regards scope, comes that on EUROPE, of which some 24,500 words are devoted to geo-

graphy and statistics and 48,000 words to history. What has been said of England, its counties and towns may be said also of France, its departments, towns, and old provinces—and all other European countries are dealt with after the same fashion. The articles, likewise, on the other continents are followed up by articles on the various countries, divisions of countries, and towns. In connection with all this mass of information it must be remembered that the articles were planned and written in a *systematic fashion* rendered possible by the simultaneous production of the whole work. They do not overlap, and they yield information under the heading to which the inquirer would naturally turn for it.

447 articles on plants.

If attention be directed to any other field, the same systematic method will be remarked. The treatment of the subject of BOTANY, for example, is outlined in the short indicator article under this heading by Dr. A. B. Rendle (Keeper of Botany, Natural History Museum). The science is pursued in its different aspects in the articles CYTOLOGY (cell formation); ECOLOGY (a new study which might be described as the science of environment); PALAEOBOTANY (fossil plants). Next in order of scope comes the great article PLANTS (80,000 words), written by a company of experts which include Dr. Reynolds Green of Cambridge, Dr. Blackman of Leeds, Dr. Vines of Oxford. The various parts of a plant are further dealt with in such articles as FRUIT, FLOWER, SEED; and the different divisions of the plant world in such articles as FUNGI, LICHENS, GRASSES, ORCHIDS. Finally there are articles on 447 different plants, of which the familiar GROUNDSEL (described in an article of 400 words) may be taken as a type of the more humble.

For special and general purposes.

At the series of dinners at which the editor lately entertained the contributors to the new edition, scholars in every department of research bore testimony to the usefulness of such a possession *from their special points of view*. Thus, the subscriber may set a particular value upon the new *Encyclopædia Britannica* for its *history* or its *science*, for the comprehensive survey afforded by its *legal* or *medical* articles, or for its studies in comparative *religion*, or in *Biblical criticism*, or in *military history*. But he foresees an even greater advantage in the possession of such a resource *because it deals with the far larger number of subjects of which he knows little or nothing*.

If the subscriber were asked why, with interests historical or scientific, he desired to possess a book remarkable also for its series of articles upon musical instruments, upon agriculture and industries, upon all sports and games, upon the fine and applied arts, he would answer that the presence of such articles was of value to him precisely because they afforded information upon subjects with which he is not immediately concerned, and of which, therefore, he

TABLE OF CONTENTS.

Vol. 1—A to Androphagi (the man-eating people of Herodotus); 976 pages, 22 plates and maps.

Vol. 2—Andros, Sir Edmund (Colonial Governor in America 1637-1714) to Austria; 970 pages, 40 plates and maps.

Vol. 3—Austria, Lower to Bisectrix (in Geometry); 980 pages, 9 plates and maps.

Vol. 4—Bisharin (Sudan tribe) to Calgary (Alberta); 1,020 pages, 14 plates and maps.

Vol. 5—Calhoun (American statesman) to Chatelaine; 980 pages, 27 plates and maps.

Vol. 6—Chatelet (in Architecture) to Constantine; 990 pages, 12 plates and maps.

Vol. 7—Constantine Pavlovich (Grand Duke, 1779-1831) to Demidov (Russian family); 960 pages, 11 plates.

Vol. 8—Demijohn (wicker-covered jar) to Edward the Black Prince; 980 pages, 13 plates and maps.

Vol. 9—Edwardes, Sir H. B. (soldier-statesman of the Punjab) to Evangelical Association; 960 pages, 25 plates and maps.

Vol. 10—Evangelical Church Conference to Francis Joseph; 944 pages, 11 plates.

Vol. 11—Franciscans to Gibson, W. H. (American illustrator, author, and naturalist); 944 pages, 10 plates and maps.

Vol. 12—Gichtel (German mystic) to Harmonium; 960 pages, 12 plates and maps.

Vol. 13—Harmony to Hurstmonceaux (village near Eastbourne); 960 pages, 13 plates and maps.

Vol. 14—Husband to Italic; 912 pages, 21 plates and maps.

Vol. 15—Italy to Kyshtym (Russia); 914 pages, 20 plates and maps.

Vol. 16—L to Lord Advocate; 992 pages, 11 plates and maps.

Vol. 17—Lord Chamberlain to Mecklenburg; 1,020 pages, 4 maps.

Vol. 18—Medal to Mumps; 992 pages, 21 plates and maps.

Vol. 19—Mun, Count de to Oddfellows; 996 pages, 22 plates and maps.

Vol. 20—Ode to Payment of Members; 1,020 pages, 21 plates and maps.

Vol. 21—Payn, James (English novelist) to Polka; 1,030 pages, 31 plates and maps.

Vol. 22—Poll to Reeves, Sims; 1,100 pages, 3 plates and maps.

Vol. 23—Refectory to Saint Beuve; 1,000 pages, 29 plates and maps.

Vol. 24—Sainte-Claire Deville (chemist) to Shuttle; 996 pages, 31 plates and maps.

Vol. 25—Shuvalov (Russian diplomatist) to Styria; 1,024 pages, 37 plates and maps.

Vol. 26—Styrolene (in chemistry) to Tompkinsville (U.S.A.); 1,024 pages, 24 plates and maps.

Vol. 27—Tomsk to Vespers; 1,024 pages, 1 map.

Vol. 28—Vespucci (discoverer of America) to Zymotic Diseases; 1,024 pages, 8 plates and maps.

Vol. 29—Index of 500,000 entries.

knows very little. "I may not be conscious, at the moment, of a desire to know about any of these things; but I would not be without the means of knowing, if such is offered to me."

Were he asked to illustrate by examples the probable usefulness of the book from this general point of view, his difficulty would be to come to the end of them. He has but to recall a single evening's desultory conversation to remember a dozen

¹ English history is treated in an article (180,000 words), under this heading, and there are articles such as "English Literature" (57,000 words), "English Language" (18,000 words), "England, Church of" (18,000 words), "English Finance" (12,000 words), "English Law" (10,500 words).

places where the argument turned upon matters of fact as to which information was doubtful or entirely to seek. The subject may have been the tuning of the two drums¹ in an orchestra; or the various breeds of cattle² characteristic of different parts of the country; or the nature of the process known as mercerizing;³ or the new and more scientific game into which croquet⁴ has developed of recent years; or the degree to which Van Eyck may be said to have "invented" oil painting;⁵ or the first china⁶ known to have been made in Europe; or the dues charged by the Suez Canal Company;⁷ or the extent of China's suzerainty in Nepal;⁸ or the comparative value of natural and synthetic indigo;⁹ or the period of the Zimbabwe ruins¹⁰ in Rhodesia; or the two accounts of the Creation in Genesis, and the two versions of the Commandments in Exodus;¹¹ or the course of the Bagdad Railway;¹² or the comparative merits of the overhead, underground, and stud systems for electric tramways;¹³ or the oldest discovered handiwork of man;¹⁴ or the extent to which a stained-glass¹⁵ window should be glazier's work or painter's work. He may even have been faced again with one of those questions which must have been asked by the children of all ages, to be answered with diffidence by the most

learned—why the sky is blue,¹⁶ why the sea is salt,¹⁷ why the moisture in the atmosphere should collect and become visible in the form of clouds.

An advantage that goes without saying.

He reasonably argues that, at one time or another, any or all of these subjects, as they are interesting enough to occur in conversation, will seem worth further pursuit. It ought, at any rate, to be possible to find out about them, and he might well be at a loss to know where to turn for information in respect of a single one. If, then, there has developed, in the course of a century and a half, an encyclopædia in which the first authorities collaborate to afford answers to these, as to all other questions, the value of such a possession appears to him to be self-evident. It scarcely occurs to him to ask "When shall I use it?" And to attempt a catalogue of such occasions, to say that he will seek its information in connexion with this, that, or the other question, is, as he feels, to imply that he may not resort to it in other connexions, and thus to set up limits to the usefulness of a book which itself knows none. When, moreover, he comes into possession of the volumes themselves, he realizes to the full the truth of the statement that they

offer such matter for his reading as needs no other stimulus than its own intrinsic interest.

Only 21s. a month.

It would be strange indeed if the new edition of the Encyclopædia Britannica did not recommend itself at once, and to a large public, as a desirable possession. It would be deplorable were its cost such as would limit to a few a resource calculated to appeal equally to all. Indeed, in undertaking the publication of the Encyclopædia Britannica, the press of the University of Cambridge regarded the sale of the new edition at a low price as a matter of the greatest importance, and in considering the wide appeal which the book is evidently making, the circumstance that it is cheap is one that can by no means be overlooked. Those whose applications have already been received have purchased the new edition at the cash price of 15s. 10d. a volume of nearly 1,000 pages, where the 9th edition was originally published at the rate of 30s. a volume of 850 pages. They have the option of paying the cash price, at an increase of but a few shillings, over a period of 4, 8, or 12 months, or of making monthly instalments of only 21s.

They have obtained the book at this low price because they made early application for it—ordering it, in fact, while it was still in course of publication. Intending subscribers, who would secure a like advantage, must follow their example, and make early application; for the completion of publication—and only the Index volume remains to be issued—will be followed by an advance in price, which will ultimately be raised to 30s. a volume.

Copies already in course of delivery.

This announcement opened with the statement that from the advance copies which were to be ready in January, deliveries were being made to the 8,000 subscribers whose applications have been received up to the last week of 1910. Of this preliminary impression, however, only 12,000 copies have been printed upon India paper. It will be seen, therefore, that the entire impression will be taken up within a short time of the publication of this magazine, and some delay must occur before further supplies are available. Those to whom it is a consideration of some importance that they should obtain copies of a new book as soon as it is out have thus every reason to make application without delay. Order form at the present low price, with prospectus and specimen pages, may be obtained by writing name and address below, tearing off this corner, and posting to

The Cambridge University Press,
135, Fetter Lane, London, E.C.

Name

Address

¹ The article **Drum** (vol. 8, 2,500 words)—one of the remarkable series (about 100) contributed by Miss Kathleen Schlesinger upon musical instruments—distinguishes the bass drum and side drums, instruments of indefinite sonorousness, from the orchestral drum, which is capable of producing sounds of definite musical pitch, and for which the reader is referred to **Kettledrum** (3,500 words, vol. 15). Here the history, compass, and tuning of the orchestral drum is fully discussed. Its purely rhythmical use is illustrated with many interesting examples, while for its more modern use the author quotes the solo for four kettledrums from Meyerbeer's 'Robert le Diable.' Berlioz, she points out, in his 'Grand Requiem,' used no less than eight pairs of drums all tuned to different notes.

² The article **Cattle** (6,000 words, vol. 5), by Professor Wallace, Professor of Agriculture at Edinburgh, describes the various breeds, their characteristics and distribution. Sixteen photographs are reproduced in illustration of this article.

³ **Mercerizing**, by Dr. Edmund Knecht, of Manchester (1,600 words, vol. 18), is one among the very important series of articles upon textile industries.

⁴ **Croquet** (3,500 words, vol. 7) describes the game as played according to the latest laws of the Croquet Association.

⁵ In addition to the article **Van Eyck** in volume 10, the article **Painting**, by Professor Baldwin Brown (55,000 words, vol. 20), contains a very complete discussion of the point.

⁶ In his authoritative article **Ceramics** (vol. 5, 80,000 words) Mr. William Burton devotes a section to the porcelain—of which specimens are extremely rare—made at Florence, in the laboratory of Francesco de Medici, between 1575 and 1585.

⁷ **Suez Canal** (vol. 26, 3,500 words).

⁸ The article **Nepal**, by Major-Gen. Wylie, formerly British Resident in Nepal (vol. 19,

6,500 words), describes the relations with China, by which country Nepal was subdued in 1792.

⁹ In the article **Indigo** (vol. 19, 2,000 words), Dr. Edmund Knecht compares natural with synthetic indigo, of which the manufacture is fully described.

¹⁰ The article **Zimbabwe** (vol. 28, 700 words) is by Dr. Randall McIver, the most recent investigator, who also contributes an archaeological section (800 words) to the article **Rhodesia** (vol. 23).

¹¹ The articles **Genesis** (vol. 11, 13,000 words), by Mr. Stanley Cook, and **Exodus** (vol. 10, 7,000 words), by Mr. J. F. Stenning, fully discuss these points.

¹² The index, under Bagdad railway, refers the reader to the full information given in the section "Railway Guarantees" in the article **Turkey** (vol. 27, 65,000 words), by Sir Vincent Caillard.

¹³ In **Tramways** (vol. 26, 12,000 words), Mr. Emil Garcke compares the "over-head," "open-conduit," "enclosed-conduit" or "stud" systems as regards both efficiency and cost.

¹⁴ The question of the oldest-known work of man is discussed in **Archæology** (vol. 2, 16,000 words) by Dr. C. H. Read, of the British Museum.

¹⁵ See **Stained Glass** (vol. 25, 10,500 words), by Mr. Lewis F. Day.

¹⁶ The colour of the sky is discussed by Lord Rayleigh in his article **Sky** (4,500 words, vol. 25).

¹⁷ Under "Sea, Salinity," the index refers to two articles in which the problem is discussed: **Ocean** (vol. 19, 31,000 words), by Dr. H. R. Mill and Professor Krümmel of Kiel, and **Geology**, section "Hydro-sphere," by Sir Archibald Geikie.

¹⁸ The part played by dust in the atmosphere is described in Dr. Aitken's article **Dust** (3,000 words, vol. 8), to which the index refers under "Cloud," as well as to the article **Cloud** itself.

LITERATURE

Highways and Byways in Cambridge and Ely. By the Rev. Edward Conybeare. (Macmillan & Co.)

CAMBRIDGE AND CAMBRIDGESHIRE have been singularly fortunate in the literature they have recently provoked. Maitland in 'Township and Borough' makes Cambridge the typical mediæval town; J. W. Clark has done valuable work on the architecture of the University and the Abbey of Barnwell; Prof. McKenny Hughes and his wife have treated of the geology of the county in a most valuable little book; and now the Rev. Edward Conybeare has written, in the "Highways and Byways Series," a volume which, light and easily read as it is, deserves to rank with the best literature about the county.

Mr. Conybeare was for many years incumbent of the parish of Barrington in Cambridgeshire, and has long been a familiar figure in the University town. He was one of the first to realize the possibilities of the safety bicycle, and has explored every village in the county. He has written several books on the subject, including a history of Cambridgeshire; but the one before us—partly from the fact that it is one of a series of uneven merit, and partly from its extreme simplicity of style—might easily be passed over as an ordinary guide-book written to order, whereas it is actually a work of great antiquarian merit.

Cambridgeshire may easily be dismissed as one of the least attractive of the counties. The scenery in the southern portion is uninteresting; and north of Cambridge it is monotonous in the extreme. Towns are few and far between; seats of noblemen and gentlemen are rare. The roads go straight from point to point, and seem studiously to avoid the villages. Except on the borders of Essex, there are no hills, apart from the Gog Magogs, which soar to the height of 234 feet above sea-level, and tower over the town of Cambridge. But when Cambridgeshire is seen under the guidance of Mr. Conybeare, few parts of England are more fertile in historic association, or, as Mr. Griggs's illustrations show, afford the artist greater opportunities for making sketches of domestic or ecclesiastical buildings.

The book falls into two main sections, the first seven chapters dealing with the University and town of Cambridge, and the remaining thirteen with the County as approached by the roads which run in all directions from the capital. The author conducts his readers through the streets of Cambridge, turning aside to look into the different Colleges and University buildings, gossiping pleasantly, yet learnedly, all the time. Here he explains things which to a University man seem so simple, and to an outsider so inexplicable, such as the meaning of "a Fellow of a College," the method of conferring a degree, or the origin of College "colours." There he tells a racy bit of seventeenth-century College gossip, like the Corpus ghost story or the tale of the "marking" of the Fellows' attendance in chapel, as a protest against their slackness, by the Trinity undergraduates, and the awarding of a Bible as a prize to Bishop Perry in 1838. At last, after much pleasant discourse, he leads us to Stourbridge Common, and tells of its famous fair, which may be the prototype of Bunyan's "Vanity Fair"; and, as an example of its worldwide popularity, he mentions that here Sir Isaac Newton bought his three prisms for 3*l.*, which at that time could have been manufactured in France or Italy only.

We are now on the Newmarket road, ready for a "spin" eastward with Mr. Conybeare. In a few miles we are brought to contemplate the prehistoric defences of East Anglia, where fen and forest had failed to make the advance of an enemy impossible. These are the great "dykes," magnificent earthworks, extending for miles, once flanked by a deep ditch and topped by a palisade of timber. Who built them none can say, though their purpose is easy enough to divine, and we can admire the strategic sagacity of their primitive constructors. The Devil's Dyke is pierced by the Icknield Way, one of the oldest tracks in Britain, and Mr. Conybeare pauses to tell us of the fate of the brave but unhappy nation from which the name is popularly supposed to be derived. The district is, indeed, rich in Roman roads, which have been carefully

investigated by the Cambridge Antiquarian Society.

Pausing at Newmarket to relate how Charles II. of blessed memory recognized the merit of the heath, and established the first race meeting, our amiable guide takes us to Exning, a Suffolk town, which was the birthplace of Queen Ethelreda, and the capital of her sire, Anna, the pious king of East Anglia, and father of a veritable family of saints. But Mr. Conybeare is so well informed that when he enters upon Anglo-Saxon history we cannot allow him to detain us unduly, so let us hasten to Cheveley and hear how the Dukes of Rutland early in the last century bought the Corporation of Cambridge body and soul, and ruled them absolutely till 1832 from their country seat.

We then turn eastward and visit the borders of the fenland, with the fine churches of Swaffham Prior and Burwell, and so on to Reach, famous for its mediæval fair. With all his lore, Mr. Conybeare omits to tell us of the famous visit of the Vice-Chancellor, the Senior Proctor, and Mr. Beverley, Esquire Bedell of the University, which began with a sermon, and ended in the three dignitaries quarrelling till they fell into a slumber for which other causes than eloquence were responsible. Is it not written in the pages of Gunning?

It is the same throughout this delightful volume. We wander along the open highways, and turn aside, down a number of interesting byways, to villages full of objects worthy of attention. At Bassingbourn we find churchwardens' accounts from 1498 to 1534; at Orwell there stood down to the "seventies" the last maypole in England; at Shingay the Knights Hospitallers had their home; while Caxton, on the Old North Road, boasted a famous gibbet and many an inn, well filled in coaching days. Here, we are told, undergraduates of Cambridge, enterprising in 1745 as in the present year of grace, hired windows from which to view the passing of the Chevalier's army on the way to London, which, however, it was destined never to reach.

Towards the end of the volume the author takes us into the fenland north of Cambridge, and discourses pleasantly and with much erudition on the Monks of Ely, the drainage of the fens, and the splendid churches of the Marshland. When he has led us to Wisbech, and described King John's loss of army and treasure in the waters of the Well-stream, his precipitate ride to Newark, and his death on October 18th, 1216, Mr. Conybeare concludes his work with these words:—

"We bid good-bye to the County of Cambridge and the Isle of Ely feeling that no hue of dullness attaches to them, as is commonly supposed by the unappreciative crowd, but that rather the footprints of the past which abound within their borders give promise of a future that shall not be unworthy of what is gone before."

The Glenbervie Journals. Edited and arranged by Walter Sichel. (Constable & Co.)

THESE journals, it appears, were sold unclassified at the auction of the Sheffield and Gibbon documents. Mr. Walter Sichel is to be congratulated on their acquisition, though they are only two volumes out of what must have been a considerable series, and we share with him the hope that the remainder may yet be discovered. For, though their importance may not be very great, they undeniably provide entertainment.

Sylvester Douglas, Lord Glenbervie, our first Governor of the Cape, and first modern Commissioner of Woods and Forests, was just an honest placeman, who went from appointment to appointment. He married a daughter of Lord North, and it is clear from his diary that he accepted that piece of good fortune with reverential piety; she was always to him Lady Katherine or Lady Glenbervie. His artless jottings reveal him as a worthy, sensible man, with all the talents that in those days made for success; knowing everybody, and capable of appreciating wit, though in all probability he did not himself contribute much to the sparkle of conversation. Mr. Sichel appears to hold Glenbervie rather too cheaply on occasion. If he was something of a Polonius, it was only right to point out that his tendency to moralize at large was not so much peculiar to him as common to the age. A fling at his "accentless Greek" seems to miss its aim when we discover that he could sit down and read Plutarch in the original. Of how many elderly officials could that be said nowadays?

As an assiduous diner-out, Glenbervie gathered many interesting reminiscences. Thus a Mr. Williams told him that Pulteney, Lord Bath, was known to his young friends as "Waddling Will" from his rolling gait:—

"He says he used to come to White's in a morning and pick up five or six people to take home to dinner with him, and that if the party was to his mind, he would sit on till 11 o'clock at night. He had a great deal of wit, liked to tell over all the history of former politics, and was not impatient in answering questions."

On his own account, Glenbervie, who was a barrister before he took to politics, volunteers the information that his first brief was due to Cagliostro, whom he met at the house of some City acquaintances so far back as 1776—"a short, thick, stumpy figure with a florid complexion," whose impostures were obvious. Glenbervie was the recipient of confidences from that shifty Chancellor, Lord Loughborough, and summed up their value with much shrewdness:—

"As he set me down at my own house, he said, 'I hope you approve of the judge I have made—Brooke in the room of Wilson.' Brooke is a very honest man and a good lawyer, but I think Lord L.'s motives for

appointing him were not those, but of a nature consonant to his character and general conduct in cases of patronage, viz., to gain the reputation of professional propriety and approbation from strangers or indifferent persons. In short, to avoid the imputation of jobb, or partiality in legal appointments. This is a liberal and politic course, at least on the first blush of it. When more *approfondi* I doubt whether it is either."

The first of Glenbervie's journals ranges from October, 1793, to the close of the year. As Mr. Sichel remarks, it is kaleidoscopic, and therefore difficult to summarize. "Old Q" and the Prince of Wales shaking their heads over "Égalité" Orleans must have been edifying spectacles, and we learn later a fact or two about "Old Q's" meanness and disastrous will. Young Pitt, we are told, when living in Lincoln's Inn, set up a carriage and incurred other expenses considerably beyond his income because he found it impossible to live on the interest of the few thousand pounds he was master of, and therefore determined to encroach on his capital and trust to fortune. Mr. Sichel makes the none too felicitous comment that the story represents "the temperament of the future Premier in a much more reckless light than tradition reports it." On the contrary, the disorder of Pitt's private affairs was notorious, and pursued him to the grave. There is a racy description (to be received with caution) of the arrival of Queen Charlotte in England.

Glenbervie's second journal, which begins in April, 1811, and ends in February, 1815, acquires a certain unity through the frequent occurrence in it of the Princess of Wales and Madame de Staël. Lady Glenbervie was a lady-in-waiting to the Princess during her residence at Kensington Palace, and, though she and her husband were loyal backers, they were evidently aghast at various indiscretions. Princess Charlotte appears, just as she does in Lord Albemarle's reminiscences, as an outrageous tomboy. In his deliberate way, Glenbervie analyzes Madame de Staël almost as acutely as Byron did, though not so wittily; she "satiated" him, and he suspected that she would outstay her welcome to the town. But, if he succeeds with Madame de Staël, he fails with Talleyrand, setting down merely a string of stale anecdotes.

Mr. Sichel was justified, no doubt, in suppressing a good deal of Glenbervie's sententiousness, but on p. 214 it is difficult to make out if the two occasions on which Pitt shed tears in public were specified by him or not, though Dundas and Sir Walter Farquhar are given as authorities. The reminiscence might have been interesting.

The foot-notes are fairly adequate, though enough care has not been taken in correcting Glenbervie's blunders in proper names. Count von Rumford was not "Alexander," but Benjamin Thompson, and took his title, not, as Glenbervie supposes, from Essex—that is presumably from Romford—but from Rumford, now Concord, in Massachusetts. Madame de Staël's unacknowledged husband was

neither "Raucart" nor "Rocarte," but Rocca; and Lord Harrowby's heir was not Lord "Sandford," but Sandon. If Mr. Sichel had gone to a good biographical dictionary when mystified by Glenbervie's handwriting, he would have discovered that the title of Marshal de Noailles was Duc d'Ayen.

The Kingis Quair and the Quare of Jelusy. Edited, with Introduction, Notes, Appendix, and Glossary, by Prof. Alexander Lawson, D.D. (A. & C. Black.)

THE rebellion against James I. of Scotland which broke out in 1896 seemed to have subsided, although the intervention of a French ambassador and a variety of British auxiliaries did not wholly succeed in suppressing it. The leader of the revolt, Mr. J. T. T. Brown, while he was not fortunate enough to mobilize any force in the open field, was able to elude capture; and now his enterprise of scepticism, after slumbering for a decade, is revived. Mr. Brown has gained the appreciable advantage of a recruit in Prof. Lawson of St. Andrews. In this renewal of hostilities, it is true, the trumpet gives forth a rather uncertain sound: the Professor hesitates to decide. While in the end he thinks that the balance of evidence lies against King James's authorship of 'The Kingis Quair,' he begins with a full and careful biography of him, followed by a scrupulously fair résumé of the debates of M. Jusserand, Dr. A. H. Millar, Mr. T. F. Henderson, Prof. Hepburn Millar, and Mr. R. S. Rait with Mr. Brown. Prof. Gregory Smith's positive disclaimer of doubt is overlooked. We cannot understand why Prof. Hume Brown is to be called a convert, the passage cited being to the contrary. On the course of the argument as a whole Prof. Lawson speaks with all the frankness of a good-natured friend:—

"If regard is had merely to Mr. Brown's pleas and the answers made to them, it can scarcely be disputed that he has in the main the worst of the argument. Certainly he has not proved his case."

But, the Professor contends, "there are reasons of weight which Mr. Brown has overlooked"—reasons not of new positive external evidence, but of internal evidence from personal elements in the poem—and which compel the latest critic to conclude that "the verdict must be given, hesitatingly perhaps, yet given against tradition." He cannot reconcile the substance of the poem "with the history and experience of the young King of Scotland"; and on this score, while rejecting as inadequate the objections stated by Mr. Brown, he considers that his own subjective reasons turn the scale. This is a hard saying for the original champion of doubt, and, if we were to decide against James, we might well prefer to give Mr. Brown the credit of his case rather than to admit the *ex post facto* cogency of Prof. Lawson's general positions that the poem cannot be

the King's because there is no colour of royalty or a Court about it, because there are signs of an inferior rank, and because a didactic spirit and purpose may be discovered in it.

In the biographical section one or two points need clearing up. Prof. Lawson, who has, be it said, written a very creditable sketch of the life of James, says that James probably sailed before February 14th, 1406, the date of Sir David Fleming's death. The authority is Bower's 'Scotichronicon'; but Bower was copying from Wyntoun, and Wyntoun leaves no doubt that James's voyage did not begin until some time—"a quhyle fra this was done"—after Sir David's funeral. Besides, the Earl of Orkney (ultimately James's fellow-prisoner in the voyage) got safe conduct on March 15th, 1406, to pass into England. This writ, in the 'Rotuli Scotiæ,' ii. 177, taken along with Wyntoun's statement, dates the voyage almost with certainty in the second half of March, not February. Further, Prof. Lawson says that "on March 30th, 1406, there was no truce between Scotland and England." Now, apart from Walsingham's statement that there was truce *in terra* and Wyntoun's that there was "trewis baithe on se and lande," the writ in Rymer (referred to by Prof. Lawson, p. 124) of September 3rd, 1406, recognizes it, subject to an *ut dicitur*. Moreover, a later writ of October 6th, 1406, on the same matter, without any *ut dicitur* qualification, says that the seizure made by Joly, the shipman of Clay, and his company, was *contra formam treugarum inter R' et adversarium suum Scotie nuper initarum et firmatarum* ('Rot. Scot.,' ii. 180, with which compare ii. 177). The inference that the plenipotentiary powers for a truce *tam per terram quam per mare*, issued on February 7th, 1406, had been effectual, seems difficult to refute.

Time brings both patience and light. The interval since 1896 has steadied discussion, and given fresh elements for the critic to assimilate. The question is now very different from what it was; and, while the issue of authorship remains the same, it has become only one, and perhaps not the chief, of a number of problems of literary relationship. Undoubtedly, as Prof. Shick showed in 1891, the heaviest debt of 'The Kingis Quair' is to Lydgate's 'Temple of Glass,' dated perhaps *circa* 1403. Alongside, however, of 'The Kingis Quair' stands 'The Quare of Jelusy,' assigned by a scribe to the "makar" Auch[inleck], and therefore believed to date *circa* 1490. Certain cross-connexions also exist with 'Lancelot of the Laik.' Are the parallelisms of line, phrase, and phonology enough to establish Auch[inleck], author of the 'Jelusy,' as author also of the 'Lancelot'? Does the failure of equal parallelisms disprove a like claim upon 'The Kingis Quair,' which would, of course, depose King James?

Prof. Lawson lays down no dogma; he brings the poems into the ring to hop as they can. Yet his somewhat vacillating sympathy inclines towards

one author for the 'Quair,' 'Lancelot,' and 'Jelusy.' His observations and notes, however, indicate (1) a closer connexion between 'Lancelot' and 'Jelusy' than between them and the 'Quair'; (2) a series of sources of 'Jelusy' different from those of the 'Quair'; (3) a more direct bond between the 'Quair' and 'The Temple of Glass' than the other two pieces exhibit; and (4) a certain didacticness common to the 'Quair' and the 'Jelusy,' but more pronounced in the latter, which is admittedly a much inferior poem. Interesting and grave questions are thus ripening for judgment. Perhaps the discerning critic will suspend the complicated decision, awaiting the issue of Prof. Skeat's contention that 'The Kingis Quair' is an early poem, and that 'Lancelot' and the 'Jelusy' are by another and later poet—"as Prof. Skeat" (writes Prof. Lawson) "privately assures me he is able to prove." No doubt the first chapter of the proof is that contained in the last number of *The Scottish Historical Review*, claiming the 'Lancelot' for Auchinleck. The subsequent chapters are needed, and Mr. Brown will doubtless make himself heard in reply. It is a lively controversy. Editing from the Bodleian MS. which is the sole authority for both 'Quair' and 'Jelusy,' Prof. Lawson reproduces the texts with the errors and corrections verbatim, placing *en regard* Prof. Skeat's amended text of the 'Quair.' He is evidently unaware that the 'Jelusy' was reprinted by Mr. Brown, revised from the MS., in *The Scottish Antiquary* for 1897, with notes forestalling some standpoints now presented again.

As we have said, we are more impressed by the questions of textual and poetic comparison discussed by Prof. Lawson than by what may be termed the psychology of the poet of 'The Kingis Quair.' Historically there is an onus of disproof which the deniers of King James must sustain, not the less heavy because Prof. Hume Brown has pointed out the significant fact that James's household was "a veritable nest of royal singing birds." How far autobiography is to be expected from a poet in his feigning must be a test of criticism. The error of the poem about the prince's age remains Mr. Brown's strong point on that head. There are discrepancies in the scribal ascriptions and the statement of Major, who is the witness in chief, although the combination, despite the errors, proves a direct tradition at the dawn of the sixteenth century, which harmonizes with a more than kingly contemporary reputation for erudition and literature. Notwithstanding, 'The Kingis Quair' will fall if it is proved that the author wrote 'The Quare of Jelusy.' That is the question, and it may be equally wise, and respectful to the pleaders, not to consider a judgment until all sides have been heard. Lord Guthrie from the chair at the recent meeting of the Scottish Text Society countenanced the question of the royal authorship as ranking among historic doubts. The announcement that Prof.

Skeat is to inaugurate early this year the new series of the Society's publications by re-editing 'The Kingis Quair' is a pledge of battle. Perhaps rather it is the lifting of the challengers' gloves.

Louis XIV. and Madame de Maintenon.
By Charlotte, Lady Blennerhassett.
(George Allen & Sons.)

THIS historical study is a carefully "documented," fair-minded, and soberly written piece of work which may be of great use to the general reader. There are no discoveries or startlingly novel conclusions to attract the historical scholar; and there is, perhaps, rather an excessive amount of space devoted to theological and religious controversy. But an admirably impartial tone is maintained throughout, and the sympathy manifestly felt by the author for the subject of the book is seldom or never allowed to bias her judgment.

A carefully written Introduction supplies a survey and estimate of the various influences which have militated against the reputation of Madame de Maintenon—La Beaumelle's mutilations of her correspondence, not detected in their full extent till a century had elapsed, and the strongly biased views of her personality entertained by the picturesque Saint-Simon and the splenetic Duchess of Orleans. The conclusion, "that when everything which has ever been brought forward against this remarkable woman is weighed in the balance, an impartial judgment will decide in her favour," seems upon the whole to be warranted. Posterity's court of appeal may be said to have reversed the judgment of the eighteenth-century tribunal of first instance, from which Voltaire, in large measure at least, dissented.

Little definite information is available about young Françoise d'Aubigné's marriage to the graceless, good-hearted cripple Scarron; but it seems likely that the whole matter was arranged by Madame de Neuillan, who thought it a good way of getting rid of an irksome charge. Saint-Simon's "infamies of the early life of Madame Scarron" cannot be substantiated any more than the assertions of Elizabeth of Orleans that want of access to the King alone prevented her from opening his eyes to the real character of his friend. On the other hand, the fact that her own brother is called as a witness against her would have carried some weight, did we not know what kind of a person this ingrate was. It is certain both that the Scarron circle was far from saintly, and that the future reformer of Louis XIV. was no prude and possessed no slight personal attractions. Even at the last she was never precisely a *dévot*, and for the greater part of her life loved lively society in the spirit of a true Frenchwoman. Personal pride rather than simple love of virtue kept her unspotted.

It may be recalled that Louis XIV. at first feared her as a *bel esprit*.

Simplicity rather than asceticism was Madame de Maintenon's ideal. She objected, in the case of religion, to "all novelties, be their merit ever so great," and was equally repelled by the austerities of Jansenism, the mysticism of Fénelon and his clique, and the subtle sophistries of the Jesuits. She appreciated the disturbing effects of controversy upon the balance of the soul. She agreed with the King in disliking convents, and in its early days her "Institut de Saint-Louis," better known as Saint-Cyr, was not carried on upon monastic lines. After all, this pillar of the Catholic faith was the granddaughter of Agrippa d'Aubigné. In the year of the Revocation of the Edict of Nantes Louis XIV., in answer to her request to him not to be inhuman to the Huguenots, but to win them over by mildness, was even moved to remind her of her antecedents: "I fear that your forbearance for Calvinism shows the remains of attachment to your old faith."

The author does not suggest that the King's privately married wife did not approve the persecuting Edict in itself, and shows how her attitude towards heretics subsequently hardened. But Madame de Maintenon was almost certainly not directly responsible for the measure itself, and, like most of the best Catholics, probably looked upon it as an unfortunate necessity. Though she was rightly credited with much influence in religious matters, the King, we know, more than once resisted. He was displeased at her relations with Fénelon in the period preceding his exile from Court, and at her objections to the Jesuits. At this time Madame de Maintenon even went so far as to commission her nominee to the see of Paris, Noailles, to request the Papal Nuncio not to call upon her. The King would not have it, and "no power whatever to do good" was left her. The Jesuits ultimately proved too strong for her, and in her opposition to the revival of Jansenism she was forced into acting with them. Though she was not consulted by Le Tellier as to the advisability of the suppression of Port Royal, her allusions to it are constrained, and, as Lady Blennerhassett points out, "nothing on her part indicates shame and horror" at the cruelties inflicted upon the poor nuns.

To estimate the exact extent and nature of Madame de Maintenon's political influence is an almost impossible task. Daguesseau attributed to the constant pressure of her influence the weakening of Louis's Gallicanism, as shown by the virtual withdrawal of the Declaration of 1682 a decade later. In 1698 the King's wife made an unsuccessful attempt to check the extravagance of the royal builder. She only made Louis angry; and Marly went on despite the distress of the people. All the uncrowned queen could do at this time was to moderate the master's displeasure with Racine, who had sent her a report he had drawn up on the condition of the rural population.

Madame de Maintenon has been made responsible by Saint-Simon and others for the King's sudden withdrawal from the camp in Flanders in the summer of 1693, a course which certainly reacted unfavourably upon the French campaign. But more probable reasons for his decision have been suggested.

We know that Madame de Maintenon was consulted on the question of the Spanish succession, and have direct evidence that she was opposed to the throwing-over of the final Partition Treaty in favour of the acceptance of Charles II.'s testament. A spectator says that she was challenged by Barbézieux "with such vehemence that she was obliged to call for help, and this touched the King's heart." But her shrewd provisions as to the instability of a Franco-Spanish alliance failed to prevail in the end; and it seems probable that such direct appeals to her for advice were exceptional. At any rate, we find the woman who was supposed to be so potent politically writing in a confidential letter about a year later:

"Those who attend Councils of State are bound to secrecy. It is a blessing for us all that the King's orders prevent me from revealing what I saw and what I heard. I am deeply depressed by present affairs and the thought of those which will have to be decided in the future. This single instance convinces me that I would die of grief had I to attend Councils. Monarchs are to be pitied, and men are wicked."

This is not the tone of one who, like the writer's correspondent, the Princesse des Ursins, regarded political intrigue as the single great occupation of life. That lady, for so many years the virtual ruler of Spain, seems to have counted upon some degree of indirect support from Madame de Maintenon, however, though she told Madame de Noailles that her belief was that the lady had taken no side at the time of her temporary disgrace, "as affairs of that sort are distasteful to her."

The elevation of Chamillart to the ministry was generally credited to Madame de Maintenon's influence, and she was also accused of bringing about his fall for personal motives. It undoubtedly was the case that she had intimate relations with the War Minister, for it came out that it was by her advice that Catinat's letters from Italy had been withheld from the King. According to Saint-Simon, a strong adherent of the future Regent, it was Madame de Maintenon's influence which ultimately prevailed over Louis's reluctance to entrust Orleans with a military command, and that to her he owed his dispatch to Spain in 1707. The reconciliation between the King and his nephew after the latter's disgrace was also brought about by the same personage, who moreover favoured the marriage of Orleans's daughter with the Duc de Berry, a younger son of the Dauphin.

It is unfortunate that most of Madame de Maintenon's letters to Villars, the

remnants of which, the Marshal's biographer asserts, "entitle her to the gratitude of France," should have perished. She seems to have given him valuable support during the negotiations with Prince Eugene in 1713, but her friendship for the great soldier did not blind her to the futility of encouraging his political aspirations.

Her correspondence with the Princesse des Ursins, who at one period was credited with wishing to take her place at Versailles, shows Madame de Maintenon in a somewhat different light. There was strong mutual appreciation between the religious ruler of France and the libertine *camerera-mayor* of the Court of Madrid. "I have contracted the habit of speaking to her as if she were my confessor," wrote the Princesse des Ursins, and added: "but the pleasure is infinitely greater." Not the least attractive part of Lady Blennerhassett's book is concerned with this able diplomatist, for so many years a power in Europe.

Many interesting pages are also concerned with Fénelon, whose nomination to the archiepiscopal see of Cambrai seems to have been largely due to the counsels of Madame de Maintenon. Her relations with him had for some time been friendly, till she became alarmed by the conduct of Madame Guyon. Fénelon probably has given us the best contemporary judgment upon the great lady who ultimately became estranged from him. When he refused to become her confessor, he told her frankly: "You are overfond of the esteem of good people, of their approbation, of the pleasure of showing your moderation in prosperity; you are proud of your inward worth, not of your station. Your idol is yourself, and you have not yet crucified it." This, and her own observation that she "detested things leading to nothing," are the most penetrating gleams we have of the inner self of Madame de Maintenon.

There seems to be some confusion where Madame de Montespan, at the age of twenty, is made to remark disapprovingly upon Mademoiselle de la Vallière's following Louis XIV. to Flanders in company with the Queen (p. 24). The observation appears to have been made in reality at a later date (Lair's 'La Vallière,' p. 199), when, strangely enough, the speaker had already virtually ousted poor Louise from the King's affections. In any case, Madame de Montespan herself was not deterred by the Queen's presence from accompanying her royal lover to the army in 1670. A wrong date is given for the accession of James II. in England on p. 92. Different years also seem to be assigned on successive pages for the death of Madame de Maintenon's worthless brother. It certainly appears strange to give, as one of the reasons which determined William III. not to protract the war, "the exhaustion of the treasuries both of France and England" (p. 160).

We ought not to take leave of the book without a word of praise for the admirable reproduction of the interesting portraits it contains, as well as for the proof it affords that the art of binding is not yet extinct.

NEW NOVELS.

The House of Silence. By E. Everett-Green. (Hutchinson & Co.)

'THE HOUSE OF SILENCE' is written with the skill of the practised story-teller. The first page suggests a lurking mystery, and the love-story of the two chief characters is rapidly developed. Silence Desart has answered an advertisement for a secretary, and finds herself confronting a young man of great personal charm. It is insisted that this young man is a genius of the first order, and, although his behaviour would evoke much disapproval from real men and women, in the pages of this book it is skilfully made to appear merely in keeping with the opulence of his nature. Unfortunately for the secretary, the poet meets another woman, whom, almost by inadvertence, he marries. The result is cleverly contrived, and brings to a conclusion a highly exciting story.

The Strength of Evan Meredith. By R. Penley. (John Long.)

MR. PENLEY has evidently striven after a clear delineation of character and a display of motive, and has accomplished his desire praiseworthy, without ever weakening the grip of his story. The heroine is an Irish-woman, irresistible and of warm affections. Indeed, it is the strength of her affections that creates the motive of the drama. Her endeavour to reclaim her brother from drunkenness by compassing his marriage with her young friend is the cause of the one serious dissension between her adoring husband and herself. The distorted morality of her attempt rouses the latent strength of Evan Meredith to an effort of mastery over the wife who has hitherto mastered him. At present the author shows a pleasing lack of mere facility; but some injustice, we feel sure, is done to the manners and breeding of the Irish aristocracy in the dialogue. This, after all, is a trifling flaw in a wholesome and unflagging story.

La Robe de laine. By Henry Bordeaux. (Paris, Plon-Nourrit.)

WHILE recognizing the great talent of M. Henry Bordeaux, we have never been able to praise his books without making at the same time serious reservations by way of admission of obvious imperfection. In 'La Robe de laine,' for the first time, he strikes us as having produced a perfect work of art. The story is of the

simplest; the characters are not immortal; but a theme somewhat old-fashioned, and well-worn during the romantic period, is nevertheless handled with a mastery that compels respect. The descriptive passages afford an admirable framework to the painful tale.

BOOKS ON FRANCE.

THE title bestowed by Mr. C. F. Warwick on his *Napoleon and the End of the French Revolution* (Fisher Unwin) gives the impression that it is a book written on the lines of M. Vandal's 'Avénement de Bonaparte,' that is to say, an account of the transformation of the Revolutionary Government into an absolute dictatorship. It is nothing of the kind, being an ordinary biography of Napoleon, an outline of his life, from his birth at Ajaccio to his death at St. Helena. It is on the whole a good, straightforward narrative by a writer generally familiar with the period. Mr. Warwick, it appears, is an American, and in his Preface he tells us that this book is a sequel to his works on Mirabeau, Danton, and Robespierre.

The chief interest of the volume lies in the illustrations, which are from the "collection of engravings and etchings belonging to Mr. William J. Latta, of Philadelphia." We quite believe that some of them are "original sketches made by artists contemporary with Napoleon, and have never before been published," and Mr. Warwick deserves the thanks of the increasing number of amateurs in this country of Napoleonic iconography for publishing in England the volume containing them.

The biography loses much of its value owing to the carelessness with which it has been prepared for the press. An afternoon's revision of the proofs at the hands of any student of the period would have weeded them of the numerous blunders, of fact and of spelling, which may mislead the general reader and reduce the value of the book as an educational manual.

The author begins with a remarkable misstatement, that Napoleon in the course of his career, "with the exception of London, entered in triumph every capital of Europe." A reference to dates would alone have taught him that Charlotte Corday could not have been "granddaughter of the great Corneille," who was born 162 years before her. Josephine's maiden name was not "Detascher," but Tascher de la Pagerie. It is improbable that in Paris, after Marengo, "the air rang with cries of 'Vive le Consular Guard.'" The Constitution de l'An 8 (which is not designated by that title) was promulgated, not on December 5th, 1799, but on December 15th. It is misleading to describe the *Moniteur*, under the Consulate, as "a journal as influential in France as the London *Times* in England." It was not "the cynical Fouché" who said that the execution of the Duc d'Enghien "was worse than a crime, it was a blunder," but Boulay de la Mourthe. Cardinal Bonaparte was not the nephew, but the grand-nephew, of Napoleon. In October, 1805, Napoleon was not "in his thirty-fifth year, the eligible age for the presidency of the United States," but in his thirty-seventh year. Though Charles IV. of Spain deserves offensive epithets, the expression "a royal pimp" does not connote the quality of his dishonour. The "handsome coxcomb" with whom Queen Hortense "was flirting" was

not known as "the Duke de Flahaut." "At the close of 1810 the three per cent British Consols were quoted," not at 65, but at 67½.

Such mistakes are perhaps not of the highest importance, but they display a carelessness which an historical writer should train himself to avoid. In harmony with them are the numerous misspellings or misprints which disfigure the volume. Pichegru becomes "Pichegre," Aboukir "Abouker," Autun "Autum," Chambéry "Chamberry," and Hawkesbury "Hawkesberry." Las Cases is spelt consistently "Las Casas," and the boats in which Napoleon proposed to invade England are called "batteaux." The Southern town "Orgon" is presumably meant for Orange.

The style of the author is in places as careless as his spelling. Napoleon in his youth "journeyed to Brienne, which institution he entered." Occasionally we find American expressions, as when under the Directory "crowds of hoodlums followed and jeered" the lady who became Madame Tallien.

Mr. Laurence Jerrold, who seems to be an accomplished journalist, has reprinted in a volume a number of his articles, under the title of *The Real France* (John Lane). They are worthier of republication than are the great majority of such writings. But he knows so intimately some of the subjects which he treats that it is a pity that he did not make these magazine articles the foundation of a carefully composed study of certain phases of French life, instead of offering them to the general public in the rough shape in which, it is to be presumed, they originally appeared. He should recollect that easy writing makes hard reading. He should know that paragraphs which stretch over three or four pages, and single sentences containing 130 words, are a weariness to the eye and the brain. The author attaches so little importance to his work that he has neglected to furnish it with an index, which is essential to a volume swarming with names.

The title of the book is not well chosen. Instead of calling it 'The Real France,' it would have been more appropriate to entitle it 'The Artificial France.' For it deals almost entirely with a certain number of the inhabitants of Paris who live upon politics, play-acting, or play-writing, or who pursue more eccentric paths of literature.

The author's only two excursions to the provinces might similarly have been labelled 'The Abnormal France.' One of them was to Lourdes, which he describes from the anti-clerical point of view; the other to Courrières, which he visited when it was stricken by the most terrible explosion in the history of coal-mining, and he proved himself an intrepid journalist by descending the burning pit. His limited knowledge of the provinces is shown by his reducing the number of departments, in more than one passage, to 82, and by clothing the *Préfets* in gold-braided uniforms.

But with certain phases of Parisian life Mr. Jerrold is more at home than any foreign journalist with whose writings we are acquainted. We do not know if he is the Paris correspondent of any London newspaper; but his familiarity with contemporary French politics and politicians would fit him for such a post. His portraits of M. Clemenceau and M. Briand are excellent. In his account of them there are one or two passages which are misleading, owing perhaps rather to careless writing than to ignorance. Thus he says that "under M. Clemenceau's premiership M. Briand's...."

hand was shaping disestablishment." This is a serious mistake, M. Briand having "shaped disestablishment" as reporter of the Commission on Separation early in 1905, soon after M. Rouvier became Prime Minister, the Separation Bill founded on his Report being passed into law nearly a year before M. Clemenceau formed his Ministry, the Sarrien Ministry having intervened. It is also misleading to speak of "Clemenceau.... draining the cup of political power and enjoying every benefit which political influence can give," before he "was kicked out of politics savagely" in 1893; for M. Clemenceau, in all his long career, never took office until 1906, and was only once a candidate for a political post, when in 1888 he tied for the Presidency of the Chamber with M. Méline, who obtained the place "au bénéfice de l'âge." Nor is it accurate to describe Mgr. Montagnini as Papal Nuncio, "semi-official" or otherwise. Mr. Jerrold's acquaintance with French politics seems to be limited to very recent years, or he would not have written, of M. Delcassé, "he did not get France into, but got her out of, the Fashoda morass," without some explanatory reference to his connexion with the dispatch of the Marchand mission. Generally, what the author has seen in the political world is set down in a manner which shows him to be capable of observing French affairs from the standpoint of intelligent Parisian journalism. But when he goes far from the boulevards he is out of his element, as when, describing the effects of disestablishment, he says, "Rome had read aright with some acuteness the new French national mood"—a proposition which, unfortunately for Rome, is completely inexact.

The last hundred pages of the book relate to literature and the stage, and they are well done, excepting the last section, headed 'Players,' which is scrappy. Particularly interesting are the chapters describing the rise and fall of "Les Jeunes," the literary coteries which arose in the last ten years of the nineteenth century, decadent, mystical, or anarchist, to which

"the first nights at the Français, the novels of Zola, Bourget, Marcel Prévost, Paul Hervieu, even Huysmans, Rostand's 'Cyrano,' and before them Daudet, and actually Maupassant, were.... as if they never had been. The 'Jeunes revues' existed for regenerating the world, and.... could not stop to notice transient phenomena. Each Jeune the moment he had an idea started a review," &c.

The author's appreciation of the French stage is optimistic in tone:—

"To-day is a fleeting, uncertain, and marvellously rich and vivid day. The present French stage is almost as varied and alive as its day."

And again:—

"French farce also has its place in to-day, and never has held a higher. The fun of to-day on the Paris stage is the funniest and the most intelligent which any stage has known for several generations. There is no more absurd superstition than that of the sadness of to-day, and no less meaning regret in Paris than that for the good old farce. If our day is no less amusing, as it is no less serious, than any other day, the present French stage is as adequate to its day as the drama has ever been."

The propositions here set forth, in not very clear language, are matters for discussion, and are not accepted by large numbers of Parisians who have their "trente ans de théâtre," and even more, behind them. But the very fact that a journalist familiar with the boulevards can write with such enthusiasm when the twentieth century is approaching its teens, shows that there is a reaction from the pessimism which reigned a dozen years ago.

As might be expected, the volume is free from the blunders in French nomenclature which are usual in the writings of English people who record their passing impressions of France. The only slip we have discovered is one which is often committed by imperfectly educated French journalists who are as incorrigible as British writers, in their manipulation of the particule "de." Here we have M. de Féraudy referred to as "de Féraudy," instead of "Féraudy" when his name is mentioned without the prefix. The author's pages are equally free from Gallicisms.

OUR LIBRARY TABLE.

The First Temptation of Saint Anthony. By Gustave Flaubert. A Translation into English by René Francis from the 1849-56 Manuscripts, edited by Louis Bertrand. (Duckworth & Co.)—The first form of 'La Tentation de St. Antoine,' of which this is a translation, is of the slightest value as a work of art compared with the final revision that Flaubert published. It is, however, of some value as a document, for it helps us to understand the workings and movements of the great artist's mind. No doubt its importance in this respect would have been treated adequately in what promised to be a highly interesting prefatory note by M. Louis Bertrand had not a number of pages been dropped out from his contribution, and pages from the preface by Sir Gaston Maspero substituted. This is the more disappointing as we have already had Sir Gaston's preface twice, once in English and once in French, and in neither language is it of any great consequence.

The translator's object has been, we imagine, to experiment in English prose. He has judged that the only language into which 'La Tentation' could be turned was that of the Authorized Version. As he is an accomplished virtuoso in words, his experiment interests us, and we should be glad to see more of his prose, either in an original composition or the translation of some important work.

The Romantic Movement in French Literature. Traced by a Series of Texts, selected and edited by H. F. Stewart and Arthur Tilley. (Cambridge University Press.)—The purpose which this book attempts to fulfil is described in the Preface: "The best way of understanding a cause is to let its supporters speak for themselves, and the object of this book is to provide such an opportunity." The method employed by the authors has been to select passages from the most eminent Romantic writers, giving their views on such subjects as 'The Influence of Foreign Literatures,' 'The Romantic Drama,' and 'The Decline of Romanticism.' The texts are preceded by "short introductory narratives," which are intended to "serve as a brief sketch of the movement in its bare outlines."

The extracts have been carefully and intelligently chosen, and the "brief sketch" is clear and strictly orthodox. We are, however, left wondering for what class of readers such a work is compiled. The contents are too ponderous and too lacking in novelty to attract the cultured amateur, and to the serious student all extracts made by other people are apt to be irritating. It is true that even serious students do not attempt to read every word of every book on their subject; but their selection cannot be made vicariously. They often learn more in the process of

searching for what they want than in the actual discovery, and hence all attempts, such as this of Messrs. Stewart and Tilley, to supply them with predigested literature, are likely to be failures. The book is without an index.

THE Abbé Dimnet in his former books showed some acquaintance with highly English sides of the world of letters, and is at present writing in *The Saturday Review*. We are, therefore, the less surprised at receiving from MM. Bend & Cie, of Paris, *Les Sœurs Brontë*, from his pen. The Abbé Dimnet is a man of courage, and in his earliest pages administers knockdown blows to the English male biographers of the Brontës, while he treats Mrs. Gaskell with French politeness. A paragraph on Mr. Birrell is worthy of that distinguished man's own pen. We do not dare to take sides between such combatants. The Abbé thinks that Mr. Birrell possesses a splendid "gaîté," which, however, "tourne vite à la gaminerie"; holding that literature should be kept in its place, "il est porté à parler de l'écrivain sans respect." Therefore the Abbé Dimnet pronounces Mr. Birrell's biography in the series of "Great Writers" to be "neither what truth, nor even his readers, required."

With the painstaking side of the present volume we shall not attempt on this occasion to deal; and content ourselves with pointing out the interest which the crude Protestantism of the Brontës possesses for the Catholic writer. He is scrupulously fair, even in face of much that would shock his trained nature were he not able to pass it by as merely childish; and sides with Charlotte Brontë in the Brussels scandal, where people of his creed had a case against their guest and helper. Even the condemnation of the moral teaching of 'Jane Eyre' by *The Quarterly Review* is quoted by the Abbé without approval, and censured as out of date. Like Mr. Birrell, our author has his playful asides, and, when forced to smile at some manifestations of Brontë Orange Protestantism, he says that it is difficult to find an example to compare with it unless drawn, "before the Oxford movement," from "Newman himself, the Newman of 1832."

Dodsley's Collection of Poetry: its Contents and Contributors. By William Prideaux Courtney. (Privately printed.)—This 'Chapter in the History of English Literature in the Eighteenth Century' was originally contributed by Mr. Courtney to *Notes and Queries*, and has been reprinted by him for private circulation in an edition consisting of seventy-five copies. The three volumes composing the first part of the 'Collection' were originally published by Robert Dodsley in 1748; in 1755, after he had entered into partnership with his brother James, a fourth volume was issued; and in 1758 the work was completed by two more volumes. The 'Collection' ran into several editions, those appearing after the death of Robert in 1764 bearing only the imprint of James, who survived till 1797. Mr. Courtney has taken as the basis of his work the edition of 1766, of which no copy is in the British Museum, although it is the commonest of all. After 1782 the publication of the work came to an end. A new taste in poetry was springing up, and the generation which had achieved its highest utterance in the poetry of Cowper was giving place to one which was prepared to welcome a new birth in the creations of Coleridge and Wordsworth.

Any one who looks through the 'Collection' at the present day will probably be

of the opinion of an anonymous writer in *The Gentleman's Magazine* who is quoted by Mr. Courtney. There is a terrible flatness in most of the poetry collected by Dodsley, and of the original pieces, apart from the reprints of Pope, Gray, and a few others, there is scarcely one which can be deemed of conspicuous merit. In those leisurely days every person in good society considered it an obligation to "woo the Muse," and the composition of occasional verse was the winter amusement of every country parsonage. Mr. Courtney has not only carefully annotated every poem in the collection, but has also added short biographies of the more obscure contributors. His full and intimate knowledge of the literary history of the eighteenth century has enabled him to throw considerable light on the lives of many worthy persons whose memory would otherwise have perished, and this neat and compact little volume cannot fail to be prized by all who appreciate the difficulties involved in that branch of research of which Mr. Courtney is an acknowledged master.

As a bibliographical detail it may be noted that the engraving on the title-pages of the various volumes, which Mr. Courtney describes as a "vignette of musicians," really represents Apollo surrounded by the nine Muses. A re-engraved copy of this little plate also does duty on the title-pages of the four volumes of Pearch's 'Collection' of 1770, and here it may be suggested that, if Mr. Courtney has the necessary leisure, he would do some service to literature by rendering to this miscellany, which in general merit equals, if it does not surpass, the earlier compilation, the same kind of office which he has so successfully bestowed upon Dodsley.

Recollections of a Scottish Novelist. By L. B. Walford. (Williams & Norgate.)—Mrs. Walford's 'Recollections' are no less vivacious and readable than we should expect from the author of 'Mr. Smith,' 'The Baby's Grandmother,' and those other novels which were deservedly popular in the latter half of the Victorian era. Mrs. Walford's father was John Colquhoun, author of 'The Moor and the Loch,' a keen sportsman and naturalist, and the greater part of her girlhood was spent in the Highlands, and especially in the Colquhoun country, among her father's people on the beautiful shores of Loch Long. It is a pleasant picture of a happy family life which she gives us, and the book is full of racy anecdotes of her relations, including her great-aunt Miss Catherine Sinclair, the author of 'Holiday House,' and of those distinguished people whom she met during the winters spent in Edinburgh—Carlyle, Prof. Blackie, Sir James Simpson the famous physician, and other luminaries of Edinburgh society in the fifties.

There is a delightful description of Sir James Simpson's breakfast parties, the only meal at which he ever received, or, as some said, "sat down." And he was not always there to receive his guests! People of many kinds and nationalities, complete strangers to one another, would be assembled, eating and drinking with mingled sensations of apprehension and disappointment. Then he would appear:—

"The very short, very broad, very great little figure, enveloped in its familiar sealskin coat, waddling across the pavement.....He has been travelling all night; he has come from London, from Paris, from St. Petersburg; it matters not from where—he makes nothing of it, has no intention of secluding himself, is delighted to see so many kind friends, and goes round the table with warm and cordial greetings."

Presently, after a meal made agreeable to everybody by the host's consummate tact and geniality, the guests are transformed into patients, and by the time each one has been submitted to a minute and exhaustive interview and dismissed, "the business of the day is only supposed to be beginning in the plain, undistinguished house in Queen Street, in which *chloroform* was first given and taken."

Every year the Colquhouns spent some weeks with Mrs. Colquhoun's parents, the Fuller Maitlands, at Park Place, Henley, and the account of this quiet Early Victorian household and its attitude towards the "children" is an amusing contrast to that of their Scotch relations.

Mrs. Walford's first, and, as some will always consider, her best, novel, the inimitable 'Mr. Smith,' was published in 1874, some few years after her marriage. Its success, as Mr. Blackwood foresaw, was immense, but amidst an admiration which was almost violent in its expression there were dissentient and disparaging voices. There had been a real Mr. Smith, dead, however, long before the book was written; but so lifelike was the characterization that many of Mrs. Walford's neighbours indignantly insisted that they had been made use of to figure in her pages. Most severe among critics, however, were the Fuller Maitland aunts: "They talked to each other, they wrote to each other; they shook their heads; they threw up their hands." Why should their niece have associated, even in imagination, with such very vulgar people? They were only won from this opinion by the expressed appreciation of Queen Victoria for the despised novel, a revulsion of feeling on their part which had its origin, certainly not in snobbishness, but "in the profound and ingrained reverence for Queen Victoria which was with them and others of their kind a species of religion."

THE import of *The Upper Garden*, by Robert de la Condamine (Methuen & Co.), is a little obscured by its excessive verbiage and occultness. "This is not a book about gardening," says the publisher's note, "but rather about everything that a garden means to the artist, the wanderer, the saint, and the student." Obviously this is a somewhat esoteric book. Its author, we should guess, is young, and he is certainly clever. Perhaps he had Pater in his mind when he wrote most of this long, rambling, and extravagant treatise. He writes with preciosity, and would probably regard himself as a symbolist. His work is full of antitheses and literary tricks. It is all, we should say, an enthusiastic, youthful exercise in words and thoughts. Human realities have not much concern here, nor do we ever feel that we are getting at close quarters with life. The language at times degenerates, by reason of its constraints and violence and tortuous ways, into something very like the ridiculous, and at other times offends one's taste. But we find sufficient thought and cleverness, and sufficient care for the niceties of English, to make us hopeful about the author's subsequent ventures.

THE INCORPORATED ASSOCIATION OF HEAD MASTERS.

THE twentieth annual general meeting of the Incorporated Association of Head Masters was held in the Guildhall on Tuesday and Wednesday last, and was attended by a large number of members.

After an official welcome by the Lord Mayor, the President, Mr. J. E. King

(Clifton), delivered his inaugural address. He deprecated the tendency of critics, in finding fault with English schools, to imply that all was for the best in the best of all possible educational worlds when once the Channel was crossed. If they looked at the discussions in French and German newspapers, they would find the same difficulties in the settlement of educational problems, and in the balancing of older and newer studies, as were experienced in this country. He did not wish to say that there were not faults and failings and deficiencies in English schools, but he suggested that other countries also thought they had grounds of complaint about their schools. He considered that the product of the sixth form of an English Secondary School would compare very favourably with the product of the corresponding form in a German Gymnasium or French Lycée. Further, the arrangements in an English school gave a boy more scope for the development of his own special bent.

The first item on the agenda, and the one which excited most interest, was the registration of teachers. The Rev. W. Madeley (Woodbridge) moved

"That the Council be empowered to proceed in conjunction with other professional associations, and independently of the Education (Administrative Provisions) Act of 1907, to the formation of a Teachers' Registration Council."

He said that it was three and a half years since the Act was passed which permitted the establishment of a Teachers' Registration Council, and the Board of Education had done nothing to carry out the intentions of the Act. Recapitulating the reasons given by the Board of Education for their inaction, he suggested that it must be a very fatiguing exercise for the officials to find out these varied excuses. Common humanity demanded that they should be relieved from the strain. It was obvious that the Board of Education did not mean to give them a Register, and it behoved them to make one for themselves.

Mr. Jenkyn Thomas (Hackney Downs) moved as an amendment

"That, in view of the fact that the one body of teachers which objected to the Teachers' Registration Council proposed by the Conference convened by the Federal Council in November, 1909, has now withdrawn its objection, this Association is of opinion that there is no justification for any further delay on the part of the Board of Education in establishing the Teachers' Registration Council contemplated by the Education (Administrative Provisions) Act, 1907."

He said that the resolution moved by Mr. Madeley was fifty years too late. Half a century ago there might have been a chance of such a Register being a success, but it would now fail, in the first place in the matter of finance, and in the second because it would have no driving power behind it. A Register must have the driving power of the Board of Education behind it, and he asked the Association to wait and see whether the Board of Education, now that the last excuse had been taken away from it, would carry out what was the intention, if not the instruction, of the last Education Act.

Dr. McClure (Mill Hill) suggested that the amendment be taken as the first resolution, and that a rider be also adopted urging the Council to make representations once more to the Board of Education on the matter and, if they failed to secure their object, to proceed to the formation of an independent Register. The President of the Board of Education was only a few months ago perfectly willing to grant a Registration Council if he was assured that there was

substantial unanimity in the teaching profession. Now that the association which, with deplorable bad taste and still more deplorable tactics, had marred the unanimity of the 1909 conference, had seen the error of its ways, it would be wise to give another and more august body the opportunity of repenting before it was too late.

Dr. McClure's suggestion was adopted. Mr. Jenkyn Thomas's amendment was passed unanimously, and the rider by a large majority.

Resolutions instructing the Council to consider the question of school certificates, and to resuscitate the Joint Committee on the Training of Teachers which was dissolved in December, 1902, were then passed; and the rest of the first session was spent in the discussion of private business.

On the second day, Mr. Cradock-Watson (Merchant Taylors, Great Crosby) read an admirable paper on 'Bible Teaching in Secondary Schools for Boys,' deprecating the timidity shown by so many schoolmasters with regard to the Old Testament, and advocating a bold use of the results of higher Biblical criticism. A general discussion followed, which showed a remarkable unanimity of opinion that the chief obstacle in the way of the improvement of Bible teaching was the unsatisfactory character of the papers on Scriptural knowledge set in public examinations.

Canon Swallow (Chigwell) opened a discussion on 'University Reforms as affecting Schools,' urging the importance, even for schools which sent only an occasional pupil to Oxford and Cambridge, of keeping in close touch with recent developments in those Universities. Mr. Shaw Jeffrey (Colchester) moved

"That in the opinion of this Association the present grouping of Colleges for the purposes of open scholarship examinations is unsatisfactory."

This was carried unanimously, as was also a further resolution

"That in view of recent developments in the teaching of the three chief modern languages, English, French, and German, some encouragement should be given to students by increasing the number of entrance scholarships in these branches of study."

It was pointed out that at Cambridge only 4 per cent of the Scholarship awards were allotted to modern languages, while at Oxford only one exhibition was given.

The customary votes of thanks terminated the proceedings.

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the second part of the list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth

and death should be given together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15, Waterloo Place, S.W.

Caine, William Sproston (1842-1903), politician and temperance advocate.
Caird, Edward (1835-1908), Master of Balliol and philosopher.
Cairnes, William Elliot (1862-1902), military writer.
Calkin, John Baptiste (1827-1905), organist and composer.
Callow, William (1812-1908), water-colour artist.
Calthorpe, 6th Baron. See Gough-Calthorpe, Sir Augustus Cholmondeley.
Cambridge, 2nd Duke of. See George William Frederick Charles.
Campbell, Sir James Macnabb, K.C.I.E. (1847-1903), compiler of 'Bombay Gazetteer.'
Campbell, John (1840-1904), Canadian ethnologist.
Campbell, Lewis (1830-1908), classical scholar.
Campbell, William Howard (1859-1910), missionary and entomologist.
Campbell-Bannerman, Sir Henry, G.C.B. (1836-1908), Prime Minister.
Canning, Sir Samuel (1823-1908), pioneer of Atlantic cables.
Carey, Rosa Nouchette (d. 1909), novelist.
Caron, Sir Joseph Philippe René Adolphe, K.C.M.G. (1842-1908), Canadian statesman.
Carpenter, George (1859-1910), physician.
Carpenter, Robert (1830-1901), cricketer.
Carte, Richard D'Oyly (1844-1901), promoter of English opera.
Carter, Thomas Thellusson (1808-1901), Rector of Clewer and Tractarian.
Carver, Alfred James, D.D. (1826-1909), head master of Dulwich College.
Cassels, Walter Richard (1826-1907), author of 'Supernatural Religion.'
Cates, Arthur (1829-1901), architect.
Cavendish, Spencer Compton, 8th Duke of Devonshire, K.G. (1833-1908), statesman.
Cecil, Robert Arthur Talbot Gascoyne, 3rd Marquis of Salisbury (1830-1903), Prime Minister.
Chads, Sir Henry, K.C.B. (1819-1906), admiral.
Chalmers, James (1841-1901), missionary in New Guinea.
Chamberlain, Sir Crawford Trotter (1821-1902), general.
Chamberlain, Sir Neville Bowles, G.C.B. (1820-1902), field-marshal.
Chamier, Stephen Henry Edward, C.B. (1834-1910), lieutenant-general.
Chance, Sir James Timmins, 1st Bt. (1814-1902), Birmingham benefactor.
Channer, George Nicholas, V.C., C.B. (1843-1905), general.
Chapman, Edward John (1821-1904), mineralogist.
Charles, James (1851-1906), landscape artist.
Charley, Sir William Thomas (1833-1904), Common Serjeant of London.
Charteris, Archibald Hamilton, D.D. (1835-1908), Biblical critic.
Chase, Drummond Percy, D.D. (1821-1902), last Principal of St. Mary Hall, Oxford.
Chase, William St. Lucian, V.C., C.B. (1857-1908), lieutenant-colonel.
Chataway, James Vincent (1853-1901), New South Wales politician.
Chatterton, Hedges Eyre (1819-1910), Vice-Chancellor of Ireland.
Cheadle, Walter Butler (1835-1910), physician.
Cheetham, Samuel, D.D. (1827-1908), Archdeacon of Rochester, and writer on Church history.
Chelmsford, 2nd Baron. See Thesiger, Frederic Augustus.
Cheylesmore, 2nd Baron. See Eaton, William Meriton.
Chichele-Plowden, Sir Trevor John Chichele, K.C.S.I. (1849-1905), diplomatist.
Chichester, Robert Bruce, C.B. (1825-1902), major-general.
Chinnery-Haldane, James Robert Alexander (1842-1906), Bishop of Argyll and the Isles.
Clanwilliam, 4th Earl of. See Meade, Richard James.
Clark, John Willis (1833-1910), Registry of Cambridge University.
Clarke, Sir Andrew, G.C.M.G. (1824-1902), lieutenant-general R.E.

Clarke, Charles Baron, F.R.S. (1832-1906), botanist.
Clarke, Sir Marshal James, K.C.M.G. (1841-1909), South African administrator.
Clasper, John Hawks (1836-1908), racing-boat builder.
Clayden, Peter William (1827-1902), journalist and author.
Clerke, Agnes Mary (1843-1907), scientific writer.
Cleworth, Thomas Ebenezer (1854-1909), champion of Church schools.
Clifford, Frederick, K.C. (1828-1904), legal writer.
Clowes, Sir William Laird (1856-1905), naval writer.
Clunies-Ross, George (1842-1910), chief of the Cocos and Keeling Islands.
Clutton, Henry Hugh (1850-1909), surgeon.
Cobb, Gerard Francis (1838-1904), musical composer.
Cobbe, Frances Power (1822-1904), philanthropist and author.
Coghill, Mrs. Harry, "Annie L. Walker" (d. 1907), Canadian poet and novelist.
Coillard, François (1834-1904), missionary of the Zambesi region.
Coke, Thomas William, 2nd Earl of Leicester (1822-1909), agriculturist.
Coleridge, Mary Elizabeth (1861-1907), author.
Collett, Sir Henry (1836-1901), colonel and botanist.
Collingwood, Cuthbert (1826-1908), naturalist.
Collins, John Churton (1848-1908), man of letters.
Colnaghi, Martin Henry (1820-1908), picture dealer and collector.
Colomb, Sir John Charles Ready, K.C.M.G. (1838-1909), Imperialist.
Colton, Sir John, K.C.M.G. (1823-1902), Prime Minister of South Australia.
Colvile, Sir Henry Edward, K.C.M.G. (1852-1907), major-general.
Colville, Sir Charles John, G.C.V.O., 1st Viscount Colville of Culross (1818-1903), Court official.
Colvin, Sir Auckland (1838-1908), Anglo-Indian official.
Commerell, Sir John Edmund, G.C.B. (1829-1901), admiral of the fleet.
Common, Andrew Ainslie, F.R.S. (1841-1903), astronomer.
Compton, Lord Alwyne Frederick (1825-1906), Bishop of Ely.
Conder, Charles (1868-1909), artist.
Conder, Claude Reignier (1848-1910), Palestine explorer.
Connemara, 1st Baron. See Bourke, Robert.
Conquest, George (1837-1901), actor.
Cook, Sir Francis, 1st Bt. (1818-1901), art collector.
Cooper, Sir Alfred (1838-1908), surgeon.
Cooper, Sir Daniel, 1st Bt., G.C.M.G. (1821-1902), merchant and politician of New South Wales.
Cooper, Edward Herbert (1867-1910), novelist.
Cooper, James Davis (1823-1904), wood engraver.
Cooper, Thomas Sidney, R.A. (1803-1902), artist.
Cooper, Thompson (1834-1904), biographer.
Copeland, Ralph (1837-1905), astronomer.
Copingier, Walter Arthur (1847-1910), legal writer and bibliographer.
Coppin, George (1820-1906), actor and Australian politician.
Coppinger, Richard William, M.D. (d. 1910), Inspector-General R.N., naturalist and bacteriologist.
Corbet, Matthew Ridley, A.R.A. (1850-1902), painter.
Corbett, John (1817-1901), promoter of Worcestershire salt industry.
Corbould, Edward Henry (1816-1905), painter.
Corfield, William Henry (1843-1903), Professor of Hygiene.
Cornish, Charles John (1859-1906), naturalist.
Cornwell, James (1811-1902), writer of school-books.
Corry, Montagu William Lowry, 1st Baron Rowton (1838-1903), politician and philanthropist.
Cory, John (1828-1910), coalowner and shipowner; benefactor to Cardiff.
Cotton, Sir George (1843-1905), cotton spinner in Bombay and philanthropist.
Couch, Sir Richard (1817-1905), judge.
Couper, Sir George Ebenezer Wilson, 2nd Bt. (1824-1908), Anglo-Indian administrator.
Cousin, Mrs. Anne Ross, born Cundell (1824-1906), hymn-writer.
Coutts, Burdett. See Burdett-Coutts.
Cowell, Edward Byles (1826-1903), Professor of Sanskrit at Cambridge.
Cowie, William Garden, D.D. (1831-1902), Primate of New Zealand.
Cowper, Francis Thomas de Grey, 7th Earl Cowper, K.G. (1834-1905), Lord Lieutenant of Ireland.
Cox, Sir George William, 14th Bt. (1827-1902), historical writer.

Craig, Isa (pseud.). See Knox, Mrs. Isa.
 Craig, William James (1843-1906), editor of Shakespeare.
 Craigie, Mrs. Pearl Mary Teresa, "John Oliver Hobbes," born Richards (1867-1906), novelist.
 Cranbrook, 1st Earl of. See Gathorne-Hardy, Gathorne.
 Craven, Hawes (1837-1910), scene painter.
 Craven, Henry Thornton (1818-1905), dramatist.
 Crawford, Oswald, C.M.G. (1834-1909), author.
 Creagh, William (1828-1901), major-general.
 Cremer, Sir William Randal (1838-1908), peace advocate.
 Cripps, Wilfred Joseph (1841-1903), writer on English plate.
 Crocker, Henry Radcliffe (1845-1909), dermatologist.
 Croft, John (1833-1905), surgeon.
 Croke, Thomas William (1824-1902), Roman Catholic Archbishop of Cashel.
 Crossman, Sir William (1831-1901), major-general, R.E.
 Crowe, Eyre, A.R.A. (1824-1910), painter.
 Cubitt, William George, V.C. (1835-1903), colonel.
 Cullingworth, Charles James (1841-1908), gynaecologist.
 Cunningham, James Macnabb (1829-1905), surgeon-general.
 Cunningham, Daniel John, F.R.S. (1850-1909), Professor of Anatomy at Edinburgh.
 Currie, Sir Donald, G.C.M.G. (1825-1909), founder of the Castle steamship line.
 Currie, Mary, Lady, "Violet Fane," born Montgomerie-Lamb (d. 1905), novelist.
 Currie, Sir Philip Henry Wodehouse, 1st Baron Currie, G.C.B. (1834-1906), diplomatist.
 Cust, Robert Needham, LL.D. (1821-1909), Orientalist.
 Cutts, Edward Lewis (1823-1901), Church historian.
 Dale, Sir David, 1st Bt. (1829-1906), iron-master.
 Dallinger, William Henry, F.R.S. (1841-1909), Wesleyan minister and biologist.
 Dalziel, Edward (1817-1905), artist and wood engraver.
 Dalziel, George (1815-1902), wood engraver.
 Dalziel, Thomas (1813-1906), wood engraver.
 Daniel, Evan (1838-1904), writer on the Prayer Book.
 Danvers, Frederick Charles (1833-1906), writer on engineering.
 Darbyshire, Alfred (1839-1908), architect.
 Daubeney, Sir Henry Charles Barnston, G.C.B. (1810-1903), general.
 Davey, Horace, Baron Davey of Fernhurst (1834-1907), Lord of Appeal.
 Davidson, Andrew Bruce (1831-1902), Hebrew scholar.
 Davidson, John (1857-1909), poet.
 Davidson, John Thain, D.D. (1833-1904), Presbyterian minister.
 Davies, Charles Maurice, D.D. (1828-1910), author.
 Davies, Robert (d. 1905), Welsh benefactor.
 Davis, Charles Edward (d. 1902), of Bath, architect.
 Davitt, Michael (1846-1906), Irish politician.
 Dawson, George Mercer, C.M.G., F.R.S. (1849-1901), Canadian geologist.
 Dawson, John (1829-1903), trainer of racehorses.
 Day, Sir John Charles (1826-1908), judge.
 Day, Lewis Foreman (1845-1910), decorative artist.
 Day, William (1823-1908), jockey and trainer.
 Deacon, George Frederick (1843-1909), engineer.
 Deane, Sir James Parker (1812-1902), Vicar-General of Canterbury.

 Everett, Joseph David, F.R.S. (1831-1904), physicist.
 Everett, Sir William, K.C.M.G. (1844-1908), colonel.
 Ewart, Sir John Alexander, K.C.B. (1821-1904), general.
 Eyre, Edward John (1815-1901), Governor of Jamaica.

THE BOOK SALES OF 1910.

PART II.

EARLY in April another book, or rather pamphlet of 11 pages, of American interest sold for 13*l.* (unbound). This was the 'Surprising Account of the Captivity and Escape of Philip McDonald and Alexander McLeod of Virginia from the Chickemogga Indians,' printed at Keene, New Hampshire, in 1794, small 8vo. A few other notable works also appeared about the same time; for instance, Blake's 'Illustrations to the Book of Job,' comprising 21 proof plates, 1826, 4to, 12*l.* (original covers), and a set of the 22 parts (in 18) of 'Scenes from the Life of Nickleby Married,' with all the wrappers, 1840, 8vo, 16*l.* It is most unusual to find this in parts as issued. It often figures in the catalogues of Mr. W. T. Spencer, who has large numbers of works of the kind continually passing through his hands, though invariably in bound form. Shelley's 'St. Irvyne,' 1811, 8vo, realized 28*l.* (morocco extra) at the same sale; and Mr. Alfred Trapnell's library, sold on the 6th, contained many good books, e.g., Ackermann's 'History of the University of Cambridge,' 2 vols., 1815, 4to, 31*l.* (calf); the *editio princeps* of the 'Vitæ et Sententiæ' of Diogenes Laertius, printed by Jenson of Venice in 1475, folio, 18*l.* (oak boards); and a number of Horæ in manuscript and in print, Psalteria, and other service books, one of the most notable being Pigouchet's Book of Hours printed at Paris in 1493, small 4to, 58*l.* (old calf, the smaller cuts illuminated).

The libraries of Mr. S. Middleton of Dublin, and the Baroness von Colberg of Rome, with other properties, sold at Messrs. Sotheby's on the 13th and following day, contained a copy of Dionis Gray's 'Storehouse of Brevetie in Woorkes of Arithmetick,' 1577, 12mo, 5*l.* 5*s.* (original calf, stained); Shakespeare's Works and Poems, the first illustrated edition, 7 vols., 1709-10, 8vo, 13*l.* (original calf); and a small English Psalter printed in 1623, in an embroidered binding of silver and coloured threads said to be by the nuns of Little Gidding, though there does not appear to be authority for the statement that any work of this kind came from Nicholas Ferrar's establishment, 16*l.* 10*s.* The late Sir Seymour Haden's 'Études à l'Eau-forte,' consisting of 25 etchings on China paper, with the plate of Fulham in two states, and 5 culs-de-lampe, 1866, realized 173*l.* 5*s.*; and a little later in the month Gould's 'Birds of New Guinea,' 5 vols., 1875-88, fetched 39*l.* (half-morocco); the 'Birds of Great Britain,' 5 vols., 1873, 34*l.* (half-morocco); the Kelmscott edition of Chaucer's Works, 1896, folio, 60*l.* (white pigskin, metal clasps); Van Ysendyck's 'Specimens of Art connected with Archi-

ture in the Netherlands,' in 10 portfolios, 1880-89, 21l.; and Ackermann's 'Microcosm of London,' 3 vols., 1808-10, 4to, which had belonged to Lionel Brough, the well-known actor, 20l. (half-morocco, uncut).

On April 25th Messrs. Sotheby sold for 8,650l. the correspondence chiefly addressed to W. Blathwayt, Secretary of State and Commissioner for Trade and Plantations, concerning the American Colonies during the last quarter of the seventeenth century. It included, *inter alia*, the original draft of the grant made by Charles II. of the Province of Pennsylvania to William Penn, dated March 4th, 1681. At the same time a collection of 13 manuscripts and 35 maps of the North American Colonies, c. 1670-90, realized 690l., and an extensive collection of documents and pamphlets on the state of the North American and West Indian Colonies in the later years of William III., 300l. A lengthy description of the maps is contained in the annual volume of 'Book-Prices Current,' pp. 439 *et seq.* A few days later at Messrs. Hodgson's the first edition of the Complutensian Polyglot, as it is called, or Biblia Sacra Polyglotta of Cardinal Ximenez, the earliest of the four standard texts of the Septuagint Greek version, 6 vols., folio, 1514-17, fetched 59l. (calf, three leaves repaired)—the Amherst copy sold for 110l. (old calf) in December, 1908; Blake's 'Songs of Innocence,' 1789, with two coloured plates from 'Songs of Experience' (1794), an early copy before the numbering of the plates, 47l. (old russia); Gardiner's 'History of England,' 17 vols., 1863-1903, 24l. 10s. (original cloth); 'The Vicar of Wakefield,' the first or Salisbury edition, 2 vols., 1766, 8vo, 67l. (old calf); Keats's 'Lamia,' 1820, 8vo, 42l. (original boards, with label); the Second Folio of Shakespeare's Plays, 1632, 60l. (morocco extra, verses mounted, title and last leaf repaired); and Turner's 'Picturesque Views of England and Wales,' on largest paper, 2 vols., 1838, 25l. (morocco extra). It is interesting to know that a complete set of the *Proceedings* of the Royal Zoological Society of London with the Library Catalogue now stands at about 40l. (half-morocco, cloth, and 153 numbers). This set included the indexes from 1830 to 1900, and ran from the beginning in 1830 to 1909.

The remainder of April was productive of very little. Two black-letter proclamations of Cromwell prohibiting horse-racing sold for 5l. and 13l. respectively; Colonna's 'Hyperotomachia Poliphili,' 1499, folio, from the Sardou library, 28l. 10s. (morocco); and a special copy of the 'Eikon Basilike,' 1648, for 51l. This had formerly been the property of Charles II., and bore the following inscription in his handwriting: "A mon Cousin Le Comte de la Gardee, Charles R.A. la Haye ce 10me de May, 1649." It belonged to the well-known edition specially printed for gifts to friends of Charles II. during his exile at the Hague, and was bound in the usual black morocco with crown and monogram and death's-head beneath.

The month of May witnessed the sale of the libraries of the late Mr. Montagu Guest of the Albany, Marion Crawford the novelist, Mr. Joseph Thompson of Wilmslow, Cheshire, and the late Prof. A. J. Butler, as well as a further portion of Mr. J.W. Ford's library, and several miscellaneous collections. Mr. Guest's library was useful rather than valuable, as also was that of Mr. Marion Crawford; indeed, it is not until we come to Mr. Thompson's collection that we find anything specially noticeable. In this was an extensive series of works relating to the Brownists, which, however, did not realize very much. Crealock's 'Deer-Stalking in the

Highlands of Scotland,' 1892, 4to, fetched 14l. 15s. (original cloth); Dresser's 'Birds of Europe,' 8 vols., 1871-81, 36l. (uncut); Elliot's 'Monograph of the Phasianidae,' 2 vols. in 6 parts, 1870-72, 47l.; a fine series of Gould's ornithological works, 370l.; Gray's 'Genera of Birds,' 3 vols., 1849, 13l. 15s. (half-morocco); another copy of the Kelmscott Chaucer, 1896, folio, 45l. (as issued); Lord Lilford's 'Birds of the British Islands,' 7 vols., 1885-1897, 8vo, 47l. (half-morocco); and Nash's 'Mansions of England,' the 4 series, 1839-49, 30l. (in portfolios). The original issue of Alken's 'National Sports of Great Britain,' 1821, folio, sold for 52l. (half-calf) on May 25th, and a series of original editions of Mr. Hardy's novels fetched varying amounts, of which the highest were 17l. 15s. for 'Desperate Remedies,' 3 vols., 1871, and 5l. 12s. 6d. for 'Far from the Madding Crowd,' 2 vols., 1874, both being in cloth as published. About the same time Heath's 'Military Costume of the British Cavalry,' 16 coloured plates, 1820, folio, brought 66l. (original boards with label), and the Nuremberg Chronicle, 1493, folio, with the blank leaves and the 'De Sarmacia,' 40l. (calf gilt, title in facsimile).

The further portion of Mr. Ford's library was catalogued in 1,239 lots, and realized 3,160l. This very fine collection of an all-round character included 'Jane Eyre,' 3 vols., Smith & Elder, 1847, 28l. (original cloth); 'Wuthering Heights,' 3 vols., 1847, 48l. (original cloth); the 'Dictionary of National Biography,' 67 vols., 1885-1904, 25l. 10s. (cloth); Dugdale's 'History of Embanking and Drayning,' with the 5 scarce leaves following the preface, "To the Reader," 1662, folio, 41l. (morocco, gilt edges, by Roger Payne); Fuller's 'Worthies of England,' 1662, folio, 110l. (old russia, also by Roger Payne, with one of his characteristic memoranda inserted); Manning and Bray's 'History of Surrey,' 3 vols., 1804-14, 20l. (russia extra); 'Les Œuvres de Molière,' par M. Bret, 6 vols., 1773, 8vo, 38l. (old French morocco extra); Repton's 'Landscape Gardening,' 1816, royal 4to, 10l. 15s. (russia extra); and White's 'Natural History of Selborne,' 1789, 4to, 20l. (morocco super-extra). There were no exceptionally rare and valuable books in this portion of Mr. Ford's library, but every one was good of its kind. Its chief feature consisted of volumes of voyages and travels, many of them from the Beckford Library, and some containing MS. notes by the builder of Fonthill.

On June 2nd eight lithographic plates (title missing) from Thackeray's Ballet Mythologique, 'Flore et Zephyr,' 1836, in sunk mounts, fetched 37l., and a day later Mr. Elliot Stock's library was sold. This consisted mainly of old English literature, such as the first edition of Burton's 'Anatomy of Melancholy,' 1621, 4to, 37l. (morocco extra), and Milton's 'Poems,' 1645, 8vo, 21l. 10s. (portrait missing, original sheep). There was also a fine set of works by the sisters Brontë, bound in oak boards made from a beam out of the old Chapter Coffee-House where Charlotte stayed during her first visit to London. This set realized 55l. On June 6th Messrs. Christie sold a copy of Smith's 'British Mezzotint Portraits,' 4 vols., 1878-84, interleaved and annotated by the late Mr. Alfred Whitman, for the large sum of 430l. 10s. This was an exceptionally important work, as a large number of undescribed "states" were catalogued.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

- Cheyne (T. K.), The Two Religions of Israel, with a Re-examination of the Prophetic Narratives and Utterances, 12/6 net.
Muir (Rev. William), Our Grand Old Bible, 3/6 net.

Literary Gossip.

'ON FREEDOM' is the title given by Mr. G. Locker Lampson, M.P., to a work dealing with the freedom of the will which Messrs. Smith & Elder will publish at the end of this month. Though the subject is generally treated in a highly technical manner, the author has made it his particular business to explain it in as fresh and untechnical a way as possible, so that the general reader may be able to pursue it rapidly and with comparative ease.

THE same firm will have ready in about a fortnight 'French Railways,' illustrated by many photographs, in which Lord Monkswell offers a succinct account of the various railway systems in France, their organization, running capacity, and engine types, based on a personal acquaintance with men and machinery.

MESSRS. CHATTO & WINDUS's announcements for the spring include: 'Men and Things of my Time,' by the Marquis de Castellane, translated by Mr. A. Teixeira de Mattos, and illustrated with portraits; 'London Clubs: their History and Treasures,' by Mr. Ralph Nevill, with illustrations; 'Wordsworthshire,' by Mr. Eric Robertson, illustrated by Mr. Arthur Tucker; 'The Bargain Book,' by Mr. C. E. Jerningham and Mr. Lewis Bettany; and 'The Favourites of Louis XIV.,' by Le Petit Homme Rouge.

THE following novels are in the same publishers' spring list: 'Mothers and Fathers,' by Mrs. Maxwell Armfield (Constance Smedley); 'A Woman on the Threshold,' by Maude Little; 'Fenella,' by H. Longan Stuart; 'Billy,' by Paul Methven; and 'The Casement: a Diversion,' by Frank Swinnerton.

The Scottish Historical Review for January opens with Sir James Balfour Paul's description of Edinburgh in 1544 under Hertford's invasion. Mr. Andrew Lang begins re-editing 'The True Loyalist,' a very rare collection of Jacobite songs. Mr. H. W. Meikle traces the adventures of two Glasgow merchants, named Sword, in the French Revolution. Sir Herbert Maxwell continues translating the *Lanercost Chronicle*. Dr. James Wilson edits, and Sir Arch. Lawrie comments on, a deed from Cîteaux by the Abbot of Cupar in 1219. Dr. Joseph Anderson writes on Mr. Curle's elaborate book on the Roman outpost on the Tweed. Prof. W. P. Ker chooses his side about the Border ballads, which are otherwise under the fire of Mr. Lang and Col. Elliot.

AMONG the papers in *Chambers's Journal* for February are 'Rob Roy and the Maclarens,' by Mr. Frederick Watson, a son of "Ian Maclaren"; 'The King's Champion,' by Mr. Julian Strange; 'A Great American Hotel,' by Mr. Day Allen Willey; 'An Old House in London,' by Mr. J. R. Evans; 'The Real Canada,' by Mr. Norman Murray; and 'A Floating Public School,' which is a description of the Liverpool training ship Conway.

'IMPATIENT GRISELDA,' a new novel by Laurence North, author of 'Syrinx,' will be published at an early date by Mr. Martin Secker.

THE copy of Stow's 'Survey of London' included in the library of the late Rev. J. H. Dent, to be sold by Messrs. Hodgson at the end of the month, is of particular interest. It is the poet Gray's own copy of the 1720 edition, and bears his autograph as well as a number of marginal notes, mostly architectural or antiquarian in his beautiful handwriting.

The acquisition, "at the expense of the Publick," of "Montague House" for the Museum is mentioned at some length, while in another place Gray notes the danger from fire which so nearly caused the destruction of the Cottonian Library. The two volumes have been carefully preserved, and are well bound by Clarke & Bedford.

OTHER items are a first edition of Walton's 'Lives' bearing a presentation inscription to his sister in his autograph; a small edition of 'Telemachus,' with the autograph of Pope; a complete set of Nichols's 'Leicester,' presented by the author to J. Tailby, who assisted him in the work; incunabula from the German and Italian presses; and two fine Horæ on vellum. There are in addition a few very rare seventeenth-century tracts relating to the early development of Virginia and other American Colonies.

THE catalogue also includes a presentation copy of Tennyson's works, inscribed by the poet "C. Euan Smith from Tennyson, June 24th—86." Under this inscription is a note signed "H. T.," evidently due to the present Lord Tennyson, which runs:—

"In Memoriam Lionel Tennyson Fili, mariti, fratris carissimi, Forma, mente, morum simplicitate, Laudem inter æquales mature adepti, Famam quoque in republica, si vita suffecisset, sine dubio adepturi."

The date and place of Lionel Tennyson's death follow.

THE fifth annual meeting of the Historical Association was held at University College, London, on Friday and Saturday in last week. On Friday evening an address was given by Prof. Sadler on 'The Value of Historical Studies to Students and Administrators of English Education,' after which a dinner and conversazione took place.

ON Saturday morning there was an interesting discussion on the place that should be taken by historical teaching in various types of schools, and the method of setting examination papers in history. It was agreed that in every school of sufficient size there should be at any rate one teacher specially qualified to supervise the history teaching, and that the history lessons should only be entrusted to those who were competent and interested in such work. It was also agreed that all school-leaving, matriculation, and professional entrance examinations should include as a compulsory subject the outlines of British history.

A NEW volume of essays by R. L. Stevenson is to be published by Messrs. Chatto. This volume, entitled 'Lay Morals and other Essays,' is composed almost entirely of work which has not hitherto been generally available outside the "Edinburgh" and "Pentland" editions.

'WEBSTER'S NEW INTERNATIONAL DICTIONARY' is now being published by Messrs. Bell. This edition is not merely an enlargement and correction of the old 'Inter-

national,' but rather a rebuilding of the old on a larger and more imposing scale. The 'New International' contains 400 more pages than the old, and some 2,000 extra illustrations, yet all the matter will still be contained in one compact volume.

THE first number of a weekly literary review will be published in the spring by Messrs. Maunsel of Dublin.

THE ENGLISH GOETHE SOCIETY has formed a Reading Circle for members, and Goethe's 'Italienische Reise' has been chosen as the first book for study. Sir James Yoxall is lecturing to the Society next Thursday evening on 'Goethe back from Italy.' Later it is proposed to read 'Egmont.'

THE programme of University Extension lectures for the coming term has just been issued by the University of London. It includes an unusually interesting series of courses on various branches of history, literature, economics, architecture, and science, which will be held at a large number of metropolitan and suburban centres. Mr. Wicksteed will lecture on the 'Purgatorio' in the University buildings, South Kensington; whilst in the City Mr. Travis Mills will deal with modern history, Mr. W. H. Hudson with ancient literature, Mr. Alfred Milnes with economics, &c. Courses on the history and architecture of London will be delivered at different centres, and a series of lecture-demonstrations in historic buildings has been arranged for Saturday afternoons fortnightly. Full particulars may be obtained on application to the University.

THE death in his 60th year is announced from Heidelberg of Prof. Heinrich Welzhofer. A pupil of Giesebrecht, he was early obliged by ill-health to give up his academic career, and he devoted himself to historical investigations. Among his most important works are 'Untersuchungen über die deutsche Kaiserchronik,' 'Allgemeine Geschichte des Altertums,' and 'Thukydides und sein Geschichtswerk.'

THE number of students at the German Universities has risen to 54,822, an increase of over 2,400 since the winter session of the preceding year. The chief increase is to be found in the Prussian Universities. The number of women students has grown from 211 to 2,418 in the five years that have elapsed since the Prussian Universities were thrown open to them.

AMONG recent Parliamentary Papers of interest we note: Argentine Emigration Handbook (post free 2½d.); Royal Commission on the Church of England and other Religious Bodies in Wales and Monmouthshire, Vol. II., Evidence (post free 4s. 8d.); and Teaching of English in Secondary Schools, Circular 753 (post free 2½d.).

NEXT week we shall pay special attention to Educational Literature and School-books.

SCIENCE

Overland to India. By Sven Hedin.
2 vols. (Macmillan & Co.)

ABOUT a year ago Dr. Sven Hedin published an admirable account of his wanderings and adventures in Tibet during 1906 and 1907 (*Athen.*, Jan. 15, 1910). To reach that country he had the choice of many routes, but characteristically selected the least easy, and in some respects the most disagreeable; partly to avoid the beaten track, and partly to visit the Persian deserts and see wherein they resembled those of Chinese Turkestan, with which he is well acquainted; but mainly, perhaps, impelled by curiosity, the sacred fire of the explorer, regarding "the ancient, desolate, and effete Persia." So in October, 1905, finding himself in Constantinople, he embarked for Batum on the *Svatoi Nikolai*, a rickety boat with much cargo and few passengers. Heavy weather was experienced, and the port was reached at midnight at the height of the storm, the difficulties of landing being enhanced by a general strike of labourers.

"However, under cover of the darkness, a couple of bold dock-labourers ventured, in consideration of high pay, to take charge of our luggage and guide us to the nearest hotel, a regular den of thieves, full of rogues and vagabonds. If they were detected as strike-breakers, they would be mercilessly shot down, our porters assured us, and we subsequently found that their statement was not exaggerated."

Delayed at Batum, Dr. Hedin got a passage on a cargo vessel to Trebizond, whence his overland journey began on November 13th. It lay through Erzerum, skirted Mount Ararat to Etchmiadzin and Nakichevan (the grave of Noah), and thence by Tabriz and Kasvin to Teheran, where the first part of his journey ended. The second part took him to Nasratabad in Seistan; the third to Quetta, where he may be said to have reached India. These divisions of the journey will be convenient in examining the record, and, moreover, they are suggested by geographical considerations.

The first part was in many respects the most agreeable, and for that reason the best known; and, though the author considers that his journey proper began at Teheran, he devotes fifteen chapters (162 pages) to the description of this section of his route. Among the points of interest were the upper waters and tributaries of the Frat-su or Euphrates, and a ridge from which rivers flowed to the Black Sea, the Persian Gulf, and the Caspian. Near this lies Erzerum, commercially decadent because its traffic is taken away by the Caucasian railway, but still strategically important: it has forty thousand inhabitants, of whom ten

thousand are Armenians, who suffer from many disabilities. Dr. Hedin was here kindly received by the Kaimakam of the district and other officials; indeed, wherever he went his tact and good humour, combined with great pertinacity, secured him the aid of which he often stood in need. This hospitality was repeated at Bayazid, famous in the wars, for the Russians have captured the place no fewer than four times, and have as often restored it to the Turks. Of Ararat, which is quite near, the author says:—

"Ararat, or, more correctly, Airarat, 'the plain of the Aryans,' is the name given from time immemorial to the high land on the middle course of the Araxes, and when it is stated in the first book of Moses, chapter viii. and verse 4, that Noah's ark rested on Ararat, this high land is really meant, and the name has been in Europe improperly transferred to the mountain.... Ever since 1827 Ararat has been the meeting-point of three empires,—Russia, Turkey, and Persia,—but so that the peak itself stands in Russian territory. Here one can stand with the left foot in Russia and the right in Turkey, and plant one's staff on Persian ground."

At Nakichevan Dr. Hedin found a compatriot in the commandant, from whom he learnt many particulars of the atrocities; and pursuing his way, he arrived about the middle of December, 1905, at Teheran, where he became the guest of Mr. and Mrs. Grant Duff. Whilst there he was received by the Shah in a château an hour's journey distant, and thus records his impressions:—

"There stood the unfortunate, pale and worn, prematurely aged shadow of a despot, clad in a very simple black costume, without the least decoration, and with the usual black *kullah* on his head; but he smiled affably, gave me his soft, limp hand, spoke to me in the Tatar tongue, and inquired into my experiences on the way from Trebizond and my plans for the future, and bade me not to forget to send him my next narrative of travel, in which he would be glad to see his portrait inserted."

At Teheran camels and the accessories of Oriental travelling were procured, and on January, 1st, 1906, Dr. Hedin set forth for Seistan, with intent to discover as much as possible about the Dashti-Kavir and Dasht i-Lut, names indicating salt swamp and desert land. He crossed the former twice, and relates its dangers in vivid language; in fact, his descriptions, though hampered by the use of a foreign language, are always good, some of his similes being specially apt. For example, his camels on the march, the head of one being tied to the tail of another, and the animals led in sections by a man, remind him of "tugs drawing a line of barges after them"; and when they sink in the Kavir, their legs "bore into the soft ground like pins into a cushion."

The system of irrigation by *kanat* or *karez*, that is, underground channels with a fall less than that of the surface, is explained; and, indeed, the story of a repulsive country, in which drinkable water is a luxury, and vermin abound, is

told at great length by the author with the cheery assumption that his readers are as interested as himself. So, seated on his camel, notebook in hand, he marches on till the second stage of his journey is completed on April 9th at Nasratabad, the plague-stricken capital of Seistan. Here

"Six Englishmen, without ladies, were staying in Seistan, and with them I spent nine memorable days. Englishmen have a knack of making themselves at home in whatever part of the world their lot may cast them, and even here in this wretched Nasratabad they lived much as in London. They did not come unshaved to luncheon in the great saloon, and at dinner they appeared in spruce attire, with starched shirts, dinner jackets, and patent leather shoes.... We were in high spirits; and it was difficult to believe that all the while the angel of death was roaming about in search of his hapless victims."

Dr. Hedin stayed nine days at Nasratabad, and then set forth on his final stage to Quetta, reaching Nushki, where he got the railway, exactly six months after leaving Trebizond.

"Turkish Armenia, Persia, Seistan, and Baluchistan lay behind me, and now only India and Kashmir separated me from Tibet.... Next morning [May 14] I bade farewell to my honest Baluchis, who had served me so well and faithfully, put Riza [his servant] in an ordinary compartment, and took my seat in one of a better class. How strange to hear again the steam whistle of the engine after half a year of the immense solitude of the desert!"

On May 20th, 1906, he took train to Simla, where his plans for the expedition to Tibet were matured.

Such, in short, was the overland journey to India, but the two volumes in which it is recorded contain a vast deal more than is above indicated. There are many digressions, some of which will not appeal to the general reader, whose interest is chiefly confined to the tale of travel; but many of them will command the attention of geographers and experts, who, not without reason, may complain that the story is overlong. To mention a few, there are notes about Marco Polo's travels, about the Euphrates, Mesopotamia, and Nineveh, chapters on travels in the Kavir, on the march of Alexander the Great, on post-glacial climatic changes in Persia, on the distribution of deserts, and on the plague. All these are matters of interest and some of importance; of the latter none yields to the records of the author's views on the deserts or plains of Persia and his comparisons with the greater ones of China.

In the transliteration of Persian words it is a pity, so far as the English edition is concerned, that the system used in India is not closely followed, though every allowance must be made in the present case. The result, however, is likely to be mispronunciation by readers, for most of them, after all, a small matter. The use of the word "Hindu" for "Indian" has a curious effect; thus (vol. ii. p. 250 and elsewhere) "the Hindu doctor, Abbas Ali Khan," is in itself a

contradiction, for the name is manifestly Musalman, and not Hindu.

These are minor matters, and we prefer to conclude with the unqualified praise the illustrations deserve, especially the reproductions of the author's pencil drawings. Those of camels' heads, and various types of men, women, and children, are of great merit, and add value to the book, which, if overlong, is both attractive and valuable.

RESEARCH NOTES.

THE luminosity of tubes containing a trace of the rare gas neon, to which attention was called in these Notes for last month (*Athenæum*, Dec. 24), seems likely before long to have a practical application. M. Georges Claude, the well-known electrical engineer, finding himself with relatively large quantities of neon at his disposal as a by-product from the commercial manufacture of liquid air, has worked out a system of artificial lighting by its means. He finds that he can obtain a brilliant light from tubes 6 metres long by the expenditure of about '64 watt per candle-power, which, with the energy required by the self-induction coil necessary for regulating the light, comes out at about '80 watt per candle-power in all. This compares very favourably in point of expense with any other system of lighting, while the longer the tube, the less is the expense. An exhibition has lately been given at the Grand Palais in Paris, which was perfectly lighted with neon tubes no less than 36 metres long, the light from which seems to have behaved in an entirely satisfactory way, and to have neither falsified natural colours nor rendered ghastly the complexions of those present, after the manner of mercury-vapour lamps and other lights lacking red rays. The current number of the *Revue Générale des Sciences*, from which this account is taken, does not state the degree of exhaustion of these tubes; but as Prof. Collie's experiments, described last month, show that neon can be made luminous at atmospheric pressure, the practical difficulty of exhausting tubes of this length may be avoided.

A communication from M. Claude appears in the *Compte Rendu* of the Académie des Sciences for last month, in which he deals with the theoretical side of the matter, and gives figures fully bearing out the conclusions of M. Bouty as to the exceptional weakness of "la cohésion diélectrique" of neon, as compared with that of any other gas. Neither M. Claude nor the learned professor at the Sorbonne, however, suggests any reason for this weakness, or, in other words, for the higher conductivity of neon over helium and its kinsmen in the "inert" group. Subject to this, it would seem as if a method of lighting interiors, and especially the interiors of large buildings, by long lines of light concealed behind cornices—the nearest approach to sunlight yet achieved—were within sight at last.

In a recent number of the *Physikalische Zeitschrift* Prof. R. W. Wood (of Baltimore) describes an interesting experiment made by him with ultra-violet light. Arguing from the analogy of radium, he thought that the ultra-violet parts of the spectrum ought to make luminous the surrounding atmosphere in the same manner as do those of radium emanation or niton. He accordingly produced rays of very short wave-length by means of aluminium electrodes behind a

metal screen so arranged as to cut off all external and direct light. When the surrounding air was freed from dust and smoke, he found that no luminescence was visible to the naked eye; but a photograph taken with a camera equipped with a quartz objective showed that it was the seat of an intense emission of rays capable of influencing a sensitized plate, and completely absorbable by glass. This emission is so violent that a fairly strong air-blast has no effect upon it; and it is not affected by the magnetic field. It can also be produced when nitrogen is substituted for atmospheric air; but the presence of free oxygen puts an instant stop to it, although whether the gas prevents its formation or merely absorbs it cannot yet be determined. The whole subject of the light produced by the electric spark evidently requires renewed investigation.

In the *Philosophical Magazine* for this month is a paper by Mr. A. S. Russell and Mr. F. Soddy dealing with the Gamma rays from thorium D and actinium. This is the completion of the account of work previously done by them upon the like rays of other members of the radio-active family of elements, including uranium X and radium C. They find it possible to classify these elements by the order of the penetrating power of their Gamma rays, the highest place in this descending scale being the substance known as thorium D. They find considerable differences between such substances in respect of their absorption by lead and also of their "hardening" (in the technical sense) by their passage through this metal.

Another result of their investigation is that while there seems to be no relation between these characteristics and the Beta rays emitted simultaneously with the Gamma, there is a very marked connexion between them and the Alpha rays emitted by the substances immediately preceding and following the same substances in the disintegration series. In their own words, "Neither in penetrability, relative intensity, nor homogeneity are the Beta rays obviously connected with the Gamma rays, whereas there is a certain connexion between the Gamma rays and the Alpha rays." Like all recent investigations, this result casts further doubt upon the theory (formed on mathematical grounds, and until lately holding the field) which would make the Röntgen radiation consist of irregular pulses in the ether, and points to some peculiarity of the positive electrons not yet distinguished.

Dr. F. Horton in the current *Proceedings* of the Royal Society deals with the nature of the positive ions set free when phosphate of aluminium is heated, as shown by the experiments of Mr. A. E. Garrett (for which see *The Athenæum* of July 16th last). From the large quantity of electricity carried from the heated salt to the surrounding electrode, he says, we are justified in assuming that the positive ions are set free in sufficient number for their spectrum to be observed. Spectroscopic examination shows that monoxide of carbon, hydrogen, mercury vapour, and possibly oxygen are all present in the tube, and that with the exception of the mercury vapour, which finds its way in from the exhausting pump, all of them come from the heated salt. Prof. O. W. Richardson's determination of the ratio of charge to mass ($\frac{e}{m}$) for the carriers of positive electricity makes it plain that the carriers in this case cannot be atoms or molecules of hydrogen or mercury; and, while it is doubtful whether oxygen is really present in the tube at all, the fact that it is strongly electro-negative renders it unlikely that it

should act as a carrier of electricity of the opposite sign. By the process of exhaustion, Dr. Horton comes to the conclusion that the positive ions in this case are molecules of carbon monoxide, the mass of them corresponding fairly closely to the specific charge obtained for the positive ions produced by iron, platinum, and carbon. But if this be the case, how comes it that they are thrown off, as Dr. Horton is convinced they are, by the heated phosphate of aluminium? Is this another case of transmutation, such as Sir William Ramsay's famous "degradation" of copper into lithium and helium?

M. Gabriel Lippmann, who succeeds M. Armand Gautier (the new President of the Académie des Sciences) in the Vice-President's chair, describes in last month's *Compte Rendu* certain experiments made by him in electrification by contact. He has for some time noticed, he says, that contact alone was unable to produce electrification without pressure, and that, even with a metallic couple like platinum and mercury, no current was produced until the platinum pressed on the mercury with sufficient force to dimple its surface. He therefore determined to ascertain the minimum of pressure necessary for electrification, and thinks that he attained this with a solution of chloride of calcium. In this he soaks a strip of writing paper, and presses this on a glass slip, allowing about half its length to project beyond the end of the slip and to dip into the solution. On this he lays a smaller strip of gold leaf, and finds the pressure produced by its weight sufficient to set up an easily detected current. It seems as if this might be turned to account in the construction of coherers for wireless telegraphy.

Two more inventions with regard to wireless telegraphy have also been announced recently. Signori Bellini and Tosi, the Italian electrical engineers who visited this country last year, claim to have solved the problem of "directing" the Hertzian waves, or, in other words, of so controlling them that they can be aimed towards any point of the compass. According to the *Revue Scientifique* for the 24th of last month, this is effected by an adaptation of the discovery of M. Blondel that a grating can be constructed for ether waves of great length which shall act in all respects like the diffraction gratings towards waves of light. As such a grating, in the case of the waves used in wireless telegraphy, would have to be from 40 to 60 metres high, the idea proved difficult of development; but the Italian inventors claim to have now got over this difficulty by an instrument called by them a "radiogoniometer," which seems to consist of two rectangular coils, between which is placed a third coil moving freely about its centre. With this they can, it is said, not only "aim" a wave in any direction, but can also choose which of the many waves being constantly transmitted by different posts shall be received, so that it is possible for a station at Dieppe (e.g.) to talk to Havre or Honfleur without any other station being able to intercept the wave. The Louisiana and Provence, two ships of the Compagnie Transatlantique, have been fitted with the apparatus, and if its trial proves successful, we shall no doubt hear more of it.

The other invention appears in the *Compte Rendu* of the Académie des Sciences for last month, and is due to M. Br. Glatzel. It seems an adaptation of the principle made use of by the "Telefunken" system, in which the vibrations of the primary circuit are "damped" by the production of extremely short sparks. M. Glatzel in his turn brings about the same "damping" by

the use of nickel electrodes in a tube filled with hydrogen.

In the *Proceedings* above quoted there also appears a report by Sir Norman Lockyer on 'The Sequence of Chemical Forms in Stellar Spectra,' which is in effect a report of the work lately done in this matter at the Solar Physics Observatory. He says that the chemical forms so far traced in the stars are associated with those elements which have a relatively low atomic weight, yet that even to these there are exceptions. The evidence for the existence of oxygen and nitrogen in the stars which have been examined is, we learn, now "complete"; but up till now no spectroscopic testimony to the presence there of any of the inert or rare gases of the atmosphere discovered by Sir William Ramsay has come to light.

An entirely new theory of the origin of the solar system has been put forward by M. E. Belot, who, although an amateur astronomer, seems to have gained the approval of several Academicians. He rejects the still fashionable idea of Laplace that the solar system has been produced by the cooling of a nebula, and declares that, as is the case, this does not account for the retrograde motion of celestial bodies like certain satellites of Jupiter, Saturn, and Neptune, nor for some peculiarities in the orbit of Uranus. These anomalies, he says, can only be accounted for by supposing that the primitive nebula was struck by a whirlpool or vortex-ring in the ether, such as Descartes alleged to exist and to be responsible for the starting of the planets on their orbits. The theory, which has been brought forward several times at the Société Française pour l'Avancement des Sciences, has other consequences, such as the explanation of the planetoids as the result of no catastrophe, but as the "tail" or trail of the larger planets, and the imagining of a similar tail for our own globe. It will be explained at length in the author's 'Essai de cosmogonie tourbillonnaire,' to be shortly published by Gauthier Villars, and an excerpt from this book with a diagram will be found in the *Revue Scientifique* for the 17th of last month.

A change of social rather than of scientific importance may be expected to occur in King George V.'s reign, although its advent may be delayed for a few years. This is the reform of the Gregorian calendar, which is pretty generally admitted to be, as it stands, a nuisance too intolerable for a scientific age. The scheme of M. Grosclaude of Geneva seems to overcome all the inconveniences of the present system, and, as it was adopted unanimously by one of the many Congresses held at Brussels during the late Exhibition, and Switzerland has now asked for an International Commission to examine into its practicability, there seems a fair chance of its being adopted. M. Grosclaude would divide the year into four quarters, each containing thirteen weeks; but, while the first two months of each quarter would consist of thirty days, the third month would have thirty-one. This would account for 364 named days only, but one unnamed day would be intercalated between the 31st of December and the 1st of January; and every leap year another unnamed day would be, in like manner, slipped in between the 31st of June and the 1st of July. The result of this would be that all anniversaries, religious festivals, openings and closings of Law Courts, and the like would fall on the same day of the week and month in every year, and the length of the month would be easily remembered by the simple rule that the first Sunday of the months in each quarter would fall on the 7th, 5th, and 3rd days respectively.

Thus the first Sunday in January would fall on the 7th, the first Sunday in February on the 5th, and the first Sunday in March on the 3rd day of these months in every year.

F. L.

SOCIETIES.

GEOLOGICAL.—Dec. 21.—Prof. W. W. Watts, President, in the chair.—Mr. T. H. Withers was elected a Fellow.—The following communications were read: 'The Keuper Marls around Charnwood Forest,' by Mr. T. Owen Bosworth.—and 'The Relationship of the Permian to the Trias in Nottinghamshire,' by Mr. R. Lionel Sherlock.

MICROSCOPICAL.—Dec. 21.—Mr. E. J. Spitta, V.P., in the chair.—Mr. W. R. Traviss described a small microscope lamp, particularly suited for opaque objects and dark-ground illumination with high powers.—A short communication from Mr. M. J. Allan of Geelong on 'An Easy Method of treating Printing-Out Paper (P.O.P.) for All Kinds of Photography,' was read. He recommends that the prints be washed in a strong solution of hypo, then placed in a saturated solution of hypo, after which they are to be washed in running water.—Mr. C. H. Higgins sent a communication on 'A New System of Filing Slides.'—Mr. A. Earland described the apparatus and methods employed in the cruiser Goldseeker of the International North Sea Commission.—A paper by Mr. A. A. C. E. Merlin 'On the Measurement of Grayson's New Ten-Band Plate' was presented.—A paper by Mr. Jas. Murray on 'Some African Rotifers: Bdelloida of Tropical Africa,' was taken as read.

The following were elected Ordinary Fellows: Messrs. W. J. Caird, J. A. Carter, and R. T. Hewlett.

MEETINGS NEXT WEEK.

- MON. Royal Academy of Arts, 4.—'Some Great Idealists,' Sir W. B. Richmond.
— Bibliographical, 5.—'Some Sixteenth Century English Books with Spurious Imprints,' Mr. R. Steele.
— London Institution, 5.—'Some Thoughts suggested by Travels over the Empire,' Bishop Welldon.
— Institute of British Architects, 8.—'Cardinal Medicis' Pleasure House,' Mr. Halsey Ricardo.
— Geographical, 8.30.—'The Michael Sars North Atlantic Deep-Sea Expedition,' Sir John Murray and Dr. Hjort.
TUES. Royal Institution, 3.—'Heredity,' Lecture 1., Prof. F. W. Mott.
— Statistical, 5.
— Institution of Civil Engineers, 8.—Discussion on 'The Strengthening of the Roof of New Street Station, Birmingham,' and 'The Reconstruction and Widening of Arpley Bridge, Warrington.'
— Colonial Institute, 8.30.—'Our Worldwide Empire,' Mr. W. H. Garrison.
WED. Meteorological, 7.30.—Annual Meeting; President's Address on 'The Present Position of British Climatology.'
— Entomological, 8.—Annual Meeting.
— Folk-lore, 8.—Annual Meeting; President's Address on 'The Essential Unity of Folk-lore.'
— Microscopical, 8.—Annual Meeting; Presidential Address by Prof. J. A. Thomson.
— Society of Arts, 8.—'The Dutch Labour Colonies,' Mr. J. C. Medd.
THURS. Royal Institution, 3.—'Recent Progress in Astronomy,' Lecture 1., Mr. F. W. Dyson.
— Royal Academy of Arts, 4.—'The Art of the Future,' Sir W. B. Richmond.
— Royal Society, 4.30.—'The Action of *B. lactis aerogenes* on Glucose and Mannitol,' Part II., Mr. G. S. Walpole; 'The Pharmacological Action of South African Boxwood (*Goniona Kamassi*),' Dr. W. E. Dixon; 'Autoagglutination of Red Blood Cells in Trypanosomiasis,' Dr. W. Yorke; and other Papers.
— Society of Arts, 4.30.—'Banking in India,' Mr. Reginald Murray (Indian Section).
— Historical, 5.—'Early Apprenticeship in England,' Miss O. Jocelyn Dunlop.
— London Institution, 6.—'The Grand Canyon of Colorado,' Dr. R. D. Roberts.
— Royal Numismatic, 6.30.—'Classical Influence on the Medals of the Italian Renaissance,' Mr. G. F. Hill.
— Linnean, 8.—'The Flora of the Falkland Islands,' Mr. C. H. Wright; and other Papers.
— Chemical, 8.30.—'The Interaction of Alloxan and Glycine,' Messrs. W. H. Hurtle and W. O. Wootton; 'Intramolecular Rearrangement of Diphenylmethane o-Sulphoxide,' Messrs. T. P. Hilditch and S. Smiles; 'The Reactions between Chemical Compounds and Living Muscle Proteins,' Mr. V. H. Veley; and other Papers.
— Society of Antiquaries, 8.30.
FRI. Institution of Civil Engineers, 8.—'The Design and Construction of Reinforced-Concrete Arches,' Mr. G. F. Walton (Students' Meeting).
— Institution of Mechanical Engineers, 8.—'Modern Electrical Dock-Equipment, with Special Reference to Electrically Operated Coal-Hoists,' Messrs W. Dixon and G. H. Baxter.
— Royal Institution, 9.—'Chemical and Physical Change at Low Temperatures,' Prof. Sir J. Dewar.
SAT. Royal Institution, 3.—'Problems in the Career of the Great Napoleon,' Lecture 1., Mr. A. Hassall.

Science Gossip.

SINCE Dr. Cowell took up the post of Superintendent of the 'Nautical Almanac,' Mr. Eddington has been the sole Chief Assistant at the Royal Observatory, Greenwich. But a second has now again been appointed in the person of Mr. Sydney Chap-

man, of the Victoria University, Manchester, and of Trinity College, Cambridge. He took a first class with distinction in the Mathematical Tripos in 1909.

PROF. MICHIE SMITH has resigned the Directorship of the Kodaikanal and Madras Observatories, which he has held since 1899. He succeeded Pogson as Government Astronomer at Madras in 1891. Mr. Evershed will be his successor, and Mr. Royds, of the Victoria University, Manchester, will become Chief Assistant.

THE degree of Doctor of Science, *honoris causa*, is to be conferred by the University of Cambridge upon Prof. Hale, Director of the Solar Observatory of the Carnegie Institution of Washington, Mount Wilson, California.

ESPIN's new star in Lacerta appears to be diminishing in brightness. Its red colour was remarkable, and of the bright lines seen in its spectrum, the red hydrogen line was the most conspicuous. The phenomenal changes are probably due to the passage of the star through a nebulous mass, as would seem to have occurred in several similar cases.

THE volume of Greenwich Observations for 1908 has recently appeared with the usual supplementary Results, both astronomical and meteorological, the former containing also the explanatory introduction, and altazimuth tables. The number of fundamental and zodiacal stars observed with the transit-circle amounts to 661; others were observed with the altazimuth, and several near the zenith with the reflex zenith tube.

THE removal of the Hamburg Observatory to Bergedorf, about twelve miles to the south-east of the old building (which was founded in 1825) and on a more suitable site, 130 feet above the level of the Elbe, is being actively proceeded with, the municipality having voted the funds necessary for its equipment. A great feature is the complete isolation of the different instruments, each having its own building. Besides those removed, or to be removed, from Hamburg, there will be a refractor of 24 inches aperture, a reflector of 40 inches aperture and 10 feet focal length, and a photographic combination.

ANOTHER small planet was discovered by Prof. Max Wolf at the Königstuhl Observatory, Heidelberg, on the 22nd ult.

FINE ARTS

Tiepolo: la Vie et l'Œuvre du Peintre. By Pompeo Molmenti. (Hachette & Cie.)

A QUARTER of a century has elapsed since the historian of the social and private life of Venice linked the names of Carpaccio and Tiepolo as the title of a volume of studies in Venetian art, the one chosen as representing the dawn, the other the sunset. How fully the former appellation is justified with regard to the period when art first became the interpreter of the fullness of Venetian life was shown in compendious and definite fashion in a volume of researches by Signor Molmenti and the

late Herr Ludwig in the life and art of Carpaccio, published five years ago. Still faithful to his choice of types, Signor Molmenti has now set himself to discharge the same task with regard to Tiepolo.

It may be admitted that the associations of dawn are more stimulating than those of sunset. The one has a certain indefinable expectancy and sense of promise which more than counterbalances the deeper hues and richer declared beauty of the evening sky. So also with the types—Carpaccio, the latest in point of time of the painters who may be described as primitives, relatively untroubled by questions of technique, owes his position to his gift of narrative and the incomparable simplicity and grace of his creative power: Tiepolo, the first of the modern and last of the Renaissance painters, preserves in his art something of the glow of Titian, of the intensity of Tintoretto, and the sumptuousness of Paul Veronese, after a lapse of almost two centuries.

Signor Molmenti's great knowledge of the Venice of the eighteenth century has enabled him to reveal to the life the background of flimsy elegances of mode, the world of perukes and panniers, against which the figure of Tiepolo appears "tout muscles et tout sang."

It was the age of Goldoni, and the increased importance of the art of the theatre at Venice made itself felt in the work of the painter; this presence, and the innate sympathy with the art of music to which Venice in the eighteenth century was passionately devoted, are links between his work and that of the contemporary masters of French art, Watteau and Boucher. In the last decade of his life he came somewhat under the influence of the masters of Spain through his long residence in Madrid, but he gave at least as much to Goya, and, through him, to more modern artists, as he himself ever received from their predecessors. He studied the work of the older painters with zeal, especially that of Dürer, and he was held in high repute as a connoisseur. His own work was of true Venetian lineage.

His temperament was calm and equable; the recorded incidents of his life are almost all concerned with the practice of his art. How rich it was, and how varied, the two hundred and fifty illustrations of Signor Molmenti's work suffice to show. They are relatively the more important because so many of the originals were intended for the decoration of private houses, and are comparatively inaccessible, whether they still retain their places on the walls and ceilings of the Venetian country seats or have been carried off to deck the *salons* of a newer generation of wealth.

The supreme felicity of Tiepolo's art is seen in his ceilings. There, amid the delicate and evanescent play of angels and cupids flitting like sunbeams and bearing some saint or goddess in apotheosis, is seen to the full his pervading sense of space-decoration together with his mastery of the problems of perspective and fore-

shortening. Studied and almost constrained by contrast with these are the wall-paintings in which he was commanded to display the pageant of family history, as in the Soderini villa at Nervesa, or the frescoes from the Contarini villa at La Mira which now form part of the André Collection at Paris. There is more of poetic feeling in the art of Tiepolo than in that of Paul Veronese, and this found expression more congenial in the frescoes of the Villa Valmarana, where it interprets that of Homer and Virgil, Ariosto and Tasso. The painter passes, as Signor Molmenti says, from the illustration of one to another without losing anything in freshness or originality of invention, in vigour of design, or in firmness of colour. It is perhaps in the story taken from Tasso of the loves of Renaud and Armide, treated by Tiepolo both here and elsewhere, notably in the Bishop's palace at Wurzburg and in four pictures in a private collection at Genoa, that he reveals most fully that vein of romantic melancholy "whose artless beauty quite precludes distress," such as is seen with some added sense of decoration, but less vitality of structure, in the pastorals of Fragonard.

But besides being a painter of pastorals and aerial visions, Tiepolo is a master of dramatic expression and composition. This is seen in the altarpiece at Este of S. Tecla delivering the city from the plague, with its admirable rendering of the contrasts between the figure of the saint praying and the plague-stricken victims below, and the vision above of God driving the demon of the plague forth from His presence; in the powerfully conceived 'Eleazar and Rebecca,' now at Bordeaux, which has all Tintoretto's subtlety in its modelling; in the deep solemnity of the 'Calvary' at S. Alvise; and in the half-length of St. Catharine in the Gallery at Vienna, which reveals with haunting impressiveness his power to charge a face with intensity of emotion.

Tiepolo's art is many-sided. His apparent facility hid constant and laborious work. Signor Molmenti has followed in his footsteps, and the book furnishes a full record of his art. It is seen in the greater churches and palaces of Venice, the Gesuati, the Scuola dei Carmini, the Palazzo Rezzonico; in the lonely S. Alvise and the Palazzo Labia; in the half-deserted villas of the Veneto, the villa Cordellina at Montecchio Maggiore and the Pisani villa at Strà serving as types—two among many. The book makes one wish to wander among these unfrequented ways and see their fading glories, and thus come to know more of the brilliance of the sunset of the art of Venice.

Wood Carvings in English Churches. By Francis Bond.—Vol. II. *Stalls and Tabernacle Work, and Bishops' Thrones and Chancel Chairs.* (Frowde).—This book yields a further proof of Mr. Francis Bond's remarkable zeal and diligence in matters ecclesiastical. This second instalment of volumes on the old wood carvings of English

churches deals chiefly with stallwork. One on misericords has already been published, and two others are in preparation, dealing respectively with chests and bench-ends. The photographic plates and detailed descriptions show that Mr. Bond is justified in stating that "there is nothing in this country more consummate in design or execution than the stallwork of Lancaster, Chester, Ripon, and Manchester." Just praise is also given to the remarkable revival of Gothic stallwork in the seventeenth century at Durham and elsewhere in the county under the guidance of that staunch Churchman John Cosin. Experienced students of the rich remnants of Gothic and Renaissance stallwork yet to be found in some of our country churches will miss various examples which are not illustrated nor even named in these pages, such as certain splendidly elaborate Gothic instances in some of the Marshland churches of Lincolnshire, or the spirited Renaissance carving at Attenborough, Nottinghamshire. But this volume makes no pretence of being exhaustive, and the finest specimens are admirably illustrated.

We do not find ourselves in complete agreement with Mr. Bond when he treats of episcopal thrones or early church chairs of dignity. There is a curious mistake on p. 115, where it is stated that there is a rude chair or settle of oak without nails in Stanford Bishop Church, Herefordshire, traditionally assigned to St. Augustine. This remarkable, and at any rate very ancient, chair was ejected from this church about half a century ago, and now stands in the museum at Canterbury as a valued relic. Mr. Bond mentions this museum chair as though it was distinct from the old one formerly at Stanford Bishop. Nevertheless the history of this remarkable piece of church furniture is well known; it was exhibited by Dr. Cox at the Society of Antiquaries, and a small volume reciting its story and the evidence of its antiquity has had a large circulation. Nor is Mr. Bond by any means conclusive in his arguments as to the thirteenth-century date of the marble patriarchal seat in Canterbury Cathedral. There is no trace of Early English design or moulding about it; if not of early pre-Conquest date, it is clearly modelled after one of ancient pattern. There is a little photograph of the rude frithstool at Beverley; it would have been better to give a picture of the one at Hexham with its noteworthy carving. The Bishop of Bristol is of opinion that the latter frithstool was designed by St. Wilfrid as an episcopal chair after a pattern he had observed in Rome.

MR. WALTER SICKERT'S DRAWINGS.

ALTHOUGH many of the drawings at the Carfax Gallery are slight, and the others appear to be slight, they are important for the insight they afford into the workings of an actively experimental and, subconsciously at any rate, very logical mind. Although the name of Mr. Sickert is for the public associated with that of Whistler as successively pupil, champion, and candid critic, yet his art has by now little enough in common with that of his master. He is a true son of Degas, and, inasmuch as this branch of the great stream of French art of the last century is still concentrated in a few forceful individuals, it is probable that it will go further than the other, which, spreading gloriously over a large expanse, is already spending its momentum in

sluggish shallows. The descendants of Monet are legion, and there is little fear that his message will either be lost to the world on the one hand, or become a devastating force on the other. It has been a fertilizing influence, but is already almost spent. The example of Degas and his adherents, on the contrary, has still to be utilized, and is still possibly dangerous.

We make the latter admission because, while we admire many of these drawings, we cannot deny that it is possible to dislike them with a considerable show of reason. Many, no doubt, will see in them, as in the work of the late Toulouse Lautrec, only a perverse cult of ugliness—"la peinture rosse," to use a serviceable colloquialism. It is odd that all the descendants of Ingres have a touch of this perverseness—Degas, Lautrec, Rhops—even (or perhaps, artistically, we might say above all) Gustave Moreau. In comparison with these, Mr. Sickert is obviously wholesome; but visitors to the Carfax Gallery may be warned that his subjects deal with a Bohemia not at all like the graceful haunt beloved of Du Maurier. "A quoi rêves-tu, Suzanne?" we can hear the Elder demanding, and the nymph respond: "Que c'est drôle l'habitude! Tous les jours on se lave la figure et les mains—les pieds jamais." It is only by the candour of such an authentic anecdote that we can suggest the regions into which, in the most matter-of-fact way imaginable, the study of the nude may lead an artist bent also on the intimate portrayal of contemporary life.

The never quite resolved problem of the artist—how to combine the closest particularity with monumental simplicity of design—presents itself a thought less acutely to the landscape than to the figure painter: few of us understand landscape so well as most of us understand our fellow-men. And the particular school of painters whose style is founded on that of the landscape art of the French Impressionists are also inclined to treat the demand for massiveness of design somewhat leniently. The best of them work into something like unity of form the jumble of objects of different shapes and sizes presented by nature, but their tendency is to do so by breaking up artfully the larger forms, the flatter tones, so that they take part in the general effervescence. The result is a close rendering of a particular effect, but a blurring of fundamental contrasts the reverse of monumental. Inevitably, if we are ever to have a school of decorative painting, we must tend the other way, and seek for unity by taking the larger spaces as the standard, and resuming the smaller forms and broken colour into the resultant flat tones to which they may be reduced for the purpose of fundamental comparisons.

Such artists as are setting themselves to the study of decorative design from this point of view will find Mr. Sickert's drawings most stimulating. Ostensibly they aim only at close actuality, but they show an instinctive rejection of anything approaching repetition, a severe determination to reduce every subject to its simplest terms, which is a reproof to the many whose conscious aim is for abstraction. Nothing could be richer in concrete suggestiveness than Mr. Sickert's drawing at its best. The perfectly natural and spontaneous figure of the woman in *Consolation* (2); the delicate expression of the flaccid, sagging forms in No. 20, *A Foreshortening*; and the vigorous continuity of line in *The Empire Bed* (14), offer admirable instances of his conciseness and economy of means. The acceptance of technical limitations is not always so unconscious, and in the effort to express a delicate tone in terms of blunt pen-strokes

he invents an odd chopped-straw or spotted method of shading, sometimes very successful, but sometimes, as in *La Belle Hollandaise* (23), rather puzzling. From his own point of view, as a plain man's statement of fact, this is a failure, though decorative enough. *Mamma mia poareta* (35) is more successful, and, in more illustrative fashion, No. 44, *Living Marionettes*. No. 14, already referred to, and No. 12, *La Mora*, are decorative patterns of great beauty; and even the least important and least satisfactory of these sketches have the pith and point of the work of a man with a keen sense of values, who in any given scene sets down the typical and ignores the accidental, who notes the rule before the exception. It is because, in a sense, the figure is essential and the clothes an accident that the nude will always be the natural subject-matter of the painter; but in the pursuit of this subject-matter Mr. Sickert has forgotten to look on life as a whole with the breadth with which he looks at any given scene. It is, therefore, with a certain justice that the average man resents the artist's absorption in a quaint backwater of existence which offers him the opportunity of dealing with large and significant form, and playing at the same time the artistically irrelevant game of literalism. Slackness of invention enjoins this upon him as historical record. It is that, doubtless, but a chronicling of rather small beer and futile gallantry. He will probably continue, however, as a little Dutch master unless some art-patron, greatly daring, should commission him to decorate a room. Then his feeling for unity of form, and the impossibility of finding within the compass of his special subjects matter for a sequence of panels, would drive him to a more inventive method of design, ranging over a wider field. Such a demand would make or break a career now at a somewhat crucial stage.

LANDSCAPE EXHIBITION.

THE best pictures among those at the Royal Water-Colour Society's galleries are Mr. Aumonier's *Dulas Valley, Autumn* (56), and the more delicately drawn, smaller work, No. 59, *In the West Country*. There is in the former picture a fine sequence of tones coiling inwards to a luminous centre, which makes the canvas fairly radiate light. The effect is powerfully achieved; the plastic facts of the scene represented, however, while well chosen for the purpose, are not given with so severe an eye to their main contrasts of character as we could wish. There are details in the silhouettes of the trees to the spectator's left, for example, which are too insignificant to play any individual part in the plastic scheme, yet not sufficiently formalized to merge into the larger and more structural elements of the design. Mr. Leslie Thomson in *A Yorkshire Stream* (40), which is by far the best of his pictures, has a similar difficulty in making the tracery of his trees against the sky relevant to the matter in hand. The core of the composition—the bowed-over tree and echoing sweep of the bank—is gently elegiac and charming. He is to be congratulated on his escape from what threatened to become a trick of composition to please both parties of the public—an embroidery of very tiny forms to give finish upon forms baldly simple so as to pretend to breadth.

Mr. James Paterson is a painter apparently with an eye for a picturesque subject in nature, such as No. 24, *Yellow Sands, Brittany*, which is pleasing and romantic, though here also the silhouette of the trees

is designed somewhat as a separate pattern rather than as a powerful factor in the whole composition. This slight mental timidity strikes us the more in view of the executive dash and *bravura* of his large picture, *The Last of the Indomitable* (22), in which one imposing feature rears itself behind the shoulder of the other in a strenuous pictorial display. How they stand on the ground plan is not very clearly stated; and though Mr. Paterson masks the connexion with sufficient plausibility to avoid making us feel that anything is really wrong, he avoids also any very strong structural basis for the scene which, with great solidity of paint, he builds up in detached segments.

Mr. James Hill's work has its usual agreeable quality of paint in detail, and in Nos. 17 and 18 shows rather more steadiness of tone than usual. His large *Thames at Charing Cross* (11) is marred by an odd vignetting by which the ironwork on the bridge is treated with a tightness of detail not maintained elsewhere in the picture. Obviously the retrocession expressed so accurately by the perspective of the bridge is as accurately, if more subtly, measurable by the drawing of the water, and the eye is shocked if the one is rendered with great accuracy, and the other with extreme looseness. A certain logic and principle are wanting to give firm ground for Mr. Hill's undoubted delicacy of fancy to build upon. Mr. Moffat Lindner, on the other hand, has a bedrock of hard science upon which he builds with almost too much assurance. *The Storm Cloud* (49) is well carpentered, with its scale of form studiously observed throughout, but it slightly wants the inspiration of recent contact with nature. The cloud is frozen and immobile, somewhat of a studio property.

It is by its rare union of spontaneity and control that Mr. Aumonier's 'In the West Country' is singularly satisfying. Its sombre scheme of silver is an unusual one with the painter, who rarely, moreover, is so completely master of form as on this occasion. Hardly a touch is otiose or fails to play its part in the design, yet every passage is vigorous and individual. It is in its way a little triumph. Mr. Austen Brown, who, without being a painter of very independent outlook, was on occasion capable of extraordinary virtuosity, seems for the nonce to have forgotten his craftsmanship. Perhaps this only implies that he has begun thinking for himself, but the immediate result is disastrous.

THE PHÆSTOS DISK.

Alleyne House, St. Andrews, January 8, 1911.

THE reviewer of Prof. Mosso's 'Dawn of Mediterranean Civilization' (*Athenæum*, Jan. 7) remarks: "Whether the considerable specimens of more than one script found in Crete will ever be read seems very uncertain." The January number of *Harper's Magazine* contains 'The Solving of an Ancient Riddle,' that is, a decipherment of some twenty words in the well-known disk of Phæstos, by Dr. George Hempl, Professor of Indo-Germanic Literature in Stanford University. Dr. Hempl's account of his method of decipherment is most interesting. Though he does not give his renderings of all the characters in the syllabary, they certainly, when applied to words of which he has not yet published the translation, work out satisfactorily. He promises a book on the subject, in which, no doubt, he will defend the very startling grammar of this pre-Homeric Greek inscription, which, as Mr. Evans has already said, is not of Cretan origin.

A. LANG.

Fine Art Gossip.

THE NATIONAL PORTRAIT SOCIETY are holding their inaugural London exhibition at the Grafton Galleries on Thursday next.

Two pictures of some interest have just been added to the National Gallery of Scotland. The first is an admirable example of the work of Matteo di Giovanni, the Sienese master of the fifteenth century. It represents the Madonna and Child, with Sebastian and St. Francis, and apart from its intrinsic merits, is interesting as having been acquired many years ago by Ruskin from representatives of the Spannochi family, who were the artist's chief patrons.

THE second picture is by an unknown painter of the Spanish School. It represents the picturesque and gallantly attired figure of St. Michael, and is notable for the rich and deep decorative harmony evoked by the yellow and black, the red and green gold of its colour-scheme.

AMONGST recent additions to the National Gallery of Ireland is a fine work by B. Wilson, a portrait of Mr. and Mrs. Richardson in a landscape. Wilson, who painted many Dublin notabilities during the latter half of the eighteenth century, was the etcher of the frontispiece to Orrery's 'Remarks on Swift.' Another acquisition is a landscape by William Ashford, from Sir Thornley Stoker's collection, which has been identified as a 'View of Leixlip.'

PROF. CAVENAGHI has recently been inspecting Tiepolo's frescoes in the Palazzo Labia at Venice, and his report is on the whole reassuring after the alarmist rumours which have been circulated regarding their condition. He does not deny that in existing circumstances these paintings are in eminent peril, and he suggests two methods of dealing with them, one of which could be put in operation at once, and would consist in a careful and thorough repair of the cracks and fissures and other injuries which have affected the surface of the paintings. The other, a longer and more complicated undertaking, would necessitate the removal of the frescoes from their present position; after the necessary repairs and restoration, they would be replaced in their original position in the Palazzo Labia, when the principal hall had been made ready to receive them once more.

PROF. CAVENAGHI intends himself to superintend the work of restoration. As to the actual condition of the paintings, it is satisfactory to learn that the colour has not deteriorated, and on the whole the splendour of these magnificent frescoes is undimmed.

FROM March to July of this year it is proposed to hold an exhibition of Italian portraiture in the Palazzo Vecchio at Florence. The artists represented will include not only those of Italian birth, but also foreign painters who worked in Italy or who portrayed the features of distinguished Italians, and the limit of time fixed is from the end of the Cinquecento down to 1861. The greatest Italian portrait painters are thus excluded, but the aim of the promoters of the exhibition is to prove that after the death of the great masters, and down to the year when the first exhibition of Italian art was held in Florence (1861), the art of the portrait-painter flourished and ran its course in an unbroken sequence.

THERE is no doubt that the exhibition will be of exceptional interest; the executive committee, which numbers among its ranks such brilliant and indefatigable workers as Count Carlo Gamba and Dr. Giovanni Poggi, has been conspicuously successful in the work already accomplished; and sub-committees in other countries, including Russia, Poland, and Hungary, are co-operating actively. Private owners all over Europe are lending their treasures. The German Emperor is contributing his celebrated portrait of General Del Borro. The King of Italy will contribute among other portraits those from Poggio a Caiano, Caserta, and other royal residences; and Queen Margherita portraits of the House of Savoy.

MANY artists hitherto unknown will be represented at this exhibition; and the Catalogue will contain reproductions of every picture shown.

A SMALL point of local art-history which is not without interest is touched upon in the December number of the *Rassegna d'Arte*. Angelo di Lorentino d'Arezzo, a pupil of Bartolomeo della Gatta, is shown to be the author of several paintings in the Church of S. Domenico at Arezzo, and attention is drawn to a mistake made by most of Vasari's annotators, who confused this painter with Lorentino d'Agnolo (also of Arezzo), who is mentioned by the biographer in the life of Piero della Francesca, and by whom there is an authenticated work in the Palazzo del Comune at Arezzo. It is possible that this painter was the father of Angelo di Lorentino. The elder master's work bears date 1482; the paintings of the younger are dated 1501 and 1511. The coincidence of the names and the chronology make the theory probable.

EXHIBITIONS.

SAT. (Jan. 14).—Modern Dutch and English Etchings and Lithographs, Rowley Gallery.
THURS. National Portrait Society, Inaugural London Exhibition, Grafton Galleries.

Musical Gossip.

THE programme of the first of the new series of the Classical Concert Society, which took place at Bechstein Hall on Wednesday evening, opened with a Sonata in A minor for pianoforte and violoncello by Mr. Emanuel Moór. Hungarian by birth, he has lived for some time in England, and various works of his have been performed in London. The Sonata in question contains some excellent thematic material, especially that of the middle slow movement, yet the treatment of it seemed rather scrappy, as if the various sections of the three movements had been composed at different times and in different moods. In his rendering of the pianoforte part, the composer in loud passages perhaps displayed too much energy, yet on the whole he and his excellent partner, Señor Casals, gave a clear idea of the composition. The latter took part with Mr. Leonard Borwick in Bach's fine Sonata in D for violoncello and pianoforte (originally gamba and harpsichord). It was a great treat to hear this work, so seldom performed: in the Adagio and Andante Bach shows wonderful breadth and pathos. Mr. Leonard Borwick contributed as solos his arrangement of a Fantasia by Mozart, originally composed for a clock-work instrument, and three short move-

ments by Domenico Scarlatti, all being played with his usual skill and restraint.

AN ARIETTA by Carl Maria von Weber, which is to be included in the programme of the London Symphony Concert at Queen's Hall next Monday evening, was the last composition of the composer of 'Der Freischütz.' A waltz entitled 'Weber's Letzter Gedanke' was published soon after Weber's death in 1826, and has since appeared in many editions, although in 1829 Reissiger, in a letter to Pixis, pointed out that it was one of a collection of waltzes composed by himself, and published in 1824.

OF the genuineness of the Arietta, however, there is no doubt. It is a setting of Nourmahal's song "From Chindara's warbling fount I come" in Moore's 'Lalla Rookh.' Weber wrote it for Miss Stephens (afterwards Countess of Essex), who sang it at his concert on May 26th, 1826. Weber there made his last appearance in public—he died during the night of June 4th–5th—and accompanied the song. The entries in his diary show that when Miss Stephens rehearsed it with him on May 25th it was partly sketched. Of the accompaniment only some bass notes were indicated. Moscheles, who was present at the concert, afterwards wrote out the pianoforte accompaniment from what he remembered, and in this he was, of course, assisted by the sketch. A copy of this Weber-Moscheles song came into the possession of Prof. Müller-Reuter, who is to conduct Monday's concert, and he has scored the accompaniment for Miss Gerhardt.

BY permission of the Dean, a performance of Bach's 'Passion according to St. Matthew,' with full orchestra, will be given in Westminster Abbey by the Bach Choir, under the direction of Dr. Hugh P. Allen, on Friday evening, February 17th. The soloists will be the Misses Rhoda von Glehn and Dilys Jones, and Messrs. Gervase Elwes and J. Campbell McInnes. Admission will be by ticket only, to be obtained from members of the Bach Choir.

THE LATE DR. HENRY WATSON, Lecturer on Musical History and Instruments at the Victoria University, Manchester, and Professor in the Choral and Ear-training Departments of the Royal Manchester School of Music, began life in a humble way. He held up cards of music in the street from which his father, a performer in a local band at Burnley (where the boy was born in 1846), played. For some years the youth earned a living principally by playing pianoforte solos and accompanying at unimportant concerts, and by teaching. In 1867 he was appointed accompanist to the newly-established Manchester Vocal Society, and from 1885 director of its music. He was also for many years music director of the Gentleman's Glee Club, Manchester.

Two years ago Dr. Watson executed a deed by which the whole of his very large collection of music and books on music became the property of the Corporation of Manchester for public use. He also presented to the Royal Manchester College and to the Corporation a large number of instruments, which in the course of many years' travelling he had collected. Dr. Watson took his degree of Bachelor of Music at Cambridge in 1882, and five years later that of Doctor.

MR. A. J. BALFOUR will be the President of the Congress of the International Society of Musicians, which will be held this year

in London from May 29th to June 3rd. Of the Governing Body, Sir Alexander C. Mackenzie will be General President; Hof-rath Dr. O. von Hase, General Treasurer; and Dr. Charles Maclean, General Secretary. Sir Alexander C. Mackenzie and Dr. W. H. Cummings will be President and Vice-President, respectively, of the English Committee (for Great Britain and Ireland).

IN addition to the meetings, lectures, &c., there will be an historical chamber music concert; an orchestral concert, with the Queen's Hall Orchestra, at Queen's Hall; a chamber concert of modern English music; a concert by the Huddersfield Choral Society of 300 voices; and a concert at Queen's Hall with the London Symphony Orchestra. Performances will also be given at Westminster Cathedral of early English church music. Arrangements are being made for an opera performance.

THE volume containing the *Proceedings* of the Musical Association during the thirty-sixth session (1909-10) has been published by Messrs. Novello. Dr. W. H. Cummings read an interesting paper on Dr. Arne, in which he gave an illustration of the composer's good opinion of himself. Writing to Garrick in 1770, when Dryden's 'King Arthur' was to be revived, Arne offered to compose music because the "Solo Songs of Purcell are infamously bad." The paper on 'French Music of To-day,' by Mr. Edwin Evans, presents a lucid and instructive account of the two modern French schools which appeal, the one more to the intellect, the other more to the emotions, and of which the chiefs are Vincent d'Indy and Debussy. The titles of the other papers, by Dr. Southgate, the Rev. H. C. de Lafontaine, and Messrs. F. Korbay and W. W. Starmer, are respectively 'Flute Music,' 'The King's Music,' 'The Hungarian Folk-Songs,' and 'Chimes and Chime Tunes.'

THE musical critics of Dresden have, it is reported, resolved not to notice the production of Strauss's 'Rosenkavalier,' which takes place on the 26th inst., as the composer has refused to let them have the libretto at the general rehearsal. If they adhere to that decision, the Dresden public will be all the more curious to hear the work.

IN *Le Courrier Musical* of the 1st inst. M. Saint-Saëns in a short article cleverly sums up the history of the art of music from its infancy down to the present time. Fétis, he says, had studied and understood the broad outlines of musical evolution up to what he justly called the *omnitonic* system, since realized by Wagner. After that, Fétis declared, "I see nothing." Saint-Saëns adds: "He could not foresee the a-tonic system. Yet to that we have now come. It is no longer a question of adding to old rules, naturally framed by time and experience, new rules; but of suppressing every rule, all restraint." The article is entitled 'L'Anarchie Musicale.'

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sousa and his Band, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	Mr. Beecham's Orchestra, 7, Palladium.
—	Sunday League Concert, 7, Queen's Hall.
MON.	Kreisler's Orchestral Concert, 3, Queen's Hall.
—	London Symphony Orchestra, 8, Queen's Hall.
TUES.	Queen's Hall Choral Society, 8, Queen's Hall.
—	Miss Helene Martini's Vocal Recital, 8.15, Bechstein Hall.
—	Miss Marta Wittkowska's Concert, 8.45, Aeolian Hall.
WED.	Miss Ruth Freeman's Vocal Recital, 8.15, Bechstein Hall.
—	Mlle. Pauline de Schonberg's Recital, 3.15, Aeolian Hall.
—	New Symphony Orchestra, 8.15, Queen's Hall.
—	Société des Concerts Français, 8.30, Bechstein Hall.
THURS.	Broadway Concert, 8.30, Aeolian Hall.
FRI.	Mr. Joseph Holbrooke's Modern Chamber Concert, 3, Steinway Hall.
SAT.	Mr. York Bowen's Pianoforte Recital, 3, Aeolian Hall.
—	Queen's Hall Orchestra, Symphony Concert, 3, Queen's Hall.

DRAMA

THE WEEK.

CRITERION.—*Is Matrimony a Failure?*
Adapted from the German of Oscar Blumenthal and Gustav Kadelburg by Leo Dietrichstein.

THE trials of matrimony have always been a standing joke in the theatre. Dramatists have taken advantage of this weakness of human nature, and the henpecked husband, the bachelor trembling on the verge of proposal, the managing or revolting wife, and the spinster who schemes to get married are assured of popularity as comic types in our play-houses. Conservative, too, as the vast majority of the public appears whenever any change in the marriage laws is mooted, it is quite prepared to give the reins to revolutionary fancies on the stage. There it can indulge lawless daydreams which would be sternly repulsed in life's more sober hours; there it can even imagine the dismay or joy which might come over a group of married couples who discovered that the ceremony which sanctioned their unions had no legal validity. It is an idea of this sort that forms the basis of the new Criterion farce, 'Is Matrimony a Failure?'

But the German authors make somewhat of a heavy tax on our credulity, or possibly it is the American adapter who is responsible for this. Eager though we may be to give their droll notion a hearing, we can hardly understand why marriages solemnized in a church, the licence of which has lapsed, should be necessarily denounced as illegal, or why the parties should be expected to separate until Parliament has granted new powers to the church. There is such a possibility as marriage before a registrar; there are such things as special licences for civil weddings. Hence the whole scheme of the play gives the impression of much ado about nothing, while the fun is of a rather laboured and mechanical kind. A staircase, up and down which all the characters dash in a body, gets on the spectator's nerves; and the division of the sexes into opposing armies, who camp at rival inns and conduct meetings as it were under the white flag, has a look of artificiality. One or two scenes on conventional lines are happily worked. An estranged couple are taught by this enforced separation that they are really in love with one another. A husband of roving propensities is brought to book by a wife who should have been too clever to let him stray from her side. A sworn bachelor gaily marches to his fate at the hands of the only married girl in the village set.

These scenes are well acted by Mr. Charles Bryant and Miss Edyth Latimer, Mr. Paul Arthur and Miss Ellis Jeffreys,

Mr. Kenneth Douglas and the *ingénue* of the cast. But piquant as is Miss Jeffreys's art of comedy, delightful as is Mr. Douglas's assumption of light-heartedness, there is a distinct lack of pace in the performance, and we are left wondering whether the slowness of the play's English interpreters is not accountable for its failure to create illusion.

OUR LIBRARY TABLE.

Memories and Impressions of Helena Modjeska: an Autobiography. (Macmillan.) —Actresses write good memoirs, if we may judge by three modern instances—those of Ellen Terry, Sarah Bernhardt, and a no less famous colleague of theirs who is, alas! no longer with us, Helena Modjeska. It is an arguable point whether Madame Modjeska's reminiscences are not the most interesting of the series. At any rate, they make delightful reading; they are full of anecdotes and piquant experiences of travel and professional work in many countries; they are singularly free from the spirit of egoism, yet suggest on every page the charm of a sympathetic personality.

Helena Modjeska was not one of those so-called "cosmopolitans" who forget their native country amid the success they win abroad. The sentiment of patriotism lends a pretty touch of pathos to the chapters in which she describes her childhood in conquered Poland, and her recollections of barricades in the streets, cannon-fire which affected private houses, and the enthusiasm which accompanied the unlucky insurrection. Art since those days has been the only outlet permissible to Polish energy, and the future actress early betrayed a mania for the stage. She met, however, with no little discouragement. One of her teachers assured her brother, after the first lesson she gave, that Helena had no theatrical vocation and had better be kept at home. That was in 1862, when Modjeska was sixteen years of age. A year later the ardent girl made the acquaintance of Shakespeare in a German performance of 'Hamlet' at Cracow, and thereafter accepted the "wonderful wizard" as her master, and aspired only to impersonate "those wayward, sweet, passionate, proud, tender, jolly, or cruel and sad heroines of Shakespeare's dramas." But she had to go through a long training before she achieved her ambition—certainly before she played these parts in their creator's own language. She was already married at seventeen, and marriage proved a stepping-stone to the stage. Favourably received at a charity performance, she was persuaded by her husband to attempt more ambitious flights, and so she went "barn-storming" through the provinces of Poland, and eventually secured engagements at the Lemberg and Cracow theatres. Her work at these playhouses gradually caused her name to be known both in Vienna and in Paris.

A chapter of accidents, however, carried her half-way across the globe to California. From her first husband, about whom she speaks with kindly reticence, she found herself compelled to part; and when she married M. Chlapowski, this time contracting a love-match, she joined her new spouse in an American farming experiment. This was none too successful, but it led to Helena Modjeska's taking lessons in English and making her début in English before an English-speaking audience. America soon hailed her as a great actress, and London followed suit, with the result that she was before long possessed, while still young, of an international reputation.

Madame Modjeska first appeared in London under Wilson Barrett's management in a version of 'La Dame aux Camélias,' which took on a new title, 'Heartsease,' and pretended to be an English play in order to dodge the Censorship. But though the Censor was deceived, one playgoer was not; and when the then Prince of Wales discovered the trick, he marvelled why a piece which had been refused a licence in its original tongue to Madame Bernhardt should be granted one as an adaptation. "I must look to it," said the Prince when told the facts. His late Majesty obviously had his eyes open as to the state of English theatrical affairs. Madame Modjeska, when she met him, broached the idea of the founding and endowing of a National Theatre in this country. To her amazement, the Prince replied, "Do you think there is enough love of art in the Anglo-Saxon race to make the theatre a State affair?"

The famous actress met everybody worth knowing of her time in England and America and in her native land, including poets, artists, musicians, singers, and other celebrities, and she writes not a harsh word of any of them. She has pleasant things to say of Tennyson and Browning and Longfellow. She has piquant stories of Hans von Bülow and Paderewski and Jean de Reszke. She is full of enthusiasm over Ellen Terry's vivacity and high spirits, alike as a woman and as an actress in the part of Beatrice. She pays her tribute, too, to Henry Irving, who forms the subject of an amusing anecdote in which Edwin Booth was concerned. She and Booth were talking about Irving, and Modjeska exclaimed, "A great man!" whereupon Irving's American rival made the reservation, "Not a great actor—but a great man!"

It was only last summer that Helena Modjeska was laid to rest in her native Poland; in these reminiscences she seems to live again.

The Piper. By Josephine Preston Peabody. (Constable & Co.)—'The Piper' was so recently discussed in these columns during its London production that detailed comment on it, now that it appears in book form, is not necessary. It reads well—reads better than it plays—and certainly its writer has gifts of imagination and poetic feeling. The first act, taken by itself, would make a striking one-act play. So far in this version the Piper of Hamelin fulfils his proper function of luring the children from their homes, and so punishing the ingratitude of the burghers. So far the author treats her theme picturesquely, fancifully, even dramatically. But her later scenes show that she lacks the architectonic scene, and are rendered wearisome by the long speeches of her Piper, turned preacher and bore. The author must curb her liking for rhetoric if she wishes to win success as a poetic dramatist.

The Way the Money Goes. By Lady Bell. (Sidgwick & Jackson.)—Readers may remember this interesting play of North-Country life being presented last March at the Royalty Theatre. It has now been issued in print, and emerges successfully from the ordeal. Its dialogue, while idealized to the extent that expletives are avoided, fulfils the expectations it created as delivered from the stage: it is admirably colloquial, and appropriate to the artisan characters to whom it is assigned. Perhaps the story is not the strongest feature of the piece; what Lady Bell, however, does contrive to do very happily is to suggest the atmosphere

of a North-Country town, full of unlovely chimneys and factories and dingy cottages and tenements. The playwright makes us see clearly the drabness of the life and home of the Yorkshire or Lancashire workman's wife, and gives a vivid picture of the temptation which the possible gains of betting or the cajoleries of the tallyman address to such a woman, lacking as she does all luxuries, and often many of those comforts that to her better-born sisters have become necessities. Yet though Lady Bell keeps in view the unpicturesqueness of the surroundings of these working people, she indicates also the virtues which make the artisan of the North so good a fellow, notwithstanding the hardness of his fibre—the virtues of cheerfulness, good temper, and camaraderie.

Dramatic Gossip.

A NATIVITY play by Dr. Douglas Hyde translated from the Irish by Lady Gregory was performed for the first time on Thursday week last at the Abbey Theatre, Dublin. The beautiful scenery, designed by Mr. Gordon Craig, formed a most appropriate setting for the little piece, which was impressive in its simple dignity.

NEXT week Mr. Alston Rivers is publishing four more volumes in his series of short French plays suitable for acting at school speech days, reading or acting in class, &c. The new volumes are: 'L'Habit de Mylord' (vaudeville), by Sauvage and Leris; 'Dieu Merci, le Couvert est Mis' (comedy), by Léon Gozlan; 'Comme Elles sont Toutes' (comedy), by Charles Narrey; and 'La Somnambule' (vaudeville), by Scribe and Delavigne.

It is announced that the coronation of King George will be made the occasion for a naval and military pageant on an extended scale. The English people have of recent years shown considerable aptitude for pageants, and a demonstration will be welcome which pays due regard to pictorial effect as well as the resources of the Empire.

TO CORRESPONDENTS.—J. D. S.—M. K.—A. L. H.—S. H.—Received.

W. A. C.—Next week.

No notice can be taken of anonymous communications.

We cannot undertake to reply to inquiries concerning the appearance of reviews of books.

MESSRS. BELL ANNOUNCE

that they will publish

WEBSTER'S NEW

INTERNATIONAL DICTIONARY

On JANUARY 20th.

Over 400,000 Defined Words and Phrases.
2,700 pages. 6,000 Illustrations.

Points of the New International.

400,000 WORDS AND PHRASES DEFINED. Half this number in the old International.

2,700 PAGES, every line of which has been revised and reset (320 pages in excess of the old International, and yet the new book is practically the same size).

6,000 ILLUSTRATIONS, each selected for the clear explication of the term treated.

DIVIDED PAGE: important words above, less important below.

ENCYCLOPÆDIC INFORMATION on thousands of subjects.

SYNONYMS more skilfully treated than in any other English work.

GAZETTEER and BIOGRAPHICAL DICTIONARY are up to date.

MORE INFORMATION of interest to MORE people than any other Dictionary.

£80,000 and EIGHT YEARS' LABOUR were devoted to making better what was already in its time regarded as the BEST.

NEW FROM COVER TO COVER.

A NEW RATHER THAN A REVISED INTERNATIONAL. It is a mistake to consider the New International as merely an enlargement and correction of the old International. It is rather a rebuilding of the old on a larger and more imposing scale. The reconstruction is radical, a very large percentage of the material being new matter.

This thorough revision has resulted in producing the clearest, most complete, and most informative dictionary in existence. This sweeping statement can readily be tested by any conscientious searcher who will devote a single half-hour to the examination of the new book.

Messrs. Bell will be happy to send a Detailed Prospectus with Specimen Pages, together with prices in all styles of binding, on receipt of a postcard mentioning 'The Athenæum.'

London: G. BELL and SONS, Ltd.,
York House, Portugal Street, W.C.

SATURDAY, JANUARY 21, 1911.

LITERATURE

Douglas Jerrold and 'Punch.' By Walter Jerrold. (Macmillan & Co.)

THE title of this volume describes exactly the object at which Mr. Walter Jerrold has aimed. He tells us nothing, or next to nothing, of his grandfather's life and circumstances. With the aid of extracts from the journalism of the time, he does, indeed, give some glimpses of Jerrold as the most "clubbable" of men and the most scintillating of wits in the circle of clubs and coteries round Covent Garden. But we learn nothing at all from these pages of the influences which made Jerrold the man he was, and helped him to form those strong opinions which were to colour the politics of Mr. Punch in the days of his youthful Radicalism, and at length made the milder Liberalism of Thackeray to revolt. Mr. Walter Jerrold has set himself the task of tracing and enumerating the various contributions of his grandfather to *Punch*, and has performed it with admirable industry. He has added an excellent Bibliography, and reprinted three of the serials for the first time—'Capsicum House for Young Ladies,' 'Our Honeymoon,' and 'The Life and Adventures of Miss Robinson Crusoe.' In regard to the latter satire on "the sex," he points out that writers have almost invariably misnamed it 'The Female Robinson Crusoe.' This book will thus serve as a welcome appendix to Mr. Spielmann's 'History of "Punch,"' which it occasionally corrects.

Jerrold formed himself, with a peculiar style and experience, and *Punch* was the Argo, to borrow James Hannay's phrase, which conveyed him to the Golden Fleece. He was a wit with a mission; a satirist whose bitterness was at any rate intended to be, like that of bark, healthful. The new journal gave him the opportunity of expressing himself strongly on subjects upon which he felt strongly, and he repaid it by contributing more largely than any other writer to the great political influence which it presently acquired. The fervent Radicalism of the Reform Bill days possessed him, and continued to colour the political outlook of Mr. Punch during his lifetime. In *Punch in London*, a paper started by Jerrold in 1832, in imitation of *Figaro in London*, there is a good deal of the Fleet Street swashbuckler's style, "I will spare no one." But the quotations which are here given afford already some good examples of the editor's wit in political writing. The tale of the Blue Monkey (p. 8) is a pretty example of the witty apologue happily invented to barb the shaft of satiric comment. *Punch in London* may be regarded as the prototype of the *Punch* of some ten years later.

But Jerrold does not stand as a claimant for the much-disputed honour of being "the only begetter" of Mr. Punch. Though the first number contains a reference to him, his first contribution appeared in the second number. This was an article which was, in effect, the first of the famous Q Papers, and it struck the political key-note of *Punch*. For us, the bitter gibes and indignant sallies of the Q Papers form a lively commentary upon and confirmation of the picture of this country in the "hungry forties" drawn by Disraeli in 'Sybil.' In Disraeli, it is interesting to note, Jerrold recognized "our future Prime Minister" twenty years before his time. As for the author, these essays in political satire no doubt had the effect of making him the first observed writer of *Punch*—the first writer whom the public generally associated with the paper. How sharp was Mr. Punch's sting in the heyday of his youth is shown by the fact that it was even proposed in the House of Commons that he should be prosecuted "as a conspirator." Yet he was not deterred from gibbeting those lines of supreme bathos,

Let wealth and commerce, laws and learning die,
But leave us still our old Nobility;

and gibbeting them so effectually, as Mr. Walter Jerrold observes, that they have since taken their place among familiar quotations. The "other" House seems upon this occasion to have shown greater tolerance of satire than the Commons.

From the first, then, Douglas Jerrold, with his vehement Radicalism and biting wit, took rank as the strongest literary force on the staff of *Punch*. Thackeray, it is clear, recognized that fact, and showed some little personal as well as professional jealousy of his colleague, "Master Douglas."

As we know, he called Jerrold "a savage little Robespierre," and eventually refused to pull any longer in the same boat. Although he has himself given two slightly different accounts of his severance from *Punch*, attributing it now to an article by Jerrold, now to a cartoon by Leech, it is plain that he was disgusted by that paper's violent Radical abuse of Prince Albert, Palmerston, and the Emperor of the French, and that for this note of political abuse Jerrold was mainly responsible. Thackeray was also, probably, piqued by some of Jerrold's rude, if witty, personalities; for Jerrold's nimble and somewhat untutored wit was prone to puns with a spice of rudeness. Many examples of such *mots*, brilliant of their kind, at the expense of one butt or another, are preserved in this book. One was at the expense of Thackeray's nose. If Thackeray was as sensitive about that broken nose as Byron was about his club-foot, one can imagine that such sayings might rankle. But we think Mr. Walter Jerrold shows good judgment in brushing aside the suggestion of Mr. Arthur à Beckett that the two writers were lifelong opponents. Smouldering jealousy on the one side there may have been, and on Jerrold's a corresponding sense of uneasiness, natural to an impulsive temperament in the presence of a more self-conscious one. He afterwards said, probably at the time of Thackeray's break with *Punch*, "I have known Thackeray for eighteen years, and I don't know him yet." Mr. Walter Jerrold well emphasizes the point that

"had Thackeray and Jerrold been so antipathetic to each other as we are sometimes asked to believe, it is scarcely likely that when the latter was a candidate for election to the Reform Club, the former would have made a special journey from Leamington to record a vote in his favour, and would have hailed a friend with: 'We've got the little man in.'"

Jerrold's political satire was the outcome of a genuine indignation, and was written, as we have hinted, with a serious purpose. Indeed, he took himself so seriously that he was inclined to resent the overwhelming popularity of Mrs. Caudle. But it is as the author of the 'Curtain Lectures' and of 'Black-Eyed Susan' that his name lives. Even the charming 'Story of a Feather' has dropped almost into oblivion. Most of the political satire, in spite of its heat, leaves the modern reader cold. Much of Jerrold's humour "dates" lamentably; even his language occasionally seems strange, as when he uses "manufacturer" where we should say "artisan" or "mechanic," for the secondary use of that word to indicate the owner of a manufactory has eclipsed the first. In the art of parody, too, Jerrold was curiously feeble, as is seen when he tries to burlesque the style of Brougham or Disraeli. Irony and invention were rather his forte. But in 'Mrs. Caudle's Curtain Lectures' he hit upon a subject of universal interest, as near to life to-day as to the audience of a Greek comedy—the monstrous plague of

nagging women. He treated it well, using with the greatest effect a new trick of humour, by which the reader is left to infer what the henpecked, sleepy husband offered in his attempted defence from the acerbity of the conjugal retort and a fresh access of grumbling.

Romance of Imperial Rome. By Elizabeth W. Champney. (Putnam's Sons.)

IF there is any justification for the attempt, in a book not professedly a novel, to blend historical fact with modern romantic invention, the author of this 'Romance of Imperial Rome' achieves a certain success. The perils of such an attempt are obvious, and might well deter any historian, however lively his imagination. Strict accuracy of detail and fidelity to fact must almost of necessity involve him in pedantic digressions and antiquarian irrelevances, which certainly impede or destroy the reader's pleasure, if this be the object sought; while, if the reader goes to the book seeking instruction rather than enjoyment, it is probable that historical pills are better not gilded. Novelists such as Scott, Lytton, and Kingsley have not been altogether successful in eluding these perils; and inferior writers, attempting similar tasks, commit glaring historical anachronisms or errors of detail which to the true student are both ludicrous and annoying.

On the other hand, the advantages of such an attempt consist in the visualization of the events and characters of history, the stimulus afforded to the often torpid historical imagination and interest, and the sympathy engendered for the days of old, the heroes or heroines of antiquity. The trend of educational theory to-day seems to be that every object of study must justify itself by being "interesting" to the young student. It is possible that there are risks of futility and exaggeration in this theory, and that the schoolboy who resents well-meaning attempts to interest him by a profuse display of lantern-slides is not only typical, but also sensible.

Such a work, however, as this 'Romance of Imperial Rome' is thoroughly harmonious with this modern theory. The heroines of Roman Imperial history, here romantically dressed and glorified, may prove attractive to the modern schoolgirl whose interest in classical history as such is but languid. The probable verdict of the public-school boy on the book is perhaps better left unexpressed.

Sulpicia and Tibullus, the romantic sorrows of Julia, the wiles of Berenice, the woes of the Vestal Cornelia, the risks of Galla Placidia, the "lady-loves" of Horace—these form the subject-matter of careful exposition and a facile, perhaps too facile, imagination. In fact, by far the best chapter in the book is that entitled 'A Dog of Britain,' which is frankly romantic and unhistorical; while 'The Necklace of Vesta,' which likewise derives its chief interest from its dramatic

staging, also proves the writer possessed of no mean powers of invention.

On the other hand, those chapters which are more strictly historical show no first-hand acquaintance with the best sources of knowledge, and tend to be slight, trivial, and of small value. Stock and commonplace views are based on the authority of modern playwrights and poetasters (many of the verse-translations limp badly). Tiberius is "bestial"; Claudius a "puppet sovereign"; Messalina's "cunning" is "demoniac"; Nero is an "adorable baby" whose later likeness shows "fish-like expressionless eyes which dare not reveal the murderous soul"; Livia poisons Augustus; Faustina's "forefinger taps her cheek... in a distraught fashion which suggests a sombre resignation, the patient bearing of the burden of a sad heart." It is not difficult to write page after page on themes and of reflections such as these. It is difficult to value them highly.

Some complaint also must be entered, even though it be held pedantic, on the score of accuracy, especially as in her Preface the writer professes, in all sincerity, her "conscientious seeking for exactitude." Mere misprints or slips in spelling, such as "Antonius" for "Antinous" (p. vi.), "Sapho" (p. 30), "pretor" (p. 192), "Cherea" (p. 330), are perhaps not serious. But other blemishes are more distressing. In the quotation from the well-known verse-translation of Virgil's Messianic Eclogue on pp. 28-29 there are six misrepresentations, one of them ridiculous, and Prof. Conway's coadjutor Miss Bevan appears as "Miss Berar." This is inexcusable carelessness. The historian will be surprised to learn that Julius Antonius, successor to Gallus in Egypt, governed that country for a number of years as consul (pp. 112 and 123). Caius Cæsar is "elected" by the Senate as Consul of Asia (p. 130). Hadrian's villa contained "five thousand square miles of mosaic-paved rooms" (p. 412) which at least is inconsistent with the scale of the plan of the villa inserted at this point. The style also of the writer suggests a surfeit of sweetmeats. Two instances may suffice:—

"Whatever may be our opinion as to the autobiographical value of the odes [of Horace], we must concede that, as a suite, they have a conscious or unconscious unity in their variety, a progression in spirals towards a definite end. Every music-lover must remember a parallel composition in the development of the warring themes which strive in Mendelssohn's Symphony in A major. The clarinets introduce the first theme in an exquisite melody breathing all the freshness and fragrance of the woods. But this melody, though recurring again and again, is constantly overpowered by the second theme as rendered by the delirious violins and the tumultuous brass. Do not the odes of Horace interpret this strife as the eternal conflict between sacred and profane love?"

We may cite further the pathetic question which closes the book:—

"Can we not take one step further and, 'thinking no evil,' believe these dear dead ladies not sinners, but sinned against by evil tongues?"

The author is also led into a grave error of taste by this perilous longing to excite interest when she invents a conversation (in what language?) between the three-year-old child Jesus at Nazareth and the Roman Lollius.

This "Romance" is beautifully adorned with illustrations of statuary and painting, ancient and modern, and decked out with every advantage of print and paper. The writer has a vivid imagination, and presents her characters with the most fervent appeals for appreciation and sympathy. Her stories are live romance, not dead antiquarianism. Pages of translation from the amorous poets adorn, if they do not always illustrate, her tales.

But the final impression produced is that Romance and Antiquarianism (to call it by no higher title) are irreconcilable foes. The plain facts of history are at times stranger and nobler than romance. If we abide by these, it may be that the feminine element in Roman Imperial history suffers; but those whose appetites crave for this might choose other periods, and writers of fiction undisguised.

Home Life in Hellas. By Z. Duckett Ferriman. (Mills & Boon.)

It is a long time since we have read a more charming book about the modern Greeks. The author, though he does not describe his travels in detail or give any maps of them, shows considerable familiarity with many out-of-the-way parts of this fascinating land, especially the islands. Perhaps his very best chapter is that on these, the account of Santorin, of Naxos, and of Ithaca, being particularly striking. Though he has visited the cliff convents of Meteora in Thessaly, he does not seem ever to have landed on Mount Athos, which shows a curious gap in his extensive knowledge of modern Hellas; for this term, as he well knows, includes many districts under alien rule. At the same time he does not appear to be a Greek scholar in the classical sense. His spelling of names shows that at once. Thus we have "Oetolia," "Tegœa," "Mantinaea," "Megaspelleion," "Karytenia," &c. Nor are we more confident about his historical knowledge. We do not believe that Eubœa, as he says, sent colonies to Italy and Sicily as early as 900 B.C.; and what "the ravages of Barbarossa in the sixteenth century" means we are at a loss to tell. "The island of Anaphe, like Iceland," he tells us, "rejoices in the absence of snakes." No doubt it does, but not for the same reasons that preclude snakes in an Arctic climate. He says that when Abney Hastings won the battle of Salona with his steam corvette the *Karteria* in 1827, the Greek Navy was more than abreast of its contemporaries. That is surely a poor way of telling the reader that the *Karteria*, built and fitted out by the genius and devotion of Hastings, was

the first steamer that ever appeared in battle, and that Hastings accordingly won his battle single-handed by lying to the windward of the Turkish fleet in a calm, and setting their ships on fire one after the other by pelting them with red-hot shot from the long-range carronade which he worked himself on his quarter-deck. Hastings had pressed his views on the English Admiralty, but had been despised and put aside because he was a rowdy character.

These are all trifles, and do not affect the author's main task, which is to supply a lifelike picture of the modern Greeks. Recent books of travel, and indeed some of the very oldest, such as Wheler's, he knows well. He has, in accordance with them, fathomed the merits and defects of the Greek character. He knows that these have been handed down from the ancient inhabitants to their descendants. He gives a clear account of the present constitution of the kingdom, but shows a strange surprise at the law requiring a quorum of more than half the House of Representatives, so that the Opposition (if its various cliques can consent to combine) may thwart all business merely by staying away. It is surely obvious that if there be only a single House of Parliament, it is common sense to require an actual majority in the case of new legislation; otherwise laws might be imposed by a small fraction of the members. He might also have known that Tricoupi used actually to subsidize a few members of the Opposition to stay in the House, and vote against him assiduously. But they brought up the House to more than half its number!

Our author thinks that vanity is the chief fault of the modern Hellenes. We should perhaps rather have said jealousy, though the former naturally leads to the latter. He supplies ample instances of both. But he does not note another defect which may cause, and which certainly intensifies, both: the absence of humour. This inestimable quality, which saves people from many mistakes, seems to have died out of Greece as early as Hellenistic times, and is now strangely absent from modern Greek life. It is one of the semi-Oriental features of that curious race. For, as Mr. Ferriman justly puts it, Greece, if it be not Asia, is not Europe either. This the Greeks themselves constantly express when they say they are going to Europe. It is curious how Italy and Greece, so close on our maps, are yet so far apart in history. The fact is they are set back to back. It is the distance between Rome and Athens, not between Brindisi and Corfu, which is and has been the dominating factor all through history. The long occupation of Greece by Turkey helped to accentuate the contrast.

We might add a thousand interesting suggestions from this living book, which is excellent reading, in spite of some lapses in style. But why, in speaking of Greek virtues, has the author omitted their mayonnaise of fish, which is one of the best things in Greece? And why has he not provided an index?

BOOKS FOR STUDENTS.

The Grecians: a Dialogue on Education. By James Elroy Flecker. (Dent & Sons.)—In Mr. Flecker's dialogue three Englishmen who are on a holiday in North Italy indulge in a discussion on education, its aim and true method. The author is a bright and attractive writer. Smith, a somewhat cocksure Socrates and not a schoolmaster, airily disposes of the opinions of his two friends, who are working schoolmasters, and finally in the last chapter monopolizes the conversation while he describes what he conceives would be the true adaptation of the Platonic theory of education to modern needs, and his recipe for making the *φύλακες* or guardians of the State. Swept along by his enthusiasm for his ideal, Smith criticizes unsparingly, and often unreasonably, present Public School methods, and works himself up to make lurid and far-fetched contrasts. "Do you not know," he asks, "how the monotonous hours are only varied by epidemics, whether of chicken-pox, religion, silkworm-keeping, or Sandow exercises?" There is too much of this kind of smartness. On the other hand, there are many sound criticisms and quotable remarks, and Mr. Flecker is bold enough to dissent from many crusted or popular institutions. He has, for instance, no sympathy with Cecil Rhodes: "We pin our faith to a written and evident intellectual superiority." His survey of the education of the Public Schools is comprehensive, if rapid; his manner is trenchant and interesting; and the book may be read with profit by all grades of Secondary School teachers.

The Bacchants of Euripides, and other Essays. By A. W. Verrall. (Cambridge University Press.)—Dr. Verrall has been writing on Euripides for many years, and each of his works, in the present reviewer's judgment, is superior to its predecessors. The 'Four Plays' is better than 'Euripides the Rationalist,' while 'The Bacchants' reaches a higher level than even the essay on the 'Heraclēs' in 'Four Plays.'

The main outlines of the latest essay are convincingly drawn, and are not marred by the over-ingenious subtleties which have sometimes annoyed the readers of Dr. Verrall's earlier interpretations of Euripides. Again and again light is thrown upon dark places in such a way as to convince a reviewer who found several of his own pet theories crumbling away as he read. Nothing could ring truer than the summary on pp. 159, 160, in which it is stated that 'The Bacchants' depicts the novelty of "a faith—religion as we mostly now conceive it, exclusive in belief and universal in claim, enthusiastic, intolerant, and eager to conquer the world." Such a religion Euripides seems to have met first in Macedonia, and in 'The Bacchants' he has left a picture of it which is truly faithful, neither concealing its beauties nor failing to portray the hideous cruelty of its excesses.

Dr. Verrall's essay is particularly interesting for the fine literary instinct that is everywhere manifest, and nowhere more than in those passages where he contrasts the English versions by Dr. Way and Prof. Murray, and points out that each represents a possible interpretation of the spirit of the drama.

We notice that Dr. Verrall accepts the main thesis of Prof. Gilbert Norwood's 'Riddle of the Bacchæ,' but we wish that

throughout more criticism had been directed towards that able and fascinating book.

Of the essays here printed, a few have already appeared in learned journals; of the others, 'Phrynicius,' and 'The Persians' appear to us to depend too much upon subjective evidence to be convincing; we have, however, nothing but praise for 'Rhyme and Reason,' which is scientific in method, and a specimen of that peculiarly graceful style which characterizes most of Dr. Verrall's work. We have often wondered why no commentator has ever noticed the remarkable rhymes in the speech of the drunken Heraclēs in the 'Alcestis.' Dr. Verrall, starting with this instance, exhaustively analyzes the examples of rhyme in extant Attic drama, and concludes that rhyme was used by (a) any speaker when he or she meant to be offensive, and by (b) women to express all kinds of painful and violent emotion. Some instances of rhyme cannot be brought under these rules, as Dr. Verrall frankly admits, but they do not invalidate the main contentions. This essay and the interpretation of the 'Bacchæ' are certainly the most valuable parts of the volume.

Plutarch's Cimon and Pericles, with the Funeral Oration of Pericles. Newly translated, with Introduction and Notes, by Bernadotte Perrin. (New York, Scribner's Sons.)—We have not before us the first volume of these translations and studies on six of Plutarch's most famous lives; but the author tells us that each of the three is to be independent of the rest. This second volume, then, we can consider on its own merits. It is a very good and scholarly rendering of Plutarch, and the ample notes give plenty of information. But when we examine the modern authorities Prof. Perrin has used, we find, as is often the case with American scholars, that he has almost wholly ignored English and French scholarship, and allowed himself to be dragged at the chariot-wheels of learned Germans, whose speculations are of the *argutius quam verius* type. Prof. Perrin's most usual oracle is Edward Meyer, no doubt a very fine historian, but his speculations and those of his colleagues on the way in which Plutarch used his sources are frequently mere guesswork. Still worse is the bare statement (taken from Meyer) that the recent historical fragment found by Messrs Grenfell and Hunt is from the 'Hellenica' of Theopompus. Our author never mentions, and has probably not read, the opinions of English scholars, most of whom agree with Blass in refusing to believe it the work of that writer. It may be Cratippus, who is little known; Theopompus it can hardly be, for we know something of his style. Mr. Walker's careful study of this question seems to us nearly conclusive, and we do not know any leading Englishman who adopts Meyer's views. But in any case the controversy should not be passed over in silence, and the German opinion adopted as gospel. There are, indeed, a good many references to Prof. Bury's and even to Mr. Abbott's histories, and there is often a sentence quoted from Jebb, who was hardly a leading authority on history. But there is absolute silence regarding Thirlwall and Grote, whose understanding of Athenian politics is far superior to that of such men as Busolt, and even Holm. For the life of such a man as Grote, or Thirlwall gives him a sense of the value of public discussion, which a professor in his study can hardly attain—not to speak of the difference between English and German life.

Prof. Perrin is not free from inaccuracies, though they are unimportant. Thus he says that the victories of Plataea and Mycale put a stop *for ever* to the invasion of Europe by Orientalism. Such invasions were often repeated in subsequent history. Then he tells us that "the fine diplomacy of the poet Sophocles kept Chios and Lesbos from joining a dangerous revolt." Where did he learn this? Certainly not from Thucydides; nor from Ion as quoted by Athenæus, who evidently ridiculed the poet's public life. We do not know on what authority he prints (more than once) "Agatharcus" and "Hygiæa," forms which offend a Greek scholar; nor do we like the "consummation" of the Athenian Empire for its zenith, or the phrase "contemporary foe," "current notes" for foot-notes, or "piratical forays" on Chæroneia, unless we describe (like Apuleius) Boeotia as a land of sea-coasts. But these trifling flaws excepted, the translation and the essay on the 50 years after Plataea are good, though not nearly so good as the corresponding chapter in Grote.

Our author has thrown in a titbit, for which we are grateful—a translation of the funeral speech put in Pericles's mouth by Thucydides. It is one of those untranslatable pieces which every one tries to translate, always with some, never with complete, success; and the author of every new version exposes himself to minute and carping criticism. The first thing that strikes us in the present essay is the disguising of the contrast of λόγος and ἔργον, which recurs with such tedious iteration in Thucydides. Such treatment no doubt improves the speech, which, after all, turns round and round a few ideas; but it does not reproduce the rhetorician faithfully. When we come to detail, the orator does not say "For the whole world is the sepulchre of illustrious men," but "Of famous men every land is the tomb," which is not quite the same. Here, again, is a clumsy sentence: "We do not regard words as incompatible with deeds, but rather the refusal to learn by discussion before advancing to the necessary action." To say such refusal is incompatible with deeds is not even true; what Thucydides says may be thus expressed: "We do not think words damaging to deeds, but rather to have to do deeds without proper instruction beforehand in words—this is damaging." We here attempt only the bare sense. Again, in the same chapter, "Our wealth supports timely action, rather than noisy speech," is a bad version of "We use wealth ἔργου μᾶλλον καίρῳ ἢ λόγων κόμπῳ," i.e., not to brag about it, but as a power of acting at the right moment. The tedious repeating of word and deed pursues us through every citation.

On the first sentence of this chapter we have a much more serious observation to make. "We cherish beauty in all simplicity, and wisdom without effeminacy," is Prof. Perrin's rendering of a famous sentence. But in spite of the acquiescence of the learned, it cannot be maintained that "in all simplicity" translates μετ' εὐτελείας, which in good Greek always means *with cheapness*, even implying the same disparagement. Prof. Perrin's version has been adopted to avoid this obvious absurdity, but falls into the trap of being historically false, as the whole life of Athens in Pericles's day amply testifies. Never was the taste for beauty more elaborate, and even gorgeous, than at that moment. Our author has probably not heard of the way out of the difficulty proposed in these columns some years ago, which at least makes Thucydides talk sense and

does not violate Greek usage. It is to emend εὐτελείας into εὐκλείας, an easy change, especially in very early handwriting, and affording this sense: We pursue beauty with good repute [unlike Spartans and Thebans], and philosophy without effeminacy [unlike the Ionians]. But classical scholars are so notoriously hostile to emendations which they have not made themselves, that we could hardly expect a scholar addicted to German authority to be easily converted.

Nevertheless we have to thank our author for bringing us from the fogs of archæology and epigraphy and other such intricate sciences into the pure air of golden-age classics, after we have had a good lesson in the delightful, but silver-age Plutarch. The minute care with which we scan the words of Thucydides, and even revel in the splendours of his obscurity, is out of place in the best Hellenistic Greek, and is the heritage left us by the "pure scholars," too rare, alas! among the omnivorous Grecians of the new generation. For though the Venus from Melos and the lady from Trentham are splendid, they are not the equals of the goddesses of the golden age.

Novum Testamentum Græce, textui a retractatoribus Anglis adhibito brevem adnotationem criticam subiecit Alexander Souter. (Oxford, Clarendon Press.)—This volume ranks with the series of Oxford classical texts, and should be invaluable to all critical students of the New Testament. The labour and time that have been spent on its preparation must have been immense, and no other single volume of the same size can present anything like so thorough a conspectus of sources at the bottom of the page. To give some idea of the extent of Prof. Souter's range of authorities, we may point out that the list of them occupies about fifteen pages. Seven correctors of the Sinaitic Codex are recognized, and the number of fragmentary MSS. is very large. 'Ancient Versions' occupy two pages, and there are 'Scriptorum Testimonia' in terrifying abundance, beginning and ending with bishops of the fourth century. Occasionally the notes offer an English rendering. The Professor is too modest in his brief Latin introduction, for the fullness and diligence of his work are bound to be recognized everywhere.

Lexicon Græcum Suppletorium et Dialecticum. Composuit Henricus van Herwerden. Editio Altera auctior et correctior. 2 vols. (Leyden, Sijthoff.)—It is only eight years since this indispensable book was first published, and the editor has since issued a supplement, and now a new edition. He has increased the contents by nearly one-half; the book now contains close on 1,700 pages. The increase is nearly all new matter: in the first edition there was little to correct. Nearly all the misprints we noted in the first have been put right (but on p. 1, l. 5, Δ stands for Λ, and the volume of C.I.A. is wanting under ἐγ): there are remarkably few in the second. Everything shows the editor's scrupulous care. We may suggest a few additions.

ἀγάγοχα: add cross-reference to ἀγύγοχα. ἀμός = τις: compare ἀμωσγεπῶς. ἀνατιθέναι: mention that this form is also used in devotiones. ἀνθεμα (Collitz iii. 3339⁶⁹, &c.) and ἀττημα (Mon. Ant. iii. 402) = ἀνάθημα, are omitted, with the Cretan ἐθετος, and τελαμῶ = τελαμών (Argos: A.J.A. xi. 43). So also is the Amorgan ἄρσιχος (*fen.*), I.G.I. Amorgos 62²¹, &c. Under λέβης a reference might be added to Prof Ridgeway's book on currency,

Under λυκάβας, add I.G.S. Thessaly 1276. I.G.I. Amorgos 115³, and the late λυκάμας = χρόνος, *ib.* 120¹⁷, &c. There is also a form δέδοχθαι, apparently in the sense of δέδοκται, found in late Attic inscriptions, which has not, we think, been noted. Dr. van Herwerden still takes γρόφον to be a name, where we can hardly follow him. Γροφεύς = γραμματεὺς has now turned up 'Year's Work in Classical Studies,' 1910, p. 69). From literary sources, one or two words or references might be added, as from the new Menander (*e.g.* μεγαλείος); but the book is surprisingly complete, and hardly anything is omitted. Perhaps we might put in a plea for Hesiod's ἐπαλέα λίσχην against the third edition (*cp.* ἀολλέες, 'Αθήνα 'Αλέα).

The reader of Clement or Josephus will be thankful for the help of this book. We only wish some scholar would compile a lexicon to later Greek more useful than that of Sophocles: readers are often nonplussed there.

We congratulate the editor heartily on the wide sale of his lexicon; no success was ever better deserved.

The Dawn of Modern England, by Carlos B. Lumsden (Longmans), is a history of the Reformation in England from 1509 to 1525, and the author intends in succeeding volumes to carry his work down to the execution of Charles I. in 1649. Mr. Lumsden's scholarship is evident, and his range of reading is wide indeed. He has read and marked his authorities, but we are not so sure that he has digested them. Some of the volumes used, Mr. Lumsden admits, are poor, but he read them with the purpose of correcting the prevalent Protestant view of the Reformation. This great revolution he apparently regards as the outcome of the conflict of the growing Individualism of the sixteenth century with the semi-Socialism of the Middle Ages. No doubt it is possible to view the struggle in this light, but when we do so we disregard other factors. This standpoint has been well worked out by the writer, who at the same time feels how complex the whole story is.

It is difficult to analyze adequately the extraordinary change of mental attitude which appears in the records of the fifteenth and sixteenth centuries. The discoveries of Copernicus and Columbus undermined the foundation of the Holy Roman Empire. Men opened their eyes, and saw a new heaven and a new earth. The Empire could no more be regarded as world-wide, for America and the planets upset this conception. When the corporate idea was thus rudely broken, the individual emerged. In England the change is soon seen. The sailor—the pirate if you like—returned from his long voyage permeated with individualistic ideas. The cessation of the common cultivation of the village also gave impetus to the movement. The economical change was powerfully aided by political doctrine, for the dogma of the divine right of kings encouraged the growth of nationality, and ultimately of individuality. Mr. Lumsden postdates the influences of this dogma, and does not attach sufficient importance to it. The influence of the mediæval Church in industrial matters was not, we think, nearly so widespread as he imagines; a mediæval act often signified little more than a resolution at a public meeting.

General and Regional Geography for Students, by J. F. Unstead and E. G. R. Taylor (Philip & Son), is clearly written, but not very inspiring. It is illustrated by many useful maps and diagrams taken from

well-known sources, but better selected than is usually the case. It departs from the orthodox plan of such works by dividing the world into "natural regions," the characteristics of each being very briefly described. In the regional part of the work these natural regions are reconsidered and subdivided in the general description of each continent, and are merely referred to in the more detailed descriptions of different countries. Thus at the beginning of the section on Denmark we find "Natural Regions—Western Marginal Lowlands: North Sea Margin (B2). Baltic Lowlands: The western margin of the Baltic and the Islands (H3)." This is followed by a brief historical and Political Survey, a section on Agriculture, and one on Commerce—all being condensed into a couple of pages. This method of treatment will probably save much time in teaching and give good results, provided that the teacher is very much alive and stirs the imagination of his class, and that proper emphasis is laid on the differences between "natural regions" which are marked as of the same type.

SCHOOL-BOOKS.

English Literature for Secondary Schools: Selections from Pioneers of France in the New World, by Francis Parkman, edited by Kenneth Forbes; and *Selections from A Survey of London, by John Stow*, edited by A. Barter. (Macmillan.)—These two little books are a gratifying illustration of the extent to which the last ten years have broadened the range of those authors comprehended scholastically under the heading of "English Literature." Parkman's fascinating work, judiciously presented, as here, should engross the youthful readers for whom it is intended; while Stow's picture of sixteenth-century London, even in its curtailed form, should appeal to the curiosity at least of those whose memory is bounded by the Strand improvements. Each volume is equipped with an adequate Introduction, maps, and sufficient notes for elementary study, supplemented by a Glossary. Further useful features of the series are the 'Questions' appended, and the list of subjects suitable for essays. To the last, moreover, Mr. Kenneth Forbes has, with commendable enterprise, added suggestions for a blank-verse soliloquy, "short poems," and "a sonnet," to be inspired by the vicissitudes and personality of Champlain.

Miss D. L. Maguire's little book, *Historic Links* (Sonnenschein), which has already reached a second edition, deserves its success. Her plan is to take an historic building, like the Tower or Westminster Hall, and recall its associations so as to illustrate periods of English history. Beginning with St. Albans and its Roman memories, she works through the ages in fourteen interesting chapters. The fifteenth-century section, dealing with some old guild-halls at Coventry, Salisbury, and elsewhere, with Crosby Hall, and with Winfield Manor, is especially well done; but every chapter bears evidence of careful preparation and intelligent selection of facts. For this second edition Miss Maguire has revised her text, and notes the lying in state of King Edward in Westminster Hall and the removal of Crosby Hall to Chelsea. The little book has sixteen appropriate illustrations, including a plan of old London, and may be commended to the notice of teachers.

The Winter's Tale and *King Henry IV., Part I.*, have appeared in "The Granta Shakespeare" (Cambridge University Press), a well-printed little edition for schools, in which "excision has been very sparingly made." The text is modernized, and has been prepared with good judgment. Mr. J. H. Lobban, the editor, is painstaking and industrious, if not inspired, and Introduction and notes are suitable for their purpose. There is a brief Glossary too, in which we should prefer to see derivations of all the more difficult words added, where they are certain. In *1 King Henry IV., III. ii. 61*, the note "rash bavin. Inflammable" seems to us inadequate, and of the two words, only "rash" appears in the Glossary. The exigencies of the series do not allow "doxy" to be explained at all.

The first two volumes of "The Shakespeare Reading Circle" (Dent) are decidedly cheap and attractive. Mr. Alfred P. Graves has arranged for class reading, with Introduction and notes, *As You Like It* and *The Merchant of Venice*. The little volumes are, of course, not solely for schools and elementary teachers, but are also well fitted for home reading. Mr. Graves has evidently ample experience of his subject, for he has added a full and interesting supply of hints for the understanding and reading of the plays. Beginning with an Introduction on the needs and deficiencies of the day, he proceeds to elocution, notes as to the play and famous actors, costume in case reading leads to acting, and the characters in detail. There follow lists of the parts best taken in common on a basis of eighteen or twenty readers down to ten or eleven, and even an arrangement of the seats in which the various characters are placed in a semicircle. At the end are notes which, speaking from our experience of Shakespeare as understood in the drawing-room, we should be glad to see increased. The excision of objectionable passages has been skilfully managed, and we expect to find the little books widely used.

Poetica: a Book of English Verse for Repetition, chosen by John Ridges (Blackie), is intended "for boys and girls for the three years ending at 15 or 16," and is arranged in three sections, representing the work of one school year. The selection is generally good, and we are pleased to see that copyright has been waived in the case of two poems by Mr. Henry Newbolt. Patriotism is naturally and rightly the leading theme, but we hope it will not induce youngsters to suppose that

the might of England flush'd
To anticipate the scene

is model poetry.

In *A Child's Story of Great Britain* (Horace Marshall) Miss C. Linklater Thomson has written "a very short and simple sketch" for first lessons in history. This is not an easy thing to do, but the writer has succeeded in attaining the simplicity which is requisite. The illustrations, as is usual now in books of this sort, are really helpful towards understanding the life of the times.

Satisfactory in the main, *Victoria the Good and Edward the Peacemaker*, one of Messrs. Blackie's "Story-Book Readers," is not always couched in suitable language. The passage, for instance, quoted from Sir Theodore Martin's 'Life of the Prince Consort' concerning Queen Victoria's marriage is for young folk alike difficult and stodgy.

Tennyson's Earlier Poems and *The Lady of the Lake*, in the same publishers' "Plain Text Poets," belong to a series we have already praised for its cheapness and excellence. We must, however, remark that the writers of Introductions to these booklets ought to consider their readers. The Rev. H. B. Ryley's account of Tennyson describes him as "a seer and prophet inferior only to those who are so great that they were of the gods before they died." Tennyson's Ulysses "is da Vinci, he is Cellini, he is of the heart and soul of the Renaissance." A passing reference is made to Macaulay's schoolboy, who will have to be revived if all this Introduction is to be understood. Mr. J. V. Saunders on 'The Lady of the Lake' remarks: "It is difficult to define exactly the meaning of the word Romance, but some historical considerations will bring out the more striking characteristics of the poetry of the Romantic Revival, a movement in which Scott played a great part, and will explain what the word meant to him." This is not the right way to make a subject interesting, and by exercising a little care and thought Mr. Saunders might have made his Introduction both shorter and clearer.

Picture Composition, Books I.-III. By Lewis Marsh. (Blackie.)—The desire for pictures is a notable feature of to-day on which publishers and newspaper proprietors have been quick to seize. Here a host of illustrations are used as a method of instruction in English. We congratulate Mr. Marsh on an excellent idea which has been carried out in capital style. The pictures, in black and white and in colour, are decidedly attractive, and the choice of subjects for composition shows ingenuity and a wide range.

Mr. Ramsay Muir's *New School Atlas of Modern History* (Philip & Son) is, for the price, a capital school atlas, containing 48 plates, or 120 coloured maps and diagrams, and an Introduction illustrated by 29 maps and plans in black and white. The editor rightly proposes to himself the aim of inserting too few rather than too many names: what student has not suffered from the muddle-headedness which throws into maps all sorts of irrelevant detail? To illustrate the scope of the work we may say that there are eleven coloured maps of Europe at different times from 395 A.D. to 1815, and three black-and-white maps in the Introduction. Among suggestive and useful maps of England are those picturing Roman Britain, England and her invaders in the eleventh century, and ecclesiastical England under Henry VIII. A good feature is the full treatment of Indian, American, and Colonial history, for it must be confessed that Macaulay's strictures (at the beginning of his essay on Clive) on British ignorance of India are still pertinent.

On the whole, Mr. George Philip and Mr. Ramsay Muir have co-operated with excellent result: their work is the most helpful historical atlas yet produced for school purposes at a moderate price.

Bravest of All, by Mabel Mackness (Blackie), contains three stories for children of six to eight. They are prettily illustrated by pictures in colour, and contain a pleasant spice of adventure, as well as a good moral.

In the revised and enlarged edition of his father's *Dictionary of French and English, English and French* (Longmans), Mr. William Bellows has presented several features which are deserving of special notice. Nouns are printed in different types to distinguish their genders; and the feminine forms of nouns, pronouns, and adjectives are given in italics. The liaison or its absence in a French word is indicated by typographic marks. A commendable feature of the dictionary is the arrangement of both the French-English and the English-French divisions concurrently on the same page, a great saving of the student's time being thus effected. Originality is also shown in the section devoted to the conjugation of the verb, reference being made to this portion by means of numbers printed in the text. We note also useful tables giving the equivalents of weights, measures, &c., in the two systems used in England and France respectively. These features deserve high commendation, the only point that we criticize adversely being the adoption in some places of very small type—a fault resulting evidently from the desire to include as much information as possible in the space at disposal.

French Phrases and Idioms, by W. M. Lightbody (Blackie), will be found serviceable for those pupils who have already acquired a fair knowledge of the accidence and vocabulary of the language. The phrases and proverbs here presented are just those with which teachers are familiar in the papers set in the University Local and similar examinations. For practice in retranslation the exercises at the end of the book are somewhat meagre, but well adapted for testing the pupil's acquaintance with the foregoing portions.

Selection from the Latin Literature of the Early Empire.—Part A. *Inner Life*. Part B. *Outer Life*. Edited by A. C. B. Brown. (Oxford, Clarendon Press.)—It cannot now be urged that schools are not well supplied by publishers with good selections from Latin literature, drawn from authors somewhat outside the range of the ordinary school textbooks. We recall a selection of Silver Latin by Mr. Brownrigg, a slightly larger selection by Messrs. Gillies and Cummings, a recently published 'Roman Life Reader' by Messrs. Winbolt and Merk, and now we have Mr. Brown's selection from literature of the Early Empire.

The last is meant primarily to serve as a textbook for the Oxford Local Examinations. The two parts dealing with Inner Life and Outer Life are bound together. There are in the whole some 200 pages of text and notes, an Introduction to each part, and some other explanatory matter. The division under the two headings is of the rough-and-ready type: the *fundamentum divisionis* is hardly sound. There are interesting readings from Martial and Pliny; and Tacitus, Juvenal, and Seneca supply their quota. In the matter of notes Mr. Brown's restraint is to be commended. It is true that to Juvenal's Seventh Satire there are six pages of notes to seven of text, but the well-known difficulty and allusiveness of this author amply explain the proportion.

OUR LIBRARY TABLE.

The History of Pendennis, his Fortunes and Misfortunes, his Friends and his Greatest Enemy, forms the third and fourth volumes of the "Centenary Biographical Edition" of Thackeray's works (Smith & Elder). As in the case of 'Vanity Fair,' Lady Ritchie has amplified her earlier Introduction, full as it was of memories of her father's school and University life, by further levies upon Canon Elwin and FitzGerald, the Baxter letters, and a Diary which gives some entirely new memoranda of Thackeray's first relations with "Capt. Shandon" (Lockhart's "bright, broken Maginn"). She has also apparently withdrawn the "little joke" written to Lady Eddisbury in the manner of Pepys, or rather Percival Leigh's "Mr. Pips," then appearing in *Punch*. The two portraits in these volumes are from drawings made by Daniel Maclise in 1832 and 1833, and in character resemble those prepared by the same artist for *Fraser*, although, according to Bates's 'Maclise Gallery,' no likeness of Thackeray appears in the magazine, except that included in the general group of "Fraserians"—an oversight which Bates rectified in his book by copying Sir John Gilbert's Garrick Club picture. Lady Ritchie makes passing references to the origin of Costigan, as related in the Roundabout paper 'De Finibus'; but she does not quote the passage. As for "Cos," we have sometimes wondered whether his surname was suggested by that real Capt. Costigan whose 'Sketches of Society and Manners in Portugal,' 1788, once formed part of Rogers's library. Nothing, we observe, is said of the prototype of Foker, Andrew Arcedeckne, concerning whom, we think, there is some account in Cordy Jeaffreson's 'Book of Recollections.' The illustrations are attractive and include some excellent page photographs of Charterhouse, Larkbeare ("Fair Oaks"), Lamb's Buildings (Pen and Warrington had chambers in Lamb Court), and Trinity College, Cambridge.

The Lady: Studies of Certain Significant Phases of her History. By Emily James Putnam. (Putnam's Sons.)—In the opening sentence of a book which is full of interest and entertainment, Mrs. Putnam tells us that "the Lady is proverbial for her skill in eluding definition." No one would contradict this observation, and it is the more curious in these days to find the author placing the Lady, as such, on an entirely different level from that of the Woman. She speaks of her with kindly tolerance as an "archaism" in contemporary society, as an individualist who neither works nor wishes to work, but is content in her soft, luxurious surroundings, and is in complete subjection to man, of whose civilization she is an artificial product.

From her Introduction we gather that Mrs. Putnam is a zealous upholder of Women's Rights, as they have come to be conventionally called; but this does not prevent her from doing full justice to her subject as she traces the development of the Lady from the Greeks down to our own time. While feminism was the basis of Greek literature and art, and woman was in theory the equal or superior of man, the Greek wife was kept in dignified and honourable, but entire seclusion. It was another matter with the Roman lady, who foreshadowed the policy of some of the "insurgent females" of the present day. After the Punic War, when all expenditure, including that of the

ladies, had to be curtailed by legislation, Cato, in a famous speech opposing the repeal of the Oppian law, exclaims:—

"Our ancestors thought it not proper that women should transact any, even private business, without a director. We, it seems, suffer them now to interfere in the management of State affairs. Will you give the reins to their untractable nature, and their uncontrolled passion? . . . The moment they have arrived at an equality with you, they will become your superiors."

The Roman ladies were indeed a power to reckon with. Mrs. Putnam accounts for their strength of mind and body by the fact that the men had not had time to bring them thoroughly into subjection. She also calls attention to a more significant point, that while they were readers and thinkers, the note of feminism is entirely absent from Roman literature.

In her chapter on 'The Lady Abbess' the author gives an illuminating account of the freedom to which women could attain in the Middle Ages by entering a convent. The Lady Abbess herself held a unique position, being "part of the two great social forces of her time, feudalism and the Church," and being treated as an equal by the men of her class. Even the so-called independence of the ladies in our own colleges pales, apparently, beside the freedom of the cloistered nuns in early days. The limited sphere of the Lady of the Castle is compared with the more extended one of the Lady of the Renaissance, though personal charm and character had probably quite as much influence in the former as in the latter period. Mere feminine charm is not, indeed, a quality for which Mrs. Putnam appears to possess unbounded respect, even though the whole of her delightful book goes to prove its unassailable influence in all history. Of the Ladies of the Salon, and the eighteenth-century ladies in general, there is naturally little left that is fresh for the most original writer to say.

Mrs. Putnam is more instructive on the Lady of the Slave States, with whose archaic position she naturally sympathizes, and she provides a graphic picture of the hard life led by the mistress of a plantation, who, if she have a conscience and a sense of responsibility, is destined to be the most complete slave on it.

MR. BASIL ANDERTON, the author of *Fragrance among Old Volumes: Essays and Idylls of a Book-Lover* (Kegan Paul & Co.), belongs to the lineage of Izaak Walton and Sir Thomas Browne. It is plain to see that although fate has made him the custodian of a great library, he loves the open air, the scent of heather and thyme, and the song of birds more than the dim recesses of a book-room and the smell of musty leather. The opening paper on that *helluo librorum*, Antonio Magliabecchi, is written with less zest than the final chapter—little more than a paragraph—on 'The Old Bookman's Retreat,' in which he looks forward, in the evening of life, to settling in a little town, "perched high above the world on the top of a steep hill," where he "will bask in the hot sunshine, walk at his ease under long avenues of elm-trees, and sit at the foot of cool grey ramparts overlooking the long levels of the fields beneath."

But a love of nature does not preclude an interest in humanity, and one of the most charming papers in the volume is that entitled 'Concordio: the Story of a Poor Music Master,' in which a picture is drawn of an idealist who sacrificed everything that gives a joy to life, and finally life itself, to a "system," which "his hard task-mistress,

Music, had laid upon him " as the object of his existence. A longer paper is devoted to a manuscript written by a Dutch recluse, in which he bequeathed to his son "all the mottoes and old words of wisdom which had guided himself in the ways of life," little thinking of how small advantage wisdom had been to rescue his name from obscurity, and in what slight esteem these sententious sayings have been held in every age. Who in the affairs of the world is ever governed by such a maxim as "No man speaketh aright but he that hath first learnt to hold his peace"?

The purely bibliographical articles consist of an essay on 'The Book-Plates of Thomas Bewick,' and a study of 'Two Minor Books of Emblems': the 'Amoris Divini et Humani Antipathia' of Michael van Lochom, and the 'Zodiacus Christianus' of Jerome Drexel. These are carefully described and illustrated, but perhaps possess less interest to the English reader than the very careful paper on Bewick, based on the fine collection of the engraver's works which is preserved in the City Library of Newcastle-upon-Tyne. With regard to Bewick's book-plates, Mr. Anderton is not perhaps so enthusiastic as some of his earlier admirers. Bewick's ideas did not flow so freely when he was called upon to design an ex-libris for a wealthy patron as when he created from his unshackled imagination the delightful vignettes which enrich the 'Birds' and other more substantial works. The artist himself regarded his book-plates as hackwork, but as they are the objects of desire to collectors, Mr. Anderton has done well to compile an authoritative list, with all the details dear to the heart of the bibliophile.

On Life and Letters. By Anatole France. A Translation by A. W. Evans (John Lane).—Lovers of Anatole France keep a special place in their affections for the four volumes of the 'Vie Littéraire,' which Mr. A. W. Evans is now translating under the above title. These little essays on subjects of the day are marked by the qualities which endear our Gallic Erasmus to us; the fine observation, the careless candour which says exactly what the author wanted to say, the mordant simplicity, the happy phrase—all are there. In them we can trace his development, and gradual approach to the politics of which he writes so gaily in his dedication. Journalism of the character of these essays is almost unknown in England—perhaps because the souls that seek adventures among masterpieces take themselves too seriously, or bring away too heavy burdens; partly because the adventures themselves so rarely concern the masterpieces. Not one of these fugitive contributions is without a solid backbone of reflection and criticism, however light its floating robes of humour and anecdote may seem. Their range is wide—from 'Hamlet' and the 'Imitation' to the 'Girl of the Period' and Guy de Maupassant—and they quote from some eight score authors by name.

Translation of this work is a difficult business. It was written for a cultivated and intelligent class of readers, familiar with the subject, and prepared to seize on the slightest allusion. A translator has to preserve these allusions, and at the same time to make them obvious, and Mr. Evans has shown great judgment in the matter. He has kept his eyes throughout on Anatole France the writer, and has told us what he had to say in the words he used. His task has been the most severe of those of any of the writers in this series, and it is by far the best accomplished. We regret to see that the index of authors quoted has been omitted.

The Athenæum of December 31st contained in the foreign portion of the List of New Books, under the heading 'Drama,' *Les Affranchis*, describing it, correctly, as "a piece in 3 acts which has been a success at the Odéon." The preface, dated a year earlier, by M. Gregh, which recommended this play in the name of Catulle Mendès to the Librairie Hachette of Paris, suggests that, while rightly holding it to be suitable to the stage, both the dead and the living poet went further in their appreciation: they thought the book a work of genius. That the play should since have been approved at the second national theatre is perhaps no contradiction of the opinion entertained of the work of Mlle. Marie Lenéru by those who have the deepest veneration for this book. In it are fought out between the two sides—a modern and highly civilized French Clericalism as opposed to a similar pessimistic philosophy—those "cases of conscience" which possess the highest interest for the most interesting among modern people. It could hardly, perhaps, be that such writing would suit itself to the Western European theatre in the days of Capus; and the intention of this notice is to commend to our readers the volume as one for private reading—and frequent reperusal. The powerful school among French male writers who have long maintained a settled view of the exact limitations of "the woman author" have indeed had much to put up with in the course of the year that has just come to an end.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS.

THE annual meetings of this body were held on Wednesday, Thursday, and Friday in last week, at University College School, Hampstead. On the first two days the Council, which was well attended by representatives from all types of Secondary Schools in the United Kingdom, discussed the future policy of the Association, and adopted the resolutions to be submitted to the general meeting.

Mr. A. A. Somerville (Eton), the Chairman, presided over the gathering on Friday, when the Hon. Treasurer, Mr. J. H. Bray (Montrose College), in presenting the financial report, congratulated the members on the satisfactory position resulting from the continued growth in numbers.

Mr. W. A. Newsome (Stationers' School), in reporting on the work of the Joint Agency, remarked on the steady development effected by the present Registrar, and the increased support received from head masters.

Mr. F. Charles (Strand School), the retiring Chairman, in moving the adoption of the Report of the Executive Committee, stated that the membership was now over 3,000, the Legal Fund stood at 970*l.*, and the Benevolent Fund was reaching appreciable dimensions.

Members were asked to take warning from the case of *Hann v. Corporation of Plymouth*, which emphasized the necessity of a clear appreciation of the obligations entered into on signing an agreement, for it could not be set aside by pleading that the provisions were contrary to the custom of the profession.

The four subjects of chief importance in the world of education at the present time

were salaries, pensions, the Register, and qualifications. They had done much good work during the year by spreading broadcast among educational authorities the Report of the Special Committee appointed to consider the conditions of service prevailing on the Continent and in America. The unsatisfactory remuneration of teachers in this country was further emphasized by a comparison with the stipends enjoyed by clerks in the lower division of the Civil Service. Public opinion should be moved to urge upon the Government the provision of adequate salaries and suitable retiring allowances for all efficient teachers. For this purpose there must be some guarantee as to efficiency, and this must be secured by an effective Register, to be framed under the direction of a Registration Council representative of the teaching profession. This Register must show the teacher's qualifications, which were, first, that he should know his subject; secondly, that he should be able to teach it properly; thirdly, that his character should be such as to command respect from his pupils. The Register should be aglorified schoolmasters' year-book, containing probably not so many names, but compiled with authority.

Mr. Charles ascribed the unsatisfactory condition of affairs to the indifference of parents, who often entrusted their boys to unqualified teachers without taking any trouble to inquire into their qualifications. They were satisfied if they gave the children a good time in the holidays, and were not worried by them on other occasions.

A strong protest was made against the practice of withdrawing from school promising boys of sixteen years of age. In this respect blame attached to business houses as well as parents. In Germany and America a large number of college men were employed by business houses, especially engineering, dyeing, and brewing firms.

What, he asked, could they do to establish still more firmly a belief in education? Undoubtedly, they must look to themselves, to see that they were able and qualified to undertake the responsible work thrust upon them by parents; they must bring their work into direct relation with the life their pupils had to lead, in order to train them to be better citizens.

Though members of Education Committees were still too much inclined to spend money on the "material" instead of the "personal," they were very much in earnest, and were taking their duties more seriously. This keen interest and willingness to learn gave teachers their opportunity of convincing them that the most important factor in education is the teacher, and that the teacher knows his business. Business men must be induced to recognize the efficacy of education, and the necessity of attracting the best men to teach in the schools. This done, a united profession, with the whole-hearted support of Governors and Committees, might develop a race with a sense of responsibility for the lives and property of others—a race selfish, not in the personal, not in the family, but in the national and imperial sense.

A vote of thanks was unanimously passed to Mr. Charles for his services as Chairman during 1910, and his efforts in bringing the questions of salaries and pensions before Local Education Authorities.

The following resolutions were then submitted by the Chairman:—

1. *Leaving Age for Secondary Schools.*—That in the opinion of this Association it is important that, in any scheme of University organization,

nothing be done to discourage pupils from remaining in a Secondary School until the age of eighteen. This Association would also deeply regret any lowering of the age at which candidates are eligible for entrance to Woolwich and Sandhurst.

2. *Salaries and Pensions*.—(1) That this Association considers that it is essential to the efficiency of Secondary Education that the Board of Education forthwith proceed to establish an effective Register and a national scheme of pensions for Secondary teachers.

(2) That this Association considers that the Board should refuse to recognize as efficient any school which does not provide an adequate scale of salaries and reasonable security of tenure.

(3) That this Association, having considered the report of the Executive Committee on the recent Conference of Associations of Teachers in Secondary Schools and Technical Institutions on the superannuation question, expresses its satisfaction at the progress made towards united action on the part of the various Associations.

3. *Model Scale of Salaries*.—That this Association is of opinion that it is desirable to amend the model scale of salaries put forward by it.

4. *Sickness and Accident Insurance Scheme*.—That this Association hereby establishes a Provident Society, for the relief or maintenance of members of the Society during sickness or other infirmity of body or mind.

5. *Appointments in Secondary Schools*.—That this Association considers as grossly unjust the fact that in requiring "Training" as a qualification for certain appointments in Secondary Schools, the Board of Education does not apparently consider experience of a satisfactory nature as the equivalent of training, and thereby debars the majority of assistant masters already in Secondary Schools from applying for such posts, there being when they entered the profession no means of obtaining College training; and requests the Board to insert in their new Regulations for Secondary Schools the definite pronouncement that service of a satisfactory nature is regarded as the equivalent of training in one of the institutions recognized by the Board under the Regulations for the Training of Teachers in Secondary Schools.

Mr. R. W. Guerra (Bristol and Western Counties) read a paper on 'National Physical Training,' his argument being that such an institution would tend to check the growth of pauperism. Disclaiming all idea of advocating militarism, he contended that knowledge, money, and intelligence were useless without the health to use them, and that teachers should educate public opinion on the subject of physical training. His humorous, though severe strictures on the Boy Scout movement caused some amusement. A scheme of physical training could, he contended, be easily established, and really healthy boys would not be loafing at street corners. As the Executive Committee had declined to sanction a discussion on the question of compulsory military drill, the Chairman decided not to take a vote on the motion. This, we think, was a pity, as it would have done no harm to see how opinion went.

At the afternoon meeting, Prof. Sonnen-schein introduced the Report of the Committee on Grammatical Terminology, and gave a lucid exposition of its chief points. After an interesting discussion, the Chairman proposed, Mr. J. Thompson (Plymouth) seconding, a resolution recommending the adoption of the suggestions put forward as worthy of careful consideration. This was carried almost unanimously.

The meeting then listened to an interesting paper, 'Looking Before and After,' by Mr. P. E. Matheson, one of the Joint Secretaries of the Oxford and Cambridge Schools Examination Board. He dealt exhaustively with the present state of Secondary Education and the many problems connected with it. The usual votes of thanks brought the proceedings to a close.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Benson (Robert Hugh), *Christ in the Church*, 3/6 net.

A volume of religious essays.

Bowne (Borden Parker), *The Essence of Religion*, 5/ net.

Brett (Jesse), *The Passion in the Spiritual Life*, 3/ net.

Brooke (Mrs. A. Amy), *The Eucharist: a Study*, 6d. net.

Carver (William Owen), *Missions and Modern Thought*, 6/6 net.

The author is a professor in a Baptist Theological Seminary in the United States.

Hadden (Robert Henry), *Selected Sermons*, 3/6 net.

With a memoir by the Rev. E. H. Pearce.

Hall (Rev. Francis J.), *Dogmatic Theology: the Trinity*, 6/ net.

Lennard (Vivian R.), *The Longer Lent: Septuagesima to Easter*, 2/6 net.

14 addresses.

Life of St. Teresa of Jesus, of the Order of Our Lady of Carmel, written by Herself, 9/ net.

Translated from the Spanish by David Lewis, re-edited by the Very Rev. Benedict Zimmerman. Fourth edition.

Love (James Franklin), *The Unique Message and the Universal Mission of Christianity*, 5/ net.

Pastor (Dr. Ludwig), *The History of the Popes from the Close of the Middle Ages*, Vol. X., 12/ net.

Drawn from the secret archives of the Vatican and other original sources, and edited by Ralph Francis Kerr.

Pells (S. F.), *Lectures on the Texts of the Bible and our English Translations*, 1/ net.

In commemoration of the Tercentenary of the Authorized version, with appendix containing chapters on the Apocryphal books, and the defects of the common English Bible.

Sermons for the Coronation of King George V., 2/6 net.

Stone (Rev. James S.), *The Prayer before the Passion; or, Our Lord's Intercession for His People*, 4/6 net.

A study of the seventeenth chapter of St. John's Gospel.

Warner (Horace Emory), *The Psychology of the Christian Life*, 6/ net.

Way to Perfection, by Saint Teresa of Jesus, 6/ net.

Translated from the autograph of St. Teresa by the Benedictines of Stanbrook. Revised by the Very Rev. Benedict Zimmerman.

Law.

Earnshaw (J. P.), *Voluntary Liquidation under the Companies (Consolidation) Act, 1908*, 3/6 net.

A handbook for liquidators, with forms and the Winding-up Rules (1909).

Gray (John Chipman), *The Nature and Sources of the Law*, 6/6 net.

One of the Columbia University Lectures.

Johnson (M. G.), *Farm Law*, 3/6 net.

Fine Art and Archaeology.

Archæological Survey of India, Western Circle, Progress Report for the Year ending March 31, 1910, 11d.

Benedictional of Saint Athelwold, Bishop of Winchester 963-84.

Reproduced in facsimile from the MS. in the library of the Duke of Devonshire at Chatsworth, and edited by Sir George Frederic Warner, and Henry Austin Wilson for the Roxburghe Club.

Benn (H. P.) and Shapland (H. P.), *The Nation's Treasures*, 2/6 net.

Measured drawings of old furniture in the Victoria and Albert Museum.

Caslin (Charles H.), *The Story of Spanish Painting*, 4/6 net.

Contains many illustrations.

Imperial Arts League Journal, No. 3, 6d.

Orbaan (J. A. F.), *Sistine Rome*, 7/6 net.

With 33 illustrations.

Ricci (Corrado), *Art in Northern Italy*, 6/ net.

With numerous illustrations.

Virzi (Tom), *Raphael and the Portrait of Andrea Turini*, 4/ net.

Poetry and Drama.

Baker (Elizabeth), *Chains: a Play in Four Acts*, 1/ net.

Doyle (E. A.), *Phocion, a Dramatic Poem, and other Poems*, \$1

A collection of miscellaneous verse.

Early Plays from the Italian, 7/6 net.

Edited, with essay, introductions, and notes, by R. Warwick Bond.

MacDonagh (Thomas), *Songs of Myself*, 1/ net.

Morris (William), *The Life and Death of Jason*, 1/ net.

With an introduction by John Drinkwater. In the Muses' Library.

Walters (Sophia Lydia), *Their Wayward Round, a Poem*, 2/6 net.

Music.

Folk Songs of Many Lands, 2/6

Collected by J. Spencer Curwen, words by F. Hoare, J. Guard, K. T. Sizer, G. Bennett, &c., and accompaniments by Percy E. Fletcher.

Bibliography.

Glasgow Corporation Public Libraries: Index Catalogue of the Woodside District Library, 8d. Second edition.

James (Montague Rhodes), *A Descriptive Catalogue of the Manuscripts in the Library of Corpus Christi College, Cambridge, Part III.*, 7/6 net.

For notice of Part II. see *Athen.* Aug. 13, 1910, p. 181.

Library of Congress: American and English Genealogies in the Library, Preliminary Catalogue, and Report of the Library and of the Superintendent of the Library Building and Grounds for the Year ending June 30, 1910.

Reader's Index, January and February: Periodicals for 1911, 1d.

The bi-monthly magazine of the Croydon Public Libraries.

Philosophy.

Halévy (Daniel), *The Life of Friedrich Nietzsche*, 8/6 net.

Translated by J. M. Hone, with an introduction by T. M. Kettle.

Jerusalem (William), *Introduction to Philosophy*, 6/6 net.

Authorized translation by C. F. Sanders. The author is Lecturer in Philosophy at Vienna University.

Political Economy.

Harris (J. Theodore), *An Example of Communal Currency: the Facts about the Guernsey Market House*, 1/ net.

Compiled from original documents, with a preface by Sidney Webb.

History and Biography.

Brandes (George), *Ferdinand Lassalle*, 6/ net.

Catling (Thos.), *My Life's Pilgrimage*, 10/6 net.

With introduction by Lord Burnham, and illustrations.

Griffith (W. J.), *A Short Analysis of Welsh History*, 1/ net.

One of the Temple Cyclopædic Primers.

Lazarovich-Hrebelianovich (Prince and Princess), *The Serbian People, their Past Glory and their Destiny*, 2 vols., 24/ net.

Stoker (Bram), *Famous Impostors*, 10/6 net.

With 10 illustrations.

Ward (A. W.), *Leibniz as a Politician*, 6d. net.

The Adamson Lecture, 1910.

Geography and Travel.

Grubb (W. Barbrooke), *An Unknown People in an Unknown Land*, 16/ net.

An account of the life and customs of the Lengua Indians of the Paraguayan Chaco, with adventures and experiences during twenty years' exploration amongst them. Edited by H. T. Morrey Jones, with 60 illustrations and a map.

Jukes-Browne (A. J.), *The Building of the British Isles, being a History of the Construction and Geographical Evolution of the British Region*, 12/ net.

Third edition, rewritten and enlarged, illustrated by photographic views, maps, and sections.

Sports and Pastimes.

Haultain (Arnold), *The Mystery of Golf*, 7/6 net. Second edition, revised and enlarged.

Education.

- Blackie's Little French Classics: A Book of French Songs, Phonetic Edition, selected by Louis A. Barbé, transcribed by Madame Girardeau, 6d.; Lesage, Crispin Rival de son Maître, edited by Andrew C. Clark, 8d.; Souvestre, Le Foyer Breton: Le Lutin de la Mare, et La Fée de l'île du Lac, edited by H. N. Adair, 4d.
 Blackie's Plain Text Poets: Scott's Lady of the Lake, with introduction by J. V. Saunders; Tennyson's Earlier Poems, with introduction by the Rev. H. Buchanan Ryley, 6d. each. See p. 69.
 Dictionary of French and English, and English and French, 5/ net.
 Compiled by John Bellows, enlarged by his son William Bellows. See p. 70.
 English Selections for French Prose Composition, 1/
 Arranged by B. B. Dickinson.
 Ironside (Gertrude M.), La petite Institutrice, and other French Dialogues, 6d.
 Contains several short scenes from French life, introducing games, songs, and recitations suitable for children of 12 years and upwards.
 Lands and their Stories: Book III. England and the English, by A. J. Berry, 1/8; Book V. Europe and its People, by H. W. Palmer, 1/8
 Both contain many illustrations.
 Layng (A. E.), A General Text-Book of Elementary Algebra, Exercises, Book II., 2/
 Lightbody (W. M.), French Phrases and Idioms, 6d.
 See p. 70.
 Mackness (Mabel), Bravest of All, and other Tales, 9d.
 Part of the series Stories Old and New.
 See p. 69.
 Marsh (Lewis), Picture Composition, Books I., II., III., 6d. each.
 See p. 69.
 Moore (James M.) and Slight (John), An Intermediate French Course, Part III., 1/6 net.
 With an introduction by R. L. Graeme Ritchie.
 O'Neill (John), Simple Lessons in Nature Study, 1/ net.
 Poetica, a Book of English Verse for Repetition, 1/6
 Chosen by John Ridges.
 See p. 69.
 Shakespeare Reading Circle: As You Like It; and The Merchant of Venice, 9d. net each.
 Both arranged for class reading, with introduction and notes by Alfred Perceval Graves.
 See p. 69.
 Shakespeare's Twelfth Night, 6d. net.
 Adapted for performance in girls' schools by Elsie Fogerty.
 Short French Plays: Comme Elles sont Toutes, Dieu Merci! le Convert est mis, L'Habit de Mylord, and La Somnambule, 6d. net each.
 Edited by F. W. M. Draper.
 Smith (Bernard), Physical Geography for Schools, 3/6
 Contains 222 illustrations, maps, and diagrams. See p. 75.
 Tomes (B. A.), A First Course in Practical Mathematics, 1/6
 See p. 75.
 Victoria the Good and Edward the Peacemaker, 4d.
 One of Blackie's illustrated Story Book Readers. See p. 69.
 Webb (George William), A Systematic Geography of America, 1/
 With 10 diagrams and maps.
Science.
 Adam (Curt), Handbook of Treatment for Diseases of the Eye, 10/ net.
 Translated from the 1910 ed. by W. G. Sym and E. M. Lithgow.

With illustrations in colour by Margaret Gregory.

Fiction.

Cleeve (Lucas), Friends of Fate, 6/

A strange story founded on fact.

Dickens Centenary Edition: Barnaby Rudge, 2 vols., and Hard Times, 3/6 each.

Dostoevsky (Fedor), Crime and Punishment, 1/ net.

Translated by Frederick Whishaw, with introduction by Laurence Irving. In Everyman's Library.

Gould (F. J.), The Divine Archer, 1/6 net.

Founded on the Indian epic of the Ramayana, with two stories from the Mahabharata.

Hopkins (William John), The Meddlings of Eve, 3/6

Two studies of the involvements due to a red-haired lady by an American writer.

Kenealy (Arabella), The Mating of Anthea, 6/

The heroine can neither read nor write, her guardian having brought her up on a system of his own, his intention being to fit her for a destiny which for a while remains a secret.

Mountjoy (Evelyn), Demetrius and Daisy, 6/

Describes the misfortunes which a well-meaning youth encounters at the hands of a charming but designing lady.

Onions (Oliver), Widdershins, 6/

A series of short stories, mostly of a psychic tendency.

Patterson (J. E.), Tillers of the Soil, 6/

Concerned with farming life and conditions as they exist at present in Essex.

Shadow on the Purple, 6/

Recollections of an ex-Attaché, recorded by a Peeress.

Tales from the Old French, 5/ net.

Translated by Isabel Butler.

Thackeray's Centenary Biographical Edition: The Great Hoggarty Diamond, and Yellow-plush Papers, 6/ net each.

Warden (Florence), The Beauty Doctor, 6/

The story of an elaborate plot which ended happily.

White (Fred M.), The Brand of Silence, 6/

Another of this well-known author's romances of incident and adventure.

Yorke (Curtis), Patricia of Pall Mall, 6/

Tells of a young girl who is left an old house by her uncle under conditions that open up a wide vista of humorous potentialities.

General Literature.

Browne (Sir Thomas), Religio Medici, and other Essays, 6/ net.

One of the books of the Verulam Club.

Currie (Rev. L. B.), Mothers, Awake! a Warning, 4d.

Six lessons forming a course of temperance instruction to mothers, with a preface by Mrs. Wilberforce.

Downham (C. F.), The Feather Trade: the Case for the Defence, 6d. net.

A paper read at the London Chamber of Commerce in November, 1910.

Encyclopædia Britannica, Vols. I. to XIV., with Bookcase.

Eleventh edition on India paper.

Essex Review, January, 1/6 net.

Japan Society, London, Transactions and Proceedings, Vol. IX. 1909-10, 10/

Jardine (Jeanne), The Best Vegetarian Dishes I Know, 1/ net.

Lamb (Sir John Cameron), The Life-Boat and its Work, 1/

With many illustrations.

Layton's Handy Newspaper List, 1911, 6d.

League Leaflet, No. 1, 1/2d.

A paper intended to interest and help members of the Women's Labour League and other friends of the Labour Party.

Mills (J. Saxon), England's Foundation: Agriculture and the State, 1/ net.

Reprinted, with additions, from *The Hereford Times*, with a preface by the Earl of Denbigh.

Osborne (Walter V.) and Judge (Mark H.), Trade Unions and the Law, 6d. net.

Shaw (James Johnston), Occasional Papers, 7/6 net.

Edited, with biographical introduction, by Margaret G. Woods.

Synge (John M.), Works, 4 vols., 24/ net.

Pamphlets.

Slade (B. E.), The New Year's Retinue, 1/2d.

An "action piece" for children. One of the Every-Day Dramas for temperance meetings and school entertainments.

Yexley (Lionel), Charity and the Navy, 3d. net.

A protest against indiscriminate begging on behalf of "Poor Jack."

*FOREIGN.**Theology.*

Analecta Bollandiana, Vol. XXX. Part I., 15fr. yearly.

Fine Art and Archaeology.

Dumonthier (E.), Les Bronzes du Mobilier National: Pendules et Cartels; Bronzes d'Éclairage et Chauffage, 55fr. each.

In limited editions.

Reinach (S.), Répertoire de la Statuaire grecque et romaine, Vol. IV. 4,000 statues antiques, 5fr.; Répertoire de Peintures du Moyen Age et de la Renaissance, Vol. III. 1,350 gravures, 10fr.

Reymond (M.) Le Bernin, 3fr. 50.

With 24 full-page plates. In Les Maîtres de l'Art.

Wissowa (G.) u. Kroll (W.), Pauly's Real-Encyclopædie der classischen Altertumswissenschaft, New Edition, Part 13, 15m.

Music.

Pougin (A.), Musiciens du dix-neuvième Siècle, 3fr. 50.

History and Biography.

Angot (E.), Louis de Talleyrand-Périgord, 1784-1808, 3fr. 50.

Bergerat (E.), Souvenirs d'un Enfant de Paris: Les Années de Bohème, 3fr. 50.

Gazier (A.), Les derniers Jours de Blaise Pascal, 1fr. 50.

An historical and critical study.

Piton (C.), Paris sous Louis XV.: Rapports des Inspecteurs de Police au Roi, Third Series, 3fr. 50.

Stenger (G.), Grandes Dames du dix-neuvième Siècle: Chronique du Temps de la Restauration, 5fr.

Stenger (G.), Grandes Dames du dix-neuvième Siècle: Chronique du Temps de la Restauration, 5fr.

Literary Gossip.

IN *The Cornhill Magazine* for February Mr. A. C. Benson writes on Bishop Wilkin-son, and Mrs. Margaret L. Woods 'By the East Coast.' Topical articles are 'Electioneering in Ireland,' by Mr. Stephen Gwynn, M.P., and 'The Wastage of Men, Aeroplanes, and Brains,' by Prof. G. H. Bryan. Miss F. E. Dugdale records the career of 'Blue Jimmy, the Horse-Stealer'; Mr. T. B. Dilks writes verses 'To Herrick'; and Mr. Marmaduke Pickthall 'The Tale of a Camp,' a humorous short story. The answers are given to Mr. Lucas's paper on Lamb, and a new set of questions by Mr. Owen Seaman on Browning.

THE February *Blackwood* contains articles on 'Aviation in 1910' by Mr. T. F. Farman, and on Lamb's friend Rickman by Mr. Orlo Williams. There is a further instalment of 'Tales of the Mermaid Tavern' by Mr. Alfred Noyes. Sir H. Mortimer Durand describes Bulu-wayo, Christmas at the Victoria Falls, and a visit to the grave of Cecil Rhodes. There are two complete stories in the number: 'Benjie and the Bogie Man,' by Mr. Stephen Reynolds, and 'The Inspector of Goz Daoud,' by Mr. E. C. Winton. 'Barbizon,' by Mr. Humphrey Jordan, gives recollections by Madame Siron of Stevenson and the artists of Siron's inn.

MR. MURRAY'S forthcoming books include 'Some Principles of Liturgical Reform,' a contribution towards the revision of the Prayer Book, by Dr. W. H. Frere; 'Japanese Poetry,' by Prof. B. H. Chamberlain; 'Reminiscences of a Paris Physician' (Dr. Poumiès de la Siboutie), edited by his daughters, and translated by Lady Theodora Davidson; and 'The British Empire,' a textbook by Mr. E. G. Hawke.

MR. MURRAY promises in fiction 'The Downfall of the Gods,' by Sir Hugh Clifford; 'Repton,' a tale of Marlborough and the Jesuits under Queen Anne, by Lieut.-Col. F. Kane; and 'Pot au Feu,' a collection of short stories by Mr. Marmaduke Pickthall which reveal study both of the East and the West.

Harper's Magazine for February will include articles by Major A. R. H. Ranson on 'General Lee as I Knew Him'; on 'Baltimore' by Mr. Harrison Rhodes; and on 'The First Americans,' traces of whom Dr. Ellsworth Huntington has discovered in Arizona. We note also a short story by Mrs. Dudeney, and verse by Mr. C. Rann Kennedy and Mr. Le Gallienne.

Scribner's Magazine for February will include an account by Mr. Price Collier of a visit to Bombay; 'German Railway Policy,' by Mr. Elmer Roberts; 'The Land of the Musk-Ox,' by Mr. Thompson Seton; an essay by Mr. John La Farge on 'The Teaching of Art'; and a poem by Sir Rennell Rodd.

THE first number of *The Irish Review: a Monthly Magazine of Irish Literature, Science, and Art*, will be issued next March. It is hoped that the *Review* will occupy the position of such periodicals as the *Quarterly Edinburgh*, and *Mercure de France*, and a strong list of contributors is announced. Each number is to contain a long critical article on a recent work of Irish interest.

MESSRS. SEELEY & Co. will shortly issue a well-illustrated book entitled 'Seventeen Years among the Sea Dyaks of Borneo.' The author, Mr. E. H. Gomes, gained the confidence of, and lived and worked among, the natives of Borneo. Many tales of their piratical acts, their treacherous and bloodthirsty nature, and their general ferocity of character, have reached this country; but Mr. Gomes has studied the Dyaks closely, and found in them much to like.

EARLY in February Messrs. D. Appleton & Co. will publish 'The American Year-Book,' a record of events and progress during the past year. While the book will be devoted to American affairs, the most important events in Great Britain and Europe will be carefully noted. The organization of the work has been undertaken by a Supervisory Board, with Prof. Albert Bushnell Hart as chairman.

THE GLASGOW PEN AND PENCIL CLUB has erected a series of tablets commemorating historic spots in the city. The inscriptions are: (1) "In Buchanan's Land on this site James Watt occupied a workshop in 1763"; (2) on a tenement at the north-west corner of George Street, "Colin Campbell, Lord Clyde, was born in this tenement in 1792"; (3) "On this site stood the Shawfield Mansion where Prince Charles Stuart resided in 1745"; (4) at 384, Gallowgate, "In this house Horatio McCulloch was born in 1805"; (5) in Duke Street, "Sam Bough resided in a house on this site in 1850"; (6) at 12, Charlotte Street, "Alexander Smith, poet and essayist, lived here in 1852."

MR. HERBERT RICHARDS is publishing very shortly through Mr. Grant Richards a volume called 'Platonica,' consisting almost entirely of material revised and augmented from his articles on Plato in *The Classical Review*.

THE REV. PERCY DEARMER has prepared a new edition of 'Lombard Street in Lent,' which Mr. Robert Scott will publish immediately. Canon Scott-Holland contributes an Introduction.

TIMOTHE BRIGHT, "Doctor of Phisicke" (1550-1615), was for some years resident physician at St. Bartholomew's Hospital. His 'Treatise of Melancholy' is said to have influenced Shakespeare as well as Burton, but he is best known as "the Father of Modern Shorthand." Mr. Elliot Stock announces for publication a biography of the learned Doctor, written by Mr. W. J. Carlton, whose researches have brought to light many particulars hitherto unknown. The work will be illustrated with photographs and fac-similes.

ON the initiative of the Mayor of Brighton (Mr. C. Thomas-Stanford, F.S.A.), the Corporation has unanimously decided to restore to the Rye authorities two MS. volumes in the Brighton Public Library which have been found to form part of the Rye municipal records. These volumes appear to have been written in the sixteenth and seventeenth centuries. We observe that when Mr. Riley reported on the Rye records for the Historical MSS. Commission, he found that at least one volume was missing.

THE third annual Charles Lamb dinner at Cambridge will take place on February 11th at the University Arms Hotel. Prof. Raleigh will be the guest of the evening, and the chair will be taken by Prof. Henry Jackson.

THE death on the 11th inst. at Bathgate, in his 82nd year, of Henry Shanks, known locally as "The Blind Poet of the Deans," is announced. The son of the Farmer at the Deans Farm, he early, while still able to work in trade, contributed poetry to an Airdrie paper. In 1863 he became totally blind, yet he continued to cultivate his poetic gifts, and, with the assistance of James Ballantine, the author of "Ilka blade o' grass," his first volume of poems was published in 1868. This was followed by another in 1872. In 1881 his lectures on Burns and Hogg (notable on account of his wonderful accuracy and memory) appeared in 'The Peasant Poets of Scotland, with Musings under the Beeches,' the second name being drawn from the Bathgate Literary Society, at which they were delivered.

A CORRESPONDENT writes:—

"The announcement by the Cambridge University Press of a book by L. Godwin Salt, M.A., strikes one as peculiar; for it turns out that the author is (1) a lady, and (2) therefore not a Master of Arts of Cambridge University. In view of the increasing number of lady writers, is it not desirable that publishers should oblige their readers by stating the Christian name or otherwise indicating the sex of the authors whose books they publish?"

IN the current *Giornale Storico della Letteratura Italiana* appears a twelve-page article by Prof. Henri Hauvette on Mr. Edward Hutton's biographical and critical study of Boccaccio, reviewed in our columns on January 29th, 1910. Prof. Hauvette considers Mr. Hutton's work as of much importance for England, and places it beside the works of Hortis, Landau, and Crescini. The article, which traverses some of Mr. Hutton's conclusions, is full of interest for students of Boccaccio, Petrarch, Chaucer, and Dante.

RECENT Parliamentary Papers include Canals and Waterways Commission, Vol. X.; (post free 7s. 6d.); Census of Production, 1907, Preliminary Tables, Part VI. (post free 7½d.); Poor Law Commission, Foreign and Colonial Systems, Vol. XXXIII. (post free 4s. 3d.); and Uganda Protectorate Handbook (post free 7d.).

SCIENCE

SCHOOL-BOOKS.

A Geometry for Schools. By F. W. Sanderson and G. W. Brewster. (Cambridge University Press.)—The principal difficulty in producing a textbook of geometry is to reconcile two ideals. The older ideal is that of Euclid, to provide a logical course in which each property of geometrical figures is deduced from definitions and from properties which have been previously proved; the newer ideal, or perhaps the revived ideal, recognizes that the facts are of more importance than the proofs, and insists on the certainty that the facts will not become part of the mental furniture of the young student unless they are brought home to him by numerous practical exercises. The method adopted by the authors of this textbook is to develop the subject on rough-and-ready lines, and at the end of each chapter to write out the formal logical proofs. The system seems to us to be admirable, and the details of the course have been thought out with care, so that the book will, we anticipate, be successful in the classroom.

We have examined with much pleasure Mr. R. J. T. Bell's *Elementary Treatise on Co-ordinate Geometry of Three Dimensions* (Macmillan). The Preface states:—

"For the student whose interests lie in the direction of Applied Mathematics, the book aims at providing a fairly complete exposition of the properties of the plane, the straight line, and the conicoids. It is also intended to furnish him with a book of reference which he may consult when his reading in Applied Mathematics demands a knowledge, say, of the properties of curves or of geodesics. At the same time it is hoped that the student of Pure Mathematics may find here a suitable introduction to the larger treatises on the subject and to works on Differential Geometry and the Theory of Surfaces."

These claims are in our opinion justified, as the descriptive matter is clear, the algebra is remarkably neat, the collections of illustrative examples are ample, and there is a complete Index in addition to a full Table of Contents.

Calculus Made Easy. By F.R.S. (Macmillan & Co.)—It is not often that it falls to the lot of a reviewer of mathematical literature to read such a gay and boisterous book as this "very-simplest introduction to those beautiful methods of reckoning which are generally called by the terrifying names of the differential calculus and the integral calculus." The author writes in his epilogue and apologue:—

"It may be confidently assumed that when this tractate falls into the hands of the professional mathematicians, they will (if not too lazy) rise up as one man, and damn it as being a thoroughly bad book. . . . it gives away so many trade secrets. By showing you that *what one fool can do, other fools can do also*, it lets you see that these mathematical swells, who pride themselves on having mastered such an awfully difficult subject as the calculus, have no such great reason to be puffed up. . . . You don't forbid the use of a watch to every person who does not know how to make one. You don't teach the rules of syntax to children until they have already become fluent in the use of speech. It would be equally absurd to require general rigid demonstrations to be expounded to beginners in the calculus."

As a matter of fact, professional mathematicians will give a warm welcome to a book

which is so orthodox in its teaching, and so vigorous in its exposition, although they will wonder how many readers will be able to keep up with their guide in this personally conducted tour over somewhat rough country. May we point out a few stumbling-blocks which could be circumvented before the next party starts and the book appears in a second edition? The differential coefficient of a power can be found by using geometrical progressions instead of the difficult binomial theorem. In that case the latter theorem can be proved by the methods of the calculus. The verification of the exponential theorem suggested at the bottom of p. 82 is very laborious, whereas the corresponding theoretical work would be simple. The differential coefficient of the sine can be found simply without appealing to the addition-formula in trigonometry; and finally, it is rather misleading to say that Napier made e the basis of his system of logarithms: Napier was entirely ignorant of the connexion between logarithms and indices.

Elements of Analytical Geometry. By George A. Gibson and P. Pinkerton. (Macmillan & Co.)—The authors of this book are the Professor of Mathematics at Glasgow and the head of the Mathematical Department at George Watson's College, Edinburgh, and have wide experience as lecturers to the large classes which are found in the Northern Universities. Their exposition of analytical geometry differs from those with which we are familiar mainly in the order of treatment. In the early part of the book conic sections are introduced in the same chapter as the conchoid and cissoid as examples of loci whose equations can be deduced from geometrical definitions. The systematic treatment of conics is postponed until after an elaborate discussion of algebraic curves in general: tangents and asymptotes appear naturally as aids to the determination of the form of a curve whose equation is given. As to conics, the methods used are sometimes geometrical and sometimes analytical, the authors being of opinion that the sharp distinction between the two types of reasoning should no longer be maintained.

There are a few details which call for criticism. In the section on Harmonic Ranges a reference to harmonic progressions would have been well placed, as the authors are anxious to correlate the teaching of algebra and geometry. For the same reason we were disappointed to find that the determinant notation had been carefully avoided. The use of imaginary and infinite quantities is marked by more precision than has hitherto been customary in English textbooks, but we notice that a pair of imaginary lines are incidentally referred to on p. 82 without any explanation, and that infinite segments are used illegitimately on p. 437. The use of the arrow notation for "approaches the limit" would have made it easy to remove the obscurity in the latter instance. The chapter on successive approximation contains no reference to the powerful method of drawing a small part of the corresponding graph on a large scale, a method which is more rapid than either of the analytical ones mentioned. The authors lay great stress on "freedom equations," i.e., equations in which the co-ordinates are expressed in terms of a single parameter. We should have liked to see this method used even more freely—for example, in the chapter on the conchoid and other curves. In conclusion, we can heartily commend the book to the notice of all teachers of the subject.

A careful perusal of *A First Course in Practical Mathematics*, by B. A. Tomes (Blackie), leads to the conclusion that it fulfils with marked success the purpose of its compiler, which is the production of a scheme of study which shall serve as a preparation for those sciences to which mathematics are essential. By concise reasoning and the elimination of all unnecessary matter the student is led to the desired end, that is, the mastery of a principle requisite for the solution of the practical problems involved in the mensuration of surfaces and solids. We can with confidence recommend the book for adoption in the classes of Evening Continuation and Technical Schools, where the time available for mathematical studies is limited. It has the further advantage of being printed in good clear type, and its low price places it within the reach of all students.

In compiling a textbook of Physical Geography there is but little room for originality of treatment. Mr. Bernard Smith, in writing *Physical Geography for Schools* (Black), is virtually confined to ground which has been traversed again and again; but he has made the best of his limited opportunity, has consulted some of the highest and latest authorities in this country and in America, and has thus produced a work which is undoubtedly entitled to the confidence of the teacher. All the subjects generally included under the head of Physical Geography—whether astronomical, meteorological, or geological—receive discussion, and if the treatment in some cases is necessarily brief, it is, we think, always accurate. The author, as a rising geologist of the Cambridge school, has already had some experience in University Extension work, and there is no question that Physical Geography, if properly treated, should prove a fascinating subject at Extension Centres. Every intelligent person should wish to know how the face of the earth on which he lives has come to be what it now is. The most attractive part of physiography is just that part in which Mr. Smith's work is strongest—the mode in which the land has been sculptured, the relation of its physical features to geological structure, and the interaction between man and nature. The book is well and freely illustrated, but we could spare, as rather irrelevant, such a picture as that of the British sailors on p. 180.

SOCIETIES.

ROYAL.—Jan. 12.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'The Absolute Expansion of Mercury,' by Prof. H. L. Callendar and Mr. H. Moss; 'The Density of Niton (Radium Emanation) and the Disintegration Theory,' by Dr. R. W. Gray and Sir W. Ramsay; 'The Charges on Ions in Gases, and some Effects that influence the Motion of Negative Ions,' by Prof. J. S. Townsend; 'The Distribution of Electric Force in the Crookes Dark Space,' by Mr. F. W. Aston; and 'The Measurement of End-Standards of Length,' by Dr. P. E. Shaw.

SOCIETY OF ANTIQUARIES.—Jan. 12.—The following were elected Fellows: the Rev. A. J. Beanlands, and Messrs. S. Denison, E. Dillon, G. D. Hobson, L. A. Lawrence, H. B. McCall, F. J. M. Palmer, H. Symonds, and R. C. Witt.

LINNEAN.—Dec. 15.—Dr. D. H. Scott, President, in the chair.—Prof. W. Bateson, Miss M. Carson, Miss E. M. E. Parsons, and Mr. H. S. Holden were admitted Fellows.—The Rev. M. Holland and Mr. H. G. Mundy were elected

Fellows; and Mr. A. Bennett and Mr. W. Cole were elected Associates.

Miss B. O. Corfe exhibited a portfolio of drawings in water colour, natural size, of about 250 wild flowers, chiefly from the neighbourhood of Winchester, ranging over 72 families. Additional observations were contributed by the President, Mr. H. J. Elwes, Mr. E. M. Holmes, Prof. Dendy, Mr. J. C. Shenstone, and the Rev. T. R. R. Stebbing.

Dr. O. Stapf, Mr. H. Groves, Mr. A. Gepp, and Mr. A. D. Cotton reported on the International Botanical Congress held at Brussels between May 14th and 22nd last. The following engaged in the discussion: the President, Prof. Dendy, Mr. H. J. Elwes, Mr. A. Henry, the General Secretary, Mr. H. N. Dixon, and the Rev. T. R. R. Stebbing.

Mr. R. W. H. Row presented his paper on 'Non-Calcareous Sponges from the Red Sea, collected by Mr. Cyril Crossland,' Prof. Dendy, the Rev. T. R. R. Stebbing, the Chairman, and Dr. A. P. Young discussed the paper.—The last paper was by Mr. R. S. Adamson entitled 'Notes on the Comparative Anatomy of the Leaves of certain Species of Veronica.'

PHILOLOGICAL.—Jan. 6.—Prof. E. Weekley in the chair.—Dr. W. A. Craigie read a paper on the S words he is editing for the 'New English Dictionary.' He prefaced his paper with some remarks on other dictionaries, the progress of completion of which is of some interest for the study of English etymology.

The 'Concise Dictionary of Old Icelandic,' prepared by G. T. Zoega in Reykjavik, and printed at the Clarendon Press, was published last June. Its importance is that it makes it possible for any person at small expense to take up the study of Old Icelandic. Many texts can now be got very cheaply, either in small editions published in Reykjavik, or in those issued by 'Det norske samlaget,' with translations into modern Norwegian. In connexion with these may also be mentioned the 'Gamalhorsk Ordbok' of Haegsted and Torp, which was completed about a year ago.

A pretty full dictionary of Icelandic, old and new, is being compiled by John Olafsson in Reykjavik. In August last the manuscript was ready only as far as B-I, so that the completion of the work is still a long way off.

Of Dahlerup's large dictionary of Modern Danish no part has yet been published, but the editor has good hopes of obtaining a subsidy from the Government to help him in carrying through the work.

The West Frisian dictionary edited by Walring Dykstra is rapidly approaching completion, and there is thus a good prospect that the editor, now in his 90th year, will be able to see the end of his important work.

In addition to the glossary of Sylt Frisian by Capt. Mungard, Rektor B. P. Moller in Hamburg is preparing a more scientific lexicon of the same dialect, and hopes to finish it next year.

The approaching completion of the new dictionary of Scottish Gaelic is a matter for satisfaction. An account of the extraordinary circumstances in which this has been compiled and printed appeared in *The Daily Chronicle* of the 3rd inst. The energy and enterprise of the author are fortunately equalled by the real merits of the work, for which much local information has been collected that might otherwise have been lost.

Within the next few months there will appear a concise dictionary of Modern Scottish. This has been compiled from all the sources at present available by the Rev. A. Warrach, and will be as far as possible a complete record of the Scottish vocabulary from the end of the seventeenth century to the present day. The work will be of special use at the present time, when efforts are being made to complete the existing evidence for the Scottish dialects, in order to set about a full dictionary of Modern Scottish.

The Oxford English Dictionary is finished up to the end of R, or to the middle of Vol. VIII. The second half of Vol. VIII., which will contain S—Sh, is in the hands of Dr. Bradley, who has now published two parts (down to Scouring). Vol. IX. begins with Si, of which the first section has just been published. The second half of Vol. IX. will begin either with Str- or with Su-. A beginning has been made with T, of which Sir James Murray has already published up to Tealt.

INSTITUTION OF CIVIL ENGINEERS.—Jan. 10.—Mr. Alexander Siemens, President, in the chair.—The papers read were 'The Strengthening of the Roof of New Street Station, Birmingham,' and 'The Reconstruction and Widening of Arpley Bridge, Warrington,' by Mr. W. Dawson.—It was announced that 29 Associate Members had

recently been transferred to the class of Members. It was also reported that 7 candidates had been admitted as Students. The monthly ballot resulted in the election of 2 Members, 30 Associate Members, and 2 Associates.

MATHEMATICAL.—Jan. 12.—Dr. H. F. Baker, President, in the chair.—Messrs. S. Chapman, T. W. Chaundy, H. R. Hassé, and A. Lynch were elected Members.—Mr. T. C. Lewis was admitted into the Society.—The following papers were communicated: 'A Property of the Number Seven,' by Mr. T. C. Lewis; 'On the Fundamental Theorem relating to the Fourier Constants for Given Functions,' by Prof. E. W. Hobson; 'The Integration of the Equations of Propagation of Electric Waves,' by Prof. H. M. Macdonald; 'On the Fundamental Theorem in the Theory of Functions of a Complex Variable,' by Dr. W. H. Young; and 'On the 3-3 Birational Transformation in Three Dimensions (Second Paper),' by Miss H. P. Hudson.

MEETINGS NEXT WEEK.

- Mon.** London Institution, 5.—'Hazlitt,' Prof. W. Raleigh.
— Society of Arts, 8.—'Etching. Lecture I. The Old Masters,' Mr. F. Wedmore. (Cantor Lecture.)
— Surveyors' Institution, 8.—'The Conservation of our National Water Resources,' Mr. W. R. Baldwin-Wiseman.
Tues. Royal Institution, 3.—'Heredit,' Lecture II., Prof. F. W. Mott.
— Colonial Institute, 4.—'Papua and the Papuans,' Hon. J. G. Jenkins.
— Institution of Civil Engineers, 8.—'Sand-Movements at New-castle Entrance, N.S.W.,' Mr. C. W. King; 'Fremantle Harbour-Works, Western Australia,' Mr. C. S. R. Palmer; 'The Bar Harbours of New South Wales,' Mr. G. H. Halligan.
Wed. Anthropological Institute, 8.15.
— Society of Literature, 5.—'The Englishman in Eighteenth-Century French Drama,' Prof. M. A. Gerthwohl.
— British Numismatic, 8.—'Portraiture of our Stuart Monarchs on their Coins and Medals: Part III., William and Mary,' Miss Helen Farquhar.
— Society of Arts, 8.—'Motor Transport in Great Britain and the Colonies,' Mr. H. M. Wyatt.
— Geological, 8.—'The Skomer Volcanic Series (Pembrokeshire),' Mr. H. H. Thomas.
Thurs. Royal Institution, 3.—'Recent Progress in Astronomy,' Lecture II., Mr. F. W. Dyson.
— Royal, 4.30.—'Memoir on the Theory of the Partitions of Numbers: Part V. Partitions in Two-Dimensional Space,' Major P. A. MacMahon; 'The Origin of Magnetic Storms,' Dr. A. Schuster; 'On the Fourier Constants of a Function,' Dr. W. H. Young; 'On the Energy and Distribution of Scattered Röntgen Radiation,' Mr. J. A. Crowther; 'On some New Facts connected with the Motion of Oscillating Water,' Mrs. H. Ayrton.
— London Institution, 6.—'Mignon's Song,' Mr. Orton Bradley.
— Institution of Electrical Engineers, 8.—'Long-Distance Transmission of Electrical Energy,' Mr. W. T. Taylor; 'Extra High-Pressure Transmission Lines,' Messrs. R. Borlase Matthews and C. T. Wilkinson.
Fri. Society of Antiquaries, 8.30.
— Physical, 5.—'A Demonstration of Phase Difference between the Primary and Secondary Currents of a Transformer by means of a Simple Apparatus,' Prof. F. T. Trouton; 'A Note on the Experimental Measurement of the High-Frequency Resistance of Wires,' Prof. J. A. Fleming; and other Papers.
— Royal Institution, 9.—'Radio-activity as a Kinetic Theory of a Fourth State of Matter,' Prof. W. H. Bragg.
Sat. Royal Institution, 3.—'Problems in the Career of the Great Napoleon,' Lecture II., Mr. A. Hassall.

Science Gossip.

JUST as we go to press, we hear with regret of the death on Tuesday last of Sir Francis Galton, whose distinguished services to science we hope to deal with next week.

MESSRS. LONGMAN will publish next week a cheap reissue of 'The Origin of Civilisation and the Primitive Condition of Man,' by Lord Avebury, with a new Preface. The book was first published in 1870, and since then a mass of evidence and theory has accumulated. Lord Avebury has in preparation a further book 'On Marriage, Totemism, and Religion: an Answer to Critics.'

AMONG Mr. Murray's announcements are 'Yellow Fever and its Prevention,' by Sir Rubert Boyce; and revised editions of Sir G. H. Darwin's book on 'The Tides and Kindred Phenomena of the Solar System,' and Sir Charles Lyall's 'Student's Elements of Geology,' brought up to date by Prof. Judd.

THE ILLUMINATING ENGINEERING SOCIETY discussed last Monday an important question, the lighting of libraries. The Library Association was invited to co-operate, and two experts in that line, Mr. S. L. Jast and Mr. J. D. Duff, read papers. Mr. L. Gaster and Mr. J. S. Dow on behalf of the Society

presented the results of a series of measurements of illumination in various libraries in London. Curiously enough, some of the libraries in which most lighting power was consumed were those in which the poorest illumination on the readers' tables was secured. It was decided to renew the discussion on the 31st, paying special attention to the standpoints of the engineer and architect.

THE American Association for the Advancement of Science at Minneapolis have made Miss Marie Stopes a Fellow of their Association. This is a rare distinction, and the fact that it has been conferred on a Doctor of Science who is also a young girl has caused some discussion.

REFERENCE being made to Prof. Pickering respecting Nova Lacertæ (which, as a variable, will be reckoned as var. 137, 1910, Lacertæ), search was made in the Harvard photographs, and the star was found registered on November 23rd and December 7th, on both occasions of the fifth (photographic) magnitude when it would have been just visible to the naked eye. No object, however, appeared in the place on a plate taken on November 19th, so that the outburst must have occurred almost suddenly between that date and the 23rd. When Mr. Espin noticed it on the 30th of December, he estimated the visual magnitude a little above the eighth. The Astronomer Royal found the photographic magnitude the same night almost the seventh, and at that it remained for several days, afterwards diminishing.

THE star's place in the constellation Lacerta is very near the boundary with both Cepheus and Cassiopeia, not far, therefore, from the first new star of which we have any authentic historical record, that noticed by Tycho Brahe in 1572. He thought that it only became visible on the 11th of November, when he was astonished at the sight as he was returning one evening from his laboratory to his uncle's house near Knudstrup, to the east of Helsingborg Castle (of which his father had been governor) in Scania, which was then considered a part of Denmark, though it is now in Sweden. But the star had really been seen by others several days earlier, the first to see it having probably been (Dr. Dreyer thinks) Wolfgang Schuler at Wittenberg on the morning of the 6th of November.

VARIABLE STARS 134, 135, and 136 for 1910 are situated in the constellations Pisces, Andromeda, and Lyra respectively.

IN the present star we have another instance of the historical value of photography in astronomy, as the plates must register all stars sufficiently bright in the part of the sky to which they are applied. A similar case occurred with the remarkable new star in Auriga in 1892, which was discovered by the Rev. Dr. Anderson at Edinburgh on the 1st of February, but was afterwards found registered much earlier on photographic plates at Harvard, the first time on the 10th of December, 1891.

No. 4464 of the *Astronomische Nachrichten* contains a long list of measures of close double stars (most of them binaries), obtained last year by Prof. Burnham with the 40-inch refractor of the Yerkes Observatory. These are in continuation of five series previously published. One, noticed by Sir William Herschel, was not described by him as a double star, but stated to be involved in a nebulous atmosphere. Near a star of 12½ magnitude is an object measured by Prof. Burnham, which, he remarks, may be a faint star or only a condensation of the nebula.

THE 30th inst. will be the first anniversary of the inaugural meeting of the Astronomical Society of Barcelona, and the first annual meeting was held on the 8th ult., when Prof. Fontseré, Chief of the Time-Service of Barcelona, was elected President for the ensuing year. The Society began in July to issue a monthly *Boletín*, in which many interesting observations, particularly of Halley's comet, are contained, besides historic and other articles. It is hoped that the *Boletín* will foster and encourage the study of astronomy in Spain generally.

THE death is announced of Herr Leppig, for many years an assistant at the Leipsic Observatory. He was in his 78th year, and retained his activity almost to the last.

FINE ARTS

THE SENEFELDER CLUB.

ALTHOUGH the Senefelder Club is now apparently a sufficiently established concern to be acquiring property (to wit, the death-mask of the inventor of lithography, presented by Sir Hubert von Herkomer), its second exhibition is still a little tentative and provisional. Its members are united by a pious desire to revive original lithography, but are as yet uncertain about the right direction for their efforts. As to what is the proper field or desirable technique of lithography there seems to be neither a common opinion nor acute difference of opinion. The catholicity of the show appears born of a gentlemanlike tolerance for any artist who has performed that act of virtue—the making of a lithograph.

This is a little disquieting because the adventurers by now ought to be getting under way, instead of merely gathering adherents by tactful vagueness as to its object. It looks as though the movement wants a leader, and if this be the case, we are inclined to welcome one result of the catholicity of the Club's ideals—the appearance in the exhibition of Sir Hubert von Herkomer. If you have no leader, the next most inspiring thing is a powerful devil's advocate to oppose, and Sir Hubert's presence may be invaluable in this way. He has a definite point of view, and, we think, a mistaken one, but he puts his case boldly and with complete conviction. We have too recently reviewed Sir Hubert's work in this medium for it to be necessary again to combat his photographic conception of the art of black and white. That conception still rules half the art-schools in the country, and we can imagine few duller institutions than a Society for propagating Lithographs of this order. Such a prospect may serve to stiffen the backs of those members who would use the art for the freer and more abstract expressiveness which surely is proper to it. There is work of this character on the walls, but too much of it comes from abroad. Those native lithographers who probably sympathize with it are apt to linger in the half-way house of polite portraiture, or at best to value the possibilities of autographic touch belonging to the method rather as an opportunity for trivial virtuosity than as an instrument for inventive and creative work. It is this aspect of the revival which gives it as yet a dilettante flavour. If preciousness is to be the only result, original lithography is

hardly worth worrying about, and we are tempted hastily to suggest that if the members of the Club had something more definite to say, they might find their way to a larger public and adapt their art to more varied uses. As it is, Mr. T. R. Way's little design *Globe Wharf* (115) is, as far as we know, the only one of the exhibits which has been put to any commercial purpose such as surely it should be the ambition of the Club to restore to lithography.

In the domain of colour-printing in particular the show is weak, even with its numerous Continental borrowings, and we look back regretfully to the admirable poster exhibitions organized by the enterprising Mr. Edward Bella, which gave Londoners, something like a dozen years back, an opportunity of seeing first-rate examples of Cheret, Toulouse-Lautrec, Bonnard, and other modern masters. We are by no means sure that all the best lithographs of that school were invariably executed throughout by the artists who conceived the designs, neither were most of the best Japanese woodblock colour-prints; and we should be better employed in cultivating the power of designing colour-prints in terms of colour-printing than in regarding with exaggerated respect the original work of men incapable of the structural use of combined printings such as the best even of the old reproductive lithographers controlled. What we have to establish in the present state of public opinion is the elementary fact that a colour-print, of whatever method, has its own standards of excellence, apart from the question of its exact rendering of any original. This should not be a task of great difficulty, but it will not be accomplished unless the original lithographer has a prevision and control of the effects of superimposed printings which enable him to match the invention of the original painting aped by the tricolour print with an invention as powerful and more relevant. Autographic touch will never excuse feeble design.

No colour-work in this collection reveals the mastery of plotting printed effects necessary to make its virtues clear to the bigoted partisan of the three-colour process. Mr. McLure Hamilton's *Tomb in Bath Abbey* (122) shows a constructive use of colour which might serve as a hint sufficient to the half-converted, but at best it is only a trifle, although a charming one. Mr. Hartrick's *Truth rising from the Well* is in its monochrome first state (121) a graceful design, more elegant than we should have expected from its author. The colour-planning, even in the elementary form shown in the second state (125), already wants compactness. The pointillism of M. Signac is rather successful in *Les Andelys* (81), the method looking, indeed, more legitimate for lithography than for oil painting. It is a method, however, too wanting in conciseness and decision to be suitable for a reduplicating process. The equestrian subjects of John Lewis Brown (71, 79) are sound, but somewhat elementary and utilitarian; while H. Toulouse-Lautrec, one of the masters of lithography, is not represented at his best in No. 80, *Clownesse assise*.

Among the works in black and white, those of E. Manet will attract attention, but they represent the period of Manet rather than that painter himself. *Guerre civile* (72), however, is interesting as offering a variant of the design for the execution of Maximilian. *La Barricade* (73) and *Le Gamín* (77) are direct and vivid, but the *Berthe Morisot* (75), which looks like a sketch for an illustrated catalogue, has more charm than any of them.

The majority of later lithographs in black and white are of less virile descent, Fantin-Latour being perhaps the arch corrupter (12 and 14). Léandre also (5 and 65) has lent disastrous support to the fashion for exploiting lithography on the side of its possibility for infinite subtleties of merely manual delicacy. The later artist is in the present show the more respectable, but in the work of neither is the continuity of such modelling as is expressible in definitely planned tones so perfect as to ask for so fastidious a delicacy of gradation between tone and tone. Manet's 'Barricade' is the sounder example. Henry de Groux's *Campagne de Russie* (110) may be cited also as an instance of the more virile imagination to which lithography offers so fine a field.

ETCHINGS AND LITHOGRAPHS AT THE ROWLEY GALLERY.

THIS exhibition is most noteworthy as introducing the charming etched work of M. Niewdenkamp, whose quaint engravings were mainly valuable as affording him a preliminary training for his fuller expression with the needle. His work has decorative fairness—a completeness of well-thought-out pattern which is very acceptable. Something of the serenity of Claude Lorraine bathes his large plate of *Rhenen on the Rhine*. In such plates as *The Lake, Holland*, or the rhythmic *Falling Leaves*, he shows admirable judgment as to the degree in which detail must be formalized in order to subordinate itself to larger structure. His clean, biting, and restrained use of only two different weights of line massively planned he shares with Mr. Mulready Stone, whose tiny plate *Bakers' Row* is an intimately rendered architectural theme.

Other exhibitions are the water-colours, mainly by deceased artists, at the Leicester Galleries, and the works of half a dozen living painters at the Victoria Gallery. Among the latter Mr. Murray Smith is by far the most accomplished—occasionally a master of luminosity in his slightly mannered fashion. His work has improved so much in the last few years as to make him an artist not to be lost sight of. Of the other pictures, Mr. Walter Fowler's small *Forest Pool* (8) and Mr. Fred Footlet's *Brixham Town* (10) are the best.

The water-colours at the Leicester Galleries maintain a high level of interest. Again and again we find ourselves arrested by the lively drawing and clever planning of some forgotten follower of Bonington, such as Cattermole (71) or Callow (53) or his artistic twin brother W. W. Deane (8). Fulleylove perhaps should have been included as the last of the school.

THE PAINTER'S MATERIALS.

Heriot-Watt College, Edinburgh, Jan. 6, 1911.

I VENTURE to write to you because I notice that the title of my book is given (*Athenæum*, Dec. 31) as 'The Materials of the Painter's Craft.' If this had been the full title, every word of the criticism you have printed would be thoroughly justified; but the full title of the book is 'The Materials of the Painter's Craft in Europe and Egypt from the Earliest Times to the End of the Seventeenth Century,' and I am therefore dealing with historical mediums, and not with the problems which face the artist of to-day, though I confess that my close

interest in those problems has led me more than once to depart from the strictly historical treatment where I thought I could throw some light on present-day difficulties.

A book of the kind suggested by your critic would be of the utmost practical value, and in it a full treatment of Herr Berger's experiments, for instance, would be appropriate, and I hope some day to be able to write it; but in the meantime I frankly confess that I do not think any chemist is sufficiently equipped for the task. The problems which arise in the practical work of the painter are so complex, and are so increased in complexity by the number of materials of various kinds which he is tempted to use without any knowledge of their composition, that the chemist is hardly in a position to speak with finality and authority on many of these practical questions. I have carried on such experiments for many years, and have at any rate been able to satisfy myself on certain questions; but there are many others on which it is too early to speak a last and authoritative word. May I say, therefore, that I entirely sympathize with your critic in what he says about what he has not found in my book, but that he has a little misjudged the purpose of the book in expecting to find there the answers to modern practical questions, and that I hope some day to be able to give him a book which, as he truly says, the artist is badly in need of? May I also, however, point out to him that in such a book as Prof. Sir A. H. Church's 'Chemistry of Paints and Painting' there is already a mass of most valuable and reliable information which will help the artist a long way, although it will not tell him everything?

The length of space which I have devoted to the subject of fresco painting is due in the first place to its long existence as a method in the history of art, and to the many modifications through which it has passed, and is also due to the fact that I believe there is a great field for genuine fresco painting in countries with a dry climate and smokeless cities, although it is unsuited to our own moisture-laden, smoke-polluted towns.

With reference to tempera, the question raised by your critic is easily answered. Let the artist buy his pigments in powder and be content to use the medium which was found sufficiently satisfactory by the painters of the fourteenth and fifteenth centuries, and which can be bought at the nearest grocer's shop, and he need not then trouble himself as to the composition of the various "mock temperas." The exact proportion of pigment, yolk, and water to form a hard durable surface is largely a matter of actual trial and experience.

In conclusion, I thank the reviewer for pointing out the slip on p. 334, which will be duly corrected in a later edition.

A. P. LAURIE.

Fine Art Gossip.

THE *pièce de résistance* in Part VI. of the Vasari Society's publications, which is in course of distribution to subscribers, is a reproduction of the great cartoon by Leonardo at Burlington House in five plates, the four heads being rendered separately full size. Other famous drawings are Mantegna's 'Virgin and Child with an Angel,' and Dürer's portrait of Paulus Hofhaimer, both in the British Museum. From the Ashmolean Museum comes the beautiful portrait of Thomas Alcock by Samuel Cooper. The collection of the Duke of

Devonshire is represented by ten drawings; that of Sir Edward Poynter by three (including an unpublished Dürer); and other private collectors have contributed to make up the total of thirty-five reproductions. The annual subscription to the Society is one guinea, and the Secretary's address is 10, Kensington Mansions, S.W.

MESSRS. J. F. BADELEY, C. H. BASKETT, AND R. W. STEWART have been elected Associates of the Society of Painter-Etchers and Engravers.

THE painting by Ebsworth illustrating Tennyson's 'Locksley Hall,' "Like a dog, he hunts in dreams.... then a hand shall pass before thee," has been presented to the Royal Scottish Academy by Mr. John Collins Francis. It was exhibited on the line at the Scottish Academy in 1850. Mr. W. D. McKay, the Secretary, says that

"it is typical of the period, both in the choice of subject and in the manner of painting. In the latter respect it has distinct affinities with that of the men amongst whom Ebsworth was working: F. Cruickshank, Orchardson, Tom Faed, Herdman, Gavin, and others."

A SELECTION of about fifty pictures from the Post-Impressionist exhibition at the Grafton Galleries opens this week at the United Arts Club, Dublin. The collection includes several important works by Gauguin, Van Gogh, Matisse, and others, and a representative gathering of drawings and water-colours.

A PORTRAIT of Queen Charlotte, George III.'s consort, by Gainsborough, in the possession of the Grand Duke of Mecklenburg-Schwerin, is fully discussed by Dr. Steinmann, its discoverer, in the January number of the *Monatshefte*, and a reproduction of the picture is given.

THE QUEEN, a standing full-length figure, is arrayed in a gala costume of some filmy white material interwoven with threads of gold; the monstrous proportions of the hoop make this portion of the picture unattractive, but the upper part of the figure and the head seem, to judge from the reproduction, of extraordinary delicacy, and the painter has imparted to the features an unusual measure of charm: the background on the left shows a landscape, which, Dr. Steinmann states, is copied by Gainsborough in other portraits of the Queen at Stuttgart and Herrenhausen dating from 1780 and later.

THE original framework (renewed in 1890) bears the inscription "Gainsborough px., London." The writer identifies the picture with the "very large" portrait of Queen Charlotte seen by Thomas Nugent in 1766, when he visited the Court of Mecklenburg, and it must thus have been painted in 1764-5. So early a date seems to present insuperable difficulties, but on this and all other points judgment must be suspended until the picture has been critically studied. An opportunity for this will be offered at the Matthieu Exhibition this spring at Schwerin.

THE death is announced, at Edinburgh, in his 51st year, of Mr. James Milne, an artist who frequently exhibited at the Royal Scottish Academy and the Glasgow Institute of Fine Arts. His special line was landscape, but he also acquired some reputation as a figure painter.

THE death at the age of 47 is announced from Stuttgart of the painter Hermann Pleuer. He studied at Stuttgart and Munich, and it was only after a long struggle

that his talents and originality of treatment were recognized. Among his best pictures are 'Farewell,' 'Amen,' and his series of 'Moonlight Nights' and 'Railway Scenes.'

By the generosity of Madame Lecreux, an annual prize of 1,000 francs, limited to women artists, is placed at the disposition of the Société Nationale des Beaux-Arts.

M. JULES MACIET, Vice-President of the Union Centrale des Arts Décoratifs, and President of the Société des Amis du Louvre, whose death is announced at the age of 64, is a great loss to French art. He was a most generous patron of young artists, and a constant benefactor to the various museums both inside and outside Paris. He was the leading spirit in the formation of the Musée des Arts Décoratifs, which he enriched with many valuable gifts.

MADAME CAMILLE ISABERT, the French miniaturist, who died on the 12th inst., was born in 1822, and began to contribute to the Salon in 1844. She continued to exhibit there and elsewhere until last year, when she took part in the Salon de la Miniature held at the Galerie Georges Petit. A large number of French miniature painters, professional and amateur, of to-day, were inspired by her conscientious work and teaching.

THE life of a great Dominican, the Beato Isnardo, has just appeared in Italy, and from an historical and artistic point of view will be of interest to many outside the Dominican Order. The subject of this memoir received the habit from the hands of St. Dominic himself in 1219, founded the Order at Pavia eleven years later, and became the first Prior of S. Maria di Nazaret, a building granted to him there by the Bishop, S. Rodobaldo, in 1231. That he was greatly venerated as a "Beato" in the fourteenth century and later is proved by the numerous paintings commemorating him, the earliest being the interesting and well-preserved fresco by Tommaso da Modena, dated 1352, in the Seminario at Treviso (formerly the convent of S. Niccolò), with a long inscription proving that the monk represented is the Beato Isnardo; he is depicted in full-length, seated in his cell. Among other paintings referring to him, and mentioned in this book, are frescoes by Vincenzo Foppa in the chapel dedicated to the B. Isnardo (and containing his tomb) in the once splendid church of S. Tommaso at Pavia (now a barrack), and two eighteenth-century copies of these frescoes, all of which have perished.

AMONG extant works mentioned are a sixteenth-century medallion portrait in fresco, and a full-length painting on canvas dated 1512, both in Santa Corona at Vicenza, the latter work being by Giovanni Speranza. Other representations of minor interest are referred to, such as those at Chiampo, the birthplace of Isnardo. The author of the book is Monsignor Maiocchi, the well-known writer and editor of an Italian Review of historical studies. Available information relating to the subject was extremely scanty, but he has made good use of early sources and unpublished documents.

AT Messrs. Sotheby's last week W. Ward's engraving after Reynolds, 'The Snake in the Grass,' fetched 101*l*.

EXHIBITIONS.

- SAT. (Jan. 21).—Camsix Art Club, Ninth Exhibition, Private View, Baillie Gallery.
- Paintings and Drawings by Messrs. T. A. Brown, N. Dawson, T. Williams, and other Artists; and Colour Prints. St. George's Gallery.
 - Mr. A. Pisa's Water-Colours, 'Sunny Sicily and Pompeii'—(the Dead City). Private View, Fine Art Society's Gallery.
 - Sculptures by Mr. Eric Gill, and Water-Colour Landscapes by Mr. J. D. Innes, Chenil Gallery.
 - Society of Women Artists, Exhibition, 6a, Suffolk Street.

MUSIC

THE WEEK.

QUEEN'S HALL. — *Leeds Philharmonic Choir.*

IT does not seem to have occurred to the framers of the programme offered by the Leeds Philharmonic Choir and the London Symphony Orchestra at Queen's Hall yesterday week that Weber's romantic and exhilarating Overture to 'Oberon,' though brilliantly rendered under the direction of M. Safonoff, was not the kind of music to put the audience into the right mood for Mrs. Margaret Meredith's 'Requiem on the Death of Queen Victoria' and 'The Passing of King Edward the Seventh.' Some quiet movement on the organ would have been more appropriate. In these two settings of poems by Mr. Owen Seaman, Mrs. Meredith rightly felt that the part played by music must be of a simple, subordinate kind. Her sable-coloured music was solemn, and at times emotional; but it lacked character. In aiming at simplicity she has come dangerously near the commonplace; her emotional feeling, earnestness, and sincerity prevented her, however, from crossing the boundary line. The choral music was impressively sung by the choir, admirably supported by the orchestra under the direction of M. Safonoff.

One number in the programme afforded the Leeds Choir a grand opportunity of showing what fine, rich-toned, ably trained voices they possess. The singing of Bach's unaccompanied double motet "Sing ye to the Lord," under the direction of Mr. H. A. Fricker, chorusmaster of the Leeds Musical Festival, must have fully convinced the audience of their powers.

M. Safonoff's reading of Tchaikowsky's Symphonic Fantasia 'Francesca da Rimini' revealed all the passion and poetry of the music. The last number on the programme was Brahms's seldom-heard 'Triumphlied,' another success for choir, orchestra, and conductor.

QUEEN'S HALL.—*London Symphony Orchestra.*

PROF. THEODOR MÜLLER-REUTER, who conducted the concert of the London Symphony Orchestra on Monday evening, is musical director of the Concert Society at Crefeld, and studied and taught previously at Dresden. Richter, Nikisch, and other great conductors have appeared at the concerts of the London Symphony Orchestra, and the new-comer selected the 'Eroica' Symphony, which challenged very close comparison. He, however, succeeded in giving an impressive rendering of the work. There was nothing formal or perfunctory in his conducting. Like Safonoff, he is at times very energetic, but makes no empty display; the effects at

which he aimed were realized. A "recreation" would be a better term than "performance" to express what he made of the music. The first and third movements were taken at a faster rate than usual, but this may have been caused by nervousness, or rather excitement. The Professor's enthusiasm for Beethoven has not cooled down, but his vivid reading of Berlioz's 'Benvenuto Cellini' Overture, and his able conducting of Mr. Frederick Delius's clever and romantic Nocturne 'Paris,' prove that he is evidently in sympathy with later schools.

Miss Elena Gerhardt sang the Weber Arietta mentioned by us last week, but in spite of her artistic singing, the song produced little effect, and that is not surprising; Weber was on the border of the grave when he penned it. In four delightful *Lieder* by Hugo Wolf Miss Gerhardt was at her very best. Prof. Müller-Reuter played the pianoforte accompaniments with rare tact and restraint.

QUEEN'S HALL. — *Mr. Franco Leoni's 'Golgotha.'*

AN oratorio 'Golgotha,' composed by Mr. Franco Leoni, was performed under his direction at the third concert of the Queen's Hall Choral Society on Tuesday evening. This work is in three parts, dealing with the Betrayal, the Trial, and the Crucifixion of Christ, and the text selected from the Gospels has been presented in dramatic form. The solemn words were treated by Bach in so earnest and dignified a manner that most composers would not venture to reset them. Mr. Leoni certainly has not imitated the style of his great predecessor, but tried to set his text to music of modern character. There are a few impressive passages in the oratorio, for instance, the close of the first part, the mocking chorus at the end of the second, and the Epilogue, "Peace I leave with you." The music, for the most part, shows, as just said, the influence of modern composers, especially those who have written principally for the stage. Thus it sounds out of keeping with the words, for in addition it is very scrappy, unemotional, and at times trivial. Most unsatisfactory, as regards both music and orchestration, are certain short instrumental sections, such as the one depicting "Physical Agony," and the crude attempt to illustrate the "falling of the darkness." In short, Mr. Leoni, who is talented, has not proved himself equal to his task.

The performance was very creditable. Mr. Gervase Elwes sang the words of Christ, and by his artistic skill and reverential manner partly concealed the poverty of the music. Of the other soloists we may mention Madame Clara Butt and Mr. Kennerley Rumford. The choir was at its best.

QUEEN'S HALL.—*Mr. F. S. Converse's 'Mystic Trumpeter.'*

AN interesting Symphonic Poem, 'The Mystic Trumpeter,' by the American

composer Mr. Frederick Shepherd Converse, was performed at Mr. Landon Ronald's third Symphony Concert on Wednesday evening. We have often complained of music, professedly of the programme sort, in which the programme is withheld. In this case Walt Whitman's poem, printed in the book, gave the necessary clue to the varying moods. Mr. Converse's tone-poem is clever, well scored, and emotional. The first two sections are the finest. War, the subject of the third, leads to music more or less conventional; while in the fourth the strains do not fully answer to the poet's pæan of joy.

Herr Lortat Jacob, a new pianist, gave an excellent rendering of Grieg's romantic Pianoforte Concerto.

Musical Gossip.

THERE is nothing new to say about Beethoven's Violin Concerto in D, neither is there any need to discuss Sir Edward Elgar's Concerto in B minor: but the magnificent renderings by Herr Kreisler of these works at his concert at Queen's Hall last Monday afternoon must not pass unnoticed. For many years Joseph Joachim was *facile princeps* as exponent of the Beethoven Concerto, and now the same can be said of Herr Kreisler; and it will indeed be difficult for any violinist to give a more finished and impressive reading of the later work. Sir Edward conducted the whole programme with skill tempered by emotion.

THE performance of Sir Alexander Mackenzie's cantata 'The Sun-God's Return' by the Vienna Singakademie on the 13th inst. was a great success. Mesdames Kinora and Martinez and Herr Lener, Court opera singers, were the soloists. The work was given in German, and under the direction of Sir Alexander, who is well known in Vienna. On the same evening a banquet was given in his honour.

THE SHEFFIELD TRIENNIAL MUSICAL FESTIVAL will be held this year on April 26th, 27th, and 28th. The only novelty as yet announced is the cantata 'Ruth' by Georg Schumann, Principal of the Berlin Singakademie. Bach's B minor Mass and 'Matthew' Passion, Handel's 'Messiah,' Brahms's 'Song of Destiny,' and Mr. Bantock's 'Omar Khayyam' will be given. Sir H. J. Wood will be both chorus-master and conductor.

ÉDOUARD LALO, the French composer who died nineteen years ago, is to have a monument erected to his memory in the Jardin Vauban at Lille, his birthplace. The monument, just completed by the sculptor, M. Maurice Quef, consists of a bust, while at the foot of the pedestal on which it rests are represented Rozenn, Mylio, and Margared, the three chief personages in 'Le Roi d'Ys,' which in France is regarded as Lalo's best work, though it was coldly received at Covent Garden when produced there in 1901.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	Sunday League, 7, Queen's Hall.
MON.	Patron's Fund Concert, 8.15, Queen's Hall.
TUES.	Brighton Festival Choir and Orchestra, Verdi's 'Requiem,' 8, Queen's Hall.
—	Miss Muriel Dorrell's Violin Recital, 8.30, Aeolian Hall.
WED.	Classical Society Concert, 8, Bechstein Hall.
—	Pachmann's Pianoforte Recital, 3.15, Queen's Hall.
—	Royal Amateur Orchestral Society, 8.30, Queen's Hall.
THURS.	Mr. William Murdoch's Pianoforte Recital, 3.15, Bechstein Hall.
—	Mr. Harold Samuel's Pianoforte Recital, 3.30, Aeolian Hall.
—	Miss Elena Gerhardt's Vocal Recital, 8.15, Bechstein Hall.
—	Miss Marie Brema's Season, 8, Savoy Theatre.
SAT.	Chappell's Ballad Concert, 2.30, Queen's Hall.
—	M. Godowski's Pianoforte Recital, 3, Bechstein Hall.
—	Miss Evelyn Hunter's Violin Recital, 3.15, Aeolian Hall.
—	Miss Marie Brema's Season, 8, Savoy Theatre.

DRAMA

THE WEEK.

LITTLE THEATRE.—*The Saloon: a Play in One Act.* By Henry James.

MR. HENRY JAMES'S long courtship of the theatre has not been happy in its results. The very qualities which lend distinction to his novels or short stories—the delicacy and subtlety of his analysis, his fastidiousness in search of the unhackneyed word or phrase, his faculty for suggesting "atmosphere" by the multiplication of tiny details—seem to hamper him as soon as he turns playwright. He appears to be unable to get the perspective of the stage, and either his treatment proves too thin to suit the coarseness of what must be his as every other playwright's material, the plain human emotions, or else, when he strives after broad effects, his refinement of temper revenges itself for being outraged, and fails to carry conviction. Under the glare of the footlights his methods have a way of looking finicking; his carefully wrought sentences take on an aspect of preciousness, his characters become eccentric, and their motives strike the playgoer as fantastic. The dialogue will arrest attention by its thoughtfulness or wit, the writing of individual scenes is sure to be impressive; but almost inevitably there will be some screw loose in Mr. James's scheme, something far-fetched in his postulates.

Take the case of his latest effort—a one-act play which tells a ghost-story. There, in a country home of the England of to-day, you have men and women talking and behaving as though they were living in the eighteenth or an earlier century. Because a lad, the hope of a family of soldiers, objects on conscientious grounds to joining the Army and wishes to take Orders, he is disowned by his stern old grandfather, General Sir Philip Wingrave; he is denounced by all his friends and relatives as a rebel and a betrayer of his ancestors; he is thrown over by his sweetheart, and upbraided by her as a coward. Further, you are asked to believe in a family ghost which punishes contumacy in members of the house, and is brought upon the scene in this particular instance. The girl has seen it walking, and comes back remorseful after her quarrel, to warn her lover. Maddened by the universal opposition he has encountered, the would-be curate defies the ghost and all its works. The stage is darkened, something white flickers in the background, there are two screams heard, and when a visitor rushes in, lighted candle in hand, Owen is seen to be dead. His is a soldier's death, you are informed.

The playwright is well served by his interpreters. His moralizing speeches could scarcely be given with more point

or in better style than they are by Mr. Halliwell Hobbes. Mr. Vanderlip shows an emotional intensity that could hardly have been expected of him in the hero's more violent moments. Miss Dora Barton thrills her audience by her shriek at the climax of the little tragedy. But the play affects the nerves without conquering the reason. The supernatural must be handled a little less crudely than Mr. James has contrived to do here before it can create illusion. So, too, must be the feudal spirit, or such of it as survives to-day.

Dramatic Gossip.

AN Irish correspondent writes:—

"Mr. Gordon Craig's new method of stage decoration, which is shortly to be brought out at the Art Theatre, Moscow, was presented to the public on Thursday, the 12th inst., at the Abbey Theatre, in two short plays—'The Deliverer,' by Lady Gregory, and 'The Hour-Glass,' by Mr. W. B. Yeats. 'The Deliverer' is a scathing satire on political events of twenty years ago, in the form of a play founded on the story of Moses.

"But it was in 'The Hour-Glass' that the new method of lighting and decoration was most impressive. The absence of footlights, the unity of the colour-scheme, the side-lights falling through a slanting screen and throwing the figures in silhouette against the severe background, made a singularly appropriate setting for a play which has no distinct reference to any period or place. The experiment was felt to have been thoroughly successful."

ON behalf of the funds of the Incorporated Soldiers' and Sailors' Help Society, a *matinée*, organized by the Ladies' Army and Navy Club, will be given at the Playhouse on Thursday, March 23rd. An attractive programme is being arranged, and many leading actors and actresses have promised to appear.

TO CORRESPONDENTS.—J. H.—A. J. M.—H. S. K.—E. D.—N. M.—L. J.—A. L. H.—Received.

H. M. S.—Many thanks.

MESSRS. BELL

announce that

WEBSTER'S NEW

INTERNATIONAL DICTIONARY

CONTAINING OVER

400,000 Defined Words and
Phrases, 2,700 pages, 6,000
Illustrations,

IS NOW READY.

Points of the New International.

400,000 WORDS AND PHRASES DEFINED. Half this number in the old International.

2,700 PAGES, every line of which has been revised and reset (320 pages in excess of the old International, and yet the new book is practically the same size).

6,000 ILLUSTRATIONS, each selected for the clear explication of the term treated.

DIVIDED PAGE: important words above, less important below.

ENCYCLOPÆDIC INFORMATION on thousands of subjects.

SYNONYMS more skilfully treated than in any other English work.

GAZETTEER and **BIOGRAPHICAL DICTIONARY** are brought up to date.

MORE INFORMATION of interest to **MORE** people than any other Dictionary.

£80,000 and **TEN YEARS' LABOUR** were devoted to making better what was already in its time regarded as the **BEST**.

NEW FROM COVER TO COVER.

A NEW RATHER THAN A REVISED INTERNATIONAL. It is a mistake to consider the New International as merely an enlargement and correction of the old International. It is rather a rebuilding of the old on a larger and more imposing scale. The reconstruction is radical, a very large percentage of the material being new matter.

THE NEW INTERNATIONAL is undoubtedly the clearest, most complete, and most informative dictionary in existence. This sweeping statement can readily be tested by any conscientious searcher who will devote a single half-hour to the examination of the new book.

Messrs. Bell will be happy to send a Detailed Prospectus with Specimen Pages, together with prices in all styles of binding, on receipt of a postcard mentioning 'The Athenæum.'

London: G. BELL and SONS, LTD.,

LITERATURE

A New English Dictionary.—Si-Simple.
(Vol. IX.) By W. A. Craigie. (Oxford, Clarendon Press.)

THE first instalment of the first half of the last volume but one of the great Dictionary—not counting the Supplement—following a double section (T—Tealt) some way on in the second half, offers compensation for being only a single section by containing an exceptionally large proportion—namely, more than ninety per cent—of current words and those formerly in general use, now surviving in dialects, many being important items traced from Anglo-Saxon times. Much more or less conjectural etymology, given in other English dictionaries, is ignored, but little fresh light is thrown on the derivation of previously registered words.

The longest article is that on the noun "sidē," which takes up eleven columns, its compounds and derivatives occupying over twelve more. The difficulties presented by the arrangement and definition of the many various shades of meaning and function of this very important syllable have been successfully overcome, the twenty-one different kinds of use—several times embracing subordinate varieties—being headed by "Either of the two lateral surfaces or parts of the trunk in persons or animals, extending between the shoulders and the hips; the corresponding part in fishes, reptiles, &c.," the first quotation for which is the earliest

in the article by about seventy years, while the other less concrete and less definite senses seem to be developed from this directly or by successive variation. Attempts to avoid the use of the word "lateral" in the definition incline us to pronounce it excusable. Dr. Craigie explains the ecclesiastical "sidesman" to mean "assistant" (of churchwardens), both rejecting with Prof. Skeat the notion of its being "synodsman" corrupted, and ignoring the popular idea that the official owes his title to collecting the offertory at the sides of the place of worship while the churchwardens collect in the middle. Mention might perhaps have been made of the title having superseded (from the seventeenth century) the fifteenth-century "questman." The slang "side" = pretentious affectation or grand airs, is treated separately as "Of doubtful origin," with references to "side" in billiards and to "side" (adjective, sixteenth and seventeenth centuries) used for "haughty," "proud." About a dozen years earlier than the earliest quotation given, beginners needlessly or ineffectually putting "side" on a billiard ball would call forth the ironical comment "Swagger stroke!"

This seems to show that a figurative use of the billiard term may be taken for granted. The numerous quotations for "side-board" teach us that it meant "A table (esp. for taking meals at) placed towards the side of a room, hall, &c.," for about three centuries before the earliest instance of the current meaning from Milton's 'Paradise Lost,' which proves that it was then familiar. A "side-saddle" is traced back to the end of the fifteenth century. It is not surprising to find Barnum the earliest authority for "side-show."

Room for improvement seldom suggests itself. Illustrations of the noun "sight" = public show, spectacular function, are not given, though the Common Councilman of Goldsmith's 'Essays' says of Bartholomew Fair "the whole sight is a perfect rapture to us," and calls the Coronation "a fine sight." Under "sigma," after "Σ, σ, s," we read "in its uncial form having the shape of" a C-like curve. Obviously "early" is accidentally omitted before "uncial." Under "Simoniac" we read "a buyer or seller of benefices, ecclesiastical preferments, or other spiritual things." It suffices to say that the word "spiritual" is here unnecessary, and puzzling to all except experts in ecclesiastical law, as, with reference to the Established Church of England, ecclesiastical emoluments and residences are called "temporalities." From Milton's 'History of England' (1670) we have an interesting extract under "Simonist"—"Wulfer . . . selling the Bishoprick of London, to Wini the first Simonist we read of in this story"—and under "Simony" a facetious etymology from J. Day, 'Peregr. Schol.' (about 1640): "I haue but a poore vicaridge which one Mr. Symon-Monye, or more familiarlie sym-

monie, helpt me to." The omission of the often repeated formula "Of doubtful origin" in the first article on "Si" is curious, as we are referred to two quotations which give different derivations, Helmore's "from the initial letters of the closing words Sancte Iohannes," and Stainer and Barrett's "Here was a sa for the seventh note of the scale . . . to mark another semitone by the final i (as in *mi*) sa was turned into *si*." We have looked in vain for more information as to sa in the first instalment of S, from which this sa is omitted, possibly as never current in Britain. Lamb in his Essay, 'A Chapter on Ears,' calls them "side-intelligencers," which term, apparently suggested by Sidney's designation of "eyes," might perhaps have been noticed in the article on the noun "side," or under "intelligencer," where we find the quotation from Sidney.

Attention is at once drawn to words derived from proper names by the verb to "Siamese" = "To join, unite, or couple, after the manner of the Siamese twins," for which four quotations range from 1830 to 1902. Another such word, "silhouette," elicits the following interesting explanation:—

"According to the usual account, which is that given by Mercier 'Tableau de Paris,' 147, the name was intended to ridicule the petty economies introduced by Silhouette while holding the office of Controller-general in 1759, but Hatzfeld & Darmesteter take it to refer to his brief tenure of that office. Littré, however, also quotes a statement that Silhouette himself made outline portraits with which he decorated the walls of his château at Bry-sur-Marne."

Yet again the surname of the Rev. Charles Simeon (1759-1836) supplied Low Churchmen or Evangelicals with the designations "Simeonite" and its disrespectful abbreviation, "Sim"; while, besides the numerous ecclesiastical words relating to simony and heresy derived from Simon Magus, we find Simkin, Simon Pure, and Sim Subtle (sixteenth century), under the first of two homonyms "Sim." The last of the three was probably suggested by alliteration with "subtle." "Simkin" = "A fool; a simpleton," seems due to an alliterative "Simple Simon," who may have "met the pieman" in the seventeenth century. Of "Simon Pure" we read:—

"The name of a Quaker in Mrs. Centlivre's comedy 'A bold stroke for a wife' (1717), who is impersonated by another character during part of the play."

The advance in tracing the history and sense-development of words, which places this Dictionary so far ahead of its English predecessors, is exhibited conspicuously in the articles on the nouns "sight," "sign," and the adjective "simple." The earliest meaning of "sight," is "A thing seen, esp. of a striking or remarkable nature: a spectacle," with a quotation more than two centuries older than for the senses "perception by eye," "the faculty of

seeing." More than forty varieties of usage are separately illustrated, apart from combinations. The classification of "sign" begins with "A gesture or motion of the hand, head, etc., serving to convey an intimation or to communicate some idea." The signification "token or indication....of some fact, quality, etc.," which is probably one of the earliest senses of the Latin *signum*, comes seventh out of eleven definitions. The order of the meanings of "simple" as far as the third is roughly: 1, guileless, 2, unpretentious; 3, artless, unadorned. This curtailed account is partly excused by the article being unfinished, and partly because it amply indicates the originality and judiciousness of the treatment.

A portion of *Sc* by Dr. Bradley is announced for April 1st.

The Conflict of Colour. By B. L. Putnam Weale. (Macmillan & Co.)

MR. WEALE reminds us of the Fat Boy. He wants to make our "flesh creep," not, however, with mere domestic scandals, but with geomantics, or, as he calls it, geopolitics. He would act the soothsayer and play upon our craven fears of "ochlocracies," and convict us of trembling "misology." Not that Mr. Weale is fond of this kind of classical exuberation. On the contrary, he has the poorest opinion of the puny efforts of Greece and Rome to influence geo-politics, and regards a classical education as a miserable training for a man of affairs. Indeed, he does not spare the rod:—

"The hateful priggism which no open-minded man can doubt is inseparable from a too fervid study and worship of the literature and laws of Greece and Rome—with their rigid and unbending formalism, their narrow traditions and all the illiberalism with which they are saturated—this priggism is no stuff with which to build a permanent empire."

It might nevertheless protect a writer from such singular scientific eccentricities as saturation with a negative quality, and rigidity that is differentiated as of the "unbending" kind. Mr. Weale is all for Science, noble majuscular Science, which, he fancies, embodies all things that can be known; but his English is of the vigorous and not pedantically grammatical variety easily intelligible by "ochlocracies." The tumid periods of classical prigs are equalled by the following display:—

"Self-interest has assumed such importance; the needs of the passing hour are deemed so supreme; the craven fears regarding the rise of triumphant ochlocracies are so wide-spread, that the world has rapidly become filled with a generation of misologists who know not what they seek. 'Sufficient unto the day is the evil thereof' is the popular political shibboleth; every one displays a eunetative disposition; and whilst even thirty years ago an Armenian massacre aroused concern, to-day synalgia is looked upon as the fore-runner of a stupid

antiperistasis which can only lead to the most unfortunate results. Any plan which is really logical is looked upon as prompted by a Catalinarian [*sic*] attitude. A common phenomenon is held to be a noumenon, and hands are often helplessly raised, and fears constantly expressed, that European civilisation may one day be engulfed in a vast Asiatic-African movement. That things should have come to such a pass is the crowning irony of a sapient age."

This sort of pretentious generalization occurs chiefly in the 'General Introduction' and 'General Conclusions,' which "the general" may safely skip. Mr. Weale's ideas of ancient and mediæval history seem to us of no great importance, in spite of the vast foot-notes containing page after page extracted from Buckle, Alison, Guizot, Pearson, and "Captain" Mahan, to whom Mr. Weale might at least have given his present rank whilst exploiting his books. A writer who terms a thing he dislikes "an evident anachronism," and describes a view opposed to his own as "old-fashioned," "prejudiced," or "mediæval," need not be taken seriously when he writes of history. "Those too celebrated republics of Athens and Sparta" (*sic*) will keep their fame in defiance of geomancy; and even the Church, which Mr. Weale withers with his contempt, may linger on a little while, especially if those terrible three hundred millions of blacks who will be in existence by the end of this century adopt the "old-time superstition and bigotry" which are derided in this volume. Mr. Weale apparently has not grasped the fact that Science itself is as dogmatic as the narrowest schoolmen could desire.

In spite of his dogmatism and love of political tags which read like election "posters" Mr. Weale has compiled a number of suggestive statistics, on which he bases some very fallacious conclusions. The difficulty is that in "geo-politics," as he admits, there are so many "factors which, though they are not susceptible of accurate classification and estimation, are often more weighty than aught else," and which lead him "to take refuge in generalities," of which, indeed, this volume is overfull. It may be added that the problems discussed are not really simplified by assuming as axioms such disputable propositions as "what is true of one man is true of another" (*e.g.*, "the despised Egyptian fellah" has been shown to be in war "the equal of the Baggara Arab"), or, in a more general form, "what is fundamentally true of one mass of human beings must be equally true of another mass, irrespective of colour and creed." This fallacy is refuted by the author himself when he proclaims, to the consternation of swarthy readers in America, that the negro cannot by any possible stretch of logic be classed with other "masses of human beings," since "the black man is something apart—something untouchable." Another assumption is that population must go on increasing at the same rate as at present. Yet apart from such dispensations as great wars and pestilences, which there are no grounds for wholly

dismissing from prognostications, Mr. Weale himself refers to remarkable variations in statistics concerning population; and, as his whole book rests upon calculations of regular increase in that way, its foundation is not absolutely secure. He seems also to labour under the delusion that all land is able to support an equal number of people, wherever it happens to be. It appears to us that the "imponderable" factors in such calculations are so many that even vague "generalities" are not a safe "refuge." It is, indeed, a relief to be assured that this wielder of statistics, albeit viewing things from that perilous position (unknown to metaphysicians) "an objective standpoint," is convinced that the wheat-area of the world will be equal to supporting twice or thrice the number of 4,000 million souls which will be inhabiting it in the year 2000; and we confess to a feeling of mild exhilaration when we learn that it is possible to squeeze 200 millions into those delectable islands of Celebes, Sumatra, New Guinea, and Borneo, which are at present "most imperfectly peopled" by a miserable handful of about 40 millions. There is balm, after all, even in 'The Conflict of Colour.'

Perhaps the greatest comfort, however, lies in the reflection that there really is no such deadly conflict at all. The author himself admits that colour has nothing to say to the unpopularity of Englishmen in India. There he calls it the animosity of the "under-dog." Race hostility we recognize as a growing danger, but colour has very little to do with it. A Spaniard is usually a darker man than a Moor, and many Turks are fairer than the men of Connaught. Race antagonism is more than skin-deep.

Mr. Weale, however, is to be taken as seriously as his literary method permits when he deals with a subject he knows so well as the condition and policy of Japan and China. Here he is on his own ground, and may be listened to with attention, even whilst one doubts the finality of a mere count of heads. His proposition briefly is that the old rivalry between East and West (the old "racial" conflict) is now about to begin again, with the mighty difference that the East has learnt its lesson from the West: "The man of colour has at last completely recovered himself, and is forcing the pendulum to stand still, if not actually to swing back." That there will be any general flooding of Europe by vast yellow hordes, as in the days of the Huns and the Mongols, he ridicules as a chimæra. What he prophesies is a policy of exclusion, of piecemeal recovery of territory and influence, and the destruction of English trade by tariffs or prohibition. If Japan succeeds in obtaining the hegemony of the yellow race—her present lack of numbers is the only obstacle, to mend which she is gradually adding territories and population—this policy will become a fact to be reckoned with, above all by England, not only on account of trade, but also because there are over 300 million

Asiatics under British sway, who are already profiting by Japan's example. Mr. Weale's conclusion, after an elaborate study of the conditions in the Far East, is that the watchword of European policy must be "China stronger than Japan," though he sees the difficulties in the way of developing China in her present lack of strong rulers, and in the elementary state of her popular institutions. His policy is to keep a balance of power within the Far East.

Mr. Weale would apply the same doctrine to Middle and Nearer Asia, but here he is not upon ground so well surveyed. Within a century, he says, India will be lost to England; and he makes the quaint suggestion that the disaster should be discounted either by creating a federation of Indian states, or by granting autonomy to the provinces, "which will make India assume something of the political appearance of South America—a South America united by a sort of general *concordat*." Happy dream! One wonders whether he has ever considered the condition of India before British rule, and the possibility of the revival of such a state of affairs when that rule is withdrawn. However, India is to be the "free ally" of her old mistress; all the present dislike of Englishmen is to evaporate as soon as the "under-dog" has recovered his bone; and a free India, "overspilling" into Persia, is to hold the balance against a strong Turkey, expelled from Europe by Austria, but firmly seated in the Near East. Africa, we regret to see, is to be wholly black, and possibly Mohammedan, in which case the Union of South Africa and French Algeria will certainly have short shrift. For the present, indeed, Egypt, though unfortunately too often a mere "school for ignorant young Englishmen," and though Lord Cromer's "entire political policy in Egypt has meant nothing at all," is nevertheless, it seems, "the real barrier" to African uprisings: "England in Egypt, and what that occupation stands for.... beneficent white conquest.... a plain usurpation" which "still leaves the people and their cherished customs untouched, and is, undoubtedly, during a strictly limited period of probation, a good and honest, and very helpful rule."

Our author, it will be seen, is fond of "brave words," and is not afraid of repeating them many times, or even of contradicting himself. This, however, may be due partly to the fact that much of his book appeared in fragments in the periodical press. It does not give the impression of mature and calm judgment, but it marshals a mass of impressive statistics, and there may be some sound teaching in it. In these columns we have nothing to say to politics, even with the geo-prefix. Mr. Weale will call us "cunctative" if we hesitate to believe that "the hour has struck" when all that was believed before 1900 is necessarily false. Numbers are not everything, in spite of Pythagoras and Mr. Weale.

London, the City. By Sir Walter Besant. (A. & C. Black.)

THIS volume begins the second division of the Survey of London projected by Besant, and deals with the topographical side of the subject. We are told that the larger part of the book was written and the running commentary supplied by him, while the detailed accounts of particular places and buildings have been provided by his assistants.

An opportunity has here been lost, for we have before us a volume of disconnected information already available in many published books on London, with little or no fresh material. The compilers appear to have no adequate grip of the subject. Although Besant was often weak in details, there was present in all he wrote evidence of an illuminating insight which made his theories worthy of consideration.

This adverse criticism does not apply to some chapters, such as that on the ancient schools of the City of London by Mr. A. F. Leach, a leading authority on the subject, or to others on the Tower, St. Paul's, and the Temple by Mr. Loftie. It may be remarked in passing that Mr. Leach's chapter contains fresh information of value, and for the first time presents a full and clear statement of the school life of the old City, the history of which has long been in confusion, owing to the mistaken account given by Stow, and repeated by succeeding writers. The most important point established by Mr. Leach is the essential difference between the Choir School and the Cathedral Grammar School.

It is not easy to arrange notes on the various streets of an immense city. The writer of the Preface says:—

"The plan of the work is simplicity itself: it follows the lines of groups of streets, taken as dictated by common sense, and not by the somewhat arbitrary boundaries of wards."

The answer to this is that wards and parishes are definite things which seldom alter, while no two persons will form the same group. Hence the reader has a difficulty in finding any place without looking it up in the Index.

The compilers have been too apt to rely upon the etymologies suggested by Stow, and they would have done better to consult Mr. Kingsford's admirable edition of Stow's 'Survey,' where some of these have been set right. The word Staining attached to the name of one of the churches dedicated to Allhallows, also to one of those called after St. Mary, has a different meaning in each case. Stow calls Allhallows Staining "Stone church," and this proves that it was built with stone. St. Mary's Staining, however, is called "Ecclesia de Staininghaga" in 1189, in the Clerkenwell Chartulary, and the land called Staininghaga formerly belonged to the town of Staines. Staining Lane has the same origin. "Roomland"

appears to have been originally used to denote market-places and open spaces in front of several large monastic establishments, and these were not necessarily close to quays.

St. Vedast is referred to as the original of Foster Lane, but the links by which the change came about should have been added, otherwise the etymology looks too much like a joke. The various changes were given in *The Athenæum* of January 3rd, 1885.

Lilypot Lane is mentioned, but the origin is not given, neither is it to be found in Stow; but there can be little doubt that it refers to the pot of lilies in honour of the Virgin Mary seen on buildings in many old towns. On the entrance gate to New Inn in Wych Street was a carving of this pot, which disappeared when that street was cleared away. The symbol on the gate is accounted for by the fact that the name "New Inn" succeeded that of "Our Lady's Inn."

The description of streets and buildings is often inadequate; for instance, a wrong impression is given by describing the Three Nuns Hotel in Aldgate High Street as erected in 1877, without mentioning that the original inn figures in Defoe's 'Plague Year.' It continued to be a busy coaching house until coaches were superseded. The present building is merely a re-erection.

In the account of Fleet Street it is stated:—

"Roman remains have been found all along the river on the West of the City.... In other words, there were Roman villas and residences all along the river from Ludgate to Westminster inclusive."

But there is no evidence of a continuous series of houses along the river front of the Thames until the ecclesiastics in the Middle Ages ventured to build outside the City walls. The Roman remains found along the river are mostly indications of burials by the side of the high road, and therefore prove that the way was then uninhabited. This may be seen from the valuable lists printed for the first time in the 'Victoria History of London.'

In the description of Warwick Lane further notice was surely due to the important residence of Cecilia, Duchess of Warwick, and afterwards of her brother Richard Neville, Earl of Warwick, when "the King-maker," surrounded by his retainers in their red jackets, made use of his position within the western wall of London to signal to his followers outside the gate. Its importance caused the old name of Eldedeneslane to be superseded. A hint might also have been given that Wren's building for the College of Physicians was on the same site, as is also the new building for the Cutlers' Company.

Another oversight is the neglect to refer to the gardens and houses of the Minor Canons in the enlarged Amen Court, with its long stretch of wall built on the original Roman wall. These houses were built on the site of the old Oxford Arms

inn, pulled down in 1876; and by this means we have one of the most important instances of an improvement in the heart of London. The Canons in the old houses of Amen Court had the privilege of entering through the wall to the bench of the Sessions House.

The illustrations in the text, mostly from old prints, are good, and ornament the book, although justice is not done to Birch's old-fashioned shop-front (probably designed by Robert Adam) in Cornhill, one of the landmarks in the City, and there is no account of the well-known firm. The full-page pictures, mostly reproduced from hard photographs, do not please us, and seem unsuitable for a handsomely printed volume.

With Stevenson in Samoa. By H. J. Moors. (Fisher Unwin.)

OF the succession of occasional books purporting to shed light on Stevenson in his Samoan home, that of Mr. Moors strikes us as being the most interesting, simply because the author knew his subject intimately, and because he writes quite frankly and sincerely. Mr. Moors is in business in Apia, and he was the first man to greet Stevenson on his arrival in that port. From that day until the novelist died Mr. Moors was his trusted adviser, his agent, his factotum, in the most generous and handsome sense of the word. If Stevenson was in trouble about house or health or politics or work, he consulted Mr. Moors who seems to have been invaluable to him. Precisely because he had the privilege of intimacy with Stevenson, and because his narrative is unsophisticated, if that of a shrewd man of business, this corrective statement as to the novelist's latter days should be of value. We say "corrective" because it is obvious from Mr. Moors's remarks here and there that he desires to correct previous impressions. It would not be fair to indicate in all particulars the alterations in the posthumous portrait which Mr. Moors suggests. However, we may hint at the interest of the volume by reference to a few.

"Stevenson was not what I regard as a religious man. . . . The interest he took in the Sunday School, in my view, was more that of the student of human nature, the psychologist, the writer of stories, than of one who was really concerned for the spiritual welfare of his pupils."

Again, emphatically:—

"The Stevenson whom some writers have told us of—the man of morals, the preacher, the maker of prayers—is not the Stevenson I knew."

"It has been said that he took his ill-health cheerfully; that is wrong, it was his good health that he took cheerfully. When he was not feeling well, Stevenson was a man who cheerfully damned the whole universe."

On pp. 150 *et seq.* we find a rather panic-stricken figure of Stevenson involved in a political imbroglio. Thus

would Mr. Moors separate this figure definitely from men of action.

But there are other touches which give point to the portrait, and need not raise controversy. In building his Vailima house Stevenson would have a brick chimney, though it cost 200*l.*, and never a fire was burnt in its grate!

"Up at Vailima they all went about in their bare feet, except when expecting guests, and generally looked about half-dressed."

This, we take it, is not contemptuous criticism, but rather the tolerant wonder of the narrator. He wonders also at other things which he perhaps might be equally expected not to understand. He never knew why Stevenson did not buy the portrait of himself painted by a celebrated wandering Italian artist. But Stevenson had been at Barbizon and at Grez! Mr. Moors had the incalculable privilege of seeing or hearing in manuscript some of Stevenson's later works; so, too, had his friend Mr. Carruthers of Apia, solicitor: 'The Wrecker'

"impressed me as disappointing and unconvincing. . . . I suggested the re-writing of what seemed to me many weak passages. He made some excuse for not carrying out my suggestion."

"As a rule he appeared to value the criticisms he obtained from Carruthers and myself, but I candidly admit that I do not remember that he ever made any material alterations to please either of us."

We have said one of Mr. Moors's merits is his candour. Undoubtedly Stevenson was delighted to take hints from one who was so familiar with the South Seas. Mr. Lloyd Osbourne has "claimed the credit" of the storm scene in 'The Wreckers.'

"However that may be, I know that Stevenson went over the whole thing very carefully with me, and we discussed every detail from beginning to end. He himself had a good knowledge of conditions at sea, in calm or storm, and speaking as one who has been shipwrecked four times, perhaps I may claim to know something of the subject."

Mr. Carruthers, alas! "pronounced the opening chapters coarse, and the whole book below Stevenson's standard."

We will not follow Mr. Moors into a subject which is as evidently near his heart as it was near Stevenson's, namely, the Island politics. They saw eye to eye in the matter, and worked together against the indifferent Powers. A few more facts culled from this interesting little book, and we have done.

Stevenson was remarkably sensitive to critical appreciations, possibly owing to his immense isolation. He ran to Mr. Moors jubilantly crying that he was at last justified because—if you please, Mrs. Oliphant, who had hitherto damned him, had accepted him. Was it, after all, his whimsical humour? Whimsical humour in its literary phases would seem out of place in Apia. Stevenson let Mr. Moors into his method of work, of which he made no private secret. He built a

story as a builder builds a house. It seems an easy saying that foundations are the prime necessity, but in these days novelists are often content to dispense with foundations. Not so Stevenson, with whom "form" counted first of all. But in all the arts we are losing form. "I think," said Stevenson to Mr. Moors in a sentence we shall like to remember among the misjudgments of great men, "that if I had written nothing more than 'Kidnapped' and 'Thrawn Janet,' I would be worthy of a place among men of letters."

That he himself was convinced of his place was revealed in an amazing story of an amazing visit to the British Consul of the day, Col. de Coetlogon, which should certainly be put on record for our national shame. The novelist, sure in his genius, induced Mr. Moors to accompany him in paying respects to the new Consul, and introduced himself as the novelist. "Well, what do you want?" demanded the Consul. Stevenson enlarged. Apparently he got no further. Here were three Englishmen on a distant foreign soil, and one the representative of the nation. "Well, what do you want?" Before that bear's growl Stevenson faltered and held up hands to heaven. "I had thought I was one of the foremost men of letters of the day, but this fellow differs!"

There certainly could have been nothing in common between this official and the lighthearted Tusitala, who played on the flageolet so that even "my friend Carruthers" objected, inasmuch as "he played so dolefully as to be a menace to one's enjoyment of life." It is fair to say that he apparently played on it only "when he got 'stuck' in the middle of a chapter and was searching for an inspiration." Moreover, Mr. Moors cannot

"truthfully say that I ever heard him playing it, though once or twice I did surprise him with it in his hands—and he dropped it as if it were something red hot."

In the course of the chapters on literature our author says that Stevenson was "commissioned to write a life of Burns for 'The Encyclopædia Britannica,' I believe." But the authorities decided it was "too severe," and it was not used. With Mr. Moors, we wonder where that MS. is. Surely it ought to be forthcoming, for, as Mr. Moors observes, "I am satisfied that his strictures were honest ones, and that the effort was a painstaking one."

The book ends with an appeal for 600*l.* to make a road to the novelist's tomb on the heights of Mount Vaea.

NEW NOVELS.

Gilead Balm, Knight Errant: his Adventures in Search of Truth. By Bernard Capes. (Fisher Unwin.)

THE disposition of Mr. Capes to play acrobatic feats with his remarkable talents is well known. Over and over again have we claimed for him that he should by right of innate talent and equipment

stand in the front ranks of romancers. Yet his fate is against him, and he has partly to thank the density of the reading public, but partly also his genius for perversity. He will not take his readers seriously, and they are affronted when they understand, which they do not always do. For example, this string of stories, which is a sort of novel in itself, exhibits characteristic moods. The author is flippant, lively or sentimental, tragic or mystical, all in turn. Mr. Capes is fertile in invention and profligate of fancy; he is a chartered libertine among events and emotions, and one never knows how he will choose to deal with them. The result is that he puzzles and exasperates ordinary readers; he is too "clever" for them, and he has the reward of overcleverness. It is not likely that this brilliant series of *jeux d'esprit* will be popular, and that is mainly because they are at once too subtle, too intellectual, and too audacious. However, they are a satisfaction to the elect.

The Simpkins Plot. By George A. Birmingham. (Nelson & Sons.)

It is a delight to meet the Rev. J. J. Meldon in these diverting pages, and happy are they who have met him before in the author's clever romances. There is only one criticism that we venture to suggest. We should have preferred the parson in a setting of pure comedy rather than in farce. The fact is the farcical framework of the tale is perhaps a little too pronounced to give perfect satisfaction; but it would be ungrateful and ungenerous to insist on this point. It is enough that the story is full of humour of an original kind, the source and fount of which is the Rev. J. J. Meldon. As for sentimental interest, it hardly exists in the book; heroine and hero do not matter. Indeed, there is no hero except the reverend gentleman, with his amazing persistence, ingenuity, unblushing effrontery, frankness, good nature, and lack of conscience. He is a veritable creation, and we hope to see still more of him.

Pam the Fiddler. By Halliwell Sutcliffe. (Werner Laurie.)

MR. SUTCLIFFE'S novel is successful in its bright and vigorous portraiture of Queen Elizabeth and Cecil, but on its purely imaginative side it is feeble. The title-character—a fiddler of genius—might be the hero of a girl's gushing romance, and his heroine, of fluctuating sanity, who physically resembles Mary, Queen of Scots, remains unreal to us all through the book. Added to these defects is an excessive use of the adjectives "clean" and "cleanly," so that the healthiness of the locality of the story, and of the minds of some of its characters, becomes positively annoying.

The principal incidents concern an abortive rising in Yorkshire on behalf

of Mary, Queen of Scots, in which the hero and his family play a spirited part. The hero rivals Horatius in his defence of a bridge against the Queen's pursuers, and the heroine helps to rescue him from the gallows to which Cecil condemns him. His father, a squire, is noble and lifelike.

The Hand of Diane. By Percy J. Hartley. (Fisher Unwin.)

MR. HARTLEY'S theme shows originality, for it consists mainly in a mystification, by which his hero (a Lutheran seigneur) is convinced that a younger sister of Diane of Poitiers is that celebrated mistress of Henri II. Circumstances make him the escort and host of the misrepresented lady, and his bravery lays her under obligation, while his voluble narrow-mindedness makes her almost willing to see him deprived of liberty. In his first and only appearance in the story, Henri II. acts the part of a humorous and benevolent fairy. The most exciting scene is a duel, worthy of a nightmare, fought in the dark between the hero and an intending regicide; and there are two or three briefer dramatic effects which linger in the mind's eye.

The Love of Kusuma. By Bal Krishna. (Werner Laurie.)

A ROMANCE written by a native of India about his own people naturally excites the sympathetic interest of the English reader—an interest which is deserved by the tale under notice, because, through the medium of an idealistic and fervid imagination, it depicts sexual love untainted by the evil dogma laid down by Hinduism on the subject of woman's relations with man. In form it is an old-fashioned three-cornered tale of two men, wicked and good respectively, intensely enamoured of the same girl, who in this case is kidnapped by hired brigands, as also is the suitor whom she loves. The author is didactic, but not dull, thanks, partly, to a style of which the occasional oddity is pleasing to a literary ear. One of his minor characters, a time-serving native priest, is a clever portrait; and a fakir who supernaturally aids the heroine is impressive.

Hawtrey's Deputy. By Harold Bindloss. (Ward, Lock & Co.)

THIS is a good and spirited example of the kind of story Mr. Bindloss has accustomed his readers to expect. Incidentally, it is a tale of a sort which is likely to become increasingly popular in the near future. This country, Europe, and the United States are now all sending men into Western Canada, to convert its prairies into wheatfields, at the average rate of considerably over one thousand a day. Such a process can hardly fail to make its mark upon con-

temporary literature, and especially, perhaps, upon fiction. Indeed, the process of the settlement and cultivation of what was so recently the great lone land, between Lake Superior and the Rockies, might well produce noble work in poetry and fiction. As yet there have not been many tales which have dealt so specifically as this one does with the typical modern prairie settlers, the wheat-growers of the Canadian West. Into his tale Mr. Bindloss has successfully woven an interesting love-story. The characterization is not subtle, but it is sure.

Midsummer Morn. By R. H. Forster. (John Long.)

GIVEN a maiden, the daughter of a knight, and a boy of similar parentage, who are indifferent to each other, yet harassed by the desire of their respective fathers for their union; given, too, an independent resolve on the part of each to escape parental importunity by running away (the time and country being Tynedale in the Elizabethan era), and the subsequent capture of the two truants, separately, yet by the same band of cattle-lifters, with a consequent easy captivity beneath the same roof; and there is as pretty a situation as the most youthful and romantic taste could desire. All that is needed further is an author who has style, dexterity, and knowledge of his scenes and period, and the incipient drama will develop into an extremely pleasant entertainment. Mr. Forster possesses the qualifications mentioned, and has dealt competently with his plot. Life in one of the most remote and lawless parts of England in the reign of Elizabeth is presented in a manner both picturesque and convincing, and with a welcome raciness of humour.

BOOKS OF REFERENCE.

Standard Books.—Vol. I. *General Work, History, Biography, Geography and Travel, Sociology, Law and Administration, Education, and Philosophy.* (Nelson & Sons.)—It is obvious that much care and skill have been expended on this publication, and the result is one on which the publishers may be heartily congratulated. When completed, the volumes will be an admirable clue for the plain man through the labyrinth of printed volumes of which Lord Morley once complained. The advanced student may be trusted to find out for himself the books he should read on any subject; it is the beginner, or the man who is for teaching himself who is likely to expend useless effort in the absence of efficient guidance. This he will find here, as this first volume goes to show.

The special excellence of this publication is its lack of finality. One publishes an ordinary volume only to begin learning its defects with no chance of remedying them: the plan on which this book is printed and bound allows for indefinite addition and correction. This application of the loose-leaf

system is both admirable and simple, and we commend the work heartily to all librarians. The binding is strong, and to all appearance durable.

The *Post Office London Directory*, with *London County Suburbs* (Kelly's Directories), for the current year has been presented to us, as usual, in an admirable binding. It is a work which in its accuracy of detail and information of the latest character reflects the highest credit on the publishers. Without this indispensable mammoth, as we once called it, the world of London would waste much valuable time; and it is well not to forget, because it is a recognized institution, the labour and care which its preparation involves.

We have received that welcome compilation *The New House of Commons, 1911*. It is published by the Pall Mall Press as a *Pall Mall Gazette* "Extra." We noticed a similar volume on March 5th last, but in that before us we have, owing to recent events, something more than its predecessor revised and brought up to date at the opening of a new Session. Much care has been taken in the revision of the more difficult particulars, and the only suspicion we have of serious error concerns the veteran Mr. John Wilson and his tenure of his seat for Mid-Durham. In the account of the Labour Party he seemed to be excluded both from that party and the "Liberal-Labour" Section, in which he might otherwise have been classed, along with Messrs. Burt and Fenwick. But on turning to the biographical account given under the constituency, we find the letter "L"—which stands for Liberal—attached. On the other hand, in the index list, giving members in their alphabetical order, "Lab."—for Labour—stands against Mr. John Wilson's name. In this last-mentioned list a good many of the "occupations" of members might be disputed. The subject is full of difficulty; but we should have thought that Mr. R. C. Lambert was rather a barrister than a "country gentleman." Mr. Charles Bathurst owes it to himself, no doubt, that he is described not as a country gentleman, but as a barrister. The examination of the case of Mr. Lambert reveals a mistake in pagination, and also a transposition of lines in the text. Of the portraits, some are strange indeed. Those of Mr. Yerburch and Mr. Maurice Healy excite wonder, while those of Mr. H. J. Tennant and Sir James Yoxall terrify the reader.

Burke's Peerage, Baronetage, and Knightage for 1911 (Harrison) is before us, a stately volume which holds the premier rank among records of the kind. This is the seventy-third edition, which manages by means of 'Addenda' to be well up to date, giving the results of the recent election. 'Burke' is full in the matter of genealogies and other details largely supplied by peers, &c., themselves, and has the merit of not confining itself to living holders of honours. It now extends to 2,636 pages, and will, we presume, need enlargement after the Coronation. As it is, we learn that last year there were "284 creations and promotions in the Orders of Knighthood." The way in which political honours have of late years been distributed has called forth much unfavourable comment.

Lodge's Peerage, Baronetage, and Knightage for 1911 (Kelly's Directories) has reached its eightieth edition, and 2,408 pages. It is distinguished, as usual, by the abundance

and excellence of its heraldic illustrations; and special efforts have been made to obtain family details in the section of Knightage. The various Lists of Precedence are of great interest, and put one at once in touch with history. The Prime Minister in England comes fourth after the Sovereign and his family. The Lord High Commissioner to the General Assembly of the Church of Scotland during its sitting comes immediately after the Sovereign in that country, preceding the Prince of Wales as Duke of Rothesay.

The Literary Year-Book for 1911, edited by Basil Stewart (Routledge), contains a great deal of useful information, and is more accurate than it has been of recent years. The 'Directory of Authors' still, however, lacks some names which should be obvious to any one with an expert knowledge of books. The same remark applies more strongly to the 'Index of Authors' under subject-headings, which is too incomplete to be of real value to editors and publishers. The latter half of the book has many sections worth the attention of writers, that on 'Law and Letters' being specially noteworthy.

Willing's Press Guide for 1911 (125, Strand) is a compact and comprehensive list which can be relied upon for accurate detail.

The Clergy Directory and Parish Guide (J. S. Phillips) has appeared for the new year. The latter part of the title, though not commonly added, indicates the usefulness of the volume as a book of reference. In looking up several names as a test of accuracy, we find one only wrong in its information.

The Catholic Directory for 1911 (Burns & Oates) is full of that care in detail which is a strong point with the Roman Church. At the beginning is a map of churches and missions, which shows that the faith is strongest in London and Lancashire, and round Newcastle and Birmingham.

The Catholic Who's Who for 1911, edited by Sir F. C. Burnand (same publishers), deserves a special word of commendation for the excellence of its biographies, many of which are of literary interest.

OUR LIBRARY TABLE.

The Spanish Journal of Elizabeth, Lady Holland, edited by the Earl of Ilchester (Longmans), hardly equals in interest and importance the two volumes of her journal which were noticed in *The Athenæum* of November 14th, 1908. There is, for one thing, rather too much guide-book about it—intelligent guide-book, but still mere travellers' descriptions of buildings and pictures. In the first section, dealing with the journey of the Hollands and their party in 1802-5, we get an amusing account of Court etiquette, which enjoined the serving of the King and Queen, and even the little Infantes, with drink by gentlemen-in-waiting on their knees, and the doffing of the hat to the cup as it passed through the apartments or corridors. The bearing of Charles IV., his Queen, and their favourite Godoy, the Prince of the Peace, is described with some humour; but the stories about that raffish trio were told with more point by Lord Holland in his 'Foreign Reminiscences'

many years ago. It is characteristic of Lady Holland's masculine habit of mind that, after a spasm of disgust, she became completely inured to bull-fighting, and when Ximenes, the matador, was gored, lamented that he would not be able to follow his "noble calling in life."

The second section of the 'Journal' covers the years 1808-9, and is thus concerned with the early part of the Peninsular War. The Hollands were exceptionally qualified to get accurate information, since the husband's well-known sympathy with the Spanish cause had gained him many friendships, while the wife had a capacity almost imperial for obtaining her own way. Soldiers in high position like Lord Paget wrote them letters at the front; distinguished sailors were anxious to place vessels at their disposal, while the leading spirit of the Junta, the accomplished Jorellanos, sent Lady Holland a daily bulletin of events. And yet, as Lord Ilchester is at pains to point out in many a pertinent foot-note, the impressions of those who hover on the fringe of war are frequently far removed from fact. Spanish generals may, perhaps, be peculiarly given to representing defeats as victories, but elsewhere than in Spain the difficulties of those engaged in critical operations are habitually under-estimated. Lady Holland has not a single good word for Sir John Moore, and on hearing of his death she dryly remarks that "it required such an end to redeem his reputation." Lord Ilchester thinks that she was biased by Frere; but she evidently saw through that dreamy envoy, and it may be suspected that the source of her inspiration was the Junta. La Romana, too, gets much less than his deserts from her, chiefly because he had the sagacity to avoid pitched battles. But the point that will probably strike most English readers of Lady Holland's 'Journal' is the fear of a successful general which the Junta entertained, or was supposed to entertain; people said that that body would rejoice to hear of Cuesta's defeat, since an important victory meant that he would seize on the Government.

Altogether this is a most lively picture of warfare in a Latin country, and we get a vivid idea of Napoleon's system of campaigning as carried out by his more ruthless officers. Junot made an unfortunate Portuguese baron spend over 40,000*l.* on fêtes to which he was not even invited! In addition to meeting Spaniards of all description, we encounter several notable Englishmen, Lord Dudley, for one, whom Lady Holland did not like, and who, as the 'Letters to Ivy' show, fully reciprocated that feeling.

George II. and his Ministers. By Reginald Lucas. (A. L. Humphreys.)—This substantial volume, its author tells us, has grown out of a study of Lord Carteret's career. Mr. Reginald Lucas writes agreeably, and has some insight into character; but his investigations, though industrious, have been concerned for the most part with familiar material, and there is not much novelty about his conclusions. The least satisfactory essay is that on George II., which is eked out by a decidedly scrappy survey of his "times," and which dwells too much on foibles of disposition. A king who could say to a minister as George II. did to Pitt, "Sir, you have taught me to look for the sense of my subjects in another place than the House of Commons," was not exactly a mediocrity, or at any rate he was a mediocrity with flashes of inspiration. But Mr. Lucas does justice to Carteret,

ascribing his failure to his neglect of party management—an important consideration in those days—and to a certain levity of mind; while the essay on Walpole is sound, though not very strong on finance. Mr. Lucas writes with a good deal of point about Newcastle; “the indefatigable minister” exactly describes him, and, fussy and absurd though he may have been in manner, the fact remains that no man ever understood better how to keep a party together. Chatham is only treated in detail as a statesman of the reign of George II., but, so far as the appreciation goes, it is well enough.

IN *Famous Speeches*, selected and edited, with introductory notes, by Herbert Paul (Pitman & Sons), a difficult feat has been accomplished with a very fair measure of success. Confronted by an overwhelming mass of material, Mr. Herbert Paul has been compelled to be somewhat unceremonious in his rejections. A considerable list can be drawn up of persons whose claims to oratory are undisputed, but who find no place in this volume. Burke is there, but not Windham; Grattan, but not Flood; O’Connell, but not Sheil. No room has been made for two great speakers of the silver age, Brougham and Plunket; or for two masters of polished invective, Derby and Lyndhurst. Mr. Paul includes two addresses by Abraham Lincoln, but omits any specimens of the much more accomplished eloquence of Daniel Webster and Clay. We cannot help thinking that American speeches should either have been omitted altogether, or given a fair amount of space. In the United States they have never been afraid of the word “oratory,” and have maintained a high level of speaking.

Still, Mr. Paul has produced an interesting book, and he shines as editor. His little introductory essays are perfect in their way—always to the point, and conspicuously fair. We come across many old favourites: Pitt’s speech on the abolition of the slave trade, with its happy Virgilian quotation; Fox’s on the Peace with France, with its withering sarcasm on the influence of politics upon warfare; Sheridan’s Begum speech with the apostrophe to filial love—how brilliant it is, but how it reeks of lamp-oil!—and, of course, Canning’s speech on the recognition of the South American republics. The Don Pacifico speech of Canning’s disciple Palmerston is omitted, and on the whole rightly, since it was no more than a supremely adroit piece of special pleading; yet it was a “famous speech” and turned votes. But, as we have already remarked, Mr. Paul must have been faced, from first to last, by a formidable embarrassment of riches. He must have been almost thankful that Bolingbroke’s eloquence has perished, and that the authentic residue of Chatham’s is small.

Of the orators of the last generation, Mr. Paul has been obliged to restrict Bright to two speeches, and Disraeli and Gladstone to one apiece. Bright is represented by his remarks on the negotiations at Vienna during the Crimean War, and his dissertation on the power of the House of Lords to interfere with money Bills. Both speeches are, no doubt, characteristic of Bright, yet some of us may prefer his incomparable essays in the simply pathetic, such as those we referred to the other day, the “Angel of Death” speech, or the description of a Quaker funeral. Disraeli and Gladstone both discourse on the Eastern question—the one on the occasion of the Berlin Treaty, the other on his resolutions of May, 1877. But, beyond the sally at the expense of Greece, “Learn to be patient,” Disraeli’s

speech contains little of that irony in which he excelled, and we should have liked much better one of his onslaughts on Peel. Again, as Mr. Paul says in his introductory note, Gladstone’s greatest argumentative speech was on the taxation of charities in 1863, and that effort, or the speech on the second reading of the Affirmation Bill, or, again, that on the second reading of the first Home Rule Bill, would seem more suitable for selection than a display which, though full of high feeling, was unproductive of any result.

But the points we have ventured to raise are, after all, largely matters of personal taste. Mr. Paul has in the main been guided by the canons of oratory, and though his preference seems to be for the Ciceronian, not the Demosthenic style, he has at all events produced a book which will be an agreeable addition to the library shelf.

The French Renaissance in England: an Account of the Literary Relations of England and France in the Sixteenth Century. By Sidney Lee. (Oxford, Clarendon Press.)—That the literary relations between England and France were those of creditor and debtor, when they were not those of mother and child, was pretty well known to most people who knew anything of the subject, but one might rise from the perusal of Dr. Lee’s book with a feeling that, if his conclusions be true, there can have been no originality, no spontaneity, in English literature at all. Dr. Lee has not advanced a single important statement which is not rigorously true; some of them are even understated, and yet his conclusions are not altogether warranted by them. We feel that we should like to have side by side with this a volume on our debt to Italy, another on the direct classical influence, a tract on Spanish influences, and then to hear counsel for the defence. It would perhaps have been more scientific to seek out what it was in foreign literatures of the time which was congenial to the English spirit, and what was not. There are certain great books which are English in spirit, though written in French, such as Froissart, and it might conceivably be shown that much of our borrowing is a result not of admiration for the new and strange, but of recognition of the true and congenial. Dr. Lee is thoroughly right in his insistence on the value of the comparative study of literature: it is essential to any one who desires to know the surroundings in which great works come into existence, but these surroundings throw little light on the originality of such a work. He has written a book which will be of value not only to students of the special period, but also to general readers who would like to learn something of the best literature of the century when French poetry lived and flourished, until “Enfin Malherbe vint” and all was over.

THE “Memorial Edition” of Meredith is now all but complete. Among numbers published recently are the *Short Stories* in two volumes, and the *Complete Poetical Works* in three, all provided with illustrations of no small interest and value. In particular, a series of facsimile reproductions of pages from the author’s manuscripts and notebooks enables readers to trace the development of his handwriting from early life to extreme old age. Force of character and a kind of fierce decorative waywardness seem at first to contend together, but afterwards they grow reconciled, and though in old age the grasp of the pen weakens, every line to the last is fibrous, determined, and alert. Among the other illustrations, two

photographs of the Surrey pine woods, given in the third volume of the Poems, must be mentioned, both for their appropriateness and their intrinsic beauty. We find also two more charming glimpses of the poet himself.

With the *Short Stories* is included the text of ‘The Sentimentalists,’ that comedy, part verse, part prose, which does not seem to have found a satisfactory outlet in either vehicle, its author remaining, not unnaturally, dissatisfied with it; and there is also an unfinished tale, not hitherto published, ‘The Gentleman of Fifty and the Damsel of Nineteen,’ which, after the breeziest of openings, is already beginning to flag a little when Meredith drops it. Its form is interesting, alternate chapters being contributed by hero and heroine.

The text of the poetry has been carefully revised for this edition, a large number of misprints receiving their quietus and not a few obscurities resolving themselves. The punctuation has also been wonderfully improved and clarified, though in this matter there is perhaps still something left to be done. The order in which the poems are printed follows, roughly, that in which they were originally issued; but this plan does not seem to be followed consistently, and, whatever the system intended, there are some unfortunate collocations. Such a piece as ‘To Children: For Tyrants,’ hardly bears the prominence accorded to it; and the same might be said of the ‘Lines to a Friend visiting America’ and some others. Where so much has been given, is it not a pity that the first, boyish, version of ‘Love in the Valley,’ preferred by some critics to the second, should have been withheld?

A CAREFUL English translation by Mr. Bernard Miall of the third edition of the principal book on the Argentina, *The Argentine in the Twentieth Century*, is published by Mr. Fisher Unwin. The volume, prepared by M. A. B. Martinez, an Argentine official, and Dr. M. Lewandowski, has the advantage of assistance from an ex-President of the Republic and other leading men. On the other hand, it has been somewhat anticipated by several publications lately reviewed by us, and is not so clearly dated in its various statistics as would be required for complete supremacy over competitors. Moreover, although the scope of the book is theoretically admirable, the ground is not so completely covered in all matters as it has been even in the South American supplements to *The Times*. All the new books deal mainly with material resources and progress; but a chapter in this one on the Argentine nationality may be commended as going into wider and more engaging topics, while exhibiting modesty in their treatment, and accuracy in its reserve.

THERE is not much to say about M. Jacques Normand’s essays, published by Calmann Lévy under the title of *Les Jours Vécus*. Readers on this side of the Channel may be interested in a long article on ‘The Subaltern.’ There is, perhaps, more literary charm in some remembrances of Maupassant, whose companion the author was in certain of the yachting cruises commemorated in ‘Sur l’Eau.’

FOUR early poems by Francis Thompson, hitherto unpublished in volume form, lend peculiar interest to *Eyes of Youth* (Herbert & Daniel), a little book of verse by various hands. Of the four thus happily preserved we would single out ‘Buona Notte,’ which we published on July 10th, 1909, and which,

with its poignant echo of Shelley's lines 'With a Guitar to Jane,' breathes the very spirit of Ariel:—

"Ariel to Miranda:—hear
This good night the sea-winds bear;
And let thine unacquainted ear
Take grief for their interpreter.

Those responsible for the remainder of the volume are numerous, and would seem, agreeably to the title, to be for the most part young; but the note of individuality and enterprise sounded at the outset is scarcely maintained. That note makes itself heard in the work of Mr. Padraic Colum—whose stanzas called 'I shall not die for you' (*From the Irish*) are justly classed by Mr. G. K. Chesterton in his 'Foreword' among those translations which, like FitzGerald's 'Omar Khayyam,' are possibly superior to their reputed originals—and again in the more varied output of Mr. Shane Leslie. The last-named writer adds strength to versatility. His short poem 'The Bee' shows the instinct of the born lyricist, while 'Outside the Carlton' is impressive by reason of its sombrely cynical realism. On the other hand, 'Fleet Street' and 'Nightmare,' from the same pen—suggesting, the one a rumour of the Day of Judgment in the newspapers, the other the actual physical overwhelming of Heaven by Hell—represent attempts to compass originality by the juxtaposition of glaring incongruities in the spaces of twelve and eight lines respectively.

Other names of contributors are Viola, Olivia, and Francis Meynell, the Hon. Mrs. Lindsay, Hugh Austin, Monica Saleeby, Maurice Healy, and the Hon. Mrs. Lytton. These sing of divers themes, largely devotional, with abundance of facility and no little feeling. We fancy, however, that Miss Viola Meynell's line

Thou canst not brook such slow and devious mean
is, in these days of technique, hardly defensible; and Mrs. Lindsay's vision of a "lamb as white as Blood" strains somewhat at the leash of poetic licence.

THE two volumes of Lecky's *History of European Morals from Augustus to Charlemagne* are now published by Messrs. Longman within a single cover in a cheaper edition. Students should be glad to have at so moderate a price a work full of matter, the controversial parts of which are to-day less likely to meet with "angry contradiction" than in the seventies.

GEORGINA MARIA MOORE.

WITH deep regret I ask leave to chronicle the death on the 18th inst. of Georgina Maria Moore, eldest daughter of the late Edward Duke Moore, M.D. Born on February 17th, 1835, she published her first book, a tale for children called 'Mary with Many Friends,' in 1878, and a sequel to this volume—'Mary's Holiday Task'—appeared the following year with a dedication "by permission to the children of H.R.H. the Princess Mary Adelaide of Cambridge, Duchess of Teck"—mother of Queen Mary. Both books were praised by *The Athenæum* for the charm of their title-character; and the present writer never lost the impression made on his mind, as a child, by the allegoric inspiration of the latter story. Queen Victoria's death was the cause of the private appearance of a brochure containing an eloquent and sincere poetic tribute from Miss Moore to "the regal little lady of great heart." To the general public she must have seemed a woman of one book, but in letter-writing her pen, almost up to the last, displayed drollery and wit.

She was uncommonly fond of poetry, and having read her friend Clifford Harrison's poem on his function as a reciter, she invented a private magazine called *Friends upon their Way*, in which a group of people copied their favourite poems and exchanged admirations. W. H. CHESSON.

'THE KINGIS QUAIR AND THE QUARE OF JELUSY.'

The University, St. Andrews, January 17, 1911.

THE writer of the very full and, in the main, judicial criticism of my edition of 'The Kingis Quair and the Quare of Jelusy,' in *The Athenæum* of the 14th inst., has fallen into two errors. He says that I overlook Prof. Gregory Smith's "disclaimer of doubt" of the authenticity of the 'Quair.' Now I expressly mention it, and quote the terms of it from 'The Cambridge History of English Literature' (Introduction to 'K. Q.', pp. xlvi, xlvii). He also says that I reproduce "the texts with the errors and corrections verbatim, placing *en regard* Prof. Skeat's amended text of the 'Quair.'" The amended text is not Prof. Skeat's, but my own. An examination of the amended text and comparison of it with the text of Prof. Skeat, in his S.T.S. edition of 1884, would have shown this. In my preface clear indication is given of what I owe to the courtesy of Prof. Skeat and what to Dr. Walther Wischmann's 'Untersuchungen.' Comment on the amended text is given in the Introduction (pp. lxxvii-lxxxiii) and in the Notes.

Your contributor is right in saying that certain points about James's departure from Scotland want clearing up. Wyntoun's errors regarding the year, and, as I believe, regarding the existence of a truce by land and sea, induce hesitation in accepting some of his details. His details may be right, notwithstanding, and the passage referred to may be one of them. Bower, who was a contemporary writer, and at that date, February—March, 1406, a man of twenty-one, does not mention any delay after Fleming had seen the Prince embark.

There are in the 'Rotuli Scotiæ' (ii. 177) two safe-conducts for the Earl of Orkney, one dated January 30th, and the other March 15th, 1406. If he received the latter in Scotland, he must have left late in March.

The statement "there was no truce" is too emphatic. There was a dispute as to whether there was a truce or not. (A full account of the grounds of this dispute is given in the preface to the Exchequer Rolls, iv. p. xlvi.) This is shown by the language of the instructions given to Henry's commissioners, appointed February 7th, 1406, to treat *de veris et firmis treugis—seu de treugis, nuper inter nos et adversarium nostrum predictum sub certa forma habitis, prorogandis* (Rymer, viii. 430). The other document referred to (*ibid.*, 450), with its *ut dicitur*, points the same way. The date of Henry IV.'s commission, February 7th, 1406, shows that Walsingham is in error in connecting the movement for a truce with the civil broils consequent upon Sir David Fleming's death. Even if there had been a truce by land, it could not have protected the Prince at sea. Nowhere—not even in the 'Rotuli Scotiæ,' ii. 180—is there any mention of time or place of conclusion of the supposed truce. Nor can I reconcile the language of this safe-conduct with the reservation *ut dicitur* in the writ of September 3rd preceding. There was not the same necessity for reservation in the second document as in the first.

It would be idle to repeat the arguments given in my Introduction against the royal authorship of the 'Quair,' and on the relations of the 'Quair,' 'The Quare of Jelusy,' and 'Lancelot.' I demur, however, to the epithet "vacillating." I endeavour to use language which fits the facts and to avoid undue emphasis. Certitude in such matters is not attainable. "Highly probable," "probable," "possible," represent different moods of mind in the presence of different kinds of evidence.

I did not know that Mr. J. T. T. Brown had edited 'The Quare of Jelusy' for *The Scottish Antiquary* in October, 1897. Had I known, I should certainly have read it and referred to it. ALEXANDER LAWSON.

* * Our reviewer regrets overlooking the citation of 'The Cambridge History,' and not more precisely noting that the amended text was only so far based on Prof. Skeat's similar expedient. There was not the least desire to disparage. As to the voyage, Bower rather appears to be garbling Wyntoun, who in any case is the far better authority. As to the truce, Prof. Lawson now greatly qualifies his denial, but has perhaps not yet qualified it enough. Was there any contemporary dispute about the existence of truce? Truce is affirmed by contemporary historians, Scottish and English, and they are explicitly borne out by contemporary State records in England. Was there any contemporary contradiction or dispute of the fact at all? None has yet appeared. Prof. Lawson errs a little in citing the Exchequer Rolls for any dispute as to whether there was a truce or not. The passage begins on p. xlv with these words: "At the time of the capture there was a nominal truce between the two countries." Since "vacillating" displeases, our reviewer gladly substitutes Prof. Lawson's own gentler and even more judicial alternative that different places in his very interesting book indicate different moods of mind.

'THE GRECIANS.'

1, rue Brey, Paris.

YOUR reviewer, though complimentary, has done me some injustice in his review of my book. He says that my Socrates

"works himself up to make lurid and far-fetched contrasts. 'Do you not know,' he asks, 'how the monotonous hours are only varied by epidemics, whether of chicken-pox, religion, silkworm-keeping, or Sandow exercises?'"

Far be it from any Socrates of mine to use such untrammelled violence. It is Hofman, purposely represented as a rather outrageous and Nietzschean personality, who uses the words which are meant to be in keeping with his character. "There is too much of this kind of smartness," says your reviewer. I thank him for the compliment. I was drawing the portrait of a smart man: I seem to have succeeded. There is usually too much of him.

JAMES ELROY FLECKER.

THE BOOK SALES OF 1910.

PART III.

INSTALMENTS from the collection of manuscripts formed by Sir Thomas Phillipps make their appearance periodically, and a further selection was sold by Messrs. Sotheby on June 6th and three following days. It realized nearly 6,000*l.*; and then we come to the miscellaneous assortment of books

sold on June 16th and 17th by the same auctioneers. This was a most important sale, which, like that of Sir Thomas Phillipps, would require a prohibitive amount of space to treat properly. Boccaccio's 'Le Decameron,' 5 vols., 8vo, 1757-61, with the title and 20 plates of "Estampes Galantes," sold for as much as 116*l.* (contemporary morocco extra by Derome); the second or Edinburgh edition of Burns's Poems, 1787, 8vo, a presentation copy to Andrew Aiken with inscription, 81*l.* (original calf); D'Arfeville's 'Navigation du Roy Jaques Cinquiesme,' 1583, 4to, 34*l.* (original vellum); Florio's 'World of Words,' 1598, folio, 35*l.* (old calf, stained, autograph inscription of John Evelyn); Goldsmith's 'Haunch of Venison,' 1776, 8vo, 27*l.* (calf extra); a presentation copy (from the author) of Milton's 'Defensio pro Populo Anglicano,' 1651, large paper, 48*l.* (original calf); a presentation copy of 'Purchas his Pilgrimage,' 4 vols., folio, 1624-5, 101*l.* (the same which sold in July, 1908, for 250*l.*); Edmund Waller's 'Works,' 1645, 8vo, the first issue, as disclosed by the ornamental border round the title, 60*l.* (original sheep); and many other printed works almost equally important, as well as a number of old manuscripts. At this sale the first English law book ever printed realized 60*l.* (old calf). This is Statham's 'Abridgment of English Law Cases down to the End of the Reign of Henry VI.,' printed by Pynson about 1490.

From this time to the end of the season there was much to engage the attention of collectors, and here and there some very valuable books are met with. Another copy of the Kelmscott Chaucer, this time on vellum, fetched 285*l.*, as against 300*l.* in 1905, and 260*l.* the year following; and on June 28th the library of the late Mr. Gray of Glasgow yielded some exceedingly scarce "Americana," including 'New England's Crisis,' 1676, a pamphlet of 16 leaves, apparently not recorded, 195*l.*, and a collection of tracts, only five in number, which fetched as much as 510*l.* Two of these were by John Eliot, the apostle to the North American Indians, whose great idea was to organize the various tribes into one great Christian community. Large as this amount was, it was exceeded immediately after by that obtained for one of the three known copies of the Block-Book Alphabet, having the letter A dated 1464, consisting of 24 letters and 6 leaves of ribbon letters. The amount paid by Mr. Quaritch for this relic was 1,520*l.*, and he also gave 110*l.* for a clean and perfect copy of the 'Three Kynges of Coleyne,' printed in small 4to by Wynkyn de Worde about 1499. Col. Hargreaves's collection of sporting works has been mentioned previously as having realized considerably over 1,000*l.*; and in the same library was that copy of Shakespeare's First Folio which realized 2,400*l.* in May, 1907. It now sold for 2,000*l.* (old morocco extra by Roger Payne). Three other copies of the First Folio were sold before the end of the season, namely, that belonging to the late Bishop Gott, previously mentioned as having realized 1,800*l.*; an example with the title, verses, and last leaf in facsimile, which fetched 600*l.* on July 21st; and Mr. Hilton's copy, which, being still more defective, realized but 400*l.* a few weeks ago. All these are, of course, large amounts, and, as frequently happens, the sales occurred within a space of less than a month.

The last days of July were not particularly noticeable, though several important works need to be mentioned. These comprised a copy of the first or Kilmarnock edition of Burns's Poems, 1786, once

belonging to William Paterson of Old Cumnock, who married Miss Morton, one of the "Six Belles of Mauchline" immortalized by Burns in his poem bearing that title, bought by Mr. Spencer for 107*l.* (sheep, title mended, and last leaf in facsimile); 'The Vicar of Wakefield,' with 24 coloured plates by Rowlandson, 1817, 8vo, 14*l.* 10*s.* (morocco extra); Marchetti's 'Della Natura delle Cose' of Lucretius, 2 vols., 1754, 8vo, 28*l.* 10*s.* (old French morocco); Dante Rossetti's 'Ballads and Sonnets' on large paper, 1881, 8vo, 20*l.* (original boards, two autograph MSS. and a lithograph, all by Rossetti, inserted); the same author's 'Sir Hugh the Heron,' 1843, 8vo, 20*l.* (morocco); Chippendale's 'Gentleman and Cabinet Maker's Director,' 1754, folio, 19*l.* 10*s.* (original half-binding); the original issue of Turner's 'Liber Studiorum,' title and 70 plates, all in the first or second states, 190*l.* (in cases); five ancient MSS. from the Abbatial Library of Waltham Holy Cross and the Monastic Library of St. Edmundsbury, which realized in the aggregate 337*l.*; and a number of books, in addition to the early editions of Shakespeare's works, which had been bought in at Bishop Gott's sale and were now offered again. Not one of them maintained its previous price. Even the first edition of 'The Merchant of Venice,' bought in at 290*l.*, fell to 155*l.*

The activities of the season closed with Byron's 'Bride of Abydos,' 1813, 8vo, containing a slip of 'Errata' unknown to Mr. Murray, 42*l.* 10*s.* (original wrapper); another copy of Colonna's 'Hypnerotomachia Poliphili,' 1499, folio, 145*l.* (old vellum, rebacked); the 'Graduale Romanum de Tempore et Sanctis,' printed at Antwerp in 1599, folio, 34*l.* 10*s.* (oak boards); Shakespeare's 'Poems,' 1640, 8vo, 106*l.* (morocco extra, portrait, apparently from a later issue); Smith's 'Generall Historie of Virginia,' 1624, small folio, 48*l.* (russia extra, defective in parts); and several important original MSS., including Oscar Wilde's 'Decay of Lying,' 54 leaves, folio, 111*l.*; Byron's 'Siege of Corinth,' 50 pages, 4to and folio, 760*l.* (his MS. of the 'Ode to Napoleon' realized 320*l.* on December 1st last); and an autograph letter from Burns to Mrs. Dunlop, who had presented the poet with a cocoanut cup, the contents of which seem to have put two "Southrons" to sleep, or, as the letter has it, "to rest," 235*l.*

The results of the sales held during the new season which opened on October 6th have been chronicled in *The Athenæum* from time to time and will be well in remembrance, particularly that interesting copy of Poe's 'The Raven and other Poems,' 1845, with the author's inscription on the fly-leaf "To Miss Elizabeth Barrett Barrett with the respects of Edgar A. Poe," 91*l.* (cloth); the fine copy of 'Hamlet,' printed "by W. S. for John Smethwicke," without date (but probably not earlier than 1636), 105*l.* (unbound); the autograph MSS. of George Meredith, which on December 1st realized in the aggregate 1,946*l.* at Messrs. Sotheby's; and the extensive library of the late Mr. W. H. Hilton sold a few days ago in the same rooms. These and other sales relieved the monotony usually associated with the fall of the year, and call attention to the fact that a book important in itself by reason of its rarity or made so by additions, such as autograph notes or inscriptions written within its covers by some one whose name is a household word, or by some peculiarity in the binding, will always command its price. Such books as these, as well as manuscripts, especially those of an essentially literary

character, are sought for by those who are able and willing to pay for them. The bookman of ordinary means should be well content that this is so, for it leaves him free to pursue his ideals in his own way in a field so extensive that it has never been completely surveyed—where much is to be acquired and still more to be learnt by those who have schooled themselves in its many intricacies.

J. HERBERT SLATER.

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the third part of the list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth and death should be given together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15, Waterloo Place, S.W.

- Faà, John, R.S.A. (1819-1902), artist.
 Fagan, Louis Alexander (d. 1903), writer on art.
 Falcke, Isaac (1819-1909), art collector, benefactor to the British Museum.
 Falconer, Lanoe (pseud.). See Hawker, Mary Elizabeth.
 Fane, Violet (pseud.). See Currie, Mary, Lady.
 Fanshawe, Sir Edward Gennys, G.C.B. (1814-1906), admiral.
 Farjeon, Benjamin Leopold (1838-1903), novelist.
 Farmer, John (1835-1901), musical composer.
 Farningham, Marianne (pseud.). See Hearn, Mary Anne.
 Farquharson, David, A.R.A. (d. 1907), landscape painter.
 Farrar, Adam Story, D.D. (1826-1905), Canon of Durham; Professor of Divinity.
 Farrar, Frederic William, D.D. (1831-1903), Dean of Canterbury.
 Farren, Ellen, known as Nellie Farren (Mrs. Robert Soutar) (1848-1904), burlesque actress.
 Farren, William (1826-1908), actor.
 Fausset, Andrew Robert (1821-1910), Canon of York; Biblical critic.
 Fayer, Sir Joseph, 1st Bt., F.R.S. (1824-1907), physician.
 Fenn, George Manville (1831-1909), novelist.
 Ferguson, Sir James, 6th Bt. (1832-1907), Governor of Bombay; Postmaster-General.
 Ferrers, Norman Macleod, F.R.S. (1829-1903), Master of Caius College, Cambridge.
 Festing, John Wogan, D.D. (1837-1902), Bishop of St. Albans.
 Field, William Ventris, 1st Baron Field of Bakhams (1813-1907), judge.
 Fielding, Sir Percy Robert Basil (1828-1904), general.
 Finch-Hatton, Harold Heneage (1856-1904), politician and Imperialist.
 Finlayson, James (1840-1906), Scottish physician.
 Fitch, Sir Joshua Girling (1824-1903), writer on education.
 Fitzgerald, George Francis, F.R.S. (1851-1901), physicist.
 Fitzgerald, Sir Thomas Naghten (1838-1908), surgeon.
 Fitzgibbon, Gerald (1837-1909), Lord Justice of Appeal in Ireland.

Fleay, Frederick Gard (1831-1909), Shakespearean scholar.
 Fleming, George (1833-1901), veterinary surgeon.
 Fleming, James (1830-1908), Canon of York.
 Fletcher, James, LL.D. (d. 1908), Canadian botanist.
 Fletcher, John, C.M.G. (1815-1902), lieutenant-colonel Montreal Light Infantry.
 Flint, Robert, D.D. (1838-1910), philosopher and theologian.
 Floyer, Ernest Ayscoghe (1852-1903), explorer.
 Forbes, James Staats (1825-1904), railway manager and connoisseur.
 Ford, Edward Onslow, R.A. (1852-1901), sculptor.
 Ford, William Justice (1853-1904), cricketer and author.
 Forestier-Walker, Sir Frederick William Edward, K.C.B., G.C.M.G. (1814-1910), general.
 Forster. See Arnold-Forster.
 Fortescue, Hugh, 3rd Earl Fortescue (1818-1905), public administrator.
 Foster, Sir Clement Le Neve, F.R.S. (1841-1904), Professor of Mining.
 Foster, Joseph (1844-1905), antiquary and genealogist.
 Foster, Sir Michael, F.R.S. (1836-1907), physiologist.
 Fowler, Thomas, D.D. (1832-1904), President of Corpus Christi College, Oxford.
 Fox, Samson (1838-1903), inventor and benefactor.
 Fox Bourne, Henry Richard (1839-1909), social reformer and author.
 Foxwell, Arthur (1853-1909), physician.
 Frankfort de Montmorency, 3rd Viscount. See De Montmorency, Raymond Harvey.
 Fraser, Alexander Garden (1813-1904), missionary in India.
 Fraser, Daniel (1822-1902), Congregational minister.
 Fream, William (1855-1906), writer on agriculture.
 Fréchette, Louis (1839-1908), Canadian poet.
 Freeman, Gage Earle (1818-1903), writer on falconry.
 Fremantle, Sir Arthur James Lygon (1825-1901), general; Governor of Malta.
 Friedländer, Michael (d. 1910), Hebraist.
 Frith, William Powell, R.A. (1819-1909), artist.
 Fry, Danby Palmer (1818-1903), writer on the poor law.
 Fulleylove, John (1847-1908), water-colour painter.
 Furnivall, Frederick James (1825-1910), English scholar.
 Furse, Charles Wellington, A.R.A. (1868-1904), artist.
 Fust, Herbert Jenner. See Jenner-Fust, Herbert.
 Fyfe, Herbert Charles (1874-1904), author of 'Submarine Warfare.'
 Gace, Frederick Aubert (1811-1902), author of 'Gace's Catechism.'
 Gadsby, Henry (1842-1907), musical composer.
 Gairdner, Sir William Tennant, K.C.B., F.R.S. (1824-1907), Professor of Medicine at Glasgow.
 Galbraith, Sir William, K.C.B. (1837-1906), major-general.
 Gale, Fred, "The Old Buffer" (1823-1904), writer on cricket.
 Gallwey, Peter, S.J. (1821-1906), devotional writer.
 Galt, Sir Thomas (1815-1901), Chief Justice in Ontario.
 Galvin, George, known as Dan Leno (1861-1904), comedian.
 Gamgee, Arthur, F.R.S. (1841-1909), physiologist.
 Garcia, Manuel (1805-1906), teacher of music and laryngoscopist.
 Gardiner, Samuel Rawson (1829-1902), historian.
 Gargan, Denis, D.D. (1819-1903), President of Maynooth.
 Garner, Thomas (1840-1906), architect.
 Garnett, Richard, C.B. (1835-1906), Keeper of Printed Books at the British Museum.
 Garran, Andrew (1825-1901), Australian journalist.
 Garrick, Sir James Francis, K.C.M.G. (1835-1907), Queensland statesman.
 Garrod, Sir Alfred Baring, F.R.S. (1819-1907), physician.
 Garth, Sir Richard (1820-1903), Chief Justice of Bengal.
 Gatacre, Sir William Forbes, K.C.B. (1843-1906), major-general.
 Gathorne-Hardy, Gathorne, 1st Earl of Cranbrook (1814-1906), statesman.
 Gatty, Alfred, D.D. (1813-1903), Vicar of Ecclesfield and author.
 Geikie, John Cunningham, D.D. (1824-1906), theological writer.
 Gell, Sir James (1823-1905), Decemster of the Isle of Man.
 George William Frederick Charles, 2nd Duke of Cambridge (1819-1904), field-marshal, Commander-in-Chief of the British Army.
 George, Hereford Brooke (1838-1910), historian and mountaineer.

Gepp, Charles Granville (1844-1903), classical scholar.
 Gerard, Emily, Madame de Laszowski (1849-1905), novelist.
 Gibb, Elias John Wilkinson (1857-1901), Turkish scholar.
 Gibbins, Henry de Beltgens (1865-1907), economist and author.
 Gibbs, Henry Hucks, 1st Baron Aldenham (1819-1907), merchant and scholar.
 Giffen, Sir Robert, K.C.B. (1837-1910), economist.
 Gifford, Edwin Hamilton, D.D. (1820-1905), Archdeacon of London and theologian.
 Gigliucci, Countess. See Novello, Clara Anastasia.
 Gilbert, Sir [Joseph] Henry (1817-1901), agricultural chemist.
 Gillies, Duncan (1834-1903), Prime Minister of Victoria.
 Gipps, Sir Reginald Ramsay, G.C.B. (1831-1908), general.
 Gissing, George (1857-1903), novelist.
 Gladstone, John Hall, F.R.S. (1827-1902), physicist.
 Glaisher, James, F.R.S. (1809-1903), meteorologist and aeronaut.
 Glenesk, 1st Baron. See Borthwick, Sir Algernon.
 Gloag, Paton James, D.D. (1823-1906), theological writer.
 Gloag, William Ellis, Lord Kincairney (1828-1909), judge of Court of Session.
 Godfrey, Daniel (1832-1903), bandmaster and composer.
 Godkin, Edwin Lawrence (1831-1902), journalist and author.
 Goldschmidt, Otto (1829-1907), founder of Bach Choir.
 Goldsmid, Sir Frederic John, K.C.S.I. (1818-1908), major-general.
 Goodall, Frederick, R.A. (1822-1904), artist.
 Goodman, Mrs. Julia, born Salaman (1812-1906), portrait painter.
 Gordon, James Frederick Skinner, D.D. (1821-1904), Scottish antiquary.
 Gordon, Sir John James Hood, G.C.B. (1832-1908), general.
 Gordon-Lennox, Charles Henry, 6th Duke of Richmond and Gordon (1818-1903), Lord President of the Council.
 Gore, Albert Augustus, C.B. (1840-1901), surgeon-general.
 Gore, George, F.R.S. (1826-1908), electro-chemist.
 Gorrington, Frederick (1832-1909), philanthropist.
 Goschen, George Joachim, 1st Viscount Goschen, (1831-1907), statesman.
 Gosselin, Sir Martin Le Marchant Hadsley (1847-1905), diplomatist.
 Gott, John, D.D. (1830-1906), Bishop of Truro.
 Gough, Sir Hugh Henry, G.C.B., V.C. (1833-1909), general.
 Gough-Calthorpe, Sir Augustus Cholmondeley, 6th Baron Calthorpe (1829-1910), cattle-breeder and benefactor.
 Gowan, Sir James Robert, K.C.M.G. (1815-1909), Canadian judge.
 Graham, Andrew (1815-1908), astronomer.
 Graham, George (1813-1901), New Zealand politician.
 Graham, Henry Grey (1843-1906), writer on Scottish history.
 Graham, Thomas Alexander Ferguson (Tom Graham) (d. 1906), portrait painter.
 Grant, George Monro, D.D. (1835-1902), Principal of Queen's College, Kingston, Ontario, and author.
 Grant, Sir Robert, G.C.B. (1837-1904), lieutenant-general.
 Grant-Duff, Sir Mountstuart Elphinstone, G.C.S.I. (1829-1906), Governor of Madras.
 Green, Samuel Gosnell, D.D. (1822-1905), Non-conformist divine and bibliophile.
 Green, Walford, D.D. (1833-1903), Wesleyan minister.
 Greenaway, Kate (1846-1901), artist.
 Greenidge, Abel Hendy Jones (1866-1906), writer on Roman history.
 Greenwood, Frederick (1830-1909), journalist.
 Greenwood, Thomas (1851-1908), promoter of public libraries.
 Grego, Joseph (1844-1908), writer on art.
 Gregory, Sir Augustus Charles, K.C.M.G. (1819-1905), Surveyor-General of Queensland.
 Gregory, Edward John, R.A. (1850-1909), artist.
 Grenfell, George (1849-1906), missionary and explorer of the Congo.
 Grenfell, Hubert H. (1846-1906), captain R.N.; expert in naval gunnery.
 Grey, Maria Georgina, born Shirreff (1816-1906), promoter of women's education.
 Griffin, Sir Lepel Henry (1840-1908), Anglo-Indian administrator.
 Griffiths, Arthur George Frederick (1838-1908), inspector of prisons and author.
 Grimthorpe, 1st Baron. See Beckett, Sir Edmund.

Groome, Francis Hindes (1851-1902), encyclopædist and author.
 Grose, Thomas Hodge (1847-1906), Registrar of Oxford University.
 Gubbins, John R. (1839-1906), racehorse owner.
 Guinness, Henry Grattan, D.D. (1835-1910), author.
 Gully, William Court, 1st Viscount Selby (1835-1909), Speaker of the House of Commons.
 Gurney, Henry Palin (1847-1904), man of science.
 Guthrie, William (1835-1908), writer on Scots law.

 Woodhouse (S. C.), English-Greek Dictionary, 15/ net.
 A vocabulary of the Attic language.

School-Books.

Black's Literary Readers, Book V., 1/6
 Written and edited by John Finnemore, with illustrations in colour by T. Haddon, F. Reynolds, and others.
 English Patriotic Poetry, 2/
 Selected and annotated by L. Godwin Salt.
 Homer, Selections, 2/6
 Edited, with introduction, notes, and vocabulary, by W. Rennie.
 Ovid's Heroides, Selections, 2/
 Edited by L. W. P. Lewis and C. H. Broadbent.
 Simplified Ovid, a First Latin Reader, 1/6
 With notes, exercises, and vocabulary by W. F. Witton.
 University Tutorial Series: Bacon, Essays XXXI.—XLV., edited by A. J. F. Collins and S. E. Goggin, 1/6; Chaucer, Pardoner's Tale, edited by C. M. Drennan and A. J. Wyatt, 2/6; Gray, Poems, edited by A. J. F. Collins, 2/6; Livy, Book II., Chapters 1-50, edited by J. F. Stout and A. J. F. Collins, 2/6; and Plato, Crito and Euthyphro, edited by A. F. Watt and T. R. Mills, 2/6

Science.

American Civil Engineer's Pocket Book, 21/ net.
 Edited by M. Merriman.
 Avebury (Lord), The Origin of Civilisation and the Primitive Condition of Man: Mental and Social Condition of Savages, 7/6 net.
 Sixth edition (1902), reissue with a new preface and illustrations.
 Bligh (W. G.), The Practical Design of Irrigation Works, 26/ net.
 Second edition, revised and enlarged, with numerous illustrations.
 Eden (Thomas Watts), A Manual of Gynæcology, 18/ net.
 First Aids to Health Booklets: A Common Stomach Trouble, by H. Valentine Knaggs; The Cure of Chronic Catarrh, by Florence Daniel; The Ideal Diet, by Edgar J. Saxon, 1d. each.
 Fry (Sir Edward), with the assistance of Agnes Fry, The Liverworts, British and Foreign, 2/6 net.
 With many illustrations.
 Groth (P.), The Optical Properties of Crystals: being Selected Parts of 'Physical Crystallography', 15/ net.
 Translated by B. H. Jackson.
 Hall (A. D.), The Feeding of Crops and Stock, 5/ net.
 An introduction to the science of the nutrition of plants and animals, with illustrations and diagrams.
 Mackenzie (N. F.), Notes on Irrigation Works, 7/6 net.
 A course of lectures delivered at Oxford under the auspices of the Common University Fund.
 Macmillan (H. F.), Handbook of Tropical Gardening and Planting, with Special Reference to Ceylon, 10/6 net.
 Osler (William), Man's Redemption of Man, 1/ net.
 A Lay Sermon delivered at McEwan Hall, Edinburgh, Sunday, July 2, 1910, in connexion with the meeting of the National Association for the Prevention of Tuberculosis.
 Sandlands (J. P.), Consumption, an Appeal to Common Sense, 1/ net.
 A treatise, in plain English, which disputes the microbe theory, and criticizes orthodox methods of treatment.
 Science Progress in the Twentieth Century, January, 5/ net.
 Sorsbie (R. F.), Geology for Beginners, 10/6 net.
 Stewart (R. Wallace), An Elementary Text-Book of Physics: Part I. General Physics, 4/6 net.
 With 187 illustrations.

United States National Museum Proceedings: 1782, Notes on the Structure and Habits of the Wolf-fishes, by Theodore Gill; 1783, North American Parasitic Copepods, Part 9; The Lernæopodidæ, by Charles Branch Wilson; 1784, Description of a New Rabbit from Islands off the Coast of Virginia, by Edgar A. Mearns; and 1785, Descriptions of New Mollusks of the Family Vitrinellidæ from the West Coast of America, by Paul Bartsch.
 Wilson (David), William Thomson, Lord Kelvin, his Way of teaching Natural Philosophy, 2/ net.

Fiction.

Applin (Arthur), Fédora of the Halls, 6/
 Another of the author's studies of stageland.
 Audoux (Marguerite), Marie Claire, 6/
 Translated by John N. Raphael, with an introduction by Arnold Bennett. For review of the French original see *Athen.*, Dec. 3, 1910, p. 696.
 Bailey (H. C.), Beaujeu, 7d. net.
 New edition.
 Barlow (Jane), Mac's Adventures, 6/
 Describes adventures of a little Irish boy.
 Brandon (D.), The Davosers, 6/
 Papers concerning life at Davos.
 Clark (Janet M.), The Bourgeois Queen of Paris, 6/
 The tale opens in France in 1559.
 Flowerdew (Herbert), The Third Wife, 6/
 Another of the dramas of married life with which the author's name is chiefly associated.
 Gerard (Dorothea), The Inevitable Marriage, 6/
 The heroine after many trials finds happiness in matrimony.
 Gerrard (Edith C.), Love or Lucre, 6/
 Begins with a skeleton in the cupboard, and ends with a christening.
 Goring-Thomas (A. R.), The Lass with the Delicate Air, 6/
 The history of an alluring girl, the scene being laid partly in London, and partly in Paris.
 Hamel (Frank), A Lady of the Garter, 6/
 The ceremonies attending the inauguration of a Knight of the Garter inspire the heroine, who has had chivalric ideals from childhood, with a longing for an adventurous career. Her beauty arouses the passions of two knights, who fight for the right to wear her colours.
 Hough (Emerson), The Way of a Man, 6/
 A story of fighting and love, treachery and its unmasking, with other kinds of adventure.
 Hume (Fergus), High-Water Mark, 6/
 The high-water mark of love is reached at the end after many strange events.
 Lawrence (D. H.), The White Peacock, 6/
 Treats of a little group of people in the heart of the country.
 Leighton (Marie Connor), Greed, 6/
 One of the author's sensational stories.
 Minnett (Cora), The Day after To-morrow, 6/
 A story of the future presenting many political changes and some wild doings.
 Minnett (Cora) and Hawker (Pellew), Lucky, 2/6
 A story told by a cat.
 Moberly (L. G.), Heart of Gold, 6/
 Deals with the fortunes of a low-born, but highly gifted girl.
 Norman (Mrs. George), Lady Fanny, 6/
 The story of a married woman over thirty, who, for seven years, has loved "not wisely" a husband of apparently an opposite temperament.
 Payson (William Farquhar), Periwinkle, 6/
 An idyll of the Dunes.
 Scaramanga-Ralli (Constantine), The Tyranny of Honour, 6/
 The story begins with the French disaster at Sedan.
 Scott (Sir Walter), The Talisman, 6d.
 Shore (W. Teignmouth), Creatures of Clay, 6/
 Deals with a problem of London life which has been much neglected, yet is of real importance.
 Silberrad (Una L.), Declined with Thanks, 6/
 A series of short tales. Second impression.
 Ward (Mrs. Humphry), Daphne; or, Marriage à la Mode, 2/ net.
 Cheaper edition.
 Whitechurch (Victor L.), Off the Main Road, 6/
 A village comedy.
 Wilson (Rathmell), When Woman Loves, 6/
 An unconventional girl, who has many admirers, settles down to happy married life at the end.
 Gissing (Algernon), Rosanne, 6/
 A comment on modern life and marriage.

General Literature.

Adventure, 3/6 net.
 Records the extraordinary experiences of two ladies who visited Versailles in 1901 and 1902.
 Alliance of Honour Record, No. 1, January, 1d.
 A small magazine of a new society for the practice of personal purity.

Baring-Gould (Rev. S.), A Coronation Souvenir, 6d. net.

With portraits and illustrations.

Birmingham Institutions: Lectures given at the University, 5/ net.

Edited by J. H. Muirhead.

Coutts (Henry T.) and Stephen (Geo. A.), Manual of Library Bookbinding, Practical and Historical.

With an introduction by Douglas Cockerell, specimens of leathers and cloths, forms, and illustrations.

Mantegazza (Paolo), The Legends of Flowers, Third Series, 2/6 net.

Translated by Mrs. J. A. Kennedy, with frontispiece by A. Rodin and floral designs by Madame M. Lemaire.

Meredith Memorial Edition: Miscellaneous Prose, 7/6 net.

New International Encyclopædia, 22 vols., 320/ net.

Edited by Daniel Coit Gilman and others, 800 full-page illustrations and 200 maps.

New International Year-Book: a Compendium of the World's Progress for the Year 1909, 20/ net.

Edited by Frank Moore Colby, with illustrations and maps.

Northamptonshire Notes and Queries, June, 1910, 1/6

Osborn (Albert S.), Questioned Documents.

A study of writing and forgery with an outline of methods by which the facts may be discovered, with an introduction by Prof. J. H. Wigmore, and 200 illustrations.

Roosevelt (Theodore), The Strenuous Life, Essays and Addresses, 1/ net.

New edition.

Royal Navy List and Naval Recorder, 1911, 10/

Slaughter (J. W.), The Adolescent.

Treats of the development of the instincts and emotions in youth, juvenile crime and its treatment, &c., with an introduction by J. J. Findlay.

Small (Albion W.), The Meaning of Social Science, 6/ net.

A publication of the University of Chicago Press.

Statistical Society, Journal, January, 2/6

Turner (Christopher), Land Problems and National Welfare, 7/6 net.

With an introduction by Viscount Milner.

Universal Quarterly, January, 1/ net.

Tables of investments.

Ward (G. H. B.), The Truth about Spain, 7/6 net.

An account of present-day Spain, with 12 full-page illustrations.

Wheldon (Rupert H.), No Animal Food, 1/ net.

Two essays and 100 recipes.

Pamphlets.

Story of a Nation's Martyrdom.

Pictures of sufferings of Armenians.

Thomas (D. A.), The Industrial Struggle in Mid-Rhonda: some Points in the Case for the Owners, 1d.

A reprint of articles which have recently appeared in *The Western Mail*, with emendations and additions.

FOREIGN.

Theology.

Cherel (A.), Fénelon: Explication des Maximes des Saints sur la Vie intérieure, Édition critique, 4fr.

Meyer (A. O.), England und die Katholische Kirche unter Elisabeth.

Reprinted from the Notices et Extraits des Manuscrits de la Bibliothèque Nationale et autres Bibliothèques.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

JUST as we go to press, we learn with deep regret of the death on Thursday morning early, from heart failure, of Sir Charles Dilke, for whom throughout his life *The Athenæum* was an object of pride and constant concern, expressing itself in the strongest personal interest.

AMONG the books to be published shortly by Messrs. Macmillan & Co. are an authorized translation, by Dr. Arthur Mitchell, of Prof. Bergson's important work 'Creative Evolution'; 'The Amazing Emperor Heliogabalus,' a new reading of his character and career, by Mr. J. Stuart Hay, with an Introduction by Prof. J. B. Bury; and 'England in the Sudan,' by Yacoub Pasha Artin, who was accompanied on his journey by Prof. A. H. Sayce, and whose book is elaborately illustrated.

MESSRS. LONGMAN have nearly ready a new edition of 'The History of Trade Unionism,' by Mr. Sidney Webb and his wife. This edition will have a fresh introductory chapter dealing at considerable length with the Osborne Judgment, and the principal industrial conflicts and developments of recent years.

THE firm of D. Nutt promises 'Monumenta Historica Celtica,' a collection of references in classical authors by Mr. W. Dinan; 'Thoughts on Ultimate Problems,' a series of theological and metaphysical studies by Mr. F. W. Frankland; and Matthew Arnold's 'Celtic Literature,' edited by the late Alfred Nutt.

MR. NUTT's widow, who is continuing her long association with his publishing work, has planned "The Woman Citizen Series" to supply practical information regarding problems of daily life. The first volume will be 'Marriage and Divorce: some Needed Reforms in Church and State,' by Mr. Cecil Chapman.

MESSRS. CASSELL's spring publications will include 'The Kingdom of Dreams,' by Mr. J. J. Bell, a sociological study in fiction; 'The Happy Vanners,' an account of a caravan holiday by Keble Howard; and 'A Daughter of the Democracy,' by Mrs. Ethel M. Forbes.

MESSRS. NISBET & Co.'s announcements include 'The King's Serjeants and Officers of State, with their Coronation Services,' from the expert pen of Dr. J. H. Round; 'The Baronetage under Twenty-Seven Sovereigns,' which deals with the reforms and concessions asked for of late; and 'The Position of Woman, Actual and Ideal,' a series of studies by Miss Sheaven, Prof. J. A. Thomson, Sir Oliver Lodge, and others.

MR. J. E. C. BODLEY is going to write a new Preface to his 'Coronation Book,' written by his late Majesty's

command, which Messrs. Methuen are about to reissue at a popular price.

MESSRS. MACLEHOSE will publish shortly in their "Seventeenth-Century Travel Series" a new edition of 'An Historical Relation of the Island of Ceylon,' by Robert Knox, a Captive there for Twenty Years. This edition will contain an autobiography of Knox's later life from the MS. which has long lain untouched in the Bodleian Library, and was recently discovered by Mr. James Ryan of Ceylon.

FROM the February number onwards, Mr. Eneas McKay of Stirling will publish the bilingual quarterly, *Guth na Bliadhna*. The number will include articles in Gaelic on the economic value to Scotland of grouse moors and deer forests, and the songs of Scotland, Ireland, and Wales. Dr. Douglas Hyde contributes a short paper in Irish Gaelic, and the Rev. Father Kane writes in English on the ancient faith of the Welsh people.

IN Messrs. Hodgson's catalogue for next week is included a selection of books, the former ownership of which, though not actually mentioned, is readily discernible from some of the entries. A copy of the three series of Barham's 'Ingoldsby Legends' bears the autograph of "Thomas Hughes" on the half-title of the first volume, which is one of only twelve copies so printed, with an inscription in Barham's hand presenting the volumes to "Mrs. Hughes"—"Tom Brown's" mother. The collection comprises many presentation copies to Hughes from his contemporaries as well as his own copy of Stanley's 'Life of Arnold,' on the half-title of which he has written an injunction from the Greek Testament to "go and do likewise."

THE MANCHESTER ORIENTAL SOCIETY held its first public meeting on the 18th inst. at the Manchester University. The inaugural lecture, given by Dr. C. H. Johns, on 'The Culture of the East in its Influence on the West,' was preceded by a statement by the President of the Society, Prof. Hope W. Hogg, in which he explained its origin and aims. The Society would not content itself with meetings and discussions, but would publish in the form of papers, reports, &c., original work bearing upon Oriental studies. The Society is intended to be of more than local interest, and already includes members in other towns.

IN recognition of his 'Historia de Rebus Gestis Scotorum' Mr. Andrew Lang has been made a Foreign Member of the Royal Swedish Academy, an honour he shares with five or six other Englishmen.

RECENT Government Publications of some interest to our readers are: Welsh Church Commission, Vol. III., Book II., Minutes of Evidence (post free 5s. 3d.) and Vol. V., Appendices (post free 2s. 4d.); An Account of the Reconstruction of the University of London (post free 5s. 6d.); and Statistical Abstract of the British Colonies, 1895 to 1909 (post free 2s. 2d.).

SCIENCE

SIR FRANCIS GALTON, F.R.S.

SIR FRANCIS GALTON, who died on the 17th inst. at the great age of 88, was the son of Samuel T. Galton, a banker at Birmingham, by a daughter of Dr. Erasmus Darwin. He was educated at King Edward's School, Birmingham, and, as he at first intended to follow the medical profession, proceeded thence to the Medical School at King's College, London. Later, he matriculated at Trinity College, Cambridge, but before entering into residence took a tour on the Continent which probably gave him the taste for travel which afterwards distinguished him. He took a pass degree in 1843, and the following year set out for the Sudan, which was then almost unexplored land for Europeans. Here he remained for nearly two years; and in 1850, having in the meantime returned to civilization, he explored what is now German East Africa, visiting in turn Damaraland, Ovampo, and Namaqualand. These travels were described by him in his 'Narrative of Explorers in Tropical Africa,' published in 1853, and gained for him the Gold Medal of the Royal Geographical Society and a seat on its Council. Of more general interest, perhaps, was his 'Art of Travel' (1855), in which he set down the several shifts and expedients which every traveller in semi-civilized or savage countries has to learn, but which had not previously been reduced to writing. It has not only proved a blessing to later generations, but has also inspired many works of the same kind, Lord Wolseley's 'Soldier's Pocket-Book' in especial owing much to it.

In 1860 Mr. Galton accompanied Sir George Airy, the Astronomer Royal, to Spain to observe a solar eclipse, and this seems to have turned his attention from travel to meteorology. He soon devised a graphical method of recording weather changes, which he described in *The Philosophical Magazine*, and was instrumental in arranging the daily weather charts which *The Times* published from 1863 onwards. The system is fully set forth in his book 'Meteorographica' (1863), and it is worth recording that he was the inventor of the word "anti-cyclone," so frequently to be found in the daily press. His meteorological efforts received recognition in his appointment to the Meteorological Committee in 1868; and as Chairman of the Committee of Kew Observatory he introduced in 1875 the process of verifying thermometers and of "certifying" watches with which the public is now familiar.

In 1869 he began those anthropological studies with which his name was henceforth associated. Having occasion to inquire into the inheritance of physical characteristics for the purpose of his book on 'Hereditary Genius,' published in this year, he made several experiments with animals which led to no great result. He found later a more fruitful field for his activity in the collection of records of families, and was the first to issue forms for inquiries into the subject, which the French describe as "questionnaires." Always inclined to mechanical and graphic modes of tabulating his results, Galton introduced the publication of "composite photographs," in which the portraits of many individuals were printed one over the other, so as to give the common or average type. Then, noticing that the

patterns of the ridges of the skin of the fingers differed in each individual, he devised his well-known system of "finger-prints," which did not, as he had hoped, give evidence of the persistence of racial or inherited characteristics, but was adopted by the State as a means of identifying criminals. In 1901 this led him into the sociological study to which he gave the name of "Eugenics," or the art of improving the race by careful selection. His contributions to this study have been too frequently before the public since that date to require further description. He was himself proud of his hereditary aptitude for science.

Francis Galton was from the beginning a diligent inquirer into Nature, and had the happiness to possess an independent fortune which provided him with the means to gratify his tastes. Although his natural bent was, perhaps, more mechanical than literary, he had a charming and easy style which enabled him to lay his ideas before the public in a manner that made them readily accessible. Nowhere is this better seen than in his 'Memories of my Life,' an autobiography published only three years ago, which is most pleasant and instructive reading. Ever ready to expend both labour and money in the furtherance of research, he occupied a position in the eye of the general public which was in some respects unique, and his death leaves a gap which will not be easily filled.

Besides the works above mentioned, his best-known books are 'Vacation Tours' (1860), 'English Men of Science' (1874), 'Finger Prints' (1893), and 'Noteworthy Families' (1906). He received many honours including the D.C.L. of Oxford and the D.Sc. of Cambridge; was at various times Honorary Secretary of the Royal Geographical Society, General Secretary of the British Association, and President of the Anthropological Institute; and was knighted in 1909.

SOCIETIES.

BRITISH ACADEMY.—Jan. 18.—Lord Reay in the chair.—The Fellows of the British Academy having assembled for the first time since the death of the late President, Mr. S. H. Butcher, it was resolved to put on record the Academy's deep sense of gratitude for the services he rendered, and to offer the Academy's condolences to his relatives and to the University he represented in Parliament.

Lord Reay paid a warm tribute to the late President's eminent services to the Academy; to his exalted view of the Academy's purposes, functions, possibilities, and all that pertained to its dignity; to his deep-seated conviction that the right organization of learning was essential to the intellectual well-being of the nation. "All too soon," said the Chairman, "he has joined the noble group whose loss the Academy has deep cause to deplore—Acton, Sidgwick, Jebb, Lecky, Leslie Stephen, Pelham, Caird, Monro, Maitland—to name a few only "of those who first manned the vessel." Mr. Butcher's influence was due to that charm of being which was truly humane and which endeared him to all who came in contact with him. His varied gifts marked him out as pre-eminently fit to be President of the Academy and to discharge the responsible duties of the office.

Dr. Shadworth H. Hodgson, Fellow of the Academy, read a paper on 'Some Cardinal Points in knowledge.' Among the most prominent of these points were the following—that consciousness is the only evidence we have for anything whatever; that every empirically present moment of consciousness moves in two opposite directions of time at once, backwards into the past, and forwards into the future; that this circumstance compels us to distinguish between consciousness as a *knowing* (in which it is our evidence for everything) and the same consciousness as an *existent* (in which it is the dependent concomitant of some real condition or conditions, which are not consciousness); that the content

of consciousness as a *knowing* is always found to be analyzable ultimately into distinguishable but inseparable elements, its so-called formal and material elements, time or time and space together being the formal, and some mode of feeling the material, while, taken as an *existent*, it appears as a self-objectifying process, having two aspects, the objective and the subjective; that physical Matter is made known to us by the process of the simultaneous exercise of the sensations of sight and touch, including pressure, which gives us our first conception of Reality in the full sense, namely, as a real condition of genesis; that physical Matter, as known by sensations of touch with pressure, is a replica of the sensations by which it is known, which cannot be said of any other sensation or feeling; that physical Matter is at once the object and the real condition of genesis of new sensations, new not in respect of kind, but of occurrence, and the experience of physical Matter is thus the point at which the physical world as known and our consciousness knowing it coincide, thus proving the latter to be true evidence of the former; that the nature of the specific qualities of sensation, *what*, for instance, sensations of touch, pressure, light, colour, sound, heat, cold, pleasure, pain, and so on, *are*—this is incapable of being thought of as caused or conditioned by anything whatever; in their simplest shape they are *ultimates* in experience; they are a *revelation* in the strictest sense: that, since time or time and space together which are their inseparable formal element, are infinite, that is, limitless in increase or decrease, we are compelled to admit the possibility of innumerable other modes of sensation than our own, and even of other kinds of formal elements than time and space, though we can form no positive idea whatever of *what* such possible modes may be; that the specific qualities of emotion and desire of all kinds are ultimates of experience, in precisely the same sense and for the same reason as those of sensation; that religion springs from an emotional root, namely, the craving for the sympathy of some Being who, besides being morally our superior, should also have a perfect knowledge of what we are and have been, such as can belong to no finite being who is separate from ourselves; and that, when thought is said to arrest the attention, the stream of consciousness, the content arrested, belongs to consciousness as a knowing, the thought which arrests it to consciousness as an existent.

ROYAL.—Jan. 19.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'The Action of *B. lactis aerogenes* on Glucose and Mannitol,' Part II., by Mr. G. S. Walpole, — 'The Pharmacological Action of *Gonioma kamassi* (South African Boxwood),' by Dr. W. E. Dixon, — 'Autoagglutination of Red Blood Cells in Trypanosomiasis,' by Dr. W. Yorke, — 'The Transformation of Proteids into Fats during the Ripening of Cheese: Preliminary Communication,' by Mr. M. Nierenstein, — 'The Action of X-Rays on the Developing chick,' by Mr. J. F. Gaskell, — and 'Experiments to ascertain if Antelope may act as a Reservoir of the Virus of Sleeping Sickness (*Trypanosoma gambiense*),' and 'Experiments to ascertain if the Domestic Fowl of Uganda may act as a Reservoir of the Virus of Sleeping Sickness (*Trypanosoma gambiense*),' by Col. Sir David Bruce and Capt. A. E. Hamerton and H. R. Bateman.

GEOLOGICAL.—Jan. 11.—Prof. W. W. Watts, President, in the chair.—The following communications were read: 'The Zonal Classification of the Salopian Rocks of Cautley and Ravenstonedale,' by Miss G. R. Watney and Miss E. G. Welch, — and 'On a Collection of Insect-Remains from the South Wales Coalfield,' by Mr. Herbert Bolton, Curator of the Bristol Natural History Museum.

SOCIETY OF ANTIQUARIES.—Jan. 19.—Dr. C. H. Read, President, in the chair.—Mr. E. Kitson Clark read a paper on 'A Prehistoric Route in Yorkshire.'—The object of the paper was to analyze the detail of a prehistoric main route, taking as an instance the line from the Wolds of East Yorkshire to the moors of the West Riding (both districts being rich in prehistoric remains), with the marshes of the plain of York and the complicated foot hills of the Leeds district intervening. Evidence for the early use of this route was adduced from prehistoric relics found at York, Adel, and Ilkley. Of its use by the Romans, as suggested by the names Garrowby Street and Tadcaster, evidence can be obtained from the discovery of Roman antiquities at York, Adel, and Ilkley. It must have been important at the time of Harold Hardrada's movement from

York to Stamford Bridge; and its continuous existence down to modern times is also to be noted. The characteristic features of such a route were suggested from consideration of prehistoric civilization, of the alignments and clusters of barrows in Jutland, Denmark, and their relation to the configuration of the country. Specially drawn maps, showing the detail of the selected route, were exhibited.

Mr. W. R. Lethaby drew attention to a group of Early Christian monuments in the British Museum, among others to a sarcophagus with representations of Cupid and Psyche and to a mosaic from Carthage, both of which Mr. Lethaby considered to be Early Christian, although hitherto they have not been recognized as such.

ROYAL NUMISMATIC.—Jan. 19.—Sir Henry Howorth, President, in the chair.—Mr. Frank E. Burton was elected a Fellow.

Mr. G. F. Hill read a paper on 'Classical Influence on the Italian Medal.' The medallist art has been described as in a sense the art *par excellence* of the Italian Renaissance; the medal appealed most strongly to Italians of the time by the scope which it gave to the expression of individuality and *virtu*. Ancient coins, especially of the Roman Empire, being found in the soil more frequently than any other kind of antiquity, were the chief means, apart from literature, by which the memory of great men of antiquity was revived and were passionately admired by humanists from Petrarch onwards. Imaginary portrait-medals were made where real ones were not obtainable. The precursors of the true Renaissance medals were closely modelled on Roman coins or medallions. Pisanello's first medal, of John VIII. Palæologus, continues the series of Roman medallions of John's predecessors in the Roman Empire. But the influence of classical models on Pisanello is merely suggestive; he shows no trace of imitation. The great medallists of the Florentine School imitate ancient models on the reverses of their medals, which are mostly shop-work in which they were not interested, while the portrait-obverses are original in conception and execution. The medallists of the Roman School in the fifteenth century (such as Cristoforo Geremia) and of Venice (such as Guidizani and Boldu) were strongly but naively influenced by classical models. In the sixteenth century a more sophisticated imitative art arose, of which Alessandro Cesati is the best instance; a group of medals with portraits of Augustus, Priam, Dido, and Artemisia may be attributed to him. Cavino of Padua represents a different school, that of the artists who imitate with intent to deceive. The general inference to be drawn from the study of the subject is that the following of classical models was, except in the case of the greater artists, detrimental to the sincerity and directness of the art.

ENTOMOLOGICAL.—Jan. 18.—Annual Meeting.—The officers and Council for the forthcoming session, 1911-12, were elected. Owing, however, to the death of Mr. J. W. Tutt, the President-nominate, no successor to the outgoing President, Dr. F. A. Dixey was chosen, and a special general meeting will be held later for that purpose. The following Fellows were elected to act as officers and members of the Council: *Treasurer*, Mr. A. H. Jones; *Secretaries*, Com. J. J. Walker and (in place of Mr. H. Rowland-Brown, who resigns after eleven years' service) the Rev. G. Wheeler; *Librarian*, Mr. G. C. Champion; *other Members of the Council*, Mr. R. Adkin, Mr. G. T. Bethune Baker, Prof. T. Hudson Beare, Mr. M. Burr, Dr. F. A. Dixey, Mr. H. St. J. Donisthorpe, Mr. J. H. Durrant, Prof. Selwyn Image, Dr. K. Jordan, Mr. A. Sich, Mr. J. R. le B. Tomlin, and Mr. H. J. Turner.

The President, after referring in his address to the losses by death sustained during the preceding year, went on to speak of various events of special interest to entomologists, among these being the appointment of Prof. Meldola as Herbert Spencer Lecturer and Mr. Selwyn Image as Slade Professor of Fine Art at Oxford; the award of the Imperial Service Order to Mr. C. O. Waterhouse, late of the British Museum (Natural History), and of the Royal Society's Darwin Medal to Mr. Roland Trimen; and the meeting of the first International Congress of Entomology at Brussels. He then proceeded to deal with certain problems of general biology on which special light had been thrown by entomological study, notably the demonstration that permanent races, differing from the parent stock, could be produced by artificial interference with the germ-plasm. This had been surmised from early experiments of Weismann, followed by Standfuss and Fischer, and had now been placed beyond

doubt by the careful work of Tower in America, who had also shown that the new form might stand in Mendelian relation with the stock from which it sprang. Other topics touched upon in the address were the psychophysical character of the material presented to the operation of natural selection—a point particularly emphasized by Prof. Mark Baldwin, and, in connexion with this, the special interest attaching to the communities of the social Hymenoptera, where the group rather than the individual appeared as the unit of selection.

METEOROLOGICAL.—Jan. 18.—Annual Meeting.—Mr. H. Mellish, President, in the chair.

The Council in their Report expressed their great pleasure that His Majesty the King had consented to continue the patronage which he had accorded to the Society when Prince of Wales. The experiment was tried for the first time of holding a meeting out of London, and on February 23rd last the Society met at Manchester, where much interest has recently been taken in the investigation of the upper air. The meeting was well attended, and led to a good discussion on the papers read, some of which were communicated by local Fellows. The Council state that the increased number of applications for lectures on meteorological subjects shows that greater interest is now being taken by the general public in meteorological matters. The researches into the conditions of the upper atmosphere have been continued under the auspices of the joint Committee appointed by the Society and the British Association. There had been an increase of 21 in the number of Fellows on the roll.—The President devoted his address to a consideration of 'The Present Position of British Climatology.'

Dr. H. N. Dickson was elected President for the ensuing year.

HUGUENOT.—Jan. 11.—Sir William Portal, President, in the chair.—A paper was read by Prof. Foster Watson on 'Huguenot Immigrants and English Education.' The beginning of foreign influence on English educational methods was traced to foreigners such as John Belmayn and Battista Castiglione, who were tutors to Edward VI. and Elizabeth. These men introduced into this country methods which were already in vogue on the Continent, and might be instanced by such works as the 'First Fruits' of Florio, which consisted of dialogues on an infinite variety of topics printed in the Italian and English languages, the object being to teach the foreign language by means of inducing interest in the subjects discussed. Among the Huguenot refugees who adopted this practice were Duplanche, Veron, and Hollyband, and the effect of their teaching was to make Englishmen far more conversant with the French language than they had hitherto been. The chief result of Huguenot influence on our education was the bringing about of the teaching of modern languages and modern subjects such as history and geography. The Huguenots helped on also the development of private schools, their own mathematical schools being regarded originally as supplementary to the native Grammar schools, and attended by the boys of the latter after their own school hours. A brief discussion followed the reading of the paper.

Mr. C. Poyntz Stewart exhibited a copy of Pistolesi's reproduction of one of the frescoes by Vasari in the Vatican commemorating the attack on Coligny a few days before the Massacre of St. Bartholomew's Day.

MEETINGS NEXT WEEK.

- | | |
|--------|---|
| MON. | Royal Academy of Arts, 4.—'The Sculptor,' Prof. W. R. Colton. |
| — | Institute of Actuaries, 5.—'On Staff Pension Funds,' Mr. H. W. Manly. |
| — | London Institution, 5.—'The Art of Aviation,' Mr. R. W. A. Brewer. |
| — | Institute of British Architects, 7.—President's Address to Students. |
| — | Society of Arts, 8.—'Etching: Lecture II. Modern Etching,' Mr. F. Wedmore. (Cantor Lecture.) |
| — | Geographical, 8.30.—'Recent Explorations in Dutch New Guinea,' Dr. H. A. Lorentz. |
| TUES. | Royal Institution, 3.—'Heredity,' Lecture III., Prof. F. W. Mott. |
| — | Society of Arts, 4.30.—'The Tin Resources of the Empire,' Mr. F. Douglas Osborne. (Colonial Section.) |
| — | Institution of Civil Engineers, 8.—Discussion on 'Sand-Movements at Newcastle Entrance, N.S.W.,' 'Fremantle Harbour-Works, Western Australia,' and 'The Bar Harbours of New South Wales.' |
| WED. | Archæological Institute, 4.30.—Ancient Bridges and their Impending Destruction, Mr. J. W. Willis Budd. |
| — | Entomological, 8. |
| — | Society of Arts, 8.—'Examinations, and their Bearing on National Efficiency,' Mr. P. J. Hartog. |
| THURS. | Royal Institution, 3.—'Recent Progress in Astronomy,' Lecture III., Mr. F. W. Dyson. |
| — | Royal Academy of Arts, 4.—'Education and Art,' Prof. W. R. Colton. |
| — | London Institution, 6.—'Life and Work of Lord Kelvin,' Prof. S. P. Thompson. |
| — | Linnean, 8.—'Supplementary List of Chinese Flowering Plants,' Mr. S. T. Dunn; and other Papers. |

THURS. Chemical, 8.30.—'The Constancy of Water of Crystallization in Hydrated Salts,' Part I., Messrs. H. B. Baker and G. H. J. Adam; 'Different Methods of applying the Grignard Reagent,' Messrs. H. Davies and F. S. Kipping; and other Papers.

FRI. Society of Antiquaries, 8.30. — Mr. W. Hill's Presidential Address, 'Flint and Chert.'

— Institution of Civil Engineers, 8.—'Rivers and Estuaries,' Vernon Harcourt. Lecture I., Mr. W. H. Hunter. (Students' Meeting.)

— Royal Institution, 9.—'Grouse Disease,' Mr. A. E. Shipley.

SAT. Royal Institution, 3.—'Problems in the Career of the Great Napoleon,' Lecture III., Mr. A. Hassall.

Science Gossip.

MESSRS. MACMILLAN will publish shortly a scientific work on 'The Feeble-Minded' by Dr. E. B. Sherlock, with an introductory note by Dr. H. B. Donkin, H.M. Commissioner of Prisons.

AMONG Parliamentary Papers published this week we note: Fishery Board for Scotland, Scientific Investigations, 1909, No. 1 (post free 2s. 4d.).

THE proposed removal of the Solar Physics Observatory at South Kensington (which has been under the able direction of Sir J. Norman Lockyer since its foundation in 1870) to a more suitable site near Caterham has the cordial support of astronomers both British and foreign, who appreciate the large amount of good work done and feel how much better would be the conditions for its continuance in its altered position. But there was some difficulty about securing the site at Forsterdown, which is a very suitable one on high level ground purchased some years ago by the War Office, and being no longer required by them, was advertised for sale on the 13th ult. A memorial, therefore, was sent to the Prime Minister by Sir David Gill, President of the Royal Astronomical Society, signed by a large number of eminent astronomers and others, praying that the sale should be delayed until a decision had been reached with full knowledge of the questions involved. This was granted, and we trust no further hitch will occur in obtaining the land and hope that the Solar Physics Observatory will long continue its important labours there.

MR. HORNER'S meteorological record shows that, though the rainfall in the neighbourhood of London last December was heavy, it was much greater in the Western districts. At Stow-on-the-Wold it amounted to 5.12 inches, and at Mangersbury in the vicinity was nearly as heavy. At Tunbridge Wells it was 3.93 inches; at Clapham Park only 2.68 inches.

THE moon will be full on the 13th prox. at 10h. 38m. (Greenwich time) in the morning, and new at 31m. past midnight on the 28th. She will be in perigee on the afternoon of the 9th, and in apogee on that of the 21st. On the morning of the 21st the bright star δ Scorpæi will be occulted by the moon: disappearance at 2h. 4m., reappearance at 2h. 20m.

THE planet Mercury will be at greatest western elongation from the sun on the 2nd prox., and will be visible in the morning until about the 20th, moving from the constellation Sagittarius through Capricornus into Aquarius. Venus sets later each evening; she is now nearly due south of a Aquarii, and will enter Pisces on the 13th prox. Mars rises a little earlier each morning; he is moving in almost a due easterly direction through the constellation Sagittarius, and will be near the moon on the 24th (conjunction before rising). Jupiter, near α Libræ, will rise at midnight about the middle of next month, and afterwards earlier. Saturn is in the southern part of

Aries, and sets now about midnight; he will be on the meridian at 5 o'clock in the evening on the 5th prox.

PROF. MAX WOLF has found the Nova (var. 137, 1910, Lacertæ) on two photographic plates taken at the Königstuhl Observatory, Heidelberg, on the 9th of January, 1894, and the 15th of July, 1904, respectively. The star was on both occasions between the twelfth and thirteenth magnitudes, so that the sudden accession of brightness between the 19th and 23rd of November last would seem to have been the result of some catastrophe.

WE have received Nos. 9 and 10 of vol. ii. of the *Publications* of the Allegheny Observatory of the University of Pittsburgh. The first contains a paper on the eclipsing variable 68 or *u* Herculis by Messrs. F. Schlesinger and Robert H. Baker, which was read at the Cambridge meeting of the Astronomical and Astrophysical Society of America last August. The star in question was first found to be variable by Schmidt at Athens in 1848, and he was puzzled by its extraordinary fluctuations. It was discovered to be a spectroscopic binary by Frost and Adams at the Yerkes Observatory in 1903. Both components appear by the Allegheny observations to be of the strong helium type; and if the approximate parallax could be determined (which is certainly very small), it would be possible to say whether these helium stars have a greater surface luminosity than our sun.

THE second contains a paper by Mr. Frank C. Jordan on the spectrum and orbit of α Persei. The period is determined to be 4.42 days; and there is a separate discussion of the H and K lines of calcium found in the spectrum, but the author does not consider that his views should be regarded as definite, further observation and discussion being required.

THE tenth (which will be the last) number of vol. xxix. of the *Memorie della Società degli Spettroscopisti Italiani* contains only the index and a continuation of the spectroscopic images of the sun's limb as observed at the Capitol Observatory, Rome, and at Moscow from the 29th of October, 1877, to the 6th of March, 1879.

Two useful annuals have appeared for 1911: the *Annuaire Astronomique* of the Royal Belgian Observatory, and the *Anuario del Observatorio de Madrid*. Both have the usual astronomical information; and in addition the former has articles on the dimensions of the earth and on the tides (the times of high water are given for Ostend), and the latter has several tables and articles, including one on the solar spots and protuberances observed in 1909.

FINE ARTS

A Roman Frontier Post and its People: the Fort of Newstead in the Parish of Melrose. By James Curle. (Glasgow, MacLehose & Sons.)

DURING the last fifteen years Scottish antiquaries have uncovered, in whole or in part, a goodly number of Roman sites, with ever increasingly interesting results. If some of their earlier efforts were less com-

plete than one could have wished, they were nevertheless useful and instructive, and the excavation of Bar Hill (1902-5) was admirably carried out and admirably described. Now we have before us the report of the latest work, the examination of the Roman fort at Newstead near Melrose, which Mr. James Curle has achieved after five years' steady digging (1905-10). We shall make no odious comparisons if we say at once that both the magnitude of the work and the magnificence of the report are unequalled.

Newstead is a hamlet on the south bank of the Tweed, under the shadow of the three tall Eildon Hills, the Trimontium towards which the Roman engineers, advancing from Cheviot, directed their highway. There, on high ground near the river-crossing, they built a fort. No ruins, nor even dim vestiges of mound or ditch, now mark the spot. Mediæval builders carried away its masonry, and the ploughman has levelled the soil above it. Only the record of chance finds suggested to Mr. Curle in 1905 the excavations which he then began in alliance with the Scottish Society of Antiquaries. But appearances were deceitful. The fort buried below the ground proved to be large and important. Its mere size—some 15 acres—set it outside the class of ordinary Roman forts; its ditches and ramparts, still traceable beneath the surface, revealed a succession of occupations which could in some measure be dated; and its pits and wells were found to hide wonderful things. Mr. Curle had a harvest such as no other Scottish antiquary has ever seen.

The reaper was not unworthy of the harvest. Through five years he carried on his search with patience, persistence, skill, and precision. Even casual digging may at times yield good fruit: at Newstead the truth was apparent that systematic and scientific care repays unfailingly a hundred- and a thousandfold. As Mr. Curle cleared out the soil that filled the buried ditches, as he dug down ten or twenty or even thirty-five feet into filled-up wells and rubbish pits, *fortem Fortuna iuvabat*. The quartet of helmets would alone make the success of most excavations: in particular, the iron helmet with visor-mask is perhaps the most admirable piece of ironwork which has come down to us from the Roman age.

Mr. Curle now crowns his successful *quinquennium* by a no less complete *lustratio*. Punctually as his spadework ended, he produces his report. It is a large and splendid volume, in which one knows not whether to admire most the numerous and costly illustrations, or the evident care which has been bestowed on perfecting the description of the discoveries, or the width of interest which these discoveries and descriptions cover. But perhaps two points will explain best the value of this work to learning.

First, in respect of history—that is, the history of the Romans in Scotland. We knew before that Agricola invaded Scotland, and was presently recalled

and most of his conquests abandoned; we knew also that sixty years later Antoninus Pius annexed the country up to the Forth, and that this conquest too was lost about A.D. 185. We now know that after Agricola's departure the Romans still held the land as far as the Tweed; that a rising drove them out of it about A.D. 115-120; and that, when order had been restored, Hadrian built his Wall from Tyne to Solway, full forty miles south of Newstead. In Britain, as in Dacia and the East, Hadrian withdrew the frontiers of the Empire, and till the advance of Pius, Newstead lay outside the Roman world. The history of this northern frontier is, of course, even now not wholly clear. But it is much less obscure than in 1905.

Again, in respect of the smaller objects of Roman life. We are going in the near future to depend for much of our Roman history on the dating of these small objects—armour, pottery, fibulæ, and the like. Here Mr. Curle gives valuable aid. The vicissitudes of Trimontium are datable, and they help us to date many of the individual finds; such clues Mr. Curle works out with many interesting suggestions and much wealth of illustration. Obviously, the subject attracts him, and his remarks on it are, in our judgment, the best part of his volume. A student of Samian (or Terra Sigillata), for instance, will find in his pages and plates far better guidance than he will get in any other English book—far better, certainly, than in the Catalogue issued by the British Museum. We hope that Mr. Curle will continue his admirable beginning of work in this untilled, but certainly fertile field.

We have said enough to show the importance of this book. We will add only one reflection. There are two Universities, Glasgow and Edinburgh, which lie adjacent to the Antonine Vallum and to Newstead Fort. Except a couple of zoologists, no member of either institution seems to have taken any interest in an excavation which has done so much for history, and for the history of Scotland.

THE NATIONAL PORTRAIT SOCIETY.

It may be well for any one criticizing the present show at the Grafton Galleries to renounce at the outset any attempt to keep King Charles's head out of the discussion: comparisons are inevitable between this exhibition and its predecessor. We may not be ready to rank the display of Post-Impressionists as an assembly of masterpieces; we may regard the exaggerated importance attached to it by the public as symptomatic of a state of mind similar to that of the amiable gentleman in Dickens's story; yet the fact remains that the people who paid their shillings to laugh did not return with their standards quite unchanged. For years they have listened with polite but profound scepticism while criticism patiently demonstrated the irrelevance, for purposes of painting, of most of the qualities they asked for in a picture; yet a collection of works which dispensed with those qualities, while few of them were of such

power as we should have thought convincing, though it has reaped apparent derision, has, we believe, in fact prevailed. So striking is the superiority of concrete experiment over theory.

The public that laughed at the vagaries of the Post-Impressionists will look at Mr. Sargent's *Lady Agnew* (51) with a surprised sense that it is a thought less painter-like than they had supposed—a little more photographic. It will seem strange that at one time Mr. Sargent was regarded as a dangerously summary painter, though it is true that was before his admission to the Royal Academy, and before he had settled down to perfect the current recipe for portraiture, which still in the present exhibition claims several adherents. Mr. Harrington Mann, whose portrait group *The Sisters* (69) is his best contribution; Mr. von Glehn (16-18); Mr. Harris Brown (137-140), and, in increasing degree, Mr. Maurice Greiffenhagen (133-136), belong to the period of Sargent influence now, for good or ill, coming to an end. The number of such painters, if we may venture a prophecy, will not receive many additions; the younger generation will feel, even in the original master, notwithstanding all the suave mastery by which he remains superior to his imitators, a pictorial diffuseness, a failure to come to grips with the essential pattern of his subject, which make his work in the present exhibition less eloquent than the vulgar directness of Herr Leo Samberger's *Erzbischof von Bamberg* (56). Herr Samberger approaches his sitters with a disrespectful familiarity, and fits them with a sort of pictorial nickname which sticks. Mr. Joseph Oppenheimer's portrait of Mlle. L—, *A Smile* (132), has a similar serviceable directness which makes for simplification of pattern, and thus for expressiveness.

A good picture even of not very decorative order, such as an Orchardson, has an underlying pattern on which the realistic details are displayed. Of the ideal masterpiece we might say that it has no extraneous details, but is itself a pattern—a fresh root-idea wrung from nature. This surely is the proper use of the word, and the present writer must be allowed to quarrel with a confrère who, in reviewing Prof. Holmes's book on January 7th, seems to imply that to aim at the making of beautiful patterns is not to aim at expression. Pattern is a language, and is recognized as beautiful because it is expressive—perhaps of simple ideas only—ideas of unity in variety—of force or suavity—of functional structure or of growth. It would be difficult to think of a root-pattern which was not expressive, though often of a familiar hackneyed idea. To reduce something local and particular, like a portrait, to its ultimate symbol is no easy task; but if portrait painters even aimed at it, we should not find in their exhibitions such repetition as we see here, where the personality of each sitter is elaborated to a proper pictorial complexity by means always of the same stock of artifices.

It is for their reduction in the number of these artifices of elaboration that we have frequently praised the work of certain of the younger school of painters, who, realizing that the essential business of portraiture was rather a matter of plastic structure than of settling the exact place of flesh in an infinite range of varying textures and colour reflections, have limited themselves in this department of art to a well-planned series of monochromes. Mr. Nicholson (70, 72), Mr. Glyn Philpot (7), and Mr. Gerald F. Kelly (39), show good examples of this sane and reasonable procedure; while Mr. Roussel (130) is welcome back in a genre in which he

was something of a pioneer years ago. With these perhaps should be classed Mr. William Orpen, but that in neither of his exhibits can he be said to attain anything like plastic unity. His *Portrait of a Lady* (53) is so chopped up with jerky brush-strokes that continuity of form is lost. It should have been stately, but looks like a waxwork figure on which a well-designed costume has been draped with care and taste. The little subtleties of form which betray the living wearer, and make of the dress an organism, are lacking, and the effect is utterly dead and prosaic. In *M. A. de la Gandara* (150) a similar self-restraint in colour is utilized to centre attention upon an academic use of line adroit enough, if somewhat artificial: it is the tradition of Ingres popularized by alloy with the flashy worldliness of Boldini—an uncanny medley of influences.

Successful or not, all these portrait painters are on a safer path than men like Mr. Wilson Steer (12) or Mr. Russell (41), who complicate their problem by the elaborate study of colour reflections which, if reduced to their most expressive simplicity of pattern, would probably result in elimination of the character of the sitter. To produce a design which would at once summarize that character, and balance the elaborate equation of multitudinously conflicting colours contained in such pictures, might well stagger an artist. Mr. Steer is frankly not equal to it, and so makes a vignette with the face as a centre. Mr. Russell ties his composition a little more together with a hard outline, which is plausible, but not convincing. More satisfactory than either is the *Reflections* (110) of Mrs. Arthur Rackham, which is purely landscape painter's portraiture—a study of colour vibrations wherein the head is adumbrated with no more than its objective importance. This is probably Mrs. Rackham's *métier*, although her drawing No. 121 shows the ambition of greater intimacy of characterization. Delicate and careful as it is, however, a certain over-modelling of line here and there, and the failure to realize the structure of the further arm (the hand of which peeps round the corner as though conveniently hung on a nail), do not reassure us as to the artist's sense of plastic logic.

Other creditable work is shown by Mr. Austen Brown (81), Mr. McClure Hamilton (164), Mr. Graham Robertson (112), Mr. William Strang (106-108), and Mr. W. Ranken, whose portrait of himself (90), though tame as a portrait, is an excellent flower study. There is a Whistler of the good early period (3), while Mr. Frank Craig's *Barry* (28), if not very highly organized as a picture, is in its imitative way a work of some charm. It is the best thing he has yet done by virtue of sincerity and interest in the sitter. Mr. Spencer Watson also, though without the power of massive design necessary for utilizing it, shows some sense of the magnificent subject offered to him by *Miss Molly Tisdall* (100).

Mr. Simon Bussy's ambitious portrait group stands apart from the other exhibits by its ambition of decorative effect in a high key of gleaming colour. The basis of the design is a sequence of comparatively neutral tones pitched very brilliantly apart, and united by the contrast of "accidental" notes of raw pigment, the introduction of which was to the artist evidently so fascinating that he found it difficult to stop adding to their number. Artists sometimes resent definite directions from a critic as to how to complete their works, yet we must confess we should like to be entitled, imitating an editor's dealings with a too enthusiastic

writer, to scrawl the mystic letters "del" over one passage of Mr. Bussy's paint. The elements of raw pink and lemon yellow in the picture are strongly discordant, but this discordance, if kept within bounds, is not without a significant flavour. It has an exotic brilliance, and it is only the distribution of the pattern which is at fault. The spray of pink just over the head of the principal figure is, in our opinion, the sinner, and if that were away the arch of white flowers would emerge against the sky as a form sufficiently noble to justify the inconsistency of colour of the latter.

POST-IMPRESSIONIST SCULPTURE.

THE most interesting work among the sculpture at the Grafton Galleries is that of Mr. Jacob Epstein, and it may conveniently be considered along with the exhibition at the Chenil Gallery of the sculptures of his adherent Mr. Eric Gill. Here is the Post-Impressionist influence indeed in full swing, welcome enough in some ways, but inducing inevitably the commonplace reflection that it is one thing to launch a revolution, and another to control it when it is launched.

From one point of view the work of these artists, like that of Mr. Hodge at the Academy, marks the healthy reaction from Rodin. The latter represents Impressionistic modelling a-quiver with light—inclined to a roughness of surface which softens every edge, and gives unity to forms full of violent projections and contrasting angles. The younger men are not modellers so much as carvers, accentuating, as stone-carvers should, the simplicity of the enclosing planes which get round the block, and reducing as much as possible mere episodes of projection. For his clean structural use of planes we have greatly admired Mr. Hodge's work, expressing at the same time the fear that, unless he made a closer study of natural forms, it would become too rhetorical and lacking in variety of interest. As yet the sculptor in question has shown little inclination for such research, and nature fills the gap with Mr. Epstein, fortunately for the school. Mr. Epstein, however, and Mr. Gill with him, are convinced—even, it would appear, imitative—Post-Impressionists. Both are inclined to hamper their study of nature by the apparently determined flouting of the facts of anatomical structure which often disfigures Gauguin's otherwise classic work. As against this, we would appeal to a tablet on the walls of Mr. Gill's exhibition on which he has carved certain principles, doubtless held as fundamental. "Being," runs the motto, "does not exist apart from doing." It follows, surely, that the form does not exist apart from the function, and the broad principles of anatomy, which make movement, say, possible, must be respected.

We do not mean by this criticism to claim literal rendering of form. That Mr. Gill should enlarge heads and extremities, and increase breadth in proportion to height—that both he and Mr. Epstein should approximate the torso to a column, the head to a block without disturbing projections—is but to say that these artists make use of legitimate conventions. Mr. Gill's carving at the Chenil Gallery, *Romilly John* (8), after Mr. Epstein's model and the still more simplified version at the Grafton christened, with suitable abbreviation, *Rom* (129), are fine works. The unfinished *Mother and Child* moreover (No. 1 in Mr. Gill's exhibition) promises exquisitely; and even the odd lopsidedness of the head in

another variant of the same theme is not without significance. The extreme simplification of these works does not preclude hints of general structure. On the other hand, the *Crucifix* (10) appears to us merely imitative—archaistic, not archaic—art; and we rebel at the perverseness which in No. 2 makes the left arm and shoulder attached not to the collar bone, but the side of the neck. Here also is indicated an outer ankle which comes forward as part of the foot with the joint apparently above it, unless, as appears more likely, the limb is jellified, bending evenly along its whole course. Still more inexplicable, in view of the greater evidence of anatomical study, is Mr. Epstein's treatment of the left leg of his statue *Euphemia* (60 at the Grafton). The toes are turned violently out, almost at right angles. The right leg is bent at the knee, and the turn of the foot is well rendered. The left leg is quite straight, and the knee therefore locked. The foot, of course, can still rotate outward, but at the hip joint. Now we ask what conceivable significance there can be in representing the lady as possessing a shinbone and fibula enabling her to turn her toe out sideways and leave her knee behind it. This appears to us mere frivolity. One may pardon exaggerations like the cutting away of the flesh below the iliac bone, but in a figure the design of which is based so closely on the bony structure (the hands and wrists are admirably and most closely rendered) such an aimless misstatement of fundamental fact spoils a work full of fine passages, and with so much feeling for structure that the oddity seems wilful.

MR. J. D. INNES'S WORKS.

THE further room at the Chenil Gallery contains a collection of works by Mr. J. D. Innes, also a convinced Post-Impressionist, and in his two imaginative figure subjects, *Springtime in Paradise* (32), and still better *Autumn Evening in Paradise* (33), an artist of considerable imaginative power. Nos. 17 and 21 are the best of the landscapes, which are always interesting in their first aspect, if not so poetically inspired as the fine 'Autumn Evening.'

ARCHÆOLOGICAL NOTES.

IN the current number of *Klio*, Prof. C. F. Lehmann-Haupt, continuing some earlier studies on the chronology of Berossus and lately discovered cuneiform texts, argues that Ilu-shuma, the king of Assyria with whom Su-abu, the earliest king of the First Dynasty of Babylon, went to war, was the same person as the Ilu-shuma who is described on a brick inscription from Kaleb Shergat as the father of Irish-sum, *patesi* or viceroy of Assyria in the year 2000 B.C. This conclusion, which he first put forward some two years ago, leads him to describe Prof. Eduard Meyer's reconstruction of the Babylonian King-lists as "demonstrably false"; but it confirms the view taken by Mr. Leonard King in his 'Chronicles concerning Early Babylonian Kings.' As the period in question forms a kind of foundation stone on which nearly all the subsequent synchronisms are built, this argument would seem to affect the conclusions that have been drawn from the supposed date of Burna-Buriash of Babylon, whom the Tel el-Amarna letters show to have lived at the same time with Amen-hotep IV. of Egypt. But Prof. Meyer places Amen-hotep IV.'s

accession at a date (1380 A.D.) which is accepted by Mr. King in the book above referred to. It seems, therefore, that the difference between Prof. Lehmann-Haupt and Prof. Meyer cannot be very great, and perhaps only consists in their various estimates of the length of some of the intermediate reigns. It does not appear likely that any absolute agreement will ever be arrived at with regard to this, and, unless some earlier records of eclipses than have yet come down to us are discovered, it is improbable that a very precise date for the beginning of any particular reign can be laid down.

In another section of the same paper Prof. Lehmann-Haupt deals with the question of the date of what he calls "the historical Semiramis," whom he takes to have been the wife of Samsi-Adad IV. and the mother of Adad-nirari IV., and to have flourished at a date which he puts at from 824 to 812 B.C. Are we then to suppose that Samsi-Adad was the Ninus, and Adad-nirari the Ninyas, of the legend which Whyte-Melville put into modern form in his romance of 'Sarchedon'? It may be so; but there is certainly very little, except the supposed identity of the Greek name Semiramis with the Assyrian Samurammât, to connect the legendary with the historical queen.

The really astonishing thing about these stories is the way in which writers in Christian times, who presumably had no knowledge of the ancient Eastern tongues, managed to retain, in perfectly correct form, the native names of historical rulers, while putting them in the strangest circumstances of time and place. Thus Lucian in the treatise 'De Dea Syria' tells us a long story about a "queen of Assyria" whom he calls Stratonice, and a courtier named Combabus, whose adventures he recounts in order to explain why the Galli mutilated themselves. Stratonice is a perfectly impossible name for an Assyrian queen, and is evidently taken from the consort of Seleucus whom he made over to his son Antiochus. M. Vellay in his essay on the 'Culte d'Adonis-Thammuz' suggests that this legend also was originally told of Semiramis. But Combabus can hardly be anything else than Khum-baba, the Elamite king who was overthrown by Gilgamesh; and how did the Greek writer get hold of the name? The fact that he did so suggests that after Alexander's conquests a good many nations besides the Jews and the Egyptians put their histories and traditions into Greek, although the traces of them have since been lost.

The works of the late Eugène Lefébure are now being published in M. Maspero's useful "Bibliothèque Egyptologique," and the first volume is introduced by an interesting life of the author by M. Philippe Virey, who does not attempt to conceal the fact that M. Lefébure by no means hit it off with the eminent Director of the Service des Antiquités. M. Lefébure, although a scholar of great erudition, was not a man of the world, and the position to which he was appointed in Cairo did not suit him for more reasons than one.

Among the other interesting essays here reprinted is one entitled 'Un des Procédés du D miurge  gyptien,' in which he drew attention to the way in which the Egyptians tried to explain on naturalistic grounds how both male and female gods could proceed from a Creator who in their view was a male living alone without consort. The same difficulty was got over by other inhabitants of the countries surrounding the Mediterranean by supposing the creating deity to be himself androgyne. Thus the Adonis men-

tioned in the earlier note was shown by M. Vellay, in the work there referred to, to be of both sexes; and the same story is told even more distinctly about Attis, the Phrygian god of whom he formed the Syrian counterpart. M. Lef bure did good service in producing texts to show that the same idea appears in the legend of Osiris, although in the cases he quotes the bi-sexual nature is assigned to Isis. This doubtless explains the effeminate appearance of the sculptured representatives of Osiris's Greek counterpart Dionysus, as well as the "What does this man-woman here?" with which Pentheus greets him in 'The Bacch e' of Euripides.

The current number of *Sphinx* contains some criticism by M. Gustave J quier upon Mr. Arthur Weigall's description of a block of sandstone, found by him in some *sebak* diggings near the temple of Edfu, as "one of the few evidences of human sacrifice in ancient Egypt." M. J quier disputes this statement, which appeared in the *Annales du Service* for 1907, because he holds that the block in question is not an altar at all. He says—and in this most Egyptologists will agree with him—that the Egyptians never sacrificed their victims on an altar, the criminals offered to the god being first cut up out of sight, and the part reserved for him afterwards served up to him in the same way as the fruit, vegetables, cakes, and other food. In Ptolemaic times, he thinks, this practice may have been modified, for he quotes scenes at both Edfu and Denderah where the king is cutting the throat of an antelope, not indeed on the altar, but on a slaughtering-block placed in front of the divinity. Mr. Weigall's block bears on its four faces various scenes in outline representing naked youths kneeling with their hands bound behind them, while near them are priests with knives. In the absence of any other than a verbal description, it is hard to put any distinct interpretation on these scenes; but from Mr. Weigall's own report, which does not indicate the presence of any god, it would seem unlikely that it is a sacrifice which is here represented. M. J quier points out that several of the assistants have the heads of animals, and that it may be read as an offering of prisoners to the infernal gods. He also points out that in the Saite recension of 'The Book of the Dead' one of the vignettes shows Am m, "the devourer" to whom the unjustified dead are handed over, seated upon a similar block to that found by Mr. Weigall. He therefore thinks it may have been intended as the base of a statue of the monster. It should be noted, however, that one of the "magic ivories" or phylacteries now in the Louvre shows a kneeling human figure with his elbows bound behind him, while several gods and genii are in attendance with knives. A female hippopotamus seems to be thrusting her head into the mouth of the prisoner, as Isis is said to have done with Horus when the latter was bitten by a scorpion; and, whatever the scene means, there is here no chance of a human sacrifice being intended.

Greek attempts to portray Egyptian gods with their native attributes are rare, and the few which have come down to us are for the most part clumsily or coarsely executed. In last year's *Revue des  tudes Grecques*, however, M. de Ridder gives a reproduction of a handsome *œnocho * now in the museum at Budapest, which has been rescued from oblivion by Herren H kler and von Bissing. It is of pure copper, the decorated part being encrusted with gold and silver in a fashion suggesting, as says M. de Ridder, niello-work. On the shoulder of the vase appears a frieze on which the different crowns and head-

dresses of the Pharaohs are represented, while the belly shows a draped female figure having the *ankh* in her right hand, and in her left the lotus sceptre with what may be a sistrum. Before and facing her stands the ibis-headed human figure of Thoth bearing in his left hand the notched palm-branch, while the right is raised in adoration. Behind him comes a female deity with a lotus head-dress, and two wings which reach the ground, while in either hand she bears a curved and notched palm-branch, from which dangles an *ankh*. M. de Ridder thinks it was made in Egypt during the reigns of the first Ptolemies, or more particularly about 250 B.C.; but the excellently artistic conception and execution of the vase are alike Greek, and it may be suggested that the scene depicted upon it represents Arsinoë or some other Ptolemaic queen to whom Thoth and the scribe-goddess Sakhthabui are announcing many years of reign. It is difficult to recognize in the two female figures thus represented the Isis and Horus whom M. de Ridder would see in them.

At the last meeting of the Académie des Inscriptions the well-known Greek archæologist M. Cavvadias gave an account of the excavations he has lately conducted in the island of Cephalonia. He found there evidence, according to him, of three successive layers of civilization, beginning with a Neolithic one which he thinks goes back to at least 3000 B.C., and is distinguished by rude monochrome pottery. The inhabitants during this period lived in wooden huts and buried their dead either in the hut itself or immediately outside it, the tomb in each case being a simple pit of roughly circular or elliptical shape. Then followed a stage of "pre-Mycenæan" culture which he would put at about 1,000 years later, characterized by black undecorated pottery and burials in oblong tombs formed of four slabs of stone. Finally came the Mycenæan period, which he puts at any time between the fifteenth and the tenth centuries B.C. At Mazaracata M. Cavvadias also found a great number of tombs showing evidence of a high state of civilization, and containing gold and bronze ornaments, pins, and daggers, together with enamels and engraved stones, but no iron. The dead in this case were placed in their tombs in a sitting position, or rather squatting on their heels, as the Egyptians still do, which is a striking testimony to the accuracy of Herodotus's remarks as to the burial customs of the Nasamones in Libya. Dr. Naville has lately appealed to this to explain the so-called "crouched burials" of early dynastic times in Egypt, and M. Cavvadias's discoveries give great support to his theory.

In the current *Proceedings* of the British Academy is an article by Prof. Ridgeway on 'Minos and the Civilization of Cnossos,' in which he complains with some asperity of the use of the word "Minoan" to describe the art of the period exemplified in Prof. Arthur Evans's famous excavations. Prof. Ridgeway's position is that Minos did not appear in Crete until after the destruction of the Palace of Cnossos, which he puts at about 1400 B.C. He also thinks that Minos was an Achæan, or rather that he represents the Achæan invasion.

At a meeting in December, 1909, of the Association pour l'Encouragement des Études Grecques, M. A. J. Reinach dealt with the celebrated clay disk of Phæstos discovered two years ago by M. Pernier, which he described as containing 124 hieroglyphs on the face and 118 on the back. He further stated that while some of these signs were repeated, 45 different ones in all could be recognized, and that these were all

human figures, parts of the body, animals, plants, and the like. He thinks, contrary to M. Pernier, that the inscription should be read from right to left, or rather, as the signs are arranged in concentric lines, from the periphery to the centre. He does not think them to be either alphabetical or syllabic, but merely ideographic, with perhaps some phonetic signs added. Finally, he considered that the writing was used by the ancestors of the later Carians, and that the disk was probably the copy of a treaty originally engraved on metal. Although M. Reinach's communication is now nearly a year old, it has been thought well to reproduce it here in view of some recent discussions.

The finds in Eastern Turkestan continue to offer ample employment to the philologists, and Mr. A. Cowley announces in the current number of the Royal Asiatic Society's *Journal* the discovery of yet another unknown tongue in a document brought back by Dr. Aurel Stein from the desert near Tun-huang. The alphabet word is said to be Aramaic, and the inscription reads from right to left; but the language, according to Mr. Cowley, is certainly not Semitic, and has no relation to the scripts found by the Prussian expedition of Dr. von Lecoq. The document in question is written on paper and very carefully preserved in a silk cover, which lends colour to the theory that it was an official letter or dispatch.

SALES.

MESSRS. CHRISTIE sold on Tuesday last the following engravings: Lady Gower and Child, after Lawrence, by S. Cousins, engraver's proof touched by the artist, 63*l*. Christmas Gambols, after Morland, by J. R. Smith; and Christmas Holidays, after and by J. R. Smith, a pair, printed in colours, 225*l*. Mrs. Pelham feeding Chickens, after Reynolds, by W. Dickinson, 126*l*. He Sleeps, by and after P. W. Tomkins, printed in colours, with wide margin, 183*l*.

At the sale on the 21st inst. Birket Foster's drawing, The Village Tree, fetched 115*l*.

Fine Art Gossip.

ONE of the chief duties expected of *The Burlington Magazine* is the announcement of rediscoveries of lost works of great masters. Certainly the most beautiful of those published in the February number is a fine double-drawing by Mantegna discovered in the Boymans Museum at Rotterdam by M. Schmidt-Degener, and now discussed in clear English, apparently from his own pen. The authenticity of the two drawings is apparent even in the photolithographic reproductions which accompany the text. A portrait of a young ecclesiastic belonging to a generous Spanish patron of the arts, the Marques de la Vega-Inclán, is also ascribed without hesitation by Señor de Beruete, the well-known authority on Velasquez, to his special master.

IN England Mr. Lionel Cust has found in another collection a variant of the portrait of Sir Charles Wingfield in the Holbein Drawing-book in Windsor Castle, but he leaves his readers to judge from the reproductions printed side by side which of the drawings is the original. A portrait, however, picked up by the owner for a small price is ascribed by the writer, "L. C.," without hesitation to Rembrandt. Mr. Martin Aldur contributes a suggestive plea that the forms of the central idea in the works of great artists have more to do in

determining the subordinate lines of the whole composition than is usually realized. Three very dissimilar examples—a Greek statue, a Hokusai colour-print, and a Millet drawing—illustrate his theory.

MR. G. F. HILL makes an article out of a lecture which he recently delivered at Oxford on classical influence on Italian medals; and Mr. Luther Hooper writes with practical knowledge on the inexperience of classical scholarship concerning the working of Greek and Roman looms. It is interesting to learn from Mr. Roger Fry that the National Gallery of Helsingfors, at least, is progressive in its estimation of Post-Impressionism, and has purchased works by Cézanne and M. Maurice Denis.

THE new number of *The Journal of the Imperial Arts League*, published on the 15th, shows that this institution is making good and practical progress. The contents include notes on 'Newspaper Reports of Art'; two cases of forgery of drawings and paintings; and a sensible letter from Mr. George Clausen concerning the exclusion of art-dealers from the League, a rule in which we regard it as fully justified.

MR. SIDNEY R. CADOGAN, whose death at St. Andrews was announced last week, acquired a reputation late in life as a landscape painter, especially of woodland scenes, and was for many years, until his health failed, a regular exhibitor at the Royal Academy.

A REMARKABLE exhibition of old masters of the Spanish School is now being held at Herr Heinemann's Galleries, Munich, and a well-illustrated catalogue has been issued. The chief feature of the exhibition is the strong representation of Goya.

AN important exhibition of the works of Ingres will be held at the Galerie Georges Petit, Paris, from April 25th to May 15th, in aid of the Ingres Museum at Montauban. This exhibition is to include 50 pictures, 200 portraits in crayons, &c., and 500 miscellaneous drawings, few of which are known to students to-day.

M. CONSTANT GEORGES GASTÉ, who died recently at Madura, British India, in his 41st year, was a member of the Société des Artistes Français and of the Société des Peintres Orientalistes Français, contributing regularly to the exhibitions of both societies. At the Salon of last year he exhibited 'Le Bain des Brahmines,' a scene at Madura.

MR. EDWARD URWICK writes from the Times Library Club, 380, Oxford Street:—

"Your art-critic, writing of the Senefelder Club's exhibition, regrets the fact that we have no poster shows nowadays. I have recently become a member of the 'Œuvre des Artistes' of Liège, where an exhibition has just been held of poster-work of all nations. I was informed that every assistance would be given me if I could arrange a similar show in England. I should be glad to hear if any of your readers would co-operate in the matter."

Mr. Urwick has, we gather, written Poster Sonnets, one of which to Jules Cheret has been translated into French.

DR. HANS KROEBER has recently brought out a volume on portraits by Botticelli, and reproduces for the first time the fine portrait of a Florentine in the Museo Filungieri at Naples, there exhibited as a Ghirlandaio, but considered by him and other critics one of the masterpieces of Botticelli in this branch of art.

PROF. CARL NEUMANN of Kiel will, it is reported, succeed Prof. Henry Thode as Lecturer on the History of Art in the University of Heidelberg.

THE oil sketch for Rubens's picture 'The Flagellation,' which he painted in 1617 for the church of the Dominicans at Antwerp, has recently been presented to the Ghent Museum. It was seen at the Exhibition of Seventeenth-Century Art at Brussels last year.

LA SOCIÉTÉ DE REPRODUCTION DE MAÎTRES has an important scheme in view for 1911-1912, the reproduction of Pisanello's drawings in the Codex Vallardi (277 in all), which will be of great value to students. Only 150 copies will be issued, and the descriptive and critical text will be written by M. Jean Guiffey of the Louvre, M. Henri Marcel of the Bibliothèque Nationale, and Mr. G. F. Hill of the British Museum.

WE have received from Messrs. Spink & Son a fine sale-catalogue of the 'Numismatic Collections of Dr. Paul Stroehlin, Third Part,' which will be sold at Geneva on February 20th and following days. The catalogue describes more than 35,000 items concerning Switzerland. There are 54 excellent full-page plates which show the value and extent of the pieces offered.

EXHIBITIONS.

SAT. (Jan. 28) Original Etchings by Mr. D. Y. Cameron, Mr. Francis Dodd, and other Artists, Messrs. Connell's Gallery.
THURS. The late John M. Swan's Studies, Drawings, and Bronzes, Private View, Messrs. Colnaghi's Gallery.

MUSIC

THE WEEK.

La Société des Concerts Français.

Two concerts were given by the Société des Concerts Français on Wednesday and Thursday last week.

At the first, in Bechstein Hall, was heard a Quartet by M. Louis Dumas, in which modern influences are felt, but without the vagueness of form or persistent use of harmonies of the neo-romantic school. By gradually grafting the new on to the old a composer best develops his talent. Bach and Beethoven possessed genius of the highest order, yet they both began by following in the footsteps of their greatest predecessors. Schumann tried to go a way of his own, but, to speak only of his pianoforte works, the earliest are the best; the fine Pianoforte Concerto bears a late opus-number, but the first and best movement was already written in 1841.

The Pianoforte Quintet by M. Florent Schmitt performed at Thursday's concert, given at "The Limes," Kensington, offers another instance of mixed past and present. The style may not be homogeneous, but the music is most interesting. The undue length of the Quintet—an hour all but two minutes in performance—was felt, not owing to the actual time occupied, but to excess of development and frequent antielimaxes.

The programmes of the two concerts included attractive songs by Bertelin, Louis Aubert, Dupont, and Maurice Ravel, ably interpreted by Madame L. Willaume-Lamber. Excellent perform-

ances were given of the instrumental works mentioned by the Parisian Quartet (MM. Willaume, Morel, Macon, and Feuillard), except that M. Dumas, M. Feuillard being ill, took the 'cello part in his own quartet. Pianoforte solos were contributed by MM. Maurice Dumesnil and M. Ravel.

STEINWAY HALL. — Mr. Holbrooke's Modern Chamber Music Concert.

MR. JOSEPH HOLBROOKE gave the second of his three concerts of Modern Chamber Music yesterday week. His programme included a masterwork, César Franck's Pianoforte Quintet; a clever, interesting, if at times rather dry, Sonata for violin and pianoforte (Op. 86) by Max Reger; and Mr. Holbrooke's genial pianoforte Quartet in G minor (Op. 21). The performances by the concert-giver and Messrs. Albert E. Sammons, A. Petre, H. Waldo Warner, and Warwick Evans, were very good. M. A. Wysman, a new pianist with excellent technique, contributed solos by Liszt. Miss Mary Grosser was the singer.

QUEEN'S HALL.—Patron's Fund Concert.

THE "PATRON'S FUND" orchestral concert on Monday evening was of considerable interest. It seemed unwise to lengthen the programme by introducing the Brahms Violin Concerto in D, but the very promising rendering of the solo part by Miss Dorothy De Vin deserves mention. In addition to good technique the young lady showed temperament. This work was conducted by Sir Charles Stanford, but other numbers by their respective composers. A Prelude, 'Thalatta,' by Mr. Julius Harrison, is a clever composition; the themes have character, the second and quieter being very expressive. The later portion of the music, however, scarcely fulfils the promise of the earlier. Mr. Felix H. White's tone-poem 'Astarte Syriaca' shows skill and ambition. A sonnet and a picture by Rossetti were the sources of inspiration. The sonnet was printed in the programme book, but, beyond the mood of the opening bars in agreement with "Mystery," the first word in the poem, the spirit of the latter was scarcely reflected in the music. We must also name Mr. Charles A. Rudall's expressive song 'Outward Bound,' and a picturesque setting of Keats's 'Belle Dame sans Merci' by Mr. George Dyson, both with orchestral accompaniment, with Mr. Evelyn Wood and Miss Dilys Jones as interpreters.

Musical Gossip.

M. DE PACHMANN gave a Chopin recital at Queen's Hall on Wednesday afternoon. His interpretations of the composer's music are unique; hence his continued popularity. His conception of the 'Études' is remarkable: they are studies for the fingers, and so they often appear even when played by good pianists; with M. de Pachmann, only the poetry of the music is felt. Next autumn will be celebrated the centenary of

Liszt's birth, but as M. de Pachmann will then be in America, he intends shortly to pay a tribute to the great pianist in the form of a Song Recital, consisting principally of transcriptions of Schubert *Lieder* by Liszt.

THE programme of the second concert of the Classical Society, which took place on Wednesday afternoon at Bechstein Hall, included two works seldom heard. One was the first of two duets for violin and viola written by Mozart for Michael Haydn. They had been ordered by the Archbishop of Salzburg, but Haydn was ill and unable to work. Though quite a *pièce d'occasion*, the music, composed as late as 1783, is delightfully fresh and attractive. The other was Beethoven's early Serenade in D, Op. 25, for flute, violin, and viola, a light, cheerful work, probably composed long before the date of its publication. Effective renderings were given by Miss Marie Motto and Mr. Frank Bridge, assisted in the second by the excellent flautist M. Louis Fleury.

PERFORMANCES NEXT WEEK.

SUN. Concert, 3.30, Royal Albert Hall.
— London Symphony Concert, 3.30, Palladium.
— Sunday Concert Society, 3.30, Queen's Hall.
— Sunday League Concert, 7, Queen's Hall.
MON.-SAT. 'Tannhäuser,' Afternoon and Evening, Palladium.
MON. London Symphony Orchestra, 8, Queen's Hall.
TUES. Mr. E. Schelling's Pianoforte Recital, 3.15, Queen's Hall.
— Miss Gwladys Edwards's Vocal Recital, 8.15, Aeolian Hall.
— Brema Season, Evening, Savoy Theatre.
WED. Brema Season, Matinee, Savoy Theatre.
— Classical Concert Society, 8.15, Bechstein Hall.
THURS. Miss Clara Blackburne's Orchestral Concert, 3, Bechstein Hall.
— Royal Choral Society, 8, Royal Albert Hall.
— Broadwood Concert, 8.30, Aeolian Hall.
— Brema Season, Evening, Savoy Theatre.
FRI. Orchestral Concert for Young People, 3, Steinway Hall.
— Mr. Plunket Greene's 'Interpretation in Song,' 8.30, Aeolian Hall.
SAT. Northumbrian Select Choir, 8, Aeolian Hall.
— Brema Season, Evening, Savoy Theatre.

DRAMA

THE WEEK.

COMEDY.—*Preserving Mr. Panmure: a Comic Play in Four Acts.* By Arthur Pinero.

It is not until the third act is reached in Sir Arthur Pinero's new farcical comedy that a playgoer of any sensibility can really enjoy himself without qualms, and forget amid his laughter certain facts that made at first for his discomfort. Let us at once state what these are, so as to get over the ungrateful business of fault-finding as quickly as possible. In the first place, the basis of the play is just a little unpleasant. Secondly, its characters, nearly all of them, lack heart and human kindness. And the author's treatment, notably as it affects his delightful young heroine, almost deserves to be described as cruel.

"What is a kiss, after all?" cries pretty Josepha Quarendon in a moment of bravado; but the kiss on which the whole story turns she mightily resented. She was affronted, outraged, dashed her hand across her lips, and was heard to question, in the style of Lady Macbeth, whether they would ever be clean again. Doubtless she took the matter a little too seriously. For the kiss came from a feeble sort of reprobate, against whom, except for her unconsciousness of evil, she could well have defended herself. A rake

turned sanctimonious, a querulous and invertebrate Pecksniff, anxious to live up to the ideals of his demure saint of a wife, St. John Panmure takes advantage of the position of Josepha as governess and dependent on his wife's bounty. The kiss began in gratitude, the girl having helped him good-naturedly to get a subject for the sermonette which Mrs. Panmure's piety demands from the reformed profligate at family prayers. It is Josepha's reception of that kiss which determines its quality and decides the attitude of the audience. The poor child feels polluted—so much so that she confides almost immediately in the worst sort of confident she could have chosen. She is so frank and gay, so innocent and high-spirited amidst a crowd of mean-souled people, that we resent the episode which shames her as though it were a personal humiliation. The sequel of her involuntary revelation of the affair is even worse. For she has promised Panmure that she will preserve his reputation, and the ladies of the country-house party, full of the fears of jealousy, bait the charming girl with the ferocity of beasts of prey. When she finally breaks down and dashes to her room in a torrent of tears, we are hardly in a mirthful mood.

It is there—in his choice of theme—that Sir Arthur makes something of a mistake. But if we grant him that and tolerate the set to which he introduces us, and forgive him the distress he causes the sweet-natured Josepha, we can revel in the rollicking humours of the third act, for by that time the girl is her cheerful, lively self again. The scene is the library, and a prim M.P. who knew Josepha's father is dictating a speech on Tariff Reform to his yawning secretary. Suddenly there is a tap on the window, and out of a snow-storm comes the heroine to demand from one or other of the men an act of chivalry. Mr. Panmure, of all men, has been deputed by the ladies of the party to conduct a mission of research and discover the villain who kissed the governess. On both of them refusing to be the scapegoat, she stops outside in the snow till, after vain attempts at completing the speech, they fetch her in and have to let her change her shoes, take off her dinner-dress to be dried, and let down her damp hair before the fire. The irruptions that ensue, the coil of complications which the playwright develops out of his tiny thread of a theme, the altercations, scrambles through doors, deceptions, and game of cross-purposes, culminating in the secretary's avowal of the offence of which Panmure is guilty, baffle any reasonable description, so much do they abound in the spirit of inconsequent whimsicality. We may feel that Sir Arthur has been a little too elaborate with his joke; we may object, if it is not crushing a butterfly on the wheel to hint as much, that he degrades his heroine somewhat in letting her be raffled for finally by M.P. and secretary; but on the whole his sense of fun triumphs over every prejudice, and 'Preserving Mr. Panmure' deserves its success. Stagecraft carries it through—a stagecraft of infinite

resourcefulness which scorns no expedients, whether obvious or subtle, and is perhaps exercised just a little too consciously and ornately.

The stage-management of the piece is worthy of Sir Arthur's reputation in that respect, and his choice of cast is one more proof of his infallible judgment. There are no square pegs in round holes at the Comedy. Miss Marie Löhr, as advised, no doubt, by the author, is a joy all through the play in the part of the heroine. High spirits, humour, innocence, generosity of temper, refinement of feeling—she reveals them all without any kind of girlish awkwardness; she is natural every moment. An admirable foil to her is the Panmure of Mr. Arthur Playfair, given a touch of plaintiveness which redeems the man's hypocrisy and even his weakness for a pretty face; the actor seems to have built up the character with an exact divination of the playwright's meaning. As the tall M.P. and the short secretary Mr. Dawson Milward and Mr. Dion Boucicault play neatly into each other's hands; and no less amusing are Miss Lilian Braithwaite as the other-worldly Mrs. Panmure, Miss Marguerite Leslie as her spiteful sister, and Miss Iris Hawkins as a girl-child of ludicrous precocity. But really there is no member of the company, small or great, who does not contribute his or her share towards a perfect ensemble.

WEBSTER'S NEW INTERNATIONAL DICTIONARY

CONTAINING OVER

400,000 *Defined Words and Phrases,*

2,700 *pages, 6,000 Illustrations,*

IS NOW READY.

NEW FROM COVER TO COVER.

A NEW ACHIEVEMENT IN DICTIONARY MAKING. Never before has so much information been gathered between two covers. Upwards of 400,000 words and phrases are defined in the New International. (A greater number than in any other Dictionary.)

THE NEW INTERNATIONAL re-presents the fruit of ten years' work on the part of a large body of trained specialists and an expenditure of £80,000.

A FEATURE OF SPECIAL INTEREST is the new divided page. By the use of this ingenious device—entirely new in lexicography—it has been made possible to include twice the amount of information which was contained in the old 'International' without materially increasing the size of the volume.

THE 'NEW INTERNATIONAL DICTIONARY' is undoubtedly the clearest, most complete, and most informative dictionary in existence. This sweeping statement can readily be tested by any conscientious searcher who will devote even a few minutes to the examination of the new book.

THE NAME OF "WEBSTER" rests on no external support for its authority. From 1843 to the present day its name has stood for the most authoritative scholarship and painstaking research: until "Webster" and "Dictionary" have become synonymous terms.

On receipt of a post card mentioning 'The Athenæum' Messrs. Bell will be happy to send a Detailed Prospectus with Specimen Pages, describing the 'New International.'

LITERATURE

The Encyclopædia Britannica. Eleventh Edition. Vols. I.-XIV. (Cambridge University Press.)

THE expectations raised by the announcements concerning 'The Encyclopædia Britannica,' so long and carefully prepared by a special staff of workers, are of two kinds. They concern the improved form of the new issue, and the quality and extent of the contributions which it puts before us.

On the first point the fourteen volumes we have received in a neat bookcase are decisive. The use of thin paper makes a remarkable reduction in size and weight—notable particularly in these days, when the crowd of books necessary for any working library which pretends to completeness makes space a matter of vital importance. For the ordinary reader, who does not trouble to verify his references, there may be more book-room, but he will at once recognize the superiority of volumes which have limp bindings, and will remain open at any given point. These material advantages are apt to be neglected nowadays by producers of books, especially illustrated books; but constant readers know well the comfort of a light volume, whether it is a work of fiction or of learning. As we hope frequently to use the 'Encyclopædia,' it is a satisfaction to find that it is not an indispensable mammoth. It will go into the bag we carry as well as the shelf of our library.

The articles are the work of experts. That is the general expression, which we believe to be justified by the array of writers already exhibited to the world in various ways. But there are various sorts of "experts." In the world of journalism, and even of books, the flood of writing has produced a very moderate standard of literary acquirements. A man may, and constantly does, claim the title of "expert" with satisfaction to himself and profit to those who publish his writings. Yet to the other man who really knows, he is fulfilling the function of the one-eyed among the blind—which is, to dominate them. He has his reputation, and only, perhaps, in the quarters where erudition lies hid, or seldom raises its voice, is he properly estimated.

Never was such a sudden scholar made

is the half-admiring reflection of the real authority, who, in Nietzsche's phrase, can boast of "a calling, but not a bawling." This second sort of expert, for whom accuracy is at once an ideal and an ordeal, is rare, and needs finding out, or, as was said of a learned Oxford don, excavation. England cannot always supply him in spite of her Universities; Germany, the United States, and a dozen other countries may have to be called in, for true scholarship has no boundaries.

It is this difficult business of discovering the right man to which the editor of the 'Encyclopædia' has directed his special attention, and, so far as we can judge without detailed examination, with marked success. But Doctors of Letters and Philosophy as well as of Medicine are apt to disagree, and an unqualified assent to the results of a specialist in any subject is not to be expected. No master, again to quote Nietzsche, wants his brilliant disciples to agree with him; but the volumes before us at least present a view worthy of all consideration, and in some cases the results of research which has not reached the eyes of an incurious public. The sending for criticism of groups of articles representing one subject has begun, and will be a great convenience to editors.

So far we have had in mind the sort of learning which is technical, and reaches the multitude, if at all, in a ready-made summary which earns the scorn, and frequently justifies the disregard, of the scholar. Much else, of course, is looked for in an encyclopædia, and much is given to us; the editor has, for instance, thought it well to include biographies of the living, and we find a crisp account of celebrities so recently eminent as Mr. G. K. Chesterton. Miss Marie Corelli gets some forty-eight lines of appreciation, which conclude as follows:—

"When she went to live at Stratford-on-Avon, her personality, and her importance in the literary world, became further allied with the historic associations of the place; and in the public life of women writers her utterances had the *réclame* which is emphasized by journalistic publicity. Such success is not to be gauged by purely literary standards; the popularity of Miss Corelli's novels

is a phenomenon not so much of literature as of literary energy—entirely creditable to the journalistic resource of the writer, and characteristic of contemporary pleasure in readable fiction."

About the same space is devoted to the distinguished scholar Franz Delitzsch, and his son, "the author of many books of great research and learning."

The 'Encyclopædia,' we think, supplies more than we might reasonably expect in view of the numerous aids to biography extant, which in these days of hustle and self-advertisement tell us of a man's "life-work" long before it is finished. Still, it is an advantage to have a judicious survey, brought up to date, of the prominent figures of our time, for experience assures us that details of the last few years are just those which are most difficult to procure promptly.

Chance more than design must prevail in the rapid study of so vast a store of information and criticism as that before us. We give, however, some of the results of our first investigation.

We have been struck with the abundance and pertinence of the illustrations—for instance, under 'Arms,' 'Amphitheatre,' and 'Greek Art'; and we find notices not only of 'Art Sales,' but also of 'Art Societies' and 'Art Teaching.' The classical specialist might discover matter for disagreement in the article on 'Apuleius,' but he will admire the command of detail under 'Apulia,' for the article begins: "sometimes Appulia in manuscripts, but never in inscriptions." Anthropology, Animism, and folk-lore have evidently been treated with great care, which is all the more satisfactory as there were complaints of neglect in these subjects in earlier editions. We are pleased to see that W. J. Thoms gets his due credit for the invention of the word "folk-lore," and look forward to an interesting discussion arising out of the dictum that, in spite of the championship of Mr. Andrew Lang and others, theriolatry does not necessarily mean totemism. Everywhere the Bibliographies are abundant, and this is a feature of the work which, though it makes little show, is of the utmost value for the student. The bibliography of France, for instance, occupies more than two pages of small print.

There are plenty of sportsmen in the world as well as students, and they will find their interests not neglected. There is, for instance, more than half a page on 'Hammer-throwing,' with "records" duly added; while 'Horse-racing' has already supplied a friend of ours with a detail of the sport not given in other available books of reference. There are short lives, too, of two notable figures of the turf—Apperley, the "Nimrod" who was the father of sporting journalism, and Sir John Astley, the cheery "Mate" of many a reminiscence. As the latter gentleman is given, we should have expected to find a separate article awarded to the great jockey Archer; but that heading is monopolized by the dramatic critic still with us. A cruel sport which has interest for the antiquary

finds its place under 'Ducking and Cucking Stools.'

The odd words which the man who is tolerably informed does not know are, perhaps, the things for which he goes most frequently to a book of reference. Here the new guide is strong. We find the psychological 'Apperception,' the geographical use of 'Divide,' the commercial sense of 'Drawback,' and the geological of 'Greywacke.' One page gives us light not only on 'Nell Gwyn,' whom everybody knows, but also on 'Gwyniad,' the Welsh name of the white fish of Lake Bala. Another affords enlightenment as to 'Hachure,' 'Hacienda,' and 'Hackberry,' the last an American member of the Elm family. Finally, the English reader who is worried by a reference to a 'Hysteron-Proteron' will find it explained and a quotation given of a celebrated example from Virgil. In the last volume we hope to see 'Zeugma' similarly elucidated, for, in spite of the Board of Education and the spirited efforts of our fellow-journalists, we still believe in grammar, and think some of the remarks of Dr. Sayce concerning it in Vol. XII. would make a good subject for disputation.

Memorials of the Counties of England.—*Old Leicestershire*, edited by Alice Dryden; *Old Lincolnshire*, edited by E. Mansel Sympson; *Old Durham*, edited by Henry R. Leighton. (Allen & Sons.)

MISS DRYDEN, who has already dealt successfully with three other counties in this attractive series, has been exceptionally fortunate in bringing together a number of valuable articles concerning the past history of Leicestershire. Although these essays are of varied quality, there is not a single trivial one amongst them. The only paper that might have been easily improved is 'Vestiges of Paganism in Leicestershire.' It is, perhaps, of a more substantial character than some which have appeared in other volumes under the heading of Folk-lore, but is hardly worthy of inclusion, judged by the standard of its fellows.

The editor has done well in the introductory paper, entitled 'Historic Leicestershire,' in linking the various essays, and briefly bridging over the main gaps in the sketch of the county. Miss Dryden also writes well on the Greys of Groby and Bradgate, whilst another writer contributes a good account of the Beaumonts of Grace-Dieu. We note a paper on Belvoir Castle, and another on the Great Civil War, whilst Mr. Gotch—the most competent of authorities on such matters—writes pleasantly on the few ancient houses of first-rate interest which the county possesses.

An unusual amount of attention is paid to pre-Norman development. Mr. Peake writes in a convincing and original fashion on the pre-historic roads which can

be traced throughout Leicestershire; and Mr. Horwood supplies sections on the county in prehistoric, Roman, and Anglo-Saxon times. Mr. Horwood's essays on these three periods, though carefully compiled, are by no means equal in value to the admirable articles on the same subjects which appeared in the first volume of the 'Victoria History of Leicestershire,' published in 1907.

The two most valuable papers of this collection remain to be noticed, both of considerable worth to ecclesiologists and almost entirely original. Mr. W. S. Weatherley supplies a full list and description of the tombs and monuments with sculptured effigies up to the seventeenth century. The county is exceptionally rich in such sepulchral records; many (notably those of the Earls of Rutland at Bottesford) are of high historical and artistic value. There are other striking examples, of varying date, at Ashby-de-la-Zouch, Ashby-Folville, Castle Donnington, Coleorton, Dalby-on-the-Wolds, Foston, Gaddesby, St. Margaret's, Leicester, and Stapleford. This article is excellently illustrated.

The other remarkable paper, entitled 'Leicestershire Churches in the Time of Charles I.,' by Mr. A. Percival Moore, Registrar of the Archdeaconry of Leicester, supplies an unusual amount of information—mostly of a sorry and unhappy nature—with regard to the fabrics of the churches from the documents in his custody. In the Archdeaconry Registry are preserved records of inspections, commonly called *lustrationes ecclesiarum*, between the years 1619 and 1639. Only in two cases—namely, Theddingworth in 1630, and Kirby Mallory in 1637—did these visitations produce laudatory entries concerning the condition of fabrics or fittings; otherwise the entries form an almost continuous record of omissions and defects. The lay impropiators were worse in their disregard of decency in the chancels than were the churchwardens in the naves. In many a church the altar-table is described as old and indecent. At Witherley "the pulpit is very indecent, being the hollow trunk of a tree." At two churches there was no surplice, at Thurnby it was "old and much torne," whilst at Market Bosworth this vestment was *nimis angustum et strictum et valde inconforme*. In 1627 articles were exhibited against the two churchwardens of Saddington, Thomas Horton and Henry Clerke, for omitting to present at the archidiaconal visitation a variety of enormities, including the following:—

"The glasse windowes of the said church being broken soe that the starlings came in thereat and defiled the church and dinged on the minister's head and on the book as he was reading of divine service there; the west dore of the Belfrie being out of repaire soe that the winde and weather did beate and blow in thereat soe violentlie that the minister was not able to read service in his seat by reason thereof. The dogges suffered to be in Church in tyme of divine prayers and with their noise disturbing the

same, and Alice Horton y^{or} wife being a comon sleeper in the Church in service and sermon tyme."

Dr. Mansel Sympson, a well-known and most competent antiquary of Lincoln, is responsible for the volume of this series which deals with Old Lincolnshire. With the aid of several excellent coadjutors, a comely and valuable work has been produced. This great county, the second largest in England, is somewhat destitute of grand or impressive scenery, and is not remarkable for remains of monasteries, castles, or great houses. It is, however, distinguished by its parochial churches, rich in the diversity of their architectural features or antiquity, and in the interest of their fittings. The volume opens with fairly comprehensive articles on Lincolnshire in prehistoric and in Roman days, but by far the greater part of its pages is concerned with ecclesiological matters. Dr. Sympson has been fortunate in securing an account of the extremely beautiful Early English chapel of Kirkstead from the pen of Mr. Hodgson Fowler, to whom the county is indebted for many painstaking and conservative restorations of its church fabrics. Mr. Crowther-Beynon writes well on the various churches of the picturesque town of Stamford; Mr. Jebb of Boston and its church; Mr. Watkins of the church of St. Andrew, Heckington; the editor of Tattershall church and castle; and Mr. W. S. Foster on South Lincolnshire churches in general.

But of all the church articles the palm must be given to the contribution by Mr. A. Hamilton Thompson on the Saxon edifices of the county. He deals very cautiously with the exact date of many of the fabrics usually accepted as pre-Norman, holding that most of the so-called Saxon churches of Lincolnshire represent a late state of Saxon art, open to Norman influence, but preserving a distinctly national tradition. Some of these buildings he regards as undoubtedly earlier than the Conquest, whilst others are possibly later, though belonging to a type of art previous to the general spread of Norman influence, and therefore fairly entitled to the descriptive term "Saxon." Prof. Baldwin Brown roughly estimates that Lincolnshire possesses about two score churches containing much "pre-Conquest work"; it will probably be henceforth safer, with regard to about half of these, to leave the question of pre- or post-Conquest alone, and to follow Mr. Thompson in speaking of them as of Saxon style. At any rate, Mr. Thompson's detailed descriptions and arguments are well worth careful consideration. Excellent illustrations are given of St. Peter's, Barton-on-Humber, the interior of St. Mary's, Stow, and the church tower of Marston before restoration.

There are also two first-rate papers dealing with the interiors of churches. The Rev. G. E. Jeans, whose general knowledge of Lincolnshire churches is unequalled, writes well, but briefly, on the sepulchral brasses, and fully establishes the great value and interest of those

extant, which are comparatively few. The editor contributes a delightful, though somewhat slight paper on the 'Mediaeval Roodscreens and Roodlofts in Lincolnshire Churches,' a subject to which much attention has recently been paid. Good plates are supplied of the pulpits of Lincoln Minster and Tattershall, and of the roodscreens of Sleaford, Cotes-by-Stow, Winthorpe, and Middle Rasen.

With one exception, namely, a poor article on 'Folk-lore,' consisting of well-worn matter common to much of England, the varied essays in the Durham volume are of distinct merit, and for the most part well illustrated. The editor contributes an attractive and well-written account of the 'Castles and Old Halls of the County.' Here it is incidentally mentioned that a modern soldier and a modern poet, both of deserved repute, were natives of the county. Ford Hall was the birthplace of Havelock, whilst Elizabeth Barrett Browning was born at Coxhoe Hall in March, 1806.

There are various papers, all good of their kind, on the priories of Wearmouth and Jarrow; on the parish churches at large; on the monumental inscriptions; and on Finchale Priory. The last of these, by Mr. Tavenor-Perry, is abundantly illustrated by his own facile pen. The great subject of Durham Cathedral has been reserved for one of the oldest and most experienced of our antiquaries, Canon Greenwell; whilst another able article on the general history of the County Palatine is written by Dr. Gee, who has won his spurs as a careful historian.

A paper on a difficult theme, which abounds in pitfalls for the unwary and careless, is written by Mr. W. Morley Egglestone, on 'Place-Names in the Durham Dales.' This is the title given to the essay in the contents, but on the headlines of Mr. Egglestone's actual pages it is clumsily transposed into 'Name-Places in the Durham Dales.' The place-names of this county are strong both in Scandinavian and Saxon words. The writer has dealt with them for the most part in a careful and scholarly fashion. A study of these names divides Northumbria into two provinces, as it were—Deira, the district of the Danes, and Bernicia, the district of the Angles, the river Tees forming the dividing line. The Norse *beck* and the Anglo-Saxon *burn* mark the line with emphasis between these districts in the upper reaches of the valleys of the Wear and the Tees. Almost all of the English rivers have retained the names given to them by the Celts, and the Celtic roots of *avon*, *dur*, *esk*, *rhe*, and *don* are frequently repeated. The Norwegians are responsible for planting in this county, and elsewhere in the North, the word *gill*, signifying a mountain chasm or fissure in the hillside. *Cleugh* is from the Anglo-Saxon *clough*, a cleft down the side of a hill. *Sike* is a common local name, signifying a marshy hollow; it is from the Anglo-Saxon *sic*, but has its Icelandic equivalent *sikje*, and in Norse *siki*. The mingling in Durham of terms of varied

origin is remarkable. Thus in the one parish of Stanhope there are, in round numbers, ten *gills*, thirty *cleughs*, and seventy *sikes*. It is interesting also to note how successive settlers reduplicated names of equivalent meaning through lack of understanding their predecessors' title. Thus we find such curiously inter-mixed place-names as Rogerley-Gill-Burn, Willow Green-Burn-Gill, and Stock-Gill-Cleugh.

Amongst curious and unexpected bits of information in this interesting article the following may be cited:—

"One of the most striking instances of the Norwegian element in Weardale is what was, fifty or sixty years ago, the 'national' winter sport of the dale. This was *skeeing*, the national sport of Norway. Within the memory of a few of the oldest inhabitants, no snowy winter passed in Weardale without this sport being practised to its full extent."

Regarding the whole story of the wanderings of St. Cuthbert's shrine, and its eventual settlement at Durham, we remark that it is wrapped up with the question of sanctuary rights, which prevailed far more in this county than in any other part of England, with the possible exception of a small circuit round Beverley. But there is no reference to the subject in these pages, with the exception of a drawing of the often illustrated "sanctuary knocker" of Durham Minster.

From Hausaland to Egypt, through the Sudan. By H. Karl W. Kumm. (Constable & Co.)

THIS volume of 324 pages and six unpaginated plates weighs 3 lb. There is really no excuse that we can see for printing it on such heavy paper; for, with the exception of the six beautiful coloured plates of butterflies and moths, the photographs which occupy nearly a quarter of the pages are not of great merit, and scarcely deserved such a fine surface. The writing corresponds to the material: it is ponderous. Yet we are not disposed to class the book among the numerous journals of travel in the Sudan which threaten to become a burden to reviewers. The attraction is certainly not in the manner of telling nor in the matter told, for there is a desperate sameness about savages when cursorily described and photographed by hurried explorers. We may make an exception in respect of the repulsive beak-lipped women of Sara-Kabba, whose mouths, according to their tolerant spouses, were thus distorted in order to ward off the attentions of slave-drivers.

What compels admiration is the "grit" of the man. He is a missionary as well as a doctor of philosophy, a sportsman, and a naturalized Englishman, it seems, and these facts may account for much. His immediate object in 1908 was to continue his work for the Sudan United Mission by taking out and establishing

seven missionaries, visiting all the mission stations, and founding the Lucy Memorial Freed Slaves' Home at Rumasha (named in memory of his wife), near Lokoja, in Northern Nigeria. All this he successfully accomplished. But he had a further design. The chief object of the Sudan United Mission is to counteract the advancing Mohammedan propaganda in Central Africa, and with it the slave-trade. Dr. Kumm is as deeply impressed as Mr. Putnam Weale with the danger of a great Mohammedan revival in Africa, and sees its best preventive in the Christianizing of the pagan tribes. With a view to surveying the field of possible work in this direction, he determined to try to cross Central Africa on the border between the Muslim and the pagan zones, from Northern Nigeria, across the north of the German Cameroons, through the Shari-Chad territory or French Equatorial Africa, to the Anglo-Egyptian Sudan. It took him nearly a year, but in December, 1909, he reached Khartum without any serious illness or any fighting. He went through unopened country; cut his way through unknown forests and tall, stiff, knife-edged grass; bridged rivers declared to be impassable; kept his carriers together in spite of hunger, fear, and the torments of the tropics; and all this he did in the rainy season. His modesty and his lack of literary fluency will very nearly succeed in hiding this tremendous feat from the casual reader; but if one adopts the traveller's own polyglot recipe for managing the natives, "Patience, Geduld, et la patience," one will find few finer examples of cool daring and splendid endurance than in Dr. Kumm's record.

The bridging of the Kotto by means of felled trees lashed together with strong creepers (Liana) was the most critical operation of the whole journey, for the explorer, after conveying his party (which included a number of starving Mohammedan pilgrims) over to an island, was in great danger of finding further advance cut off. The river rose in the night and washed away the bridge by which he had crossed to the island; it was impossible to retreat, his people were sick, the food supply was exhausted, and they were at least seven days' journey from the nearest town of the Anglo-Egyptian Sudan; and no trees on the island were big enough to reach across to the eastern bank. "The outlook was cheerless indeed; about the most hopeless I ever had to face." To have faced it and got across is one of the imperishable deeds of the explorer. His narrative becomes exciting in this crisis, and we follow him breathlessly as he staggers on with his starving followers through the tropical rain:—

"My helmet became shapeless pulp; not a thread of clothes was dry; all the boxes were clay-coloured; the bush path had turned into a brook; the blades of the 12-foot long grass, sharpened by the drenching water, cut like knives into one's hands and arms. Slowly our poor animals toiled onwards, climbing in and out of elephant holes full of water. Every few steps my poor beasts fell, and I tumbled off alternately, first on

the right and then on the left, into the ditch. . . . What in the world did I come to Central Africa for ? . . . All the provisions had gone. All the flour was eaten, and we were yet some 200 miles from towns and posts that appeared on the map as British. . . . It was several weeks since we had seen a human being not belonging to our caravan."

Dr. Kumm had cut a new path from Fort Archambault, the Ultima Thule of European civilization in French Africa, through a country which, if traversed before by a French lieutenant, had never been mapped or reported, to Keffi Genji, and his arrival in British territory was dramatic enough to crown the terrible exploit. He was received by the muzzles of a dozen rifles pointing at him out of a zariba. He rode up, unarmed, with a boy carrying the Union Jack behind him. "Are they British? So are we."

The remarkable point about this journey, apart from its risks and sufferings, is the extraordinary skill with which Dr. Kumm managed not only his own followers (Hausas, Senegalese, Sanusi, &c.), but also the various tribes whose country he traversed. Of his native servants and carriers' devotion and endurance he writes with the highest praise, but he must be a born leader to win such fidelity in the face of such privations. His peaceful method of dealing with possibly dangerous tribes contrasts favourably with the hectoring ways of some earlier explorers, and the result was seen in his amicable reception in so notoriously fanatical a centre as the large Fulani town of Marua, or at Ndeli, the capital of the formidable Mohammedan sultan (though a tributary of France) who is known as "the Sanusi" *par excellence*, and who rules the territory which is the last happy hunting-ground of the slave-trade in Africa (if Wadai has finally fallen), and where virtually the whole population consists of slaves. Although the chief ruler of the Sanusi sect, the Sultan of Ndeli does not appear to possess the sanctity of the Sayyid Mohammed of Jarbub or his son el-Mahdi of Kufra, to whom he is not related by blood. He received Dr. Kumm kindly, advised him as to his route, and gave him a guard of his own men to reinforce the French escort which had accompanied the traveller from Fort Archambault.

Few English readers realize the marvellous advance of the French dominion in Central Africa, or the wide conquests which have been made by mere handfuls of French soldiers pitted against thousands upon thousands of natives. Dr. Kumm gives a brief résumé of this extraordinary advance, and the numbers opposed in the various encounters seem incredible. The differences between the English, French, and German administrations in Central Africa are thus summed up:—

"In this all three agree, though the British and German administrators lay, perhaps, more emphasis upon it than the French, namely, that the autocratic form of government is the most suitable for primitive races. Forced labour has been largely abolished in the British and French spheres, but is recognised and employed freely in

German Adamawa. The payments made to natives are high in the British territory, lower in German, and lowest in the French regions. In roads and river communication the Germans far excel; then come the British, and lastly the French. The French are most anxious to retain the pagans as pagans, and not let them become Mohammedans. As a consequence the pagans in the Sari-Chad Protectorate have the greatest confidence in their white administrators. This is not so in German Adamawa nor in Northern Nigeria, where the intelligent and half-civilised Moslem has secured considerable prestige, and is in many cases preferred by the Government official to the naked bush pagan. As a consequence, the French have more trouble with the Moslems, and the British and the Germans more trouble with the pagans, in their respective territories."

The account of the German administration is not pleasant reading. We are informed that the Germans do not allow natives to learn German, because they would understand what their superiors were talking about; that they employ forced or slave labour habitually; that they tax Muslim pilgrims, and thus compel them to take an exhausting route to avoid the tax; and further, that, while in Northern Nigeria it is "bad form" for a European to have a native mistress, and not usual in the French territories, "it is the rule in Adamawa," where half-castes, with too often the vices of both races and the virtues of neither, abound. If the French condescend to such liaisons, they import into them the politeness of their nation:—

"The sergeant at Dumraou is married to a native young lady, who seems to rule in the house, and for the first time I saw a white man turned out of his easy chair by a coloured girl, who appropriated it with the greatest nonchalance, and Monsieur le Sergeant seemed quite satisfied with the footstool!"

Dr. Kumm's toleration is among his admirable qualities. A missionary vowed to resist the progress of Islam, he appreciates the devotion of Muslim pilgrims, and gives them his protection and succour; and he rides into British territory escorted by Sanusi guards. He is full of sympathy and affection for the natives, and compassion for his "poor beasts," who of course suffered terribly, not only from exhaustion, but also from the attacks of the tsetse fly. But he has no sympathy whatever for the elephant as "poor, innocent, hunted game." He has been hunted himself by elephants, and knows of a herd of 300 or 400 who are the most dangerous man-hunters between Bor and Gondokoro, the constant terror of the Dinkas. One chief, he remarks, always takes the precaution of sending an exploratory old woman ahead of him on his journeys that the elephants may experiment *in corpore vili*. There is plenty of big-game shooting in the book, for which Dr. Kumm stayed two months at Fort Archambault—rather imprudently, in view of the approach of the rains. There are also numerous tables of roads, distances, villages, tribes, meteorological observations, lists of specimens brought home—notably the fine collection of Lepidoptera

—some valuable vocabularies, and a curious series of drawings of the distinctive face-cuts of different tribes. The chapter on 'The Land of Cush' was apparently written in ignorance of Dr. Budge's two massive volumes; and Lieut. Cumin's explorations on the Bahr el-Arab and Fabor were probably published too recently for notice in this book, but it is strange that Dr. Kumm does not seem to have heard of that industrious explorer. Nor is he well informed in his chapter on ethnology. We are not sure, by the way, that the author is quite safe in regarding German as a learned language in which to obscure anthropological observations. The maps are good, and the Index.

History of Ireland. By the Rev. E. A. D'Alton. 3 vols. (Gresham Publishing Company.)

WE have already noticed the earlier volumes of this ambitious work, which now appears in a handsome and complete form, bringing the subject down to the present day. It is really in six volumes (each of which is called a half-volume), and is adorned by many good photographs of modern politicians, and bad pictures of ancient worthies, drawn from imagination.

What we have now to consider is the third volume, which is new, and which covers the period after 1780. It is, of course, a highly controversial period, and for every year of it there are authorities conflicting bitterly with one another. We may repeat what we said in reviewing the second volume regarding the author's qualifications. He is diligent, though he has missed some valuable authorities, and skipped some interesting problems. He makes every effort to be fair; he sees and notes the vices of his people. From the days of incessant border-wars and cattle-lifting among the savage chieftains down to those of 1798, there have always unfortunately been Irishmen ready to play false to Ireland, with the natural results. All this the author chronicles and deplures, yet, in spite of his efforts, his book is but a partial and one-sided account, which bears on every page the evidence of being composed by an Irish Roman Catholic priest. Ireland is to him Catholic Ireland; the brilliant Protestants it has produced come in only as accidents. They are strangers to him in religion, and therefore in race, and the great things they have done for Ireland are noticed only occasionally and by the way. Thus the rise and progress of Trinity College, Dublin, a notable factor in Irish history, afford him no interest. He misdates the foundation; he never mentions the efforts of the Jesuits to counteract its dangerous power; he imagines Thomas Ingram, who wrote a book defending the Union, to be one of its professors; he speaks of the college in recent days as the hotbed of bigotry and intolerance. Its greatest sons, Berkeley,

Goldsmith, William Hamilton, are hardly mentioned. The large effect of Irish prose writers on the world is ignored, while William Carleton, Thomas Davis, and the like are lauded as the flower of Irish literature. Lecky is indeed an exception, and is to our author the greatest historian of the age; but that is because he takes the sentimental view of Irish miseries and grievances, and controverts the advocates of the Union with England.

Thus the characters of men and of classes are in this book determined altogether by their regard or disregard of Catholic interests. The foul blot on the Union was that the emancipation of the Catholics was not made part of it. In this Pitt was, of course, much to blame. But to infer that therefore duplicity was the leading feature of that great man's character is absurd. Still worse is the estimate of Castlereagh. Because he carried the Union by unscrupulous means, though he did nothing that other English politicians, such as Walpole, would not do, he is drawn as a ruffian with a black heart, loaded with every vice, without one redeeming quality but a handsome face and suave manners. It is absurd to say that a man who maintained himself in the highest position among English public men, and was even entrusted with national interests at the Congress of Vienna sixteen years later, the friend of Pitt and Wellington, was a monstrous villain of this sort. Such a judgment stamps the writer's want of perspective clearly.

He shows a like narrowness regarding classes. Thus the landowners of Ireland are depicted throughout as a set of tyrants, squeezing the very lifeblood out of their wretched tenants, without a spark of indulgence or pity. He admits, however, that there were exceptions here and there, and good men even among landlords. He has put the thing exactly the wrong way. The majority of the Irish landlords were easy-going, charitable, but not thrifty people. They were kind to their tenants, and there existed much affection between both. In the great famine time no class showed more active charity and self-denial than the landlords did. Yet because there were a few miscreants who tried to screw their rents out of the starving people—possibly they were starving themselves—these cases are quoted as specimens of the atrocities of a class. Mr. D'Alton is right in saying that as regards evictions (not as regards other tyranny) the period 1850-70 was the worst. But that, as he elsewhere states, was owing to the disappearance of the old considerate and charitable landlords, when their estates were bought by land-jobbers as a mere speculation, and all traditions were ignored. Gladstone once observed to the present writer that the omission of any clause saving the existing tenants, when land changed ownership under the Encumbered Estates Act, was the worst blot in that legislation.

The landlords have been tried and found wanting; they will presently, perhaps,

become extinct, and some will regard their fall as the just punishment of their want of thrift, their inability to trust any leader, and their failure in public spirit. But there is no need to trample on the fallen adversary, and represent the whole flock in the colours of its blackest sheep. Moreover, some of those reputed the worst were shamefully maligned. The late Mr. John Adair had in his possession, and used to show his friends, a document signed by the neighbouring Catholic priests, thanking him for having been, under God, the means of rooting out the nest of villains that occupied Derryveagh. It is not our duty here to vindicate his act, but the facts of the case were either concealed or distorted in the authorities used by our author.

We might say the same things regarding the author's estimate of the Protestant Irish Church, once established by law. Here are his words:—

"And thus, after a long and inglorious career, a mischievous and hated institution came crashing to the earth [in 1869]. Sheltering every abuse, sanctioning every oppression, the tool of tyranny and the apologist of corruption, it fell amid the execrations of millions of Irishmen whom it had so long impoverished and enslaved."

The reader would never suspect that this Church, though it wholly failed as a missionary Church, and remained the creed of the minority, counted among its numbers (especially in the nineteenth century) many pious and active Christians, many eminent writers and preachers, many rectors who were the kindest of landlords, and whose incomes were spent among the Catholic poor; moreover, many who brought up brilliant sons to become the stay and the ornament of the British Empire. Mr. D'Alton need not go far to find outbursts as violent against his own creed. France and Spain will supply him with plenty. In no case can we call estimates of this sort fair history.

Such are the difficulties in the way of an honest and sober man if he has been brought up in an atmosphere of prejudice. He may do his best to tell the whole truth, yet his prejudices overmaster him, and he misjudges his opponents. The matter would not be of much importance anywhere else, but, in a history which professes to give an account of life and thought in Ireland down to the present day, the forgetting or ignoring of what Irish Protestants have contributed is a capital defect. It has often been said with considerable reason that a really impartial history is not to be found, or if it is, it must be the dullest of books. We want colour in every story, and the hues are contributed by the likes and dislikes of the author. But if so, the reader who desires the truth must read the other side; he must read the work of Thomas Ingram explaining how the Union was carried, or the much more moderate book of Froude on the English in Ireland. If one side is inaccurate, so is the other.

Turning to smaller points, we think the author underrates the current of opinion

in favour of the Union all through the eighteenth century. He knows only the "obscure names of Madden and Dobbs." In the first place, Madden was perhaps the most prominent practical Irish patriot early in the eighteenth century; he founded the famous Dublin Society, and devoted his very public life to the development of Irish industries. But there were besides many pamphlets to which we could refer the author, and then there was Arthur Young. Again, George IV. landed not at Dunleary, but at Howth. The Plunket family are not to be called Plunketts, nor should Docwra be printed "Dowcra." The author thinks the fame of Bishop Doyle (of Carlow) "exceeded the fame of any Irish Churchman since the days of St. Malachy." What about Ussher and Bedell, and Reeves and Todd, not to mention Salmon, and other recent men? Are we to confine the term "Irish Churchmen" to Roman Catholics? There are phrases of this colour all through the book. Trinity College, for example, is called "aggressively Protestant, though it derives its income from the plunder of Catholic lands." It may be asserted that there is not one acre of its lands taken from a Catholic because he was a Catholic, and handed over to the College because it was Protestant. The larger part comes from the confiscation of O'Neill and O'Donnell in Ulster by James I., and these princes were attainted not because they were Catholics, but because they were believed to be rebels plotting against the Crown. Their creed was not made a charge against them. It may be true that, had they been Protestants, they might have avoided their condemnation; and so there is an element of plausibility in the statement. But how far is it from sober and impartial history!

We will not follow the author into his account of recent politics and politicians in Ireland. Here he is confessedly on ground so debatable that hardly any statement or estimate of character is undisputed. He calls men "honest" whom their opponents in Ireland quote as specimens of the very opposite. But he is certainly far more careful of his blame. His judgments of the living are generally kindly and generous. No leading man was less in sympathy with him (strange to say) than Cardinal Cullen, but he gives the Cardinal full credit for good intentions. So we find in every page the writing of a scholar and a gentleman. His long training has given him a bias which is beyond cure. Nevertheless we have read his book with great interest and not without sympathy.

NEW NOVELS.

The New Machiavelli. By H. G. Wells. (John Lane.)

It is impossible to judge 'The New Machiavelli' by the ordinary criteria of fiction. The author has not designed it as a novel, but intends it to be the history of one man's development among

the social, political, and ethical forces of his time. The narrator is Remington, whose father was a science teacher, and whose education was effected at a Public School of sorts and at Cambridge. It is probable that readers in an ordinary way will find the earlier chapters the most interesting. Certainly they exhibit Mr. Wells in his most incisive and comprehensive mood. There is a good deal about education in this part of the book, and we are re-introduced to many of the author's familiar opinions and theories. He can touch nothing without producing some new points of view, and starting doubts and wonders and speculations in the reader's mind.

In a way this may be said to be Mr. Wells's chief service to his generation. He ploughs up so much that it is impossible any field may remain fallow for the spectator. It is, however, where the narrative, which is virtually an introspective autobiography by Mr. Remington, reaches the political arena that the author would have us centre our interests. He introduces political and social personages as types, though in some cases it is not difficult to put one's finger on the prototypes. No one, for example, could doubt the identity of Evesham, to whom Mr. Wells pays curiously interesting homage.

It seems to us that Remington in his political career is too much an abstraction. He talks, he ruminates, but he does not act. Mr. Wells is understood to be painting here a figure outside his own political views, for Remington begins as a Radical-Socialist, and ends as a Unionist Tariff Reformer. Yet undoubtedly Remington sometimes speaks with his author's authority. We find Mr. Wells's notion of the source of aristocracy as developed in an earlier volume by him, and also the theory of "endowment of motherhood" to which he is known to subscribe.

Altogether, the political part is a strange medley of acute observation, imagined theory, and vague discontent with the crudeness and insincerity of modern parties. But the ideas thrown about in it are wonderfully stimulating. Then comes the crisis, the sexual crisis, which constitutes the tragedy of the book. This is virtually the only part of it which is entitled to the name of "story"; and the truth is that we have not been sufficiently interested in the man and the woman to care what happens to them. 'The New Machiavelli' is essentially a book of theories, of views, of pictures, of speculations.

Young Life. By Jessie Leckie Herbertson. (Heinemann.)

THIS seems to us a misleading title, for the action of the novel centres less in "young life," as represented by a girl of mysterious origin and personality, than in the mature woman who, from motives rather of benevolence than sympathy, becomes her guardian. The story contains little in the way of incident, and depends for its

interest mainly on a psychological analysis of the two female characters mentioned and four belonging to the opposite sex. Of the latter, at least two are, in varying degree, undesirables, and their evil influence threatens a moral catastrophe to the matron and a disastrous marriage to her ward; but both dangers are averted, and all ends more or less happily.

Down our Street. By J. E. Buckrose. (Mills & Boon.)

A TENDENCY to cynicism having been noticed in her more recent books, Mrs. Buckrose seems to have determined to correct it by a rather free indulgence in sentimentality. "Our street" is in a Northern seaport town, and the energetic wife of a sombre clerk in a butter importer's office has an irrepressible good-humour which never fails to dispel its gloom. Occasionally her cheeriness has almost a Dickensian flavour. Some of the minor characters in the story—rather curiously assorted folk they are to reside in the same thoroughfare—are drawn with a nice satiric touch, but the smiling, sentimental, eccentric figure of the wife mentioned above predominates, and, unfortunately, lacks the quality of life. She is a vehicle for Mrs. Buckrose's humour and observation—not a human being capable of uttering the shrewd and amusing sayings put into her mouth. The book is a collection of characters and incidents rather than a story, and not on the same level of achievement as 'The Wood End' and 'The Little Green World.'

Tillers of the Soil. By J. E. Patterson. (Heinemann.)

MR. PATTERSON is one of those few novelists who know whereof they write and can tell their tale in good sound English. His book, as the title indicates, is of the soil, and in some quarters he will be likened to Mr. Thomas Hardy, from whom he differs in many directions. Mr. Patterson handles "a slice of life," and, though comic and tragic, eschews the forms of comedy or tragedy. His book is a series of pictures, a gallery of well-drawn characters (from which we except an artificial American, who is rather more symbolic than human); its point of unity is the rustic atmosphere which he creates. This atmosphere, too, is of to-day—of the age of small-holdings, intensive agriculture, co-operative farming, and the new attack upon the old feudalisms. Mr. Hardy would never have referred to the charges extorted by a railway company for the transport of agricultural produce to London.

We have paid Mr. Patterson the compliment of a serious comparison, and whatever fault we may find is probably due to lack of maturity. If ever that desideratum is achieved, he will be a writer of more than the outstanding merit which we acclaim to-day. One bone we have to

pick with him. Why spoil the effect of a passable set of verses with an asterisk which proclaims that "the music rights of this song are the property of Miss So-and-So"? —

A Priestess of Humanity. By Mrs. Stanley Wrench. (John Long.)

A YOUNG literary aspirant who, with satisfaction to himself, can "write" of Helen of Troy that she was "the most fascinating, yet the most elusive feminine personality in all the annals of the world's history," and argue the point, does not hold out great hopes of entertainment. The mingled priggishness and chivalry, however, of Mrs. Wrench's hero in relation to two women—the errant wife of another man, and a lady novelist rejoicing in the discovery of her affinity—afford a study of more than common interest. It is only when Clive Annesley is called upon to make the supreme choice between the women aforesaid that the author's treatment seems at fault; for the moment of crisis, carefully prepared for, is faced, and the anticipated course taken, with so little show of hesitation, that we are left in doubt whether any real crisis had ever, in fact, existed. The scene of the story is laid for the most part in London, but the author also describes with effect meadows in springtime.

Children of the Cloven Hoof. By Albert Dorrington. (Mills & Boon.)

NOTHING would be easier than to point out flaws in the construction of this story of Queensland life; nothing would be more unjust if the critic were to allow his task to finish there. The interest of the book is divided between two families in the Bush, the head of one an abnormally rich stockbreeder with a son who returns from Oxford to be convicted of murder, the head of the other a daring horsethief with a daughter whose affection for the wrongly accused man leads her to disclose the identity of the real perpetrator of the crime. It is a commonplace plot, and its central weakness is that the murder is destitute of motive. A more irritating fault is that one of the most interesting figures in the story is allowed suddenly to disappear, only to be capriciously re-introduced in the closing page. It is in the telling that the attractiveness of the story lies. Mr. Dorrington, unlike most writers of Bush stories, has nothing of the melodramatic in his style; he is forcible without being sensational, and picturesque without straining after effect.

The Passionate Elopement. By Compton Mackenzie. (Martin Secker.)

THIS book is characterized mainly by a careful avoidance of the commonplace. Its studied artificiality is in keeping with its scene and period, the former being a fashionable Spa, the latter the age of Dr. Johnson. The author evidently has a

predilection for the eighteenth century, and he successfully translates the reader into an atmosphere of patches, beaux, postilions, and brocades. The manner of the book is discursive, and the somewhat thin stream of narrative that provides the title deals with an affair of the heart between one Phyllida and Francis Vernon, an elegant scamp and gamester. The sustained insincerity of the story is apt to grow fatiguing, especially as it prevents the reader from getting near the living persons. The author's affectation of eighteenth-century quaintness is clever, but never amounts to an interpretation of the spirit of the age.

OUR LIBRARY TABLE.

WE welcome the new and revised edition of Mr. Bryce's *American Commonwealth*, 2 vols. (Macmillan). Since this luminous and candid work has long since won general recognition on both sides of the Atlantic, it will be enough to indicate the nature and scope of its new matter. Mr. Bryce can rightly claim that the survey has been thoroughly renovated. Thus to the chapter on 'State Politics' he has added an interesting note on the working of the Referendum, which he might conceivably have enlarged if he could have foreseen how prominent that word would become in our own affairs.

The first of the three new chapters, 'Further Reflections on the Negro Problem,' is written in a tone of sober optimism; Mr. Bryce believes that the African race has gained rather than lost by its practical elimination from party politics. The chapter on 'The New Transmarine Dominions' is wisely chary of prophecy, and notes how the Americans have drifted into dominion, and how they are confronted by difficulties of administration. In 'Further Observations on the Universities' we get Mr. Bryce at his best—fully alive to the immense progress achieved, but reproving the underpayment of teaching staffs, the superficiality of much of the instruction, and the athletic craze.

Mr. Seth Low has rewritten his chapter on 'Municipal Government,' and, while admitting the demoralization produced by "graft," contends—and that with cogency—that the tendency is towards improvement.

MR. WERNIE LAURIE publishes in two volumes *The Servian People, their Past Glory and their Destiny*, by Prince and Princess Lazarovich-Hrebelianovich. The Servians as here treated include the Montenegrins, and to some extent the Croats, although the inhabitants of the organized state of Croatia are cut off from the rest of the Servian people by their closer adherence to Rome, and absence of unanimity in the Orthodoxy of the Eastern Church. The book is unsatisfactory, but highly interesting. It is ill-arranged, and difficult to read, and will be of little value as a book of reference. Yet, when all this is said, we may still find it perhaps the best work available upon that typical representative of the Southern Slavs—the Wendish group of tribes who, Teutonized in Prussia, are represented by their name in mainland Venice, and their tongue from Trieste to the mountains of the Greek frontier, and eastward to the Carpathians, Northern Roumania, and Western Bulgaria. So much turns on the

way in which history is written that Hungary, often treated as the kingdom which bore the brunt of Turkish attack on Europe, appears in these pages as the oppressor who prevented the complete success against the Turks of the heroic Servians by whose insurrection every attempt at united action against the Osmanli was begun.

The authors, of whom we guess that the lady is of American descent, are thorough-going supporters of Slavonic institutions, and embark on an impassioned defence of that ancient system of village tenure of land which they attack both Austro-Germans and Magyars for suppressing. It is accordingly necessary to add that the one substantial change in Russia accomplished by Parliamentary government through the present Duma is this—we agree, unfortunate—surrender to the hated Economists of Western Europe. Of Russia we find little in praise or blame; but, even more than the Turk, to our authors the Austro-Hungarian is the enemy. We are told of the Servian national songs that "in Austria-Hungary they are forbidden under heavy pain." But we are occasionally inclined to doubt the strict accuracy of our writers. Some experience of such Russian terms as "Pladu" leads us to question the words that follow the description of some mountain meadows: "These places are called 'Blatos.'" There are good people still left in Wales who proudly quote "pont" as Welsh for a bridge before the days of Rome. The transliteration of names is as strange as is usual in such cases, and leads to much confusion when any attempt is made to consult the imperfect Index. Unfortunate Europeans of the West can hardly make much of such geographical descriptions as "Tsrny Vrh." Another objection is that the spelling adopted violates custom in the case of well-known names, as, for example, "Tsrnagora" and "Serayevo." Both the Barbarossas are the subject of allusions in the text, but neither is in the Index. There are two references in the Index to the Bogomils, but ten or a dozen are scattered through the text, and some of them go to show greater knowledge of the curious subject than is common in these days. It is noted by the authors, for example, that at the beginning of the thirteenth century the heresy had spread "into France, extending into England." There are many allusions to the repeated attempts of Rome to class together "Bogomilism and Orthodoxy" in an effort for their eradication, delayed by the quarrels between the Franciscans and the Dominicans until the permanence of Orthodoxy and long life of Bogomilism were assured. One of the most dangerous attacks by the King of Hungary upon the Servians of Bosnia was based on the necessity of suppressing the Bogomil faith. But its reign over the affections of the Bosnians in the eighteenth century appears to have been as complete as at the end of the twelfth.

Several foot-notes assure us that "Knez," for Prince, is a term of Servian origin. But when two of them go on to add that "in Russia" this forms "the only real Slavonic title," we must be allowed to dispute the extension involved. In Russia the title is in practice never used except by Slavs in addressing or speaking of Mohammedans.

In their account of the bearing of modern politics upon the Servians our authors assume that the second use made of the *entente* with France displayed the intention "to form a ring about the Hohenzollern Empire," and the existence also of a scheme "to supplant a national Servian ruler by an Anglo-German prince."

University of Cambridge Grace Book Δ, containing the Records of the University for the Years 1542-89. Edited by John Venn. (Cambridge University Press.)—The Grace Books of the University are gradually making their appearance, and this, the fourth of the series, takes us from 1542 to 1589. It is hardly possible to over-estimate their value and importance. For historical, antiquarian, and genealogical information the records of the Universities are constantly being referred to; nor can the legal aspect be overlooked, the mention of a particular name being often of special interest to practising lawyers. Thus we can imagine no work more peculiarly the province of the Registry's office than the publication of such documents as those before us. That so little has been done—that the University has to thank volunteers who have come forward to undertake what must be a most arduous labour of love, as Dr. Venn has done in the present instance—would be little short of a scandal, were it not for the notorious poverty of the University. We are, however, full of hope that the new business methods employed by the Syndics of the Press may result in such profits that Cambridge antiquaries may be lucratively employed in editing the early documents in the possession of the Registry.

The special interest of Grace Book Δ lies in the fact that it deals with a state of things which continued down to days within the memory of men still living. The college system was by 1542 fully established, and the Elizabethan statutes prevailed from 1565 to 1860. The "Caput" was from 1528 and onwards the governing body of the University; and Dr. Venn has some pungent remarks on the present Council of the Senate, somewhat to the advantage of its venerable prototype. He shows that the idea that the "Caput" consisted of "a lot of old heads" is erroneous, the fact being that besides the Vice-Chancellor, who was not invariably a "Head," the body was made up of representatives of "faculties," and that the "Regent" house was always represented. In other words, among the five rulers of the University one was always a very young man, certainly not more than 25 years of age. In 1572 the average age of the five members of the "Caput" was 31. Under George V. the youngest member of the Council of the Senate was 47!

The discussion on the lists, "Ordo Senioritatis," and the two annual examiners, whose names since 1535, with a few omissions, appear in the Appendix, is extremely interesting. The "Ordines" are recorded, almost without intermission, since 1491, and only ceased when the Mathematical Tripos was "reformed" in 1882, Wranglers ceasing in 1909. How a more or less arbitrary list became a real order of merit, as well as how the subjects, originally philosophical, became entirely mathematical, is hard to trace. The process was gradual and almost unconscious, and was due to no legislative enactments. Dr. Venn also tries to solve the problem of the exemption of King's men from examination for degrees. The whole Preface is well worthy of perusal. The Indexes seem to be most satisfactory, and especially that of degrees during the period over which the Grace Book extends. The list of officials is a useful addition; but it is open to question whether the method of arrangement whereby one is able to trace a prominent man's University career, employed by Mr. Searle in Grace Book I, is not preferable. Dr. Venn's attention should be called to a strange error on p. xx, which is one of the few blots in an excellent and self-denying piece of work.

The Political Theories of Martin Luther. By Luther Hess Waring, Ph.D. (Putnam's Sons.)—A monograph on Luther's politics by an adequately trained and critical scholar is greatly needed. Unfortunately, Dr. Waring is hardly possessed of these qualifications. He seems to have read much concerning Luther, and to have glanced at a good many other books. But he writes from the hagiologist's standpoint, so far as his subject is concerned; while his acquaintance with mediæval politics may be gauged by such a dictum as the following:—

"All through the Middle Ages, and prior to the golden age of the contract theory of the origin of the state, the doctrine of the divine right of Kings prevailed."

His account of Luther's ideal is good enough:

"Luther's appeal was for a modern state; not the ideal world-empire, but a sovereign, unitary, territorial state of one people—the national state, as the most natural, the most homogeneous, the most stable, the most successful."

But Dr. Waring goes on: "The Florentine Machiavelli said centuries ago," &c. Would the casual reader gather that Machiavelli's 'Prince,' though written a year or two earlier, was not made public till fifteen years after the theses were nailed on the doors of the church at Wittenberg?

We are sorry that we can say no better things of this book; but the fact is that it is impossible for any one to write even tolerably on the beginnings of modern political philosophy who has not made a considerable study of mediæval thought, and of this we see little evidence in the volume before us. Indeed, the writer does not seem to have read Dr. Carlyle's accessible volumes. In regard to Luther's attitude to the Peasant's Revolt the author is far too apologetic; Mr. Pollard's admirable chapters in 'The Cambridge Modern History' rightly suggest a more balanced view.

Gesenius' Hebrew Grammar. Edited by the late E. Kautzsch. Revised by A. E. Cowley. (Oxford, Clarendon Press.)—The 'Hebrew Grammar' of Gesenius is a good example of the perennial value possessed by a work based on sound scientific principles, and accomplished with masterly thoroughness. The author had, if not genius, at least a capacity for taking infinite pains, the one quality which is really essential for a production of this kind. The Grammar first appeared in 1813, and its history now includes no fewer than twenty-seven subsequent editions, which gradually grew both in bulk and importance. The first twelve were published by Gesenius himself, and the twenty-second to the twenty-eighth were prepared by the late Prof. Kautzsch. An English translation of the twenty-sixth edition was published at Oxford in 1898; and as this has been exhausted since 1908, Hebrew students all over the English-speaking world will gladly welcome the new edition, which Mr. Cowley has with conscientious care made conformable to the twenty-eighth German edition. Paper, type, and general appearance will all be found excellent; and the Table of Alphabets by Dr. M. Lidzbarski is clear and most helpful. In his Preface Mr. Cowley pays a well-deserved tribute to the memory of Prof. Kautzsch.

English Country Life. By Walter Raymond. Illustrated in Colour from Water-Colour Drawings by Wilfrid Ball, R.E. (T. N. Foulis.)—Mr. Raymond writes with

intimate knowledge of the Western shires, particularly of Somerset; and we must conceive that the Sutton which is the village of his new book is somewhere within the confines of that county. The illustrations in colour by Mr. Wilfrid Ball, which are admirably pleasing, seem to indicate Wessex, as does the talk. Mr. Raymond is more or less of the school of Mr. Hudson in his methods. That is to say, he is not first and foremost a literary man, like, say, Mr. Dewar or Mr. E. K. Robinson. He is an observer, a "naturalist" to begin with; and other things are added to him. Mr. Hudson's method is akin to Borrow's; he goes wandering on, making his records with shrewd eyes and shrewd mind, with a view to the light they cast on human life.

Mr. Raymond is similarly minded. These sketches offer abundant proof of his sympathies, and his quality of observation, as well as of his sense of humour. They are the intimate sketches of a village life and are set down lovingly. It is not so easy to record the humours of a village in right proportion as it might seem. It is much more easy to exaggerate, and to take things out of relation to their setting. Mr. Raymond avoids this mistake. He knows the squalor and the sordidness of rustic life on occasion, but he does not give it the predominance which one less familiar with the country would do. The earthiness of rural life sometimes appals sensitive critics more even than its imaginary Arcadianism attracts them. Both interpretations are erroneous. The villager lives near the soil, and is of it, but he is wholly human. A book like this is of value because it makes one realize that, and therefore helps to a sound knowledge of country life.

The Motorist's Pocket Tip Book. By Geoffrey Osborn. (Mills & Boon.)—We have not before heard of a "Tip Book," but this is precisely what, we imagine, it should be. It is slender and comely, like a good sort of letter-case; handy for the pocket, well printed on good, thin paper, and illustrated by a few particularly clear diagrams. The table of contents is not quite adequate as an index, but in so small a book this is not important. From the simplicity of his language, and the correctness of his explanations, where we have been able to test these, we gather that the author has really mastered his subject.

Beginning with lucid explanations of the working of a petrol-driven internal-combustion engine, the author proceeds to practical advice as to the handling and management of a motor-car, and then to his "tips" for discovering and remedying causes of trouble. These hints do not, of course, exhaust the ways of going wrong, or the possible remedies; but they are as useful a collection as we have seen, and they do embrace virtually all the difficulties which have come within the present reviewer's experience during the past few years. A list including all the troubles of eight or ten years ago would require a far more cumbersome volume than this, while its interest would be merely academic for the driver of the luxurious modern automobile. The advance made, for instance, in the ease with which the driver starts his engine nowadays would surprise the pioneers who frequented the roads at the beginning of this century.

The Dickensian for 1910 (Chapman & Hall) is, as usual, full of varied matter bearing more or less relevantly upon its chosen topic. Mr. C. M. Neale devotes three articles to

illustrating the extent to which the literary mind of Dickens was coloured by his (hypothetical) study of Charles Lamb, and to that end gives a list of "Pickwick words" also employed by Elia. The fact, however, that such everyday expressions as "boy," "bachelor," "turkey," "sausages," and "salmon"; proper names like Jove and Julius Cæsar, and places so commonly alluded to as the House of Lords and London Bridge, are calmly kidnapped and carried off to the Pickwickian pound, indicates a process of special pleading which is not likely to lead to any conclusive result. An attempt by Mr. Willoughby Matchett to sketch a parallel between 'Hunted Down' and the Crippen case seems to us to lack significance; while two articles on the subject of Dickens and Christmas (in a single volume) give undue prominence to a theme already worn threadbare.

A delightful story, set forth in the editorial notes of the December number, tells of a certain young man who, to gain proficiency in the art of type-writing, set out to type 'David Copperfield,' altering the names of persons and places so as to give "variety and interest to his task." Being moved to send the completed manuscript to a "well-known firm" of publishers, he is said to have received a reply to the effect that the work exhibited great promise, but was "much too long for present-day tastes," with these words added: "We notice that you have been influenced very much by the works of Mr. William de Morgan, and would suggest that you try to adopt a more original style." It is of interest to learn that the novel in question during the past year made its way into Portuguese.

A Chesterton Calendar (Kegan Paul), which is "compiled from the Writings of 'G. K. C.' both in Verse and Prose, with a Section apart for the Moveable Feasts," is, as the sub-title might suggest, a comely book rather than a Calendar, supplying for every day a passage of varying length. The author is by this time well known as a public stimulant, and his gifts of imagination, exaggeration, and paradox have won him a distinct place. He is best in a sentence or two rather than a long passage, and in the regions of speculation rather than those of history and philosophy. His cleverness is amazing, and this Calendar, though we cannot recommend its use for every day, should be a good deal more thought-provoking than the tedious iterations of commonplaces which have lost all their power and savour. On December 23rd we read the characteristic dictum:—

"A Turkey is more occult and awful than all the angels and archangels";

on May 8th:—

"The world is not a lodging-house at Brighton, which we are to leave because it is miserable. It is the fortress of our family, with the flag flying on the turret, and the more miserable it is, the less we should leave it";

on July 13th:—

"Only in our romantic country do you have the romantic thing called weather, beautiful and changeable as a woman."

The author's verses are a pleasant variant on his prose. In his adventures among men of letters he discovers novelties beyond the literary critic. For instance, the contrast between Johnson and Addison supplied for Johnson's birthday (September 18th) is not one that can be accepted by real students of their lives and manners.

SIR CHARLES DILKE.

THE death of Sir Charles Dilke on Thursday morning in last week is an irreparable loss to *The Athenæum* and the sister journal with which he was so long and closely associated. Even before the trying weather of the General Election he had been in bad health, but his resolute spirit would never give way while work was possible, and up to the last days he was taking his usual vivid interest in both papers. He used laughingly to say that he retained some votes which belonged to his grandfather, and the identity of names in each case certainly was backed by a similarity of tradition. A short account of Sir Charles not long ago in the daily press said, "He lives only for politics." The ludicrous inadequacy of this remark could be proved by many who have profited by the stores of his nimble and wide-exploring mind, and by his unwearied zeal in prosecuting many an inquiry with which politics had nothing to do.

The tradition of independence, fairness, and research in letters left him by his grandfather was, indeed, one of the chief pleasures and preoccupations of his life. 'The Papers of a Critic,' including an all too brief memoir of his grandfather by Sir Charles, show what that critic did in *The Athenæum* and *Notes and Queries* for scholarship by his patient and unflinching pursuit of truth. The thoroughness and independence of the grandfather were invaluable for English literary journalism. In an age in which these virtues are, perhaps, rarer than they were, his grandson strenuously preserved them.

His mind was intensely critical, and he may, possibly, have laid too much stress on the small slips and errors which his own extraordinary endowments enabled him to avoid; but his high standard of achievement was one of the utmost value to *The Athenæum*. Commercial ideas, the number of amateur writers, the strain and hurry of social life, and the efforts made by the press in general to adapt itself to every ephemeral demand have lowered the expectations of readers, and often dulled the artistic conscience of those who supply them with what is, or ought to be, their mental nutriment. Such considerations nowhere affected the resolute striving of Sir Charles for the best. He realized with delight the subtleties of scholarship, and, as convinced of the value of time as any man, he would have thought it ill gained if it had been won by the omission in the word *Athenæum* of the diphthong which is beyond the powers of the Post Office. Like Norman MacColl and Joseph Knight, he was essentially an artist in his appreciation of literary style. The barren commonplaces which so often blossom into easy verbiage found with him no quarter, and he scrutinized keenly the average verdict of the time, which gives so many clever writers, hitting on it just before it becomes general, an air of inferior infallibility. His strangely mobile intellect kept him from the ossifying influence of age. Not the teachers of his youth alone, though they were spoken of with all reverence, but also younger intellects, still splashing about, perhaps, in a sea of conjecture and new ideas, attracted his attention and secured his serious interest when the world saw only their want of balance. The present writer once heard an eminent lawyer recently dead say that the pursuit of the law had destroyed all his interest in imaginative literature. Students of economics have shown similar deficiencies, but Sir Charles had a remarkable zest for pure literature, which was undimmed by

his close study of economics and statistics. A young man with his brilliant brains, assured position, and early aptitude for politics might easily have become a premature prig with a gift only for Blue-books, or a successful dilettante moving with graceful ease among the shallow-minded, and seldom forced to exhibit his full powers in the intellectual gymnastic which is the making of an acute mind. His Cambridge career showed that Sir Charles was made of other metal, though he enjoyed a frolic as well as anybody; and, when he returned with his honours to Sloane Street, he came to a house not less distinguished for hard work in art and literature than for family affection.

His was an intensely practical intellect, and, when once he had mastered books, he laid them aside—treated them without the reverence of the bibliophile. He told me that he carried to the very door of the Senate House at Cambridge, the place of his examination, the eviscerated contents of books containing important law cases, and, once seated, wrote in haste what he feared he might forget.

His taste in literature was not altogether orthodox, but generally sound, and he readily recognized the possibility of other opinions. Reared in traditions of personal intimacy with Keats, he regarded almost as a personal insult any hint of that poet's deficiencies. Of Dickens, Hood, and others of his grandfather's circle he had a very just view, but he was somewhat of a heretic regarding Shakespeare. He was inclined to associate Milton with the Bogomils, an instance of his curious erudition. Though not a philologist, he had an obvious interest in the intricacies of the subject, and would talk by the hour of the puzzles of Provençal. For Latin and Greek he had a fine reverence, and delighted in the achievements of Shilleto, or the twice classic parodies of Sir George Trevelyan. His handwriting, grown difficult through haste, retained for the discerning traces of an early enthusiasm for Greek. Modern Greece found in him an unwavering champion, and such protests as "The Greeks won't like this" were attached to many a printer's proof containing shrewd criticism of the difficulties and disappointments of the modern régime in that country of ancient glories.

"Not competent" was another of the comments which were frequently scribbled by the side of proofs, and this modest deference concerning the few things which he did not know was characteristic of Sir Charles.

Of all that he did know it is impossible to give an idea. He was by hereditary aptitude an antiquary as well as a Radical, and the extraordinary range of his knowledge and memory added much to these columns weekly. He began in 1862 to write on International Law, and had been a constant contributor ever since. His wonderful mastery of history led him, as a writer says in *The Daily News* of Friday in last week, to put "posers which were beyond the reach of the acknowledged expert"; and the way in which he would pursue the identity of some obscure but important figure through a multitude of possible "Quellen" was a lesson in acuteness and perseverance. This command of sources was clearly shown in his *Quarterly* article in January of last year on the escape of Napoleon from Elba. He had gone so deep into modern history, and found so much that was contrary to accepted views, that he once said the whole of it required to be rewritten.

"Il faut se borner" is, I believe, a maxim of Napoleon's making, but the

extraordinary intellect of Sir Charles never seemed to lose its precision in the multiplicity of subjects which it grasped. In matters of art and architecture, as well as common life, he was as fully informed as on history. His 'Memoir of Lady Dilke' recalls the fact that he won at the same time as she did a Queen's Prize at South Kensington; and he was an excellent, if severe, judge of various forms of art. Of the portraits of many centuries he spoke with the skill of a connoisseur, and his house at Sloane Street was full of art treasures, among which I may recall a fine picture of his ancestor Thomas Wentworth, Lord Chamberlain of the Household of Henry VIII., whom he himself strikingly resembled. In early days he had played the piano, and, though generally indifferent to modern music and drama, he had a relish for older opera, such as 'Carmen' and 'The Tales of Hoffmann,' characteristically discovering in the former traces of traditional folk-song. In Paris he visited on occasion the plays of interest, though he seldom stayed for more than one act, and never for more than two. He was thoroughly at home in the art, antiquities, and literature of France, and delighted in the company of the learned as well as men of affairs.

His equipment was, indeed, formidable. He could recall the very spots where the doctors of an earlier day drove "off the stones" of London and demanded an extra fee; he remembered the early use of the slang word "blazer" at Cambridge; he could tell you where the best green figs in England were grown, and describe the process of making attar of roses. A friend tells me that a distinguished man of science who had written a great book on the tropical life and vegetation of the East conversed with Sir Charles, and found him so full and vivid in his realization of the details of these strange regions that he credited him with having traversed the same country.

The possession of so commanding and wide an endowment is apt to obscure other faculties. One trait in Sir Charles of great importance must at least be mentioned here. He was ever ready to recognize merit, whether academic or not. He was not under the obsession of mere names which often warps the judgment of men; indeed, his verdicts sometimes reversed the opinion of the world, and they were always worth attention.

With *The Gardeners' Chronicle* as well as the two papers of Bream's Buildings he had been long connected, and he enjoyed a talk about birds or flowers as much as the narrowest of naturalists. He gave you offhand a dozen instances of the unlikely proximity of the nightingale to human haunts of noise. Of forestry he would discourse with keenness, dilating on the ancient verderers of the Forest of Dean; or he would dwell with pride on the fact that his old friend Dr. Masters was the first botanist to arrange satisfactorily the difficult group of the Conifers.

Details of the sports in which he was interested were also followed year by year, and the prospects of the Cambridge crew were always a subject of keen discussion. When the Belgian style of rowing was triumphant at Henley, his disappointment was keen and obvious. He was an admirable sculler, and one of the best fencers of his day. In his brief holidays he strove towards "fitness" with all the care of an athlete.

The union of sport and scholarship, though viewed with amazement and dislike by the learned prig, is not so rare as is supposed. The "mens sana in corpore sano" leads to distinction in more than one field. What,

however, is very rare is a life that combines with these diverse predilections a strenuous zeal for the betterment of social conditions, especially among those whose work is in itself a handicap to health or decent enjoyment. "Tout savant est un peu cadavre," and the epigram has a melancholy truth about it which depresses the scholar. With Sir Charles, learned in so many ways, it was very different. He was alive, every inch of him; he was hard at work all his life; and without his pioneer suggestions and fruitful achievements in English legislation the lot of the worker would be much harder than it is. To one who is not a politician his interests seem a happy and rare contradiction of the absurd idea that Imperial needs and aims belong to one party, and social reform to another. Of the mass of unprinted papers he has left use will, it is hoped, be made.

The interests I have hinted at above belong mainly to politics, which are outside our scope; but no notice of Sir Charles can fairly omit his beneficent work as politician and sociologist.

In his public speeches and his ordinary manner there was a certain coldness which did him injustice. He did not suffer fools gladly, though he gave freely of his stores of information; and he was always, I think, unwilling to betray his emotions. He has been credited with a lack of humour, an assumption which 'Prince Florestan of Monaco, by Himself,' should alone be sufficient to refute. This remarkable *jeu d'esprit* of only seventy-eight pages, though anonymous, at once made a reputation for its author, and was even put down to Matthew Arnold. To a second edition Sir Charles characteristically added the criticisms it had evoked. It deserves attention, for it is a pioneer book in its way, being the first of those numerous narratives in which young English heroes are called to foreign kingdoms. Sir Charles depreciated it as "chaff, not literature"; but it is at any rate excellent chaff, showing the author's joint interest in rowing and republicanism, and that tendency towards "universal negation" which is ascribed to "spectacled undergraduates," and common to many able young men at the opening period of their lives. The wit of the young Trinity man who is suddenly promoted to rule Monaco is not common, and various public figures—popular preachers and politicians alike—are hit off with remarkable penetration. Sir Charles cleverly concealed his own authorship by more than one unfavourable reference to himself. Here is a quotation which will show the easy style of the book, a style somewhat spoilt in later years by the hurry of composition:—

"Mr. Disraeli was my admiration as a public man—a Bismarck without his physique and his opportunities—but then in politics one always personally prefers one's opponents to one's friends. As a republican, I had a cordial aversion for Sir Charles Dilke, a clever writer, but an awfully dull speaker, who imagines that his forte is public speaking, and who, having been brought up in a set of strong prejudices, positively makes a merit to himself of never having got over them. This he calls 'never changing his opinions.' For Mr. Gladstone I had the ordinary undergraduate detestation. There are no liberals at Cambridge. We are all rank republicans or champions of right divine."

In another place he mentions Ashton Dilke as "a man of more real talent than his brother, although, if possible, a still more lugubrious speaker," and refers amusingly to the disappearance from their pride of place of the portraits of himself and another light of the Cambridge Union when their party was outvoted.

As a matter of fact, Sir Charles was in congenial company the most easy and

delightful of talkers, full of incident, story, and reminiscence, and brilliantly discursive, with that taste for the vernacular which heightens the effect of a cultivated speaker. He complained that his stories were spoilt, and one could well believe it when one heard him tell them. Of the well-loved brother just mentioned he told that, at the time when Parnell's letters were said to have been opened, Ashton Dilke remarked, "We did at least think that, when we had a blind Postmaster-General [Fawcett], he would not open our letters." On another occasion a member of the company remarked that Mr. Roosevelt was the greatest legislator since Noah, as he was the only one who had shared with the patriarch the credit of being responsible for a toy. Sir Charles followed this up by saying that he had had occasion to dissect goliwoggs of all prices and sizes, and, finding that they included every possible type of savage, was convinced that they were an advertisement for the Aborigines Protection Society.

An admirable French scholar, he preserved many a piece of the Gallic wit which shines so brightly on the other side of the Channel. His old friend General Galliffet gave him, he told me, the following charming summary of the merits of another soldier of France: "He is not a general, not an officer, not even a soldier, but he is an angel with sound views about Cavalry!"

His gaiety was treasured by many. When a great French statesman lay dying, he asked a friend: "Et Dilke? Est-ce qu'il rit toujours?"

On the subject of dogs and cats in life and literature Sir Charles was particularly happy, recalling that picture in which a great ecclesiastic goes to heaven, cloaking under his ample robes not only his cook, but also his cat. He had, too, a special word for that St. Francis who took all the animal world under his care.

Sir Charles's hospitality was a model of rightness and elegance, and many a friend must recall the pleasures of Sloane Street and his other houses. He even succeeded in preserving, after it had perished elsewhere, the tradition of the brilliant breakfast.

Home life was, indeed, one of his chief delights, and some hints of the fullness and depth of that life may be gathered from the brief memoir of Lady Dilke attached to 'The Book of the Spiritual Life,' a record rendered only the more poignant by its restraint. Such memories are not for the idle curiosity of the world, but the "Benedictine" application to labour, which Sir Charles attributes in the 'Memoir' to Lady Dilke, will be equally noted by all friends as his own practice. Deprived of that rebound of gaiety, that "dancing side" which was so precious a part of his wife's temperament, he did not abate his energies. He was still the public servant, the omnivorous student. "As long as I am any use to others, I must work."

He spent his last weeks in the South of France, the place he loved best of all; and he died in the house where he was born, vigorous in mind and eager to the last, working in bed through a pile of Blue-books and papers which had accumulated in his absence. In the prologue to 'The Book of the Spiritual Life' he printed two sentences taken from his wife's manuscript notes, which bear the significant addition, "Ad Sapientes qui sentiunt mecum":—

"For all that you may know, none will like you the better; but in knowing you must find your own joy—Labour!"

"Thy travel here has been with difficulty; but that will make thy Rest the sweeter."

V. R.

THE SADDUCEAN CHRISTIANS OF DAMASCUS.

20, Porchester Square, W.

You recently published (November 26th) a review by the Rev. G. Margoliouth of the first volume of Schechter's 'Documents of Jewish Sectaries.' Your reviewer seeks to identify the text as early Christian. Such identification is ingeniously worked out, but there are many difficulties, such as the "Messiah's" descent from Aaron and not David; and it will, I think, prove ultimately untenable.

May I very briefly outline another explanation which seems less forced, and which, indeed, conforms more to the views of Prof. Schechter himself? I cannot ask you to allow me space for a detailed argument, but hope to deal with the subject fully in another place.

The document seems to me an appeal against merger, by a leading Sadducee Jew to his sect. He points to their historical origin at Damascus, whither they had fled after the golden age when two Sadducee "Messiahs" reigned over Palestine.

"390 years" after the "end of the wrath" may well be 128 B.C. (518–390). John Hyrcanus, the first Maccabæan king, reigned from 135 to 105. Both Josephus and Abulfath tell how he broke away from the Pharisees and joined the Sadducees, who then became the ruling party for over 20 years. The Talmud (Kidd. 66a), in a passage which seems to be an extract from a Pharisee chronicle of Maccabæan times, also tells the story, though, by a manifest confusion, it refers it to his son.

This son, Alexander Jannæus, on his coins called Jonathian, reigned from 104 to 78, and was a Sadducee throughout. He fought with the Pharisees and massacred many, but on his deathbed, advised his wife and successor, Alexandra Salome, to become reconciled with them. This she did, bringing about the "return of the exiled" Pharisees, and allowing her husband's friends, the Sadducees, to retire to places away from Jerusalem. And Josephus, immediately after recounting this, tells of her son's unsuccessful attack upon Damascus, suggesting, as a cause for his failure, the absence of the Sadducees from his army.

The day when the Pharisee Sanhedrin abolished the Sadducee code was celebrated as a festival (Meg. Taan. iv.). Its President is said to have been Simeon ben Shetaḥ, called the Queen's brother—perhaps the "scoffer" of our text.

Hyrcanus and Jannæus were each an "Anointed Priest"—"Cohen Messiah" in the words of Lev. iv. 3. The "Head of the Kings of Javan" I take to be Pompey, who very shortly after Alexandra's abandonment of the Sadducees "executed vengeance" and captured Jerusalem.

The book "Hagu" perhaps means Scripture, "hagu" being the apocopated past participle, meaning "to be meditated in" or studied: cf. Josua i. 8: "This book of the law shall not depart out of thy mouth; but thou shalt meditate therein day and night."

In its present form the text may be six or seven centuries later than the epoch of the Sadducee "Messiahs" John and Jannæus. It may have formed part of the law book of a sect eventually absorbed by the Karaïtes. If this is so, both volumes of Schechter's "Sectaries" have, as he perhaps suspected, a connexion closer than that of juxtaposition. E. N. ADLER.

THE ENGLISH ASSOCIATION.

THE annual general meeting of the English Association, held on January 27th and 28th, was an unqualified success. At the business meeting with which the proceedings opened, the Report and Financial Statement for 1910 were adopted, both testifying to the growth and prosperity of the Association. Some slight changes were made in the rules of the constitution. Mr. A. C. Bradley was unanimously elected President; Lord Morley (as Past President) and Mr. Sidney Lee (in place of the late Dr. Furnivall) were chosen as new Vice-Presidents; and Mr. C. T. Hagberg Wright as Hon. Treasurer in succession to Mr. E. S. Valentine, who retires. Mr. A. H. D. Acland continues the Chairmanship of Committee for another year; and Mr. Percy Simpson was re-elected Hon. General Secretary. Mr. G. E. S. Coxhead resigned the office of Hon. Secretary for business connected with branches in England and Wales early last year, and it was moved and carried that the office be abolished. A vote of thanks to Mr. Valentine and Mr. Coxhead, two of the chief originators of the Association, was unanimously carried. Several new members representing scholarship and teaching were elected to the General Committee.

The great event of the meeting was Lord Morley's Presidential Address, delivered to an appreciative audience of over 800 persons (among whom were some of the most distinguished writers and teachers of the day) in the Lecture Theatre of the Civil Service Commission, Burlington Gardens. Lord Morley spoke for more than an hour, and in fascinating manner treated a number of points concerning English literature and language at the present time. The address was packed full of observations that, as our French neighbours say, give furiously to think. Lord Morley's main purpose was to discover how literature or language would "fare amid the swelling tides of democracy." He spoke of the effect of science on prose and on poetry, and of the peril of the documentary age in regard to the writing of history. For the spirit of the time was the spirit of science and fact and ordered knowledge. He showed how such men of science as Darwin, Hooker (happily still with us), Huxley, and Buffon were writers of excellent form, and that Tennyson's interest in the problems of evolution did not prevent him from being an exquisite melodist. He then discussed the qualities of style, highly commending two, those of sanity and *justesse*—qualities that have the advantage of being within reach, while the grandeur of Carlyle, Macaulay, and Ruskin is not. It was pleasant to some of his auditors to hear Lord Morley's warning not to undervalue criticism, or to fall into the blunder of regarding it as a mere parasite of creative work.

The address concluded on a note of hope for literature in the future. Although there is to-day no monarch in any tongue upon the literary throne, no sovereign world-name in poetry or prose, there is no cause for despair.

"Genius is genius. The lamp that to-day some may think burns low will be replenished. New orbs will bring light. Literature may be trusted to take care of itself, for it is the transcript of the drama of life, with all its actors, moods, and strange flashing fortunes. The curiosity that it meets is perpetual and insatiable, and the impulses that inspire it can never be extinguished."

The vote of thanks for the eloquent address was moved by Mr. Sidney Lee, who referred to another great instance of the combination of a Secretary of State and a

man of letters in Addison, and seconded by Prof. Mackail.

A dinner followed at the Criterion Restaurant, at which 200 ladies and gentlemen were present. Lord Morley had intended to preside, but was prevented by a command to dine at Windsor. At his request Mr. Sidney Lee took the chair. The toast of the Association was proposed by Mr. John Bailey, who said that the Association had a real claim to respect and approval, and was treated with increasing regard by schoolmasters throughout the country, and recognized by the Board of Education, who had asked its assistance in the preparation of a circular on the teaching of English in Secondary Schools. He thought that in whatever spirit the teaching of English literature was to be guided in the future, it was certain that there would be increasing study of it on right lines. Prof. C. H. Firth in responding spoke of the success of the Association in enlisting in its cause a large number of the most eminent living representatives of English letters, a circumstance that proved, he humorously added, that English literature was not regarded merely as a subject for examination purposes.

Prof. Ellershaw, President of the Durham Branch, proposed the "Guests," and Mr. Richard Whiteing in reply said that authors were enormously interested in the work of the Association, for was it not true that the Association was making readers for authors? Mr. John Albert Bright also responded, warmly praising the objects and methods of the Association. The health of the Chairman was then proposed by Mr. A. H. D. Acland, who spoke in appreciative terms of Mr. Lee's work as a man of letters, and in particular praised his latest book, 'The French Renaissance in England.'

On Saturday morning a discussion on 'Phonetic Spelling' was held at University College, Dr. T. Gregory Foster presiding. It arose from the very interesting paper on 'The Present State of English Pronunciation,' contributed by Mr. Robert Bridges to the volume of 'Essays and Studies' by members of the English Association, edited by Mr. A. C. Bradley, in which Mr. Robert Bridges criticized Mr. Daniel Jones's system of phonetics. Among the speakers were Prof. Skeat, Mr. William Archer, Mr. Bridges, Mr. Bernard Shaw, Mr. Daniel Jones, Miss A. D. Butcher, and Mr. W. W. Sawtell. Prof. Skeat declared that the history of every word was really the history of its pronunciation. The spoken word was the real word. Mr. Bridges took a hopeful view of the situation in stating that he thought the present generation would see phonetic spelling in use in the elementary schools. Mr. Bernard Shaw said that it was really time something was done in the matter of spelling reform. He suggested as a first step that the play of 'Hamlet' as pronounced by Mr. Forbes-Robertson, the best living speaker of English, should be issued in Mr. Bridges's script. There was evidently much difference of opinion among the speakers as to the methods in which a reform of English spelling could be carried out, but such a discussion has its uses in bringing to light the various systems proposed.

SALES.

The following were the chief prices at the sale of the Dent Library at Messrs. Hodgson's rooms last week: Thomas Gray's annotated copy of Stow's Survey of London, 2 vols., 1720, 95*l.* An autograph presentation copy of Izaak Walton's Lives, morocco, 1670, 31*l.* Nichols's History of Leicestershire, 4 vols. in 9, boards, uncut, 1795-

1815, 88*l.* The Houghton Gallery, 2 vols., folio, 1788, 50*l.* Silvestre. Paléographie Universelle, original French edition, 4 vols., folio, 1850, 27*l.* Dugdale's Monasticon Anglicanum, 8 vols., morocco, 1846, 16*l.* Maund's Botanic Garden, 18 vols., green morocco, 1825, &c., 15*l.* 10*s.* The Gentleman's Magazine, 224 vols., half-calf, 1731-1866, 17*l.* A collection of early maps in 4 vols., russia, 27*l.* The Fourth Folio of Shakespeare, 1685, 42*l.* Lactantius, illuminated border, Rome, 1468, 61*l.* Hieronymus, Epistolæ, Mainz, 1470, 41*l.* Cassiodorus, Augsburg, 1472, 19*l.* 10*s.* The Nuremberg Chronicle, 1493, 31*l.* Horæ on vellum, illuminated, Paris (1510), 33*l.* Horæ on vellum, illuminated (1520), 23*l.* 10*s.* Sarum Missal, Paris, 1555, 17*l.* 10*s.* Queen Elizabeth's Prayer Book, 1578, 19*l.* A collection of 58 Prayer Books from Edward VI. to Queen Victoria sold for 196*l.* 7*s.* 6*d.*; and a collection of 60 Bibles, mostly in contemporary binding, for 125*l.* 10*s.* The sale also included a number of rare Americana: A True Declaration of the Colonie in Virginia, 1610, 200*l.*; Hamor's A True Discourse of the Estate of Virginia, 1615, 121*l.*; The Discoveries of John Lederer, with the map, 1672, 136*l.*; A Declaration of the Colonie and Affaires in Virginia, 1620, 32*l.*; Johnson's Nova Britannia, 1609, 45*l.*; Hakluyt's Virginia Richly Valued, 1609, 35*l.*; a copy of 'The Crisis,' 1775-6, 19*l.* 10*s.*; and a set of Purchas, 5 vols., morocco, 1624-6, 64*l.* An interesting autograph presentation copy of Tennyson's Works, 1884, realized 27*l.* The two days' sale produced a total of 2,422*l.*

On Tuesday last Messrs. Sotheby sold the library of Mr. L. A. Barrett, removed from Milton House, Stevenston, Berks. Among the few lots of importance were: Natalis, Adnotationes et Meditationes in Evangelia, 1595, in a fine binding ascribed to Clovis Eve, 15*l.* 5*s.* The New Testament, 1738, in a remarkable contemporary binding, 29*l.* A scrapbook containing about 600 prints, 18*l.*; another with about 500, 44*l.* 10*s.*; another with about 650, 25*l.* 10*s.* The total of the sale was 623*l.* 8*s.* 6*d.*

LIST OF NEW BOOKS.

ENGLISH.

Theology.

- Apologies of Justin Martyr, 7/6 net.
 Edited by A. W. F. Blunt for the Cambridge Patristic Texts.
 Church Quarterly Review, January, 3/
 Harper (Frederick), A Broken Altar, and other Sermonettes preached in Hinton Church, 3/ net.
 Herkless (Prof. J.) and Hannay (Robert Kerr), The Archbishops of St. Andrews, 7/6 net.
 Hutton (Edward Ardron), An Atlas of Textual Criticism, 5/ net.
 An attempt to show the mutual relationship of the authorities for the text of the New Testament up to about 1,000 A.D.
 International Swedenborg Congress, Transactions, 3/ net.
 Held in London in connexion with the celebration of the Swedenborg Society's Centenary, July 4 to 8, 1910.
 Novum Testamentum Græce, 8/6 net.
 Edited with notes by Alexander Souter.
 An excellent edition, on writing paper with large margins, of the volume noticed in *The Athenæum* of Jan. 21, p. 68.
 Pfander (late Rev. C. G.), The Mizânul Haqq ('Balance of Truth'), 10/6 net.
 Revised and enlarged by the Rev. W. St. Clair Tisdall.
 Ryder (Rev. A. R.), The Priesthood of the Laity Historically and Critically Considered, 6/
 Schrempf (Prof. Christof), What We Want, a Confession, no Programme, 6*d.* net.
 An address reprinted from the General Report of the Fifth International Congress for Free Christianity and Religious Progress Berlin, 1910.

Law.

- Aggs (W. H.), The Licensing (Consolidation) Act, 1910, and the Licensing Rules, 3/6 net.

 Curlewis (H. R.) and Edwards (D. S.), The Law of Prohibition at Common Law and under the Justices Acts, 35/ net.
 International Law Association, Report of the 26th Conference at the Guildhall, London, August 2 to 5, 1910, 15/6 net.

Potts (T. Radford), A Summary of the Leading Principles of the English Law of Contract, with Historical Introduction, 10/6 net.
 Renton (A. W.), and Phillimore (G. G.), The Comparative Law of Marriage and Divorce, 30/

Fine Art and Archaeology.

Baring-Gould (S.), Cliff Castles and Cave Dwellings of Europe, 12/6 net.
 With 51 illustrations and diagrams.

British Numismatic Journal and Proceedings of the British Numismatic Society, 1909, Vol. VI.
 Catalogue of the Collection of Antique Gems formed by James, Ninth Earl of Southesk, K. T., edited by his Daughter Lady Helena Carnegie: Vol. II. Sassanian, Oriental, Mesopotamian, Babylonian, Assyrian, Persian, Hittite, Cyprian, Cilician, Mediæval, Modern, 30/ net.

Foley (Edwin), Decorative Furniture, Section IX., 2/6 net.

For notice of Vol. I. see *Athen.*, Dec. 17, 1910, p. 771.

Goodyear (William H.), Recently published Measurements of the Pisa Cathedral.

Reprinted from *The American Journal of Archaeology*.

Grant (Capt. M. H.), The Makers of Black Basalt, 42/ net.

With illustrations of nearly 300 pieces.

Masse (H. J. L. J.), Chats on Old Pewter, 5/ net.

With 91 illustrations.

Masterpieces in Colour: Corot, by Sidney Allnutt, and Delacroix, by Paul G. Konody, 1/6 net each.

Each illustrated with 8 reproductions in colour.

Year's Art, 1911, 5/ net.

A concise epitome of matters relating to painting, sculpture, engraving, and architecture, and Schools of Design, which occurred during 1910, together with information respecting 1911, compiled by A. C. R. Carter.

Poetry and Drama.

Book of Cambridge Verse, 6/ net.

Edited by E. E. Kellett.

Guedalla (P.), Ignes Fatui: a Book of Parodies, 1/ net.

Open Spaces, by Irvén, 3/6 net.

A collection of poems.

Poe (J. W.), Passing Poems, 1/

Stafford (Wendell Phillips), Vermont.

A poem read at the 110th Commencement of Middlebury College, Vermont.

Music.

Fuller-Maitland (J. A.), Brahms, 7/6 net.

Deals briefly with the events of Brahms's life, but treats with more detail his relations with other musicians, and the acceptance of his music by the public in England and in Germany. With 12 illustrations.

Bibliography.

Library, January, 3/ net.

Philosophy.

Sisson (Edward O.), The Essentials of Character, a Practical Study of the Aim of Moral Education, 4/6 net.

History and Biography.

Admissions to Trinity College, Cambridge: Vol. IV. 1801-1850.

Edited by W. W. Rouse Ball and J. A. Venn, 21/ net.

Lee (Albert), The History of the Tenth Foot (the Lincolnshire Regiment), 2 vols., 25/ net.

With illustrations.

Lloyd (John Edward), History of Wales, from the Earliest Times to the Edwardian Conquest, 2 vols., 21/ net.

Madras Government Dutch Records: No. 11, Memoir of Commandeur Caspar de Jong delivered to his Successor Godefridus Weijerman, dated 7th March, 1761, copied by the Rev. P. Groot; No. 12, Memoir of Commandeur Godefridus Weijerman, delivered to his Successor Cornelis Breepot on the 22nd February 1765, copied by the Rev. P. Groot, 1/3 each.

Ralph (Edith), Empire Builders in Australia: Early Days in New South Wales, Victoria, and South Australia, 5/ net.

Russo-Japanese War: The Raid to Yin-Kou and the Battle of San-de Pu, 8/6 net.

Prepared in the Historical Section of the German General Staff. Authorized Translation by Karl von Donat.

Taylor (G. R. Stirling), Mary Wollstonecraft, a Study in Economics and Romance, 7/6 net.

Illustrated with 3 portraits in photogravure.

Wilkinson (Spenser), Hannibal's March through the Alps, 7/6 net.

With 2 figures and 4 maps.

Geography and Travel.

Abraham (George D.), Swiss Mountain Climbs, 7/6 net.

With 24 illustrations and 22 outline drawings of the principal peaks and their routes.

Boyd (Mary Stuart), The Fortunate Isles: Life and Travel in Majorca, Minorca, and Iviza, 12/6 net.

Describes the personal experiences of a family of three during a six months' sojourn in the Balearic Isles, and contains 8 illustrations in colour and 52 pen drawings by A. S. Boyd.

Fraser (Sir Andrew H. L.), Among Indian Rajahs and Ryots: a Civil Servant's Recollections and Impressions of Thirty-Seven Years of Work and Sport in the Central Provinces and Bengal, 18/ net.

With 33 illustrations and a map.

Gomes (Edwin H.), Seventeen Years among the Sea Dyaks of Borneo: a record of Intimate Association with the Natives of the Bornean Jungles, 16/ net.

With an introduction by the Rev. John Perham, 40 illustrations, and a map.

Shrubsole (O. A.), Where to Live Round London (Northern Side), with a Chapter upon the Geology and Subsoils, 1/ net.

New edition, No. 2 of the Homeland Reference Books.

Sladen (Douglas), Oriental Cairo, the City of the 'Arabian Nights,' 21/ net.

With 63 pictures from photographs by the author, and a map of Cairo.

Whiting (Lilian), Italy, the Magic Land, 7/6 net.

With 32 illustrations from photographs.

Education.

Henderson (Ernest Norton), A Text-Book in the Principles of Education, 7/6 net.

Liverpool University Calendar, 1911.

Public Schools Year-Book, 1911, 3/6 net.

The official book of reference of the Headmasters' Conference, edited by H. F. W. Deane and W. A. Evans.

Philology.

Emerson (Oliver Farrar), A New Chaucer Item.

Reprinted from *Modern Language Notes*.

Emerson (Oliver Farrar), The Suitors in Chaucer's Parlement of Foules.

Reprinted from *Modern Philology*.

Gadde (Fredrik), On the History and Use of the Suffixes -ery (-ry), age and -ment in English, 2/6 net.

Greek Papyri in the British Museum, Catalogue with Texts: Vol. IV. The Aphrodito Papyri, edited by H. I. Bell, with an Appendix of Coptic Papyri, edited by W. E. Crum, 80/

School-Books.

English Literature for Schools: Selections from De Quincey, edited with introduction and notes by E. B. Collins; and Dryden, Virgil's Æneid, Books I., II., and VI., edited by A. Hamilton Thompson, 1/ each.

Gangopādhyāya (Sārādākānta), Conic Sections Made Easy, 8 annas.

Intended to meet the requirements of candidates for the Intermediate Examination of the Calcutta University.

Gangopādhyāya (Sārādākānta), The Student's Matriculation Geometry, Books I.-IV., Re. 1/4

Second edition, revised.

Ovid's Metamorphoses, Selections, 1/6

Edited by H. A. Jackson.

Science.

Arber (E. A. Newell), The Natural History of Coal, 1/ net.

With 21 illustrations. One of the Cambridge Manuals of Science and Literature.

Battle (William H.) and Corner (Edred M.), The Surgery of the Diseases of the Appendix Vermiformis and their Complications, 10/6 net.

Second and enlarged edition, with many illustrations.

Berkeley (Comyns) and Bonney (Victor), A Text-Book of Gynaecological Surgery, 25/ net.

Brew (William), Three-Phase Transmission, a Practical Treatise, 7/6 net.

British Bird Book, Section III., 10/6 net.

Edited by F. B. Kirkman. With numerous illustrations. For notice of Section II. see *Athen.*, Nov. 26, 1910, p. 671.

Cubitt (James), A Short Specification of Materials, Labour, and Goods for Works connected with Building, 5/ net.

Deerr (Noël), Cane Sugar, 20/ net.

A textbook on the agriculture of the sugar-cane, the manufacture of cane sugar, and the analysis of sugar-house products, together with a chapter on the fermentation of molasses. Illustrated.

Don (John) and Chisholm (John), Modern Methods of Water Purification, 15/ net.

With 96 illustrations.

Ennis (William D.), Applied Thermodynamics for Engineers, 24/ net.

With 316 illustrations.

Hays (W. M.), Farm Development, 7/6 net.

Hubbard (T. O'B.), Ledebor (J. H.), and Turner (C. C.), The Aeroplane, an Elementary Text-Book of the Principles of Dynamic Flight, 2/6 net.

With 4 plates and 35 diagrams.

Marshall (W. J.) and Sankey (Capt. H. Riall), Gas Engines, 6/ net.

With 127 illustrations. In the Westminster Series.

Mast (S. O.), Light and the Behaviour of Organism, 10/6 net.

One and All Gardening, 1911, 2d.

Edited by Edward Owen Greening.

Richardson (Charles), The New Book of the Horse, 25/ net.

With 29 coloured plates and numerous photographic illustrations of celebrated horses and a veterinary section.

Stevenson (Thomas), The Modern Culture of Sweet Peas, 3/ net.

With 12 illustrations.

Treasury of Human Inheritance: Parts V. and VI. Section 14a: Hæmophilia, by William Bulloch and Paul Fildes, 15/ net.

Eugenics Laboratory Memoirs, XII.

United States National Museum Proceedings: 1788, North American Parasitic Copepods belonging to the Family Ergasilidæ, by Charles Branch Wilson; 1791, Sperm Transfer in Certain Decapods, by E. A. Andrews; 1793, Thalassocrinus, a New Genus of Stalked Crinoids from the East Indies (Scientific Results of the Philippine Cruise of the Fisheries Steamer Albatross, 1907-10), by Austin Hobart Clark; 1794, On Some Hymenopterous Insects from the Island of Formosa, by S. A. Rohwer; and 1795, On the Inorganic Constituents of Skeletons of Two Recent Crinoids, by Austin Hobart Clark.

Walmsley (R. Mullineux), Electricity in the Service of Man: Vol. I. The History and Principles of Electrical Science, 7/6 net.

A popular and practical treatise on the applications of electricity to modern life, with over 1,600 illustrations.

Wild Flowers of Barmouth and Neighbourhood, 6d.

Fourth edition, with list by the late Rev. T. Salwey.

Wood (T. B.), A Course of Practical Work in Agricultural Chemistry for Senior Students, 2/6 net.

Fiction.

Alexander (Evelyn), The Essence of Life, 6/

The story of a handsome girl who finds happiness after difficulties and surprises.

Bowen (Marjorie), Defender of the Faith, 6/

A romance concerning the later Stuarts and William of Orange.

Coke (Desmond), Wilson's, 6/

A school story, part of which, in a largely different shape and under another title, has lately appeared in *The Captain*.

Dodge (Walter Phelps), The Crescent Moon, 1/6

A romance written in letters.

Grayson (David), Adventures in Friendship, 6/

By an American writer, with effective illustrations.

Half a Truth, by Rita, 6/

Tells of disappointments experienced after attainment of the desire to be in high society.

Ironside (John), The Red Symbol, 2/ net.

A story of mystery.

Lluellyn (Richard), The Imperfect Branch, 6/

The scene is for the most part laid in Devon.

Methven (Paul), Billy, 6/

"Billy" is a girl who drifts into an apparent *impasse* in matrimony.

North (Laurence), Impatient Griselda, a Comedy in Resolved Discords, 7/6 net.

A study of an unusual and charming woman.

Pain (Barry), Here and Hereafter, 6/

Short stories, many of them dealing with the supernatural.

Phillipotts (Eden), Demeter's Daughter, 6/

The scene is again laid on Dartmoor, and the author's chief character is a fine wife and mother.

Scott's Kenilworth, 2/

Contains 47 illustrations. In the Oxford Library of Standard Authors.

Sélincourt (Hugh de), A Fair House, 6/

A study of family love.

Sidgwick (Mrs. Alfred), Odd Come Shorts, 6/

Short tales, most of which have appeared in magazines and papers.

Syrett (Jerrard), A Household Saint, 6/

Reveals some modern types, especially an unconventional pretty woman.

Vaughan (Thomas Hunter), *The Gates of the Past*, 6/

A first novel touching on the theme of reincarnation.

Walpole (Hugh), Mr. Perrin and Mr. Traill: a Tragi-comedy, 6/

General Literature.

Beau (The) on the Science of Pleasure, No. 2, 2/6 net.

With many illustrations.

Brief Sketch of the Morris Movement and of the Firm founded by William Morris to carry out his Designs and the Industries revived or started by him.

Written to commemorate the firm's fiftieth anniversary in June, 1911.

With 9 illustrations.

Debrett's House of Commons and the Judicial Bench, 1911, 7/6 net.

Drage (Geoffrey), *The Imperial Organization of Trade*, 10/6 net.

Deals with trade and industrial questions from the point of view of Imperial politics, with special reference to the forthcoming Imperial Conference.

Fairclough (M. A.), *The Ideal Cookery Book*, 25/ net.

Illustrated.

* * * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

SIR A. CONAN DOYLE is about to publish with Messrs. Smith & Elder a volume of poems entitled 'Songs of the Road.' This volume will be of about the same size and sort as his 'Songs of Action,' which appeared some ten years ago, and has passed through half a dozen editions. In the 'Songs of the Road' there are several pieces which may become as popular as 'The Song of the Bow' and 'The Groom's Story' in the previous volume. There is also a series of philosophic verses, which strike a graver note than any in the earlier collection.

'THE AGONISTS: A TRILOGY OF GOD AND MAN,' by Mr. Maurice Hewlett, will be published in the early summer by Messrs. Macmillan. In presenting the stories of Minos, King of Crete, Ariadne in Naxos, and the death of Hippolytus the author seeks to express "the fallacy in the ancient conceptions of God-kind and Man-kind, and in the ancient views of their relationships."

THE OXFORD UNIVERSITY PRESS include in their announcements 'Ireland and the Normans,' by Mr. G. H. Orpen; 'The English Factories in India, 1634-6,' by Mr. W. Foster; and 'Berkshire Place-Names,' by Prof. W. W. Skeat.

MESSRS. LONGMAN will shortly publish a pamphlet by Mr. Francis H. Skrine, 'True Democracy versus Government by Faction.' It is a concise history of the Referendum and Initiative in Switzerland.

'THE HOOF-MARKS OF THE FAUN' gives the title to a little volume of fantastic tales which Mr. Secker is publishing for Mr. Arthur Ransome. He is also publishing 'Mary Wollstonecraft: a Study in Economics and Romance,' by Mr. G. R. Stirling Taylor.

THE choice and extensive collection of books on angling formed by the late Mr. James L. Haig of Chicago, which the Merwin-Clayton Sales Company of New York will sell next week, includes a set of the first five editions of Walton's 'Compleat Angler.' The copy of the *editio princeps* is without flaw, except that a few of the pages have been repaired; and the almost equally rare second issue is perfect.

THE death is announced, at the age of 74, of Mr. John Lockwood Kipling, father of the famous writer. Mr. Kipling retired in 1893 from the post of Principal of the Mayo School of Industrial Art at Lahore, where he proved an admirable teacher. He was previously an architectural sculptor at Bombay, and his talents both as writer and artist are shown by his charming book 'Beast and Man in India.'

THE annual general meeting of the International Association of Antiquarian Booksellers was held on January 30th. The Report for 1910 showed a steady increase in the membership, which now approaches 300. Mr. Walter V. Daniell was elected President for the ensuing

year; Mr. Thomas Chatto was re-elected Hon. Treasurer; and Mr. Frank Karslake, to whom all inquiries respecting the Association should be addressed, Hon. Secretary.

LORD ROSEBURY presided at the annual meeting of the Old Edinburgh Club held on Monday. In the Report the Editorial Committee submitted a list of the papers to form the Club volume for 1910—(1) *Sculptured Stones of Old Edinburgh*, by Mr. John Geddie; (2) *Lady Stair's House*; (3) *Arms of Edinburgh*, by Sir James Balfour Paul; (4) *Restalrig*, by the Rev. W. Burnet, B.D.; (5) *Old Edinburgh Clubs*, by Mr. Harry Cockburn; (6) *The Blackfriars*, by Mr. Moir Bryce; (7) *An Old Edinburgh Lord Provost*, by Mr. William Baird; (8) *Discoveries at Holyrood*, by Mr. W. T. Oldrieve; and (9) *Parliament Square*, by Mr. Ralph Richardson. The Club is now such a success that there are fifty applicants waiting admission.

THE CURATORS OF THE ADVOCATES' LIBRARY, EDINBURGH, report two valuable donations to their collection of MSS. The first is the original MS. of the 'History of Scots Affairs from 1637 to 1641,' by James Gordon, parson of Rothiemay, one of the most important original authorities for the history of the troubles in Scotland in the seventeenth century. The second MS. represents the papers of Sir George Murray, who was Wellington's Quarter-master-General in the Peninsula, and afterwards Governor of Canada, Commander-in-Chief in Ireland, and Colonial Secretary. His papers include original letters of Wellington, Sir Robert Peel, Palmerston, Brougham, and many other distinguished personages. The number of items received by the Library during 1910 was 51,296, an increase of 4,555.

MESSRS. CONSTABLE send us the following note:—

"In your review of the 'Memorial Edition' of Meredith's Works, dealing with the volumes of short stories and the complete poetical works, we noticed that you say: 'Where so much has been given, is it not a pity that the first, boyish, version of "Love in the Valley," preferred by some critics to the second, should have been withheld?'"

"We would point out that the volume under review contains the final accepted versions of the poems; but Vol. XXVII., which will shortly appear, contains alterations and earlier versions, and in this volume will appear the early version of 'Love in the Valley.'"

M. HENRI DURAND-MORINBEAU, who wrote under the pen-name of Henri des Houx, died on Friday in last week at the age of 62. He was Professor of Rhetoric at Limoges, but soon abandoned teaching for journalism. He was associated with Dupanloup in the management of *La Défense*; and after starting a paper of his own, *La Civilisation*, became editor of *Le Journal de Rome*, which involved him in trouble with the authorities and imprisonment for his advocacy of the temporal power. Returning to France, he published 'Souvenirs d'un Journaliste Français à Rome' and 'Guerre au Papisme.'

SCIENCE

OUR LIBRARY TABLE.

New Illustrated Natural History of the World. By Ernest Protheroe. (Routledge).—It can hardly be said that Mr. Protheroe's rendering of popular natural history is likely to replace the work of the late Rev. J. G. Wood in the affections of the public, although in many respects he has profited by the additions to zoological information. As a book of reference it has the merit of compactness, though it is too weighty—in a literal sense—to be really handy. The whole of the animal creation down to the protozoan parasites that propagate disease is reviewed in some 550 pages, so that it would be surprising if the author had not fallen occasionally into the pitfalls that beset the compiler.

The worst inaccuracies that we have noticed are in the Bird section. Here a goodly number of obsolete local names, such as "lesser pettichaps" and "green grosbeak," have been unearthed with doubtful advantage. We were prepared to find the wren credited with "as many as twelve" eggs; we have always believed such records to be accounted for by mistaken identity, and Mr. Protheroe seems to prove our contention when he describes the nest as being "sometimes in a pump, access being gained to it by means of the spout"—a tit of course. On p. 261 we read that, "unlike the foregoing bird [whinchat], the stonechat totally deserts us during the winter." But the most remarkable lapse is on p. 368, where an incident is given which occurred in June, 1910. A clergyman, when climbing Ill Bell in the Lake District, was attacked in an alarming way by a pair of huge birds, and "his assailants proved to be a couple of Great Bustards that in all probability were nesting in the neighbourhood"! There is not much similarity beyond the sound of their names between a great bustard and a buzzard.

The illustrations are of varying merit, the coloured plates being fairly good, but many of the photographs poor.

British Ferns and their Varieties. By Charles T. Druery. (Same publishers.)—Interest in British ferns, after suffering a declension for some years, has shown signs of revival, due mainly to the unceasing work of a few enthusiasts. Amongst these enthusiasts, none is more strenuous in his advocacy of hardy-fern cultivation than the present author. The volume will be welcomed, because it is written in the familiar style of one who has an enthusiasm for the plants he describes, and because the numerous illustrations, many of them coloured plates, represent almost every distinct variety of garden value. The descriptions are of considerable length, and, although they are in some instances of a popular rather than a strictly scientific nature, they will help many to identify unnamed varieties in their collections. An Appendix contains 96 nature-prints of varieties selected from 300 which were printed from fronds by the late Col. Jones, whose notes and descriptions are reproduced. Mr. Druery describes the life of ferns, and explains the phenomenon known as apospory, which, discovered by himself, has since been studied closely by Prof. Bower.

We have every sympathy with the efforts to promote proper appreciation of our native ferns, and cordially approve the author's condemnation of the practices of dealers and others who have depleted many a hedgerow of its fern flora. At the same time, it does seem a pity that the enthusiasts should concentrate their interest on abnormalities. Some of the crested and tessellated forms are pretty enough, and all are interesting; but, unfortunately, there is a tendency to value them in proportion to their divergence from the normal.

It will be noticed that the author has a special weakness for long sentences, which are apt to be less clear than is desirable. The first in the volume, for example, contains 95 words, and this is not an exceptional case. The system of fern nomenclature, too, is somewhat bewildering to the novice, owing to the use of Latin for mere varietal forms. Amateurs are not likely to be specially attracted by such a name as *Polystichum angulare* var. *divisilobum proliferum* Plim-soll! But the author must not be held to be alone responsible for the system of nomenclature. The volume may be recommended to all who cultivate hardy ferns or wish to know something of their most interesting points.

SOCIETIES.

ROYAL.—Jan. 26.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Memoir on the Theory of the Partitions of Numbers: Part V. Partitions in Two-Dimensional Space,' by Major P. A. MacMahon, 'The Origin of Magnetic Storms' and 'On the Periodicity of Sun-spots,' both by Mr. A. Schuster, 'Atmospheric Electricity over the Ocean,' by Dr. G. C. Simpson and Mr. C. S. Wright, 'On the Fourier Constants of a Function,' by Dr. W. H. Young, 'On the Energy and Distribution of Scattered Röntgen Radiation,' by Mr. J. A. Crowther, and 'On some New Facts connected with the Motion of Oscillating Water,' by Mrs. Hertha Ayrton.

SOCIETY OF ANTIQUARIES.—Jan. 26.—Dr. C. H. Read, President, in the chair.—Mr. C. Hilary Jenkinson read a paper on 'Exchequer Tallies,' which was illustrated by a number of exhibits lent by Martin's Bank, the Royal Statistical Society, and others. The Bank's tallies dated from 1703-9, and dealt with thirteen annuities bought between 1756 and 1759. That lent by the Statistical Society was a very long one, dated 1713, and was for 25,000*l.* Tallies were ordered to be discontinued by an Act of 1783, but receipt tallies remained in use until 1826, the year of the death of the last of the Exchequer Chamberlains, whose interests had been protected by the Act abolishing tallies.

Sir J. C. Robinson exhibited an Anglo-Saxon silver brooch of the tenth century and two ancient Highland brooches. In the discussion of the exhibit there was considerable difference of opinion as to the authenticity of the former.

Mr. W. Dale exhibited a series of lantern-slides of the Tudor House and so-called King John's Palace—a Norman house—at Southampton, which are now being offered for sale; and a resolution urging the importance of their preservation was passed by the meeting.

Prince Frederick Dhuleep Singh exhibited a seventeenth-century alabaster carving representing Charity which had been discovered near Diss, Norfolk.

LINNEAN.—Jan. 19.—Dr. D. H. Scott, President, in the chair.—The Rev. Manoah Holland and Prof. E. A. Minchin were admitted Fellows.

The President alluded to the great loss biological science had sustained in the death of Sir Francis Galton on the previous day, and stated that, although not a Fellow of the Society, he was closely associated with it as one of the recipients of the Darwin-Wallace Medal on the 1st of July, 1908.

Miss B. O. Corfe exhibited some trays of Lepidoptera and other insects received from her brother, Mr. C. Corfe, living at Toronto. Amongst these local insects were some equally common

in Great Britain and Canada, as the red admiral (*Vanessa atalanta*) and a local variety of the large tortoiseshell (*V. polychloros*). Others, as the Camberwell beauty (*Vanessa antiopa*), common in Canada, are extremely rare in the United Kingdom; and still others, as many of the various swallowtails, are absent from our fauna.

Prof. Dendy and Mr. G. E. Nicholls exhibited a series of lantern-slides illustrating the structure and relations of the sub-commissural organ and Reissner's fibre in various vertebrate types.

Mr. F. N. Williams, Dr. Rendle, Prof. Minchin, and Dr. Lilian Veley discussed the points raised by the exhibition.—The Rev. R. A. Bullen exhibited specimens of *Bythinella padiraci*, Locard, and *Niphargus plateaui*, Chevreux, from an underground river in Southern Central France. The Rev. T. R. R. Stebbing added some observations.

The first paper was by Mr. C. H. Wright on the 'Flora of the Falkland Islands.' Dr. Rendle and Dr. Stapf contributed to the discussion which followed.

Mr. Cyril Crossland's paper describing the geological and geographical position of Khor Dongonab, in amplification and part correction of a paper previously published in the *Journal* of the Society, was read in title.

Mr. Hugh Scott then exhibited two boxes of insects—one of Fossorial Hymenoptera, the other of minute flies—to show the character of the material upon which the five following papers were based: 1. Report by Mr. Rowland E. Turner on the Fossorial Hymenoptera. 2 and 3. Reports by Prof. J. J. Kieffer on two families of Diptera, the Cecidomyiidae (Gall-flies) and the Chironomidae. 4. Report by Dr. K. Kertész on another family of Diptera, the Stratiomyidae. 5. Report by Mr. E. Meyrick on the Microlepidoptera of the groups Tortricina and Tineina.

MICROSCOPICAL.—Jan. 18.—*Annual Meeting.*—Prof. J. Arthur Thomson, President, in the chair.—Mr. T. Chalkley Palmer made some remarks upon a slide of *Surirella elegans*.

The President took as the subject of his address 'The Determination of Sex.' He discussed, historically and critically, five theories or sets of suggestions.

1. It has been suggested that environmental conditions operating on the sexually-undetermined, developing offspring-organism, may, at least, share in determining the sex. The evidence in support of this has in great part crumbled before criticism, and before the counter-evidence of cytologists and Mendelians. But when we think of the gamut of life, we feel it to be rash to exclude even this possibility.

2. It has been suggested that the sex is quite unpredestined in the germ-cells before fertilization, and that it is then settled by the relative condition of the gametes (as affected by age, vigour, &c.), or by a balancing of the inherited tendencies which these gametes bear, neither ovum nor spermatozoon being necessarily decisive. The evidence in support of this is very far from satisfactory. Yet in view of some sets of experiments of R. Hertwig in particular, it seems rash to foreclose the question.

3. It has been suggested that the sex is predestined at a very early stage by the constitution of the germ-cells as such, there being female-producing and male-producing germ-cells, predetermined from the beginning, and arising independently of environmental influence. The evidence in support of this is very strong, both on experimental and on cytological grounds.

4. It has been suggested that maleness and femaleness are Mendelian characters, and one form of this very attractive theory is that femaleness is dominant over maleness, and that females are heterozygous as regards sex, and males homozygous as regards sex. But there are grave difficulties as well as very striking corroborations.

5. It has been suggested that environmental and functional influences, operating through the parent (or, in short, the parent's acquired peculiarities), may alter the proportion of effective female-producing and male-producing germ-cells, as, for instance, in Russo's experiments on rabbits. This possibility remains tenable.

Prof. Thomson argued in support of the theory that there is no sex-determinant at all in the usual sense, but that what determines the sex of the offspring is a metabolism-rhythm, a relation between anabolism and katabolism, or a relation between the nucleoplasm and the cytoplasm. Many sets of facts converge in the inference that each sex-cell or gamete has a complete equipment of both masculine and feminine characters—of which there are doubtless chromosomal determinants. It may be that the liberating stimulus which calls the masculine or the feminine set into expression or development is afforded by the metabolism-rhythm set up in the cytoplasmic field of operations. It may be that this meta-

bolism-relation—between nucleoplasm and cytoplasm doubtless, and likewise between anabolism and katabolism—leads first and necessarily to the establishment of ovaries or of spermaries, and secondly, either directly, or through the gonads with their internal secretions, to the expression of the contrasted masculine or feminine characters.

The following Fellows were elected as officers and Council for the ensuing year: *President*, H. G. Plimmer; *Vice-Presidents*, A. N. Disney, R. G. Hebb, E. Heron-Allen, and J. A. Thomson; *Treasurer*, Wynne E. Baxter; *Secretaries*, J. W. Eyre and F. Shillington Scales; *Members of the Council*, F. W. W. Baker, J. Barnard, F. J. Cheshire, C. L. Curties, C. F. Hill, J. Hopkinson, P. E. Radley, J. Rheinberg, C. F. Rousselet, D. J. Scourfield, E. J. Spitta, and Sir Almroth E. Wright; *Librarian*, P. E. Radley; *Curator of Instruments*, &c., C. F. Rousselet; *Curator of Slides*, F. Shillington Scales.

The following were elected Fellows: F. Armstrong, J. Ross, W. Ayrton, and C. J. Tabor.

INSTITUTION OF CIVIL ENGINEERS.—*Jan. 24.*—Mr. Alexander Siemens, President, in the chair. The papers read were 'The Bar Harbours of New South Wales,' by Mr. G. H. Halligan, 'Sand-Movements at Newcastle Entrance, N.S.W.,' by Mr. C. W. King, and 'Fremantle Harbour-Works, Western Australia,' by Mr. C. S. R. Palmer.

HISTORICAL.—*Jan. 19.*—Archdeacon Cunningham, President, in the chair.—A paper was read by Miss O. J. Dunlop on 'Early Apprenticeship in England.' Mr. F. H. Skrine and the President contributed to an interesting discussion which followed.—The election of the Rev. I. Hartill and of Mr. N. H. Capron as Fellows was announced.

BRITISH NUMISMATIC.—*Jan. 25.*—Mr. Carlyon-Britton, President, in the chair.—Messrs. C. A. Cain, A. W. Lafone, and Hal Waddington were elected Members.—Mr. Bernard Roth, Vice-President, on behalf of the Society, presented the John Sanford Saltus Medal to Mr. Carlyon-Britton, to whom it had been awarded by the ballot of the members at the Anniversary Meeting for his contributions to the Society's publications.

Miss Helen Farquhar read the third of her series of articles on 'Stuart Portraiture,' describing the coins and medals of William and Mary, including those of the King after the Queen's death. From references in the State Papers and other Manuscripts she attributed to George Bower, whose work as cuneator had hitherto met with little notice, the half-guinea and tin half-penny and farthing of 1689. Following the story of the Roettier family to the death or departure from England of its various members, she endeavoured to trace the earlier dies for the great recoinage to the several engravers, establishing the claims of James Roettier to the principal share of the work, comprising dies and puncheons for the country mints, to the exclusion of Henry Harris, the official chief-engraver. She also drew attention to the very gradual development of a more medallist style of portraiture after the dismissal of James Roettier from the Tower mint in 1696-7, as exemplified in John Croker's gold pieces at the termination of William's reign; and she illustrated by lantern-slides the slight changes which appeared in the portraits of 1696-7 when Croker superseded Roettier.

Mr. Dalton presented to the Society the second part of 'The Provincial Token Coinage of the Eighteenth Century.' Numerous and interesting coins and medals in illustration of the subject of Miss Farquhar's paper were shown by Mr. S. Spink, Mr. A. H. Baldwin, and the lecturer. Mr. MacIlwaine exhibited five varieties of the early Irish silver penny, as supplemental to Mr. Roth's paper on that subject in the current *Journal* of the Society; and Major Freer, the badge of the Turkish Order of the Medjidie, third class.

Specimens of the new bronze halfpenny, submitted by Mr. Baldwin, evoked the remark from the President that, as on the present money, the mechanism of the striking still raised a faint trace of the device of the one side upon the other, which was a defect unknown until recent years.

MEETINGS NEXT WEEK.

- MON. Royal Academy of Arts, 4.—'The Statue,' Prof. W. R. Colton.
- London Institution, 5.—'The Art of Palaeolithic Man,' Dr. A. C. Haddon.
- Royal Institution, 5.—General Meeting.
- Society of Engineers, 7.30.—Presidential Address.
- Aristotelian, 8.—'Value and Reality,' Miss H. D. Oakeley.
- Society of Arts, 8.—'Brewing and Modern Science,' Prof. Adrian J. Brown. (Cantor Lecture.)
- Surveyors' Institution, 8.—'The Evolution of Fire-Resisting Construction,' Mr. W. Woodward.

- TUES. Royal Institution, 3.—'Heredit,' Lecture IV., Prof. F. W. Mott.
- Institution of Civil Engineers, 8.—'The Detroit River Tunnel, between Detroit, Michigan, and Windsor, Canada,' Mr. W. J. Wilgus.
- Anthropological Institute, 8.15.—'Recent Theories about Palaeolithic Man,' Mr. J. Gray.
- Zoological, 8.30.—'On the Structure and Function of the Gas-Glands and Retia Mirabilia associated with the Gas-Bladder of some Teleostean Fishes, with Notes on the Teleost Pancreas,' Dr. W. N. F. Woodland; 'Skulls of Oxen from the Roman Military Station at Newstead, Melrose,' Prof. J. Cosser Ewart; and other papers.
- WED. Central Asian, 4.30.—'The Proposed Trans-Persian Railway,' Lieut.-Col. A. C. Yate.
- Geological, 8.—'Glacial Geology and the British Antarctic Expedition of 1907-9,' Prof. T. W. Edgeworth David.
- Society of Arts, 8.—'Some Nigerian Head-Hunters,' Capt. A. J. N. Tremearne.
- THURS. Royal Institution, 3.—'Problems of Animals in Captivity,' Lecture I., Dr. P. Chalmers Mitchell.
- Royal Academy of Arts, 4.—'Ancient and Modern Sculpture,' Prof. W. R. Colton.
- Royal, 4.30.—'Certain Physical and Physiological Properties of Stovaine and its Homologues,' and 'The Effect of some Local Anesthetics on Nerve,' Dr. V. H. Veley and Mr. W. L. Symes; 'Experimental Researches on Vegetable Assimilation and Respiration,' Parts VIII. and IX., Dr. F. F. Blackman and Mr. A. M. Smith.
- Society of Arts, 4.30.—'Indian Superstitions,' Mr. R. A. Leslie Moore. (Indian Section.)
- London Institution, 6.—'Classical Song,' Mr. Stanley Roper.
- Institution of Electrical Engineers, 8.—Discussion on 'Long-Distance Transmission of Electrical Energy,' and 'Extra High-Pressure Transmission Lines.'
- Society of Antiquaries, 8.30.
- FRI. Astronomical, 5.—Annual Meeting.
- Institution of Civil Engineers, 8.—'Rivers and Estuaries,' Vernon-Harcourt Lecture II., Mr. W. H. Hunter. (Students' Meeting.)
- Royal Institution, 9.—'Robert Louis Stevenson,' Sir Sidney Colvin.
- SAT. Royal Institution, 3.—'Architecture: The Byzantine and Romanesque Period,' Lecture I., Mr. T. G. Jackson.

Science Gossip.

AMONG the numerous elementary textbooks of botany in use in England there are few, we believe, that include morphology, classification, and ecology. Teachers will therefore welcome 'Plant Life,' a little book containing 250 illustrations, which is to be issued by Messrs. Sonnenschein. The text is by Prof. Warming, and has been translated under his supervision by Miss Rehling and Miss Thomas.

PROF. SANDWITH will deliver on February 14th to 17th inclusive four Gresham Lectures on 'Plague' at the City of London School.

THE OXFORD UNIVERSITY PRESS announce a new edition of 'Forest Terminology,' by Messrs. J. Gerschel and W. R. Fisher, and 'Australia: Physiographic and Economic Aspects,' by Mr. T. G. Taylor.

WE regret to announce the death, in his 70th year, of M. Gustave Leveau, who had been long connected with the Paris Observatory, and was awarded the Darnoiseau Prize of the Académie des Sciences in 1892, principally for his work on the perturbations of the periodical comet of D'Arrest. His other widely known work is the formation of tables of the motion of the planet Vesta.

MR. LYNN has in the press new editions of his handy little books 'Remarkable Eclipses' and 'Remarkable Comets,' which will be published by Messrs. Bagster probably early next month. That they are brought up to date is shown by the mention in the first of the eclipses (both sun and moon) of last year; whilst in the second is given a reproduction of a drawing of Halley's comet as seen at Barbados when nearest to the earth in May.

WE hoped we had heard the last of the so-called Daylight Saving Bill, but apparently it is to be brought forward again. It does not seem to have occurred to the promoters that the advantages proposed to be attained by the adoption of the scheme could readily be obtained in a more simple and straightforward way, without the indescribable confusion and inconvenience which would be caused by interference with clock-time. Well may our contemporary *Nature* say that we should become a laughing-

stock to the civilized world if we accepted so roundabout (one might say deceitful) a means for regulating work at different seasons of the year according to daylight. Euc. I. v. got its sobriquet from the indirect way in which it approaches its object. Of one thing the supporters of this scheme may rest assured: the vast majority of householders will not meddle with their clocks in the way suggested, but, if offices and trains do alter their times by the seasons, will mentally allow for the difference, and we should have to go back to the logical method of considering an hour to be an hour and nothing else, simply changing the allotted times at which certain things were done.

THE GOLD MEDAL OF THE ROYAL ASTRONOMICAL SOCIETY has this year been awarded to Dr. Cowell, Superintendent of 'The Nautical Almanac,' principally for his work on the lunar acceleration and discussion of ancient eclipses as bearing upon this. The address on presentation will be given at Burlington House on Friday next by Sir David Gill, the retiring President.

AN ASTRONOMICAL SOCIETY OF INDIA was founded last July at Calcutta, and it has published a monthly journal containing some interesting papers. The first President is Mr. H. G. Tomkins, F.R.A.S.

THE REPORT OF THE WASHINGTON OBSERVATORY for the year ending on the 30th of June last has been received. For several reasons, the observational work has been somewhat restricted, and an effort has therefore been made to bring up back reductions, and effect needful repairs and changes in the instruments. It has been decided to take part in the observation of fundamental stars in connexion with the International Chart, but for the present this must be in a limited way. Delay has occurred in bringing the new 6-inch transit-circle into use. Halley's comet was observed from November, 1909, to June, 1910, but when it was nearest in May, there was much interruption from visitors.

MR. S. M. BAIRD GEMMILL, a frequent contributor on astronomical topics to newspapers and periodicals, died suddenly on the 19th ult. in the 51st year of his age.

PROF. BARNARD has found on three photographic plates taken at the Yerkes Observatory on the 7th of August, 1907, and the 22nd and 24th of August, 1909, a faint star in the place of Espin's Nova Lacertæ. It is also clearly marked on one taken at the Lick Observatory so long ago as the 11th of October, 1893, so that previously to its sudden outburst last November it must have existed for at least seventeen years as a fourteenth-magnitude star.

THE star B.D. + 60° 1743 (of about 6½ magnitude) has been detected to be a variable by Mr. T. H. Astbury, and will be reckoned as var. 1, 1911, Draconis.

WE have received a tractate by Prof. Pio Emanuelli (abstracted from the *Memorie della Pontificia Accademia Romana dei Nuovi Lincei*) on 'L'Eclisse totale di Sole del 28-29 Aprile, 1911,' in which the circumstances of the total solar eclipse of next April are worked out, and the islands in the Pacific Ocean indicated which the moon's shadow will traverse, the most eligible for the observation being apparently Samoa or the Navigators' Islands.

FINE ARTS

A History of Architecture. By Russell Sturgis.—Vol. II. *Romanesque and Oriental.* (B. T. Batsford.)

THE first volume of this 'History of Architecture' was reviewed in *The Athenæum* of August 17th, 1907. The second volume maintains the same high standard of general excellence. With the completion of the third volume on the lines originally laid down, students will be in possession of a valuable handbook of architectural history comparable in its scope to Fergusson's well-known history. Fergusson's history at the time it was written—it was first published in 1855—was a remarkable achievement; combined with the true scientific spirit of painstaking and methodical research, its author had a passionate enthusiasm for the nobler qualities of his subject. Since Fergusson's days many pages of history have been written. Evans, Lethaby, Schultz, Cattaneo, Venturi, Strzygowski, and other authorities have added much to our knowledge of defined districts and periods.

Mr. Sturgis's second volume treats of mediæval work under the headings, Romanesque and Oriental. The buildings dealt with are mostly in existence, and the difficulty of discriminating between original work and later additions has to be faced. So long as building was a traditional and customary art, the difference between one generation of craftsmanship and another was so slight that the substitution of new work for old is not always easily defined; where the transition is complete, the inquiry is straightforward enough. The restorations of the last hundred years are often deplorable, even when they have been directed by the most eminent authorities. To quote only the case of the Château of Pierrefonds, before 1865 the ruin was a genuine historical document; since Viollet-le-Duc's restoration we no longer see a fourteenth-century castle, but an interesting study of what an eminent architect thought such a castle must have been. As Mr. Sturgis shrewdly says, the restorer "as he builds can never restrain his own feelings of what should be from overcoming his slowly gained knowledge of what was."

Architectural style is so much a matter of temperament that an analysis of many styles by any one man is an almost impossible task. The chapters on the architecture of the East, informed as they are by laborious study and enlightened taste, skim the surface of deep waters. India, China, Japan, and Persia pass under review, and the author succeeds in awakening the interest and enthusiasm of the student to the possible fruitfulness of further inquiry. We like the rule which he lays down in the Preface:—

"When we discuss fine art, let us keep to that which can be verified. Let us be ready

to disbelieve, to ignore, to refuse the search for evasive theory. The arts of design are the result of the artistic impulse in man, of his disposition to record, to explain, what is beautiful in the world of nature, and to refine and beautify the work of man."

We can get no further than this with Oriental art, but we may hope for a day when a general history of the fine arts may be written by the experts of many nationalities. We like, too, the author's observation on p. 29 when writing of the Chinese Empire and of the discoveries that will one day result in a new chapter of architectural history. He says: "There is no distinction, among people of truly artistic feeling, between major and minor arts—arts of expression and arts of decoration." It is interesting that Mr. Sturgis in his study of Eastern art should emphasize the importance of the roof in architectural development. Our own architects, involved in the intricate problems of present-day requirements, sometimes forget to look at their work from a sufficient distance; the evidence of all Western architectural development points to the fundamental relation of roof to plan.

To most readers the chief interest of the present volume will be found in those chapters dealing with the styles resulting from the decline—we should prefer to call it the transition—of ancient art. With few exceptions, the buildings left from the stormy days following the break-up of the Roman Empire are of the basilican type. Many of them are of circular plan, a form in favour in the time of the great Empire. The later buildings on this plan, roofed with the same admirable system of vaulting, such as that of the tomb of Theodoric at Ravenna, testify to the hold which Roman tradition obtained over the Gothic invaders. Many of their round churches built before the year 1,000 became baptisteries to the later churches of cruciform plan.

The development from the basilican type is a fascinating study. The measured plans and sections collected from many sources, profusely supplemented with photographs of the buildings as they now stand, are not the least valuable part of Mr. Sturgis's contribution.

The influence of the Moslem conquests on the Byzantine type is interesting. The Moslem hold over the native workmen in Syria, Egypt, Northern Africa, Persia, India, Sicily, and Spain affected the decoration rather than the structure of the buildings; the barbaric simplicity of their conception, overlaid with delicate surface-decoration rich in colour and splendid in design, resulted in some of the most remarkable monuments of any age. Mr. Sturgis deals fully with the Moslem use of the pointed arch, a form known and rejected by other builders.

The later Romanesque architecture in Italy is fully dealt with, and proper appreciation of the great church of S. Ambrogio at Milan, the most perfect mediæval building in Italy, is expressed. The present writer has not seen the beautiful little church of Pomposa illustrated else-

where; it is worthy of accurate measured records.

The Romanesque development in France is more complex than in any other country. Late in the period the pointed arch was used, but without any tendency to its Gothic development. The problem of roofing is the history of the style. Norman and British Romanesque are grouped together; while the architects of the central and southern districts of France were trying to solve the problem of stone vaulting over the whole of the church, those in England and Normandy were content with timber roofs, either from preference or lack of ambition. As Mr. Sturgis points out, "the real development of Norman architecture took place in England...after that millennial year which was of such importance in European history." The first fruit of the renewed activity was Westminster Abbey. The narrow nave of our English cathedrals was not in Norman times due only to difficulties of vaulting, for with the exception of Durham no attempt to span the roof in this way is to be found; the difficulty was that of spanning any considerable width with a single tiebeam of timber, the only form of roof truss then known. The question whether or not the vaulting at Durham is contemporary with the wall is answered by Mr. Sturgis in the affirmative, and he justly says: "We have in Durham the nearest approach to a perfect Romanesque interior that the British Isles can furnish."

Before the Gothic period the honours in scientific vaulting are with the builders of the Rhine. Cautious and conservative, they yet felt at once the fascination of the vault, and adopted it as a guiding principle in planning their churches; their experiments, unlike so many of those in the South, have stood the test of time.

Three chapters are given to the few remaining examples of Romanesque building in Spain, Scandinavia, and South-Eastern Europe. Those in Scandinavia are interesting on account of their material; wood was used even in large churches, and the fine example of Borgund still stands to-day. The beautiful style of ornament known as Runic is traceable to this material.

Some fine churches in Armenia of typical Byzantine origin are shown and are well worthy of more attention than can be given to them in the pages of a general history of architecture.

As we close this scholarly volume, we sincerely regret that its author was not spared to complete his task. The death of Mr. Sturgis took place before the present instalment was published, and we can only hope that his executors have been able to make satisfactory arrangements for the completion of the work on the lines he laid down. Whatever matter Mr. Sturgis may have left, the remaining work will be no light task; it is one worthy of achievement.

The Index is promised with the third volume. It only remains to add that the text is singularly free from errors.

OUR LIBRARY TABLE.

Andrea Mantegna: l'Œuvre du Maître en 200 Reproductions. (Hachette & Cie.)—The latest addition to the "Nouvelle Collection des Classiques de l'Art" maintains the high standard of the series. Its distinctive feature consists in the fact that the number of the illustrations is sufficient to supply a complete gallery of each artist's work, and the form is such as to convey an adequate impression of detail. This result is helped by the fact that each of the larger compositions is given in a series of reproductions in which the various parts are on a scale that permits a minute study of salient details. Thus the reproduction of the fresco at Mantua of Ludovico Gonzaga and his family is followed by nine of portions of it, some of these being of single heads which are on a scale of one-third the size of life. These afford ample testimony of that unerring fidelity in delineation by which Mantegna did for the lords of Mantua the service which Ghirlandajo rendered to contemporary Florence. That statuesque quality in which Mantegna excelled all his contemporaries down to Michelangelo is not suffered to dominate to the same extent as in the work in the Eremitani Chapel at Padua, where the study of the antique and the teaching of Squarcione are more apparent, but is tempered and rendered mobile, with added flexibility and grace, by the Venetian influence which Mantegna underwent during his association with the Bellini. This marked the ripest stage of his art, which, however, owed relatively less to colour, and consequently its characteristic features are more readily apparent in half-tone illustrations. The order of these is not chronological, the classified arrangement being better calculated to show the wide range of Mantegna's intellectual interests, and reproductions of engravings form a noteworthy section.

The Introduction is a careful compendium of the main biographical facts, with brief descriptions of the principal works. Herr Kristeller's scholarly monograph has left very little scope for the future art-historian to treat of Mantegna, but the aim of the present work is more restricted, and within its limits the performance is sound and adequate. Now and again, however, a judgment of relative values arrests attention and provokes criticism. To class together Bellini, Perugino, and Ghirlandajo as equal in attainment is surely to under-estimate the importance of Giovanni Bellini. Still more open to question is the statement that Mantegna's excellence as a draughtsman raises him "above even Da Vinci, and near to Michelangelo." The suggestion that the hand in Mantegna's 'Madonna of the Victory' in the Louvre was copied by Leonardo in the 'Vierge aux Rochers' is contradicted by chronological evidence. Mantegna painted his picture to celebrate the battle of Fornovo, which took place on the 6th of July, 1495. The 'Vierge aux Rochers' was then already in existence, for it is referred to in a document in the Milanese archives which is of a date between 1491 and 1494. The picture was painted, in all probability, soon after Leonardo went to Milan. The similar gesture of the hand in benediction may well have occurred to both painters independently; but if there was any borrowing, Mantegna must have been the borrower.

Revolution in Art. By Frank Rutter. ('The Art News' Press.)—In reviewing Prof. Holmes's 'Notes on the Post-Impressionist Painters' in *The Athenæum* of January 7th, we remarked that the author

was so strong in technical criticism that he tended to neglect that to which technique is a means. Mr. Rutter's knowledge of the means is, we imagine, limited, but his enthusiasm for the great ends of art gives force and significance to his book. This is fortunate, for he is neither a first-rate writer nor a critic of exceptional insight; if we prefer his book to that of Prof. Holmes it is because he has aimed higher.

Taking for his texts Van Gogh's saying, "Is it not strength of thought far more than quiet brushwork that we seek?" and Gauguin's rather too brilliant aphorism, "In art there are only revolutionaries and plagiarists," Mr. Rutter gives a fair account of the passions and ideas of the early Post-Impressionists and the feelings they tried to express. But more important is his discussion of the younger men, Matisse, Friesz, Derain, Vlaminck, &c., in understanding and appreciation of whom he is superior to both Prof. Holmes and Mr. Walter Sickert. Perhaps he does not show with sufficient clearness that the notion that the end of plastic art is to create an illusion of reality is a sure and familiar sign of decadence; that in painting, as in poetry, the value of symbols depends upon their intrinsic beauty and their power of conveying emotion; and that when a painter wishes to give a general idea of a fierce beast or a tall tree, he is no more obliged than a poet to notify its genus and species. But at any rate, he understands that the younger French painters are, at present, occupied in trying "to put a line round a mental conception"—that they are not trying to represent youths dancing, oak trees in a storm, or gardens on the banks of rivers, but rather to translate into line and colour such abstractions as the rhythm of the dance, the stir of trees, and the lush wetness of swampy places.

Coins of the Roman Republic in the British Museum. By H. A. Grueber. 3 vols. (British Museum.)—The numismatic catalogues of the British Museum have always been held in honour among archaeologists concerned in any way with coins. The three stately volumes now before us well maintain that honour. They are indeed important for more than one reason.

In the first place, they contain a detailed catalogue of a remarkably fine collection of the issues of the Roman Republic down to about the year B.C. 3, when, as Mr. Grueber thinks, the practice of placing moneyer's names on coins was finally suspended at Rome, and when, therefore, the Republic may be said to have reached its numismatic death. The first volume includes—after a long, but not overlong Introduction—the coinage of the urban mint from its earliest days down to B.C. 37. The second volume carries the urban coinage on to the supposed date B.C. 3, and treats also of the coins issued down to the same date outside of Rome, both in Italy and in the provinces, so far as they follow the Roman monetary system. The third volume contains lists of hoards of Republican silver coins, indexes of various sorts, and 123 admirable autotype plates. The compilation of such a work means an immense labour, and we warmly congratulate its author, Mr. Grueber, the learned keeper of the Department of Coins and Medals, on its completion.

Secondly, this work gives us—at last—the classification of the Roman Republican coinage devised by the late Count de Salis. That extraordinary man—perhaps the only Count of the Holy Roman Empire who has ever scientifically studied numismatics—had both a passion for coin-collecting, and

a veritable genius for the interpretation and classification of ancient, and in particular of Roman, coinage. After amassing and arranging a fine collection of his own, he obtained leave in 1859 from the Trustees of the British Museum to classify the British Museum collection. For ten years he laboured in the Medal Room, without pause and without rest. In that decade he classified alike the Republican, the Imperial, and the Byzantine sections of the Roman coins in the Museum. But he left no published or even written account of his system. Yet so wonderful was his *flair* in regard to fabric and style that his classification has been maintained in the Museum virtually as he left it at his death in 1871.

Of this classification Mr. Grueber now supplies a full account, with copious notes of his own which defend or occasionally criticize the scheme of de Salis, and which give other information such as a student might desire. In particular, he has taken account of the more recent writers on his subject. The earlier part of his catalogue, indeed, was sent to press five years ago, before E. J. Haebler issued his epochmaking works on the "aes grave" and other early Roman coinage; and the views of Willers seem equally to have come too late for Mr. Grueber to consider. We have here another example of the evil of spreading the printing of an elaborate work over a long period of time. But other recent writers, like General Bahrfeldt, receive full notice, and their views are conveniently summarized and discussed.

We do not here propose to criticize any details in the classification of Count de Salis or in Mr. Grueber's annotations thereto. It is obvious that the numismatic world stands on the verge of a reconsideration of the whole problem of the Roman Republican coins. The 'Münzwesen' of Mommsen, first issued (*pace* Mr. Grueber) in 1850 and completed in 1860, has held the field for half a century—a good deal longer than most books in most branches of knowledge. Now the hour is near when new views will have to be discussed freely, and the subject perhaps reconstituted as a result. In that contest Mr. Grueber's three volumes will play their part, and we must leave them to do it. We should like, however, to suggest that if the Catalogue be continued, as we hope it may, to include the Roman Imperial coinage, the matter of the historical notes should be reconsidered. When one observes in the work now before us that the biography of a man like Hirtius is not correctly given, and that other lesser slips occur, one reflects that in the mass of detail errors are inevitable. On the other hand, we think that many of the historical notes are for practical purposes superfluous. The labour expended on the Catalogue would be lessened, and its correctness enhanced, if such matter were left out.

County Churches.—Norfolk. By J. Charles Cox. 2 vols.—*Surrey.* By J. E. Morris. (Allen & Sons.)—These volumes are the first of a series of handy or pocket guides to the churches in the counties of England. The Rev. Dr. Cox is general editor of the series, and the author of the two volumes on Norfolk; Mr. J. E. Morris is responsible for that on Surrey. Owing to the number of churches in Norfolk, 650 in all—Dr. Cox gives a list of 125 additional churches which have, through neglect or other causes, disappeared—this county has been divided into north and south.

Each author opens with a concise Introduction, treating generally, and where necessary in detail, the history, architectural characteristics, building materials, and

other interesting matters anterior to the seventeenth century. The churches, taken in alphabetical order, are grouped in the old rural deaneries, and, so far as the writer can judge from examples known to himself, every feature of interest in every church in the counties is recorded. In the work on Norfolk Dr. Cox has tabulated the towers, spires, roofs, screens, fonts, &c. Mr. Morris has been more fortunate than Dr. Cox in seeing his work safely through the printers' hands, and has avoided the table of errata which disfigures the Norfolk volumes. Each county has its Index. There is a sprinkling of illustrations of indifferent quality, and it is open to question whether they would not have been better omitted. For method and thoroughness of investigation these little volumes are praiseworthy; such conscientious work will no doubt in due course greatly facilitate the labours of the Royal Commission on Historical Monuments, if only in the preparation of the Inventory which is part of its work.

WORKS BY THE LATE J. M. SWAN.

It is perhaps because there are fewer finished pictures and a larger proportion of studies that this collection at Messrs. Colnaghi's Galleries impresses us more favourably than the one from the same artist at the Royal Academy. Yet, to be just, it is not that alone, but the presence among these studies and sketches of a number of works in which the artist is seen striving after original and creative work, that stamps Messrs. Colnaghi's collection as more finely representative.

Swan's exhibited studies fall as a rule into three categories. There are in the first place his studies—usually in pastel—of animals on the move or in momentary repose—impressions naturalistic in intention, though often with the touch of style inseparable from extreme terseness of expression. The best of these, such as the study of *Jaguars* in the present show (2) or the happy impression of a *Polar Bear Swimming* (23), could hardly be surpassed. Only a little less good is the *Study of a Serval* (67) or (perhaps in this instance because it is in oil instead of pastel) the *Wounded Puma* (14). The Academy also is rich in these drawings. At their best, while they have the charm, they have also the weakness which belongs to such unpremeditated assaults upon Truth. The nymph is indeed captured, but the captor stands amazed at his own good fortune. He has carried off he knows not what, nor can he return again to woo with quite the same zest and conviction as before.

Yet these animal studies are almost uniformly better than Swan's drawings of the human figure which have been shown (of late years in considerable quantity). As a draughtsman of the nude Swan possessed the undistinguished fluency which most capable art-students ultimately attain to, and which very few transcend. It is the natural result of constant study of the posed model that we should come to a prompt recognition of familiar forms and a somewhat blunted perception of their functions. Swan's nudes have usually this fatal familiarity without intimacy, and, though we should perhaps make some allowance for our own more exacting standards, we find his human figures academic in comparison with his leopards.

It is in a third class of drawing—more fully represented here than at the Academy—that we are reminded that Swan, after all, was by nature an idealist and a dreamer

as well as an executant. Of the hours he spent, pencil in hand, watching his cats, the drawings he brought home were or should have been a by-product only. Doubtless, as he found how highly his brilliant studies from nature were valued, he was tempted to forget that the object of working from nature is not the production of brilliant studies. Yet he did not wholly forget his true business as an artist—to assimilate and co-ordinate the essence of natural law till he could dream in terms of instinctive tiger-movement, and recreate in imagination the elemental combinations, the typical groups of primitive life. The sombre *Two Leopards Drinking* (78) is a highly concentrated example of this more fatiguing effort of constructive imagination. It might almost bear comparison for force with the 'Wounded Leopard' at the Academy, and is even more impressive in invention. The *Jaguar and Cubs* (90) is another imaginative little work. Not so directly responding to purely physical causes, the bodily expressiveness of a man is by so much less obvious than that of a cat, and it is difficult to imagine an artist making it self-explanatory without in some degree abstracting from the complication of appearances the plastic element of his group, and presenting it starkly as form simply rendered. No great master of the human figure would set so high a price as did Swan on the witchery of shot-colour and gleaming surfaces, yet in an occasional pastel like the one we noticed at the Japan-British Exhibition or No. 84 in the present show we see him vaguely endeavouring to endow these toys of realism with a more general imaginative significance. Even in the large unfinished oil painting, No. 47, the experimental splashes of pigment over a rather imitative life-study, if the gropings of a somewhat foggy idealist, must be counted as aspiration: nor need we be in a hurry to pronounce these experiments the sign of an uncreative mind when we remember the naive fashion in which Rodin sometimes casts together figures modelled for quite diverse purposes, on the offchance of an accidental conjunction which may prove inspiring. Far more beautiful, however, than any such fumbings in the iridescent void is the lovely simplicity of his *Study for La Cigale* (75)—a painter's vision of extraordinary purity, which convinces us more than anything ever shown by the artist of his noble natural endowments. This is as fine as the best work of an artist whom England has not yet appraised at his true value—the late William Stott—and in the same vein of lyricism. Stott was a poet, and helpless in any other aspect. Swan was poet and executant by turns, but it was mainly as an executant that he found discerning admirers.

OTHER EXHIBITIONS.

THE remaining shows of the week are on a lower plane of achievement, although the spoils of Mauve's sketchbooks shown at Walker's Gallery are the honest notes of a painter of temperament and some insight settled down to the methodical exploitation of a speciality. Nos. 9, 29, 40, and 70 may be recommended for the swift seizure of good motives for the painter's art. One can easily reconstruct the resultant pictures from these few essentials.

Probably every critic goes to an exhibition of works by women artists furiously determined to admire, so ungracious does it seem to be for ever belittling these exhibitions or meanly ignoring them. The

Society of Women Artists at the Suffolk Street Galleries again foils the best-laid plans. Miss Eleanor Brace (13), Miss Mima Nixon (136), and Miss Youngman with an old-fashioned, but tranquilly disposed flower piece (142) emerge from the water-colour painters, but cannot be accounted remarkable. The work evinces throughout the want of a standard of thoroughness in any direction, even the apparent conscientiousness of such objective drawings as the *Old Norwegian Bridge* (316) of Miss M. K. Hughes or *The Oratory* (327) of Miss Kerr displaying an indifference to the niceties of perspective typical of, though, alas! by no means peculiar to, the work of women artists. Miss Lilian Pocock's small design for a stained-glass window (330) is not unpromising, but the weaker, over-modelled draughtsmanship of her other exhibit (360) makes us doubtful of its further development. Only the work of Miss Margarethe Dellschafte (278, 359) and Miss Rowley Leggett (275) shows some firm foundation in study, though on somewhat hackneyed lines.

Signor A. Pisa, who is showing at the Fine-Art Society's Galleries, is with Mr. Walter Tyndale the perfect type of travelling water-colour painter of our day; that is to say, he sets down clearly and plausibly the bright colours of Southern landscape without any attempt to sort them into categories. None of his works shows any evidence of painter's research, so their interest for us is purely in their choice of subject. From this point of view No. 4 is rather striking; No. 56 is bold and to the point; while No. 72, *Ruins of the House of the Mariners, Pompeii*, though executively just like the rest, has a certain impressiveness from the simplicity with which it presents to us the deserted remains of what was once a habitation.

The exhibition in aid of the Boy Scouts' Organization Fund at the Baillie Gallery contains a fair sketch by Mr. David Murray (28), a poor portrait by Mr. Solomon (83), and a stylish lithograph by Mr. Kerr Lawson (73). More "topical" are Sir Hubert von Herkomer's portrait of Lieut.-General Sir R. Baden-Powell (39) and a large collection of that well-known officer's drawings. These show him, like many distinguished amateurs, aspiring, and in a high degree attaining, to just the qualities necessary for the popular success of the market. No journalist could be more promptly effective or more unsatisfactory to the serious critic. It is wonderful that he should be able to do such things, but amazing that he should want to do them. No. 65, however, shows some dramatic sense—just enough to lure us into the mistake of taking seriously what is probably only a busy man's pastime, pursued vehemently while he is at it, like any other game.

SALES.

ON Tuesday, January 24th, and the three following days, Messrs. Sotheby sold Japanese prints, the total of the sale being 1,677*l.* 11*s.* 6*d.* Among the few lots of importance was a print by Harunobu. A Lady standing in a Doorway, 25*l.* 10*s.* A set of the 55 stations of the Tokaido, with a few duplicates, all first editions, sold in separate lots for an aggregate of 122*l.* 5*s.*

MESSRS. CHRISTIE sold on Saturday last the following works. Drawings: F. Hals, Portrait of a Lady, in black dress with white collar, cuffs, and cap, 357*l.* Gardner, Mrs. Adelaide Penton, of Haydon House, Sussex, in white dress, with grey scarf, 189*l.* Pictures: R. P. Bonington, A Street Scene in Verona, 220*l.* Lawrence, Head of Miss Siddons, a sketch, 199*l.* Millais, Constance, Duchess of Westminster, in dark dress, 204*l.* Hoppner, Portrait of a Lady, in white dress and lace cap, 199*l.*

Fine Art Gossip.

THE death of Mr. John MacWhirter, R.A., on Saturday last removes a well-known and popular artist. As a painter, he had the gift of being affected by the sort of subject which had poetic associations for the general public—a gift which has always in this country been the root of a landscape painter's popularity. He painted these subjects—Scottish lochs, silver birches, floods of Alpine flowers—with such copiousness of detail that the beholder, already convinced that Nature in such aspects was beautiful, could not refuse admiration for his pictures, her very image to his eyes. On the other hand, it is doubtful if a man who cared for none of these things was ever won over by any revelation from MacWhirter's brush. His feeling for grace of line was rather negative, and so submerged in complicated detail as hardly to be appreciable. His love of colour resulted, in later days particularly, in the mere multiplication of unrelated hues. The large Alpine subject in the Chantrey collection represents him perhaps at his worst, as it has not even the tightness of imitative drawing which makes some of his early work a reminder, at any rate, of certain possibilities of landscape art neglected to-day.

AMONG the drawings by Old Masters lent to the Fitzwilliam Museum, Cambridge, by the King this term are two very fine portrait studies by Holbein of persons not yet identified. The Duke of Devonshire lends two important drawings by Raphael, and others by Filippino Lippi and Hans Burgmaier. A series of Persian drawings and manuscripts is on loan from various sources. Thirty-six of Rembrandt's etchings, selected from the large collection belonging to the Museum, are also exhibited temporarily.

M. THÉOPHILE CAMEL, the French sculptor, whose death at the age of 48 is announced this week, was a native of Toulouse, where he received his earliest instruction at the École des Beaux-Arts. Removing to Paris, he became a pupil of Falguière and also of Mercier. For some years Camel had been an exhibitor at the Salon of the Artistes Français, of which he was a member. His best-known works are the 'Premier Regret,' now at the Petit Palais, and his 'Montmartroise,' erected in the Square Carpeaux at Montmartre. His group 'Maternité' is the property of the State. The last Salon contained his 'Fleur d'ajonc,' which was a State commission.

THE death is also announced of M. Théodore Tchoumakoff, a native of St. Petersburg, but a Parisian by long residence. He was 87 years of age, and had been a constant exhibitor of landscapes and genre subjects at the Salons and other places in Paris for many years.

THE important collection of Dutch and Flemish masters formed by Herr A. von Carstanjen, for some time on loan at the Berlin Museum, has been lent to the Pinakothek at Munich.

AN exhibition of pastels by English artists, mainly of the eighteenth century, is being organized on behalf of two important Paris charities, the Victoria Home and the Orphelinat des Arts. The exhibition will be held from the beginning of April till the middle of June, and a number of English owners of pastels are lending pictures, of which especial care is being taken. Owners willing to assist are asked to write to the Secretary at 2, Cornwall Mansions, Kensington Court, W.

M. LÉON DUCARUGE, who died recently at Saint-Étienne, was born at Lavoute-Chillac (Haute-Loire) in 1842. Well known both as a *dessinateur fusiniste* and as a painter, he obtained many distinctions. He was a member of the Société des Artistes Français. Several of his works are in the municipal art-galleries of Paris, Grenoble, Clermont-Ferrand, Puy, and Saint-Étienne.

FROM a short notice by Prof. Colasanti in a recent number of the *Rassegna d'Arte* we learn that many interesting Italian pictures are to be met with in different collections in Hungary. Some of these paintings, such as the fine Boltraffio belonging to Count Palfi at Poszony, are known to students, but no one has hitherto drawn attention to the gallery at Estergom. Among the painters represented there are Lorenzo Veneziano, Sassetta, Neroccio, Matteo di Giovanni, Vittore Crivelli, Lorenzo di Credi, Pintoricchio, Giampietrino, and others. The painters of Forlì are represented by several works—Marco Palmezzano by three, and Giovanni Battista Rosetti by a signed 'Madonna and Child' dated 1507. This panel is identified by the writer of the notice with a picture once in the possession of the Savorelli family at Forlì, and mentioned by Guarini in his 'Notizie della Biblioteca comunale di Forlì.' Only two other works by this painter are known.

A LITTLE-KNOWN work by Pieter de Hooch, after being for some time in an American collection, has returned to Holland, having been acquired at the Yerkes Sale by a dealer at the Hague, who has lent it to the Mauritshuis. The picture is reproduced in the *Cicerone* (Heft 2).

WHAT will be the verdict of posterity? What would Byron, Landor, Goethe, and Gregorovius have said could they have foreseen that the Strozzi Palace, the most splendid architectural monument of the Tuscan Renaissance, would one day be turned into a furniture shop? For—the negotiations between the executors of the late Prince Strozzi and the present Italian Government having collapsed—such, according to the latest report, is likely to be its fate. Surely this is a matter on which the Florentines should have their say in a meeting held on the adjacent Piazza di Santa Trinità, and that right swiftly.

EXHIBITIONS.

SAT. (Feb. 4).—Etchings by W. Hollar, Mr. Gutekunst's Gallery.
—Admiral Sir Wilmot Fawkes's Collection of Engraved Portraits of British Admirals and Sea Battles, Mr. Harvey's Gallery.
—Mr. F. W. Jackson's Water-Colours of England, France, Tangier, &c., Dowdeswell Galleries.
—Señor Llaverias's Drawings, 'Catalonian Spain,' Victoria Galleries.
—Modern Society of Portrait Painters, Fifth Exhibition, Private View, Royal Institute Galleries.
WED. Society of Graver-Printers in Colour, Works in Monochrome, 25, Bedford Street, Strand.

MUSIC

THE WEEK.

SAVOY.—Miss Brema's Opera Season.

MISS MARIE BREMA opened her third season at the Savoy Theatre on Thursday evening, January 26th, with two novelties: 'Wedding Bells' and 'La Pompadour,' by the Hungarian composer Emanuel Moór. The libretto of the first of these operas—the scene of action is a Swiss village—tells of the peasant Gottfried, who loves Gertrude, but is about to marry her sister Agnes, owing to a vow made by

him when in the mountains she once saved him from death. The short drama ends with the deaths of Gottfried and Gertrude. It is unnecessary to relate the story in full.

Although there are happy moments, Mr. Moór's music lacks individuality, so that it cannot be said that the tragic events and the genuine passion of the two ill-fated lovers are intensified thereby.

In the other opera the same criticism perhaps holds good, yet the story is bright, and the music, if not strong, is attractive; one or two movements are, indeed, so quaint that they almost seemed revivals of old French dances.

Miss Brema, who appeared as Gertrude, also as La Pompadour, acted and sang extremely well, but naturally created a stronger impression in the second work. Mr. Francis Braun impersonated the Chevalier de Vauvert with good effect, while Miss Gladys Honey as Athénaïs, whom the Chevalier woos and wins, was charming in the small part assigned to her. Mr. Frank Bridge conducted with tact and spirit.

BECHSTEIN HALL.—M. Godowsky's Recital.

M. GODOWSKY gave a pianoforte recital last Saturday afternoon. His programme included a Sonata in E minor of his own composition. It consisted of five sections: the first an Allegro, which in form was classical, though scarcely in character. The music, however, was interesting. Next came a quiet, expressive Aria, and then an effectively written "Intermezzo scherzando." A graceful Valse was followed by a finale containing two slow, mournful movements—a Fuga on the name Bach, and a Funeral March, succeeding one another without break. Fantasia would have been a suitable term for this finale, or, still better, some programme explaining the prevalent sad mood, and the *raison d'être* of the Fugue. M. Godowsky gave a fine rendering of his difficult work, while his interpretation of pieces by Beethoven, Brahms, and Chopin was magnificent.

QUEEN'S HALL.—Bach's Christmas Oratorio.

BACH's great B minor Mass and 'Matthew' Passion are generally regarded as his most important sacred works. The 'Christmas Oratorio,' which was performed last Monday at the sixth concert of the London Symphony Orchestra, for grandeur may not compare with them, yet it is one of great interest. Although Bach himself described it as an oratorio, it is not one of the usual kind, but virtually six cantatas, written for performance in church as part of services on six different days during the Christmas season, beginning on Christmas Day. Hence there is no gradual working up to a musical, or, to use the term in the proper sense, dramatic climax. But throughout the work there are inspired numbers which could only have been penned by Bach. Frequently in the recitatives there

are dramatic, also realistic, touches, the effect of which is in inverse proportion to the means used. The 'Slumber Song' is of rare charm and delicacy, but the Arioso, "Jesus, Thou that for me livest," and the duet "Ah! my Saviour, I entreat Thee," both for soprano and bass, are wonderful, and instinct with devotional fervour. The Pastoral Symphony at the opening of the second part is as remarkable for its tone-colour as for its exquisite strains; it is sublimated folk-music.

An excellent performance was given of the work. The singing of the "Hallé" chorus from Manchester deserves high praise. They have fine voices, and while in some of the choruses there was opportunity for bright, vigorous singing of which they availed themselves, they were equally successful in the quiet chorales, which were rendered with intelligence and devout feeling. The soloists were the Misses Gleeson-White, Marie Stuart, and Edna Barker, and Messrs. John Coates and Campbell McInnes, of whom the first and last two entered most into the spirit of the music. The playing of the London Symphony Orchestra was extremely refined. Dr. Richter conducted as if it were to him a labour of love.

OUR LIBRARY TABLE.

The Oldest Music Room in Europe. By John H. Mee, D.Mus. (John Lane).—A brief introductory chapter deals with the "Act" on which, in the Middle Ages, Oxford set much store. Our author considers the Music Room in question as "probably the oldest building of its kind in Europe"; anyhow, "careful search" has failed to discover any older one having a staff of regular performers attached to it. In 1773 Wood wrote that the account of the Music Room in his 'Ancient and Present State of the City of Oxford' is the "Effect of our ingenious and very worthy Professor Dr. William Hayes"; also that in its performances, usually oratorios, were given every Monday, with certain exceptions named. Dr. Mee presents a list ("probably very nearly complete") of oratorios performed there between February, 1754, and April, 1789, almost all by Handel. The composition of the orchestra is interesting; it was given by Philippe Jung, himself a member of the band, in his 'Guide d'Oxford' published in 1789. It consisted of 6 violins, 2 violas (*basses de viole*), 1 cello, 1 double-bass, 2 oboes, 2 bassoons, and 2 horns (one of whom was also a flute-player); and there was, at any rate up to 1779, and probably later, a harpsichord. For special performances help from London was obtained.

The third chapter gives a list of the music belonging to the society, which includes the names of Stamitz and Abaco, composers to whom Dr. Riemann and Adolf Sandberger have been recently drawing attention. Handel, of course, is largely represented. Three musical prodigies appeared between 1779 and 1788: Master Crotch, Miss Poole, and Hummel, aged respectively 4, 11, and 9 years; Miss Poole afterwards became celebrated as a singer. John Baptist Malchair, who in 1759 became leader of the orchestra, is described by Jung in his 'Guide' as having "un gout particulier pour la musique du célébré Handel, Geminiani, Corelli, et d'autres

anciens auteurs." Handel, however, who died in that very year, could scarcely be accounted an "ancient author." Of Malchair interesting details are given. In 1791, for a benefit concert of Hayward, a member of the orchestra, "Mr. Haydn of Vienna" was announced, but did not come. Hayward published an explanation given by Haydn for not keeping a "solemn Promise," and the composer himself inserted an apology in *The Oxford Journal*. For the Commemoration two months later Haydn was in Oxford. The *Journal* noticed the proceedings, curtly remarking that "the Honorary Degree of Doctor in Music was also conferred on Joseph Haydn, Esquire."

As a specimen of public taste, or rather want of it, the programme of a concert given on May 13th, 1816, announced a "Sonata, Pianoforte—Master Reinagle, in which will be introduced a favourite Air, with Harp Variations, accompanied on the Violoncello by Mr. Reinagle"!

Dr. Mee's interesting book, for which he must have made much research, contains twenty-six full-page illustrations.

Joseph Haydn: the Story of his Life. From the German of Franz von Seeburg by the Rev. J. M. Toohey, C.S.C. Authorized Translation. (Notre Dame, Indiana, Ave Maria Press.)—Writers on the history of music, critics, and teachers consult important biographies and dictionary articles to learn the stories of the lives of great musicians. For the general public, and especially for young folk, the former are too long and too elaborate; the latter too condensed, and frequently merely a dry record. In the work before us is told in pleasant words the life of Joseph Haydn. Sometimes the author's inventive powers are somewhat forced, as in the story of Ditters presenting young Haydn with a spinet. Again, some of the earlier imaginary conversations might have been shortened, and a little more said about the visits to England. The translation on the whole is very good. Twice, by the way, the unusual French word "partition" is used instead of "score"; also "cords" for strings.

Musical Gossip.

MISS ELENA GERHARDT has long been recognized as one of the most earnest and able interpreters of German songs, and she never gave fuller proof of this than at her recital last Thursday week at Bechstein Hall. Her programme was devoted to choice *Lieder* by Schubert, Brahms, Hugo Wolf, and Richard Strauss. The audience instinctively felt that the singer was in an inspired mood, and showed satisfaction sometimes by enthusiastic applause, but still more forcibly by silence. *Tacent, satis laudant*, wisely wrote a Latin poet.

A NEW Symphony in F by Mr. Emil Mlynarski will be produced next Monday under his direction, at the twelfth and last of the Patterson series of Subscription Orchestral Concerts, of which he is conductor.

THE directors of the Queen's Hall Orchestra announce a special evening concert to be given on Tuesday next, when Herr Kreisler will play Sir Edward Elgar's Violin Concerto. The programme will include the Introduction to the second act of Humperdinck's opera 'Königskinder,' recently produced at New York.

THE first of the five "condensed" operas to be performed by the Thomas Beecham Opera Company at the Palladium was given

(afternoon and evening) last Monday. 'Tannhäuser' was selected. Miss Edith Evans was very good as Elizabeth, and so was Mr. Philip Brozel, although, at any rate in the afternoon, he was not in good voice. The chorus was most satisfactory. There was a very large and attentive audience. Mr. Thomas Beecham conducted with point and vigour. We have already approved of the scheme: it seems a practical way of giving the public a taste for opera. Only the names of the performers were marked in the programme. Would it not be well to give a synopsis, however brief, of the plots? The next opera will be 'Carmen.'

THE KING AND QUEEN have given their patronage to the forthcoming season of grand opera which opens at Covent Garden on April 22nd.

WAGNER'S Symphony in C, which he composed in 1832, and which, as he himself remarked, was modelled on Mozart and Beethoven, will be performed at the Symphony Concert, under Sir Henry J. Wood's direction, at Queen's Hall on the 18th inst. The work was first performed in London under Mr. Henschel's direction at a Symphony Concert in December, 1887, and repeated during the same month. A score of the work has just been published by Messrs. Breitkopf & Härtel.

THE memoirs or autobiography of Wagner are about to be published by Messrs. Schuster & Loeffler. They were dictated by him to his wife Frau Cosima, between 1868 and 1873. Twelve copies were printed, and of these one was presented to the King of Bavaria and one to Liszt. Another copy came into the possession of the Hon. Mrs. Burrell. It consisted of three volumes (1813-34, 1842-50, and 1850-61). After her death, the first volume was issued privately (only 100 copies) by her daughter, Mrs. S. Henniker Heaton, and her husband in 1905. Wagner in an introductory note explains that, owing to certain names and figures mentioned in it, the work could only be published some considerable time after his death, should his heirs care to do so. One of the twelve copies must surely have been given to Herr Carl Fr. Glasenapp for his 'Leben Richard Wagners'; but what use he made, or rather was permitted to make, of it is not known.

THE MASQUE SOCIETY gives a double bill at the Court Theatre on the 21st inst., consisting of 'The Masque of Comus,' by Milton and Henry Lawes, and 'The Masque in Dioclesian,' by Betterton and Purcell.

ALBERT NIEMANN, who impersonated Tannhäuser at the three performances of Wagner's opera at the Paris Opéra on the 13th, 18th, and 25th of March, 1861, and who took the part of Siegmund in 'Die Walküre' at the first cycles of the 'Ring' in 1876, celebrated the 80th anniversary of his birth on the 15th inst. From 1866 to 1889 he was connected with the Berlin Court Opera.

NEXT year the Philharmonic Society will celebrate its centenary, and for such an important event the directors have made special arrangements. They have invited Sir Edward Elgar, Sir Alexander Mackenzie, Sir Hubert Parry, Sir Charles Villiers Stanford, Dr. Frederic Cowen, Mr. Landon Ronald, Mr. Granville Bantock, Dr. Walford Davies, and Edward German to compose new works, and all these composers have accepted the invitation. During the first year of the Society in 1813 no British composer was represented, so that the celebration scheme shows how interest in native art has grown. In 1813 symphonies by Haydn, Mozart, Beethoven, Pleyel,

Woelfl, Clementi, and Romberg were performed. Works by the last four composers are no longer heard, but the names of Mozart and Beethoven are still constantly to be seen on concert programmes; that of Haydn, however, has become rare.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	Sunday League Concert, 7, Queen's Hall.
TUES.	Messrs. A. Manby and G. Wigley's Ballad Concert, 8.15, Bechstein Hall.
—	Walenn Quartet, 8.15, Æolian Hall.
—	Herr Kreisler's Violin Recital, 8.30, Queen's Hall.
—	Rosé Quartet, 8.30, Broadwood's Room.
WED.	Classical Concert Society, 3, Bechstein Hall.
—	Madame Clara Butt and Mr. Kennerley Rumford's Ballad Concert, 8, Royal Albert Hall.

DRAMA

The Plays of Thomas Love Peacock
Published for the First Time. Edited
by A. B. Young. (David Nutt.)

IN reviewing a book of this sort the first question to be asked is, "Was it worth publishing?" Without much hesitation we may agree, in this case, that it was. Every possessor of Messrs. Dent's attractive edition of Peacock, or any edition for that matter, will gladly set this small volume beside the others, and thus become the owner of the complete prose works of an English classic. To print the early works of a classic can hardly be wrong, and Peacock is little less. Otherwise these plays might well have been allowed to acquire that portentous dignity that grows like moss on ancient and unprinted MSS. in the British Museum. For though in the farces one may discover examples of truly "Peacockian" wit and style, these rare gems have mostly been worked into the novels; while the residue, which includes a drama in blank verse, has but little intrinsic value. The earliest works of Peacock—a brilliant amateur to the last—are as amateurish as the earliest works of his friend Shelley, and as thin and conventional as the worst of Goldoni. Nevertheless they are readable; so we need not stay to quarrel with the enthusiastic editor who claims that they are "replete with fun, written in a flexible style, and bearing the imprint of a scholarly discrimination."

English prose and humour are certainly the richer for one or two speeches in this little book, but the service it performs is greater than rescuing a few fragments of humorous prose, or even than filling a gap on our shelves. It reminds us that, as usual, we are neglecting one of our best writers. The 'Life' of Peacock has yet to be written, and has, as we mentioned recently, already been taken in hand; at present an ineffectual memoir by Sir Henry Cole, some personal recollections by the author's granddaughter Mrs. Clarke, a critical essay from the versatile but vapid pen of

Lord Houghton, the gossip of Robert Buchanan, and editorial notices by Prof. Saintsbury and the late Richard Garnett, together afford nothing more than a perfunctory appreciation. Two writers, indeed, have attempted a more elaborate estimate: James Spedding, an able prig, reviewed Peacock's novels in *The Edinburgh* of January, 1839; and more than half a century later a not less able publicist, Mr. Herbert Paul, contributed to *The Nineteenth Century* a paper on the same subject. The judgment of both is vitiated by a common defect. Both are good writers, but both are also good party men; consequently, neither can appreciate the attitude of one to whom collective wisdom was folly, who judged every question in politics, philosophy, literature, and art on its merits, and whose scorn for those who judged otherwise was cruel and cruelly expressed. With the possible exception of Prof. Saintsbury, not one of Peacock's interpreters has quite understood his position or perfectly shared his point of view. Did not Dr. Arthur Button Young, the editor of these plays, himself affirm that

"his stories deal with tangible realities, and not with obscure or absurd situations, as is the case with those of many novelists . . . For this reason alone they deserve to be widely known, as also their author, for having helped to raise the tone of novel-writing at a critical juncture in its development, by introducing into his tales instruction and information"?

It is only fair to add that this bit of criticism occurs in his "Inaugural Dissertation presented to the Philosophical Faculty of the University of Freiburg in Breisgau for the Acquisition of the Degree of Doctor of Philosophy."

In calling Peacock one of our best writers we have raised a claim that must be made good. His exquisite style with its fine Tacitean flavour, the perfection of his lyrics, his wit, and that intellectual brilliancy which sparkles from all the facets of his satire, parody, and epigram, suffice to endear him to the small, fastidious world whose approval is best worth having, and also, perhaps, to justify our opinion. But, unless we mistake, his novels possess a rarer and more potent quality: their appeal goes further than the frontiers of good taste. Peacock's mind was original; he thought about many things, and he always did his own thinking. He is the other side to every question; his way of looking at life is a perpetual challenge; and a man without a vestige of humour or taste may read him with profit for his point of view.

Peacock belongs to no school or age. He has been called a man of the eighteenth century living in the nineteenth; nothing could be further from the truth. He loved the dignity and calm of the Augustans, just as he loved the fire and romance of the Renaissance, and the mysterious gaiety of the Middle Ages; but he could have criticized any of them with as good a will as he criticized the age of machinery and "the march of mind," and, had he

been born in any one of them, would doubtless have done so. He was a student of bardic poetry who yet admired Pulci and Ariosto; his passion for classical literature was uncommonly wise and sincere; he read Sophocles for pleasure. So remote was he from the eighteenth-century Grecians that he could perceive and enjoy the romantic element in Greek life and art; yet it is a mistake to call him a Greek. An Athenian of the time of Pericles was, he thought, the noblest specimen of humanity that history had to show, and of that nobility he assimilated what he could. He acquired a distaste for cant, prudery, facile emotion, and philanthropy; he learnt to enjoy the good things of life without fear or shame; to love strength and beauty, and to respect the truth. For all that, he was a modern too; sharp eyes can see it in his verse. A touch of gloating and uninquisitive wonder, a suspicion of sentiment for sentiment's sake, the ghost of an appeal from the head to the heart, from the certainty of the present to the mystery of the past and the future, betray the descendant of Shakespeare and Sterne. The very culture that he inherited from a Græco-Roman civilization, his bookishness, his archæology, his conscious Paganism, would have looked queer in an Athenian of the fifth century B.C. The author of 'Love and Age' was no Greek; but he was Greek enough to stand out above his fellows, from whom he is most honourably distinguished by his Athenian open-mindedness.

That Peacock cultivated prejudices is not disputed; for instance, he could not abide tobacco-smoke, Lord Brougham, or the Great Exhibition of 1851. But his prejudices were as peculiar to himself as the principles of Sir Thomas Browne. They were not the prejudices of his age and state, neither were they of the kind that is fatal to free thinking and plain speaking. Unlike the popular prejudices of his day, the dogmas of the Hedonists and Utilitarians, his whims and fancies were superficial, and involved no intellectual confusion. He compelled no one to build on unproved hypotheses, nor would he suffer himself to be compelled. Though sceptical about progress and mistrustful of democracy, to the end of his life he disliked the Conservative party; and perhaps his finest flights of sarcasm occur in 'The Misfortunes of Elphin,' where he ridicules Canning's florid rhetoric in defence of the Constitution.

Peacock's attitude towards women affords an example of the liberality of his views and of his isolation. It shocked Victorian sentimentalists, and would probably infuriate the more austere feminists of to-day. Peacock's heroines, though, like all his characters, roughly and sometimes extravagantly sketched, are always charming and generally alive. Stupidity, ignorance, and incompetence, craven submissiveness or insipid resignation, he did not commend in women: on the contrary, intellect, wit, gaiety, spirit, and even a first in the Classical Tripos seemed or

would have seemed desirable and lady-like attributes to the creator of Anthelia Melincourt and Morgana Gryll. What was called "womanliness" in the forties displeased him; but he liked women to be feminine, and knew that distinguished women have ever been distinguished as women.

The truth is, Peacock had standards tested by which the current ideas of almost any age would be found wanting. Without being a profound thinker, he was one of those people who "bother about ends" to the extent of being unwilling to approve of means unless they are satisfied that the end in view is good, or at least that there is some end in view. With a self-complacent age, in which every one was shouting "Forward!" and no one was expected to inquire "Whither?" he was necessarily out of sympathy. To the shouters he seemed irrational and irrelevant. They called him "immoral" when they were solemn, and "whimsical" when they were merry; and "whimsical" is the epithet with which we are tempted to label him, if labelled he must be. Genius makes strange bedfellows; and Peacock's intellectual candour finds itself associated with the emotional capriciousness of Sterne. Truly, he is always unexpected, and as often as not superficially inconsequent. To state the three parts of a syllogism is not in his way; and by implication he challenged half the major premises in vogue. His scorn of rough-and-ready standards, commonplaces, and what used to be called "the opinion of all sensible men" made him disrespectful to common sense. It was common sense once to believe that the sun went round the earth, and it is still the mark of a sensible man to ignore, on occasions, the law of contradictions. To that common sense which is compounded of mental sluggishness and a taste for being in the majority Peacock's wit was a needle. He was intellectual enough to enjoy pricking bladders, and so finished an artist that we never tire of watching him at his play.

He was, in fact, an artist with intellectual curiosity; and just as he lacked the depth of a philosopher, so he wanted the vision of a poet. That he possessed genius will not be denied; but his art is fanciful rather than imaginative, and in creative power he is deficient. His life was neither a mission nor a miracle. But he was blessed with that keen delight in his own sensations which makes a world full of beautiful and amusing things, charming people, wine, and warm sunshine seem, on the whole, a very tolerable place, and all metaphysical speculation and political passion a little unnecessary. He made an art of living, and his novels are a part of his life. He wrote them because he had a subtle sense of the ludicrous, a turn for satire, and style. He wrote because he enjoyed writing; and, with a disregard for the public inconceivable in a man of sense, he wrote the sort of books that he himself would have liked to read. They are the sort, we think, that will always be worth reading.

Dramatic Gossip.

IN view of the fact that Mr. Whelen proposes to inaugurate a season for the advancement of the theatre, the New Dramatic Company, after consultation with him, not wishing to prejudice his chances of success in any way, has decided to withhold its plans for the present season.

AN Irish correspondent writes:—

"On Thursday, January 26th, a new play in two acts by Lord Dunsany, entitled 'King Argimenes and the Unknown Warrior,' was produced at the Abbey Theatre. King Argimenes, who has been overthrown and enslaved by his rival, King Darniak, finds a sword buried in the earth, and, inspired by the spirit of the unknown warrior who once possessed the weapon, rouses the slaves and regains his kingdom. The play is well conceived and effectively written. Mr. O'Donovan as King Argimenes and Mr. Kerrigan as Darb, a slave, played the principal parts in a thoroughly capable manner."

REPORT OF THE MATHEMATICAL ASSOCIATION COMMITTEE.

Paper covers, price 3d. net.

WEBSTER'S NEW INTERNATIONAL DICTIONARY.

MESSRS. BELL have just published an ENTIRELY NEW EDITION of WEBSTER'S INTERNATIONAL DICTIONARY. The fruit of ten years' labour on the part of the large staff of Editors and Contributors is represented in this Edition, which is in no sense a mere revision of "The International," but exceeds that book in quality, quantity and convenience of reference as much as, in its turn, it surpassed the "Unabridged."

Send a post card mentioning 'The Athenæum' and Messrs. Bell will forward a copy of the Illustrated Booklet, with Specimen Pages, giving full details of the 'New International.'

LITERATURE

Amurath to Amurath. By Gertrude Lowthian Bell. (Heinemann.)

THE title of this book would seem to imply nothing more than a testimony to the essential unchangeableness of the Turkish Empire; but whilst the volume is that, it is also much more. We have no hesitation in saying that it is the most important work of exploration in the neglected field of mediæval antiquities in Mesopotamia that has yet appeared. It is also a vivid account of the conditions of life of the people, written as only one qualified by experience of the Arabs and familiar with their language could write it. Miss Bell had already shown in that brilliant book 'The Desert and the Sown' how enthusiastically she could enter into the life and ideas of the Bedawis. In 'Amurath to Amurath' she is still among or near her favourites, and she gives equally living portraits and dialogues and scenes of Muslim life in camp or in the village. But her eyes are always turned to the past—to the glories, not of the early Arabs of the Jahiliyeh, but of the great Caliphate which once made the lands watered by Tigris and Euphrates a garden and a granary, where ruined towers and fortresses now only serve to intensify the desolation.

Miss Bell has set herself to rediscover the vestiges of the 'Abbasids, where other explorers have been absorbed in the far earlier remains of Babylonians and Assyrians. These she does not neglect

altogether, nor the evidences of Greek and Seleucid sway. She is deeply interested in the routes of the Greek armies and the traces of Hellenic influence. But her chief business is with the cities and fortresses built by the Arabs and their immediate predecessors the Sasanians. How successful she has been would require an elaborate essay to explain, and the explanation would be appreciated by only a few specialists. It is sufficient, within our necessary limits of space, to indicate one or two subjects in which her exploration has led to signal results.

One of these is the relation of Mesopotamian architecture to the Saracenic style we know in Egypt and Syria. The connexion has long been established between the inlaid silver and brass work of the Mamluks of Egypt and the metalworkers of Mesopotamia, whose designs date from early Persian and Sasanian times. It has also frequently been pointed out that the curious "corkscrew" tower or minaret of the mosque of Ibn-Tulun at Cairo has its counterpart in the slightly earlier tower still standing at the temporary 'Abbasid capital, Samarra, on the Tigris, where Ibn-Tulun had himself been trained in arms and courtiership. But the architecture of the Caliphs of Baghdad was little studied, especially in the provincial cities.

Claudius Rich and various succeeding travellers had recorded ruins of cities up the rivers, but no adequate examination of most of them had been made until Miss Bell, accompanied only by native Christian servants and the usual rather nominal Turkish escort, made her adventurous journey from Aleppo, down the left or unfrequented bank of the Euphrates from Jerablus to Anah, then on the right bank to Hit, thence by a circuit in the desert to Museyyib and Baghdad, returning up the Tigris to Diyarbekr (Amid), and so back through Anatolia. In this journey she visited many sites and ruins and her surveys, plans, and photographs of such remains as those at Rakkah and Rafikah, at Ukheydir, and at Samarra—to name only three prominent examples out of scores of important observations—are contributions of the highest value to the history and sources of Saracenic architecture.

The discovery of the fort and palace of Ukheydir—for discovery it was in spite of the slightly earlier description of it by a French explorer unknown to Miss Bell until her return, and a reference to it in Niebuhr's travels as seen by an unnamed Englishman—was the culminating joy of the expedition. Ukheydir, "the little green spot," though now no shaded oasis, is a most remarkable ruin of a bastioned fortress enclosing a palace, with architectural features (cusped arches, grouped niches or squinches, &c.) of the greatest interest, to which Miss Bell's elaborate plans and beautiful photographs do justice. It stands in the region dominated by the Lakhmid kingdom of the Arabs of Hira, and, although Miss Bell hesitates to pronounce upon its precise

date, the absence (so far as the present writer knows) of any reference to it by the Arabic geographers or historians seems to place it definitely among the constructions either of the Lakhmid kings or the Sasanians, before the Saracen conquest. This is undoubtedly Miss Bell's greatest discovery; but her examination of Samarra comes only next, and there are many other sites on which her researches have thrown fresh light and suggest fruitful subjects for further exploration and, it should be added, excavation. Her book must undoubtedly have a valued place in the library of every Oriental archæologist.

But we are not all archæologists, and lest we should unfortunately give an impression that 'Amurath to Amurath' is a book which appeals only to specialists, we hasten to add that it is brimful of human interest. Miss Bell has the gift of drawing out the Eastern and getting him to talk to her as a friend, and she has the talent to set down his talk with phonographic fidelity. Her *scènes de la vie nomade* are admirable genre pictures, and she can describe Turkish governors, policemen, heads of Dervish orders, even bishops, as if they were alive in her pages. She chanced to travel through the Asiatic provinces of Turkey just when the new Constitution of the Young Turks was heralded through the land like a message of salvation unto the people. Unfortunately, but most naturally, the people neither believed nor understood. They had been too long accustomed to tyranny and corruption to have the smallest faith in the new panacea. They knew their compatriots, and could not imagine that the mere fact of being M.P.—or whatever it was called and whatever it meant—would alter their natures and make them high-minded representatives at Constantinople of the oppressed folk at home, instead of merely clever rascals absorbed in their personal ambitions and interests. As for that new-fangled word *Hurriyat*, "Liberty," Miss Bell was everywhere assailed with petitions for a definition. Liberty from the laws of the Koran was unthinkable or blasphemous; and liberty from the oppression of the local governors, the Kaimmakam or the Mutasarrif, whilst a pleasing dream, was soon found by experiment to be purely visionary.

Asiatic Turkey, it is plain, is not ready for the Constitutional Idea, though, if the new governors appointed by the Committee of Union and Progress are really of a higher character, as Miss Bell believes, some improvement may come. Meanwhile the state of the administration of "justice" here described; the neglect of the police and troops; the wretched ragged little garrisons, left unpaid and unrelieved in desolate, isolated spots; the insecurity of the roads; the feuds of the Arab tribes, and the deadly antagonism of races and creeds, point to a wide field of reform if the Young Turks mean to carry out their programme. The population, whether Christian or Muslim, appears to look forward to a millennium of European

intervention. Miss Bell, seeing no sign of political initiative in the provinces, is convinced that the impulse and direction must come from European Turkey :—

“Cruel and bloody as Ottoman rule has shown itself upon these remote frontiers, it is better than the untrammelled mastery of Arab beg or Kurdish âghâ; and if the half-exterminated Christian sects, the persecuted Yezîdis, the wretched fellâhîn of every creed, who sow in terror crops which they may never reap, are to win protection and prosperity, it is to the Turk they must look. He, and he only, can control the warring races of his empire, and when he has learnt to use his power impartially and with rectitude, peace will follow.”

At that rate, we fear, peace is a “far cry” off, and we are disposed to look with greater confidence to the influences of the future Baghdad Railway and the irrigation works projected by Sir William Willcocks, who, by the way, found himself “held up” on the river by insurgent tribes during his beneficent survey. We have been able to notice but a few points in a book which is packed full of new material and learned research, but we must not omit to record our admiration of the courage and coolness of the lady traveller in emergencies, or her open-minded fairness and sympathy with all classes and races.

The Complete Poems of Emily Brontë.
Edited by Clement Shorter, with Introductory Essay by W. Robertson Nicoll.
(Hodder & Stoughton.)

SIXTY-TWO years have elapsed since the death of Emily Brontë, and to-day she is held by many, Sir Robertson Nicoll among them, to have been the greatest woman genius of the nineteenth century; but a complete edition of her verse is offered now for the first time. Of the 330 pages in this volume, 82 suffice for the poems which have been published in England hitherto; the contents of 100 had never seen the light at all. Sir Robertson Nicoll, in the course of a somewhat colourless introduction (was it by an inadvertence that he omitted, from his list of known facts in Emily's life, the deaths of her two eldest sisters?), warns his readers that “it is not claimed for a moment that the intrinsic merits of the verses are of a special kind.” The phrase is vague; but without hesitation we can pronounce it more deprecatory than it need have been. Throughout Emily Brontë's poetical work—and in her prose too, for that matter—crudity of handling and other limitations of inexperience are obvious features. The least insidious of banalities finds her a defenceless prey, and lapses into bathos are naturally more frequent and more unredeemed in these last gatherings of her genius than in the chosen samples put forward by herself during her lifetime or by her sister after her death. Yet there can be no doubt that, in the eyes of the discerning, Emily Brontë's reputation as a

poetess will be enforced by what these fresh pages reveal.

Part of the interest of the volume in its biographical aspect is that it shows her sense of latent creative power to have been the bitterest affliction of what, in Blake-like language, she called her “prison.” One may observe, too, how little, in its short term of years, her poetic faculty developed. In her nineteenth year she can command haunting phrases, exquisite fragments of melody, such as

O transient voyager of heaven!
O silent sign of winter skies!

in her address ‘To a Wreath of Snow.’ In her thirtieth her inspiration is still spasmodic and untamable. Her melodic powers have long been recognized; yet material has been lacking till now for just appreciation of their compass and variety. How beautiful is the following, as well in its use, as in its refusal, of artifice!

If grief for grief can touch thee,
If answering woe for woe,
If any ruth can melt thee,
Come to me now.

Subtler still in their variation, and bold, like Blake again, in their instant accommodation of the music to the thought, are these three stanzas—clearly a poem in themselves, though printed by Mr. Shorter continuously with three others, the rhythm of which is inferior and the theme different:

Tell me, tell me, smiling child,
What the past is like to thee?
An Autumn evening, soft and mild,
With a wind that sighs mournfully.

Tell me what is the present hour?
A green and flowery spray,
Where a young bird sits gathering its power
To mount and fly away.

And what is the future, happy one?
A sea beneath a cloudless sun;
A mighty, glorious, dazzling sea,
Stretching into infinity.

Even among the poems never before printed one may stumble over gems like this :—

Harp of wild and dream-like strain,
When I touch thy strings,
Why dost thou repeat again
Long-forgotten things?

Perfect beginnings are, no doubt, more frequent than perfect poems. Let us close with a piece which is in itself perfect, and in which the autobiographical as well as the poetic value of this collection is represented :—

I know not how it falls on me,
This summer evening hushed and lone;
Yet the faint wind comes soothingly
With something of an olden tone.

Forgive me if I've shunned so long
Your gentle greeting, earth and air!
But sorrow withers e'en the strong,
And who can fight against despair?

We have noted some very doubtful readings—such as “deceiving” for “declining” (?), p. 110; “flowless” for “flowerless” (?), p. 134; “idol” for “idle,” p. 184—and a few misprints—“way” for “away,” p. 73; 1832 for 1842 (?), p. 288.

A Roman Diary and other Documents relating to the Papal Inquiry into English Ordinations. By T. A. Lacey. (Longmans & Co.)

BOOKS are made in strange ways, and Mr. Lacey's way in this book is curious indeed. The volume consists partly of documents and learned polemical articles. These were all worth reprinting, and it is convenient to have them all together. The documents are Leo XIII.'s *Apostolicæ curæ* and the answer issued in the names of Archbishops Temple and Maclagan (which they certainly did not write themselves), with the unimportant reply of the Pope. The articles are for the most part Mr. Lacey's acute and vigorous presentations of the Anglican position in regard to sacred orders, and his criticisms, which are very good reading, of the various Roman utterances on the subject, such as the curious ‘Risposta all' Opuscolo “De Re Anglicana,”’ (which is not quite certainly authentic, but which neither Canon Moyes nor Abbot Gasquet, whose names are attached to it, has, it seems, ever repudiated, though one would think that they would be anxious to disclaim such a remarkable collection of mistaken or ignorant statements as it contains), and the Papal Bull itself. All this part of the book is learned, and must remain an important contribution to the history of a question of considerable ecclesiastical importance. But it has all been published before.

The novel part of the volume is the Diary which Mr. Lacey kept at Rome, when he was engaged with Mgr. Duchesne, Father Puller, Mgr. Gasparri, and the Abbé Portal on what was little better than a wild-goose chase. Of the Diary he himself speaks with a freedom which might have convinced him that it is hardly likely to interest other people so much as it does the writer. It shows him, as he says, to have been not at all well, much overworked, and not a little pettish and suspicious. But its interest for ordinary folk is small. At the most it shows two things. The first is that the English clergy were very honest, not at all doubtful of the strength of their own case, and easily taken in by the agreeable diplomacy of Italian ecclesiastics: the learning of Mr. Lacey had, as he shows us, some surprising gaps, but his simplicity appears to have been complete. Secondly, we see clearly that all the really important people at Rome in 1896 desired was to receive the submission of these two intelligent English clergymen (and of those who thought with them) to the Papal See. Cardinal Mazzella expressed the matter most simply: “He could not think why so much fuss was made about Orders. The Pope was the great question.” It always came round to that in the end. There never was any question among the Roman authorities which way the decision on English Orders would be given: it had all been settled long ago by the Gordon case—ignorantly, no doubt, but

still settled. So the English clergy were treated politely, like nice children, and begged to stay on after the decision: they would now, it was hoped, see reason. "The Pope was the great question."

Out of the simple and commonplace details of the Diary, and the Introduction to it written fourteen years later, emerge some interesting things: the bitter description of some of the Monsignori, persons of no great repute; the illustrations of the singular unscrupulousness in the use of authorities shown by some Roman controversialists; the references to the sympathy of another simple person, Archbishop Maclagan; some *obiter dicta* of Mgr. Duchesne's on early Church history; the view of an unnamed prelate that there was a great deal of the Old Testament "not worth reading," and that the Breviary should be reformed, and could be done by him alone in one year, by two persons in three years, by eleven in a century; the acute intervention, on a point of legal history, by Mr. Justice Phillimore; and such like.

But, in truth, of the chief English actors, only two survive these rather peddling disclosures with undiminished reputation. The one is Gladstone, whose 'Memorandum' addressed to the Archbishop of York is the only thing in this part of the book which shows a really statesmanlike grasp of the essential points brought forward in 1896. The other is the late Lord Alwyne Compton, Bishop of Ely, whose attitude shows a sagacity and restraint, not unsympathetic, but wise, which the other persons in the concern may now feel reason to envy. His letters are models of prudent goodness; and when Mr. Lacey says that he "would not" give him formal leave of absence on this business, the letters prove that the correct expression, which Mr. Lacey must be sorry not to have used, is "could not."

The Glamour of Oxford: Descriptive Passages in Verse and Prose by Various Writers. Chosen and edited by William Knight. (Henry Frowde.)

A GREAT deal has been written and collected concerning Oxford of late years, and the subject is, perhaps, in danger of being overdone in the book-market. Recently both a photographer and a water-colour artist have supplied pictures for the Oxford work of Matthew Arnold; and last year we noticed 'The Clerk of Oxford in Fiction,' 'Oxford, its Buildings and Gardens,' 'Oxford from Within,' and the first volume of a book 'In Praise of Oxford' by Messrs. T. Secombe and H. Spencer Scott. Earlier there was a book on 'The Minstrelsy of Isis' by Mr. J. B. Firth. A late-comer after all these volumes, and, like the most recent of them, a mixture of verse and prose, the book before us might be neglected, a course which would be unfair to its merits.

Mr. Knight, as all who use his edition of Wordsworth know, is an editor, as well as a Professor Emeritus. He has kept his anthology of prose and verse in praise of Oxford long upon the stocks, with the result that his readers have a collection of passages, select rather than voluminous, distinguished by ripe judgment and scholarly care in the editing. We could lay our finger on a misprint or two, and in some cases think a heading might have been improved. Thus, on p. 79, the heading 'Wordsworth and the Coleridges' seems to bear no relation to the text of an American appreciation of Magdalen and St. Mary's, and is somewhat bewildering till one finds the clue. But there criticism ceases. The editor is sufficiently scholarly to quote from Thomas Vaughan, twin brother of the Silurist Henry, who made the fine phrase on Bodley,

Here thou art safe,
Where every book is thy large epitaph;

and sufficiently modern to quote passages from those living authors, from the Chancellor downwards, who have written well of their University. The result is a varied array of passages in prose and verse, some of them of exceeding merit, which succeeds in giving a vivid impression of the manifold glamour of Oxford. "This Oxford I have no doubt is the first city in the world"—so wrote that admirable letter-writer John Keats. It is in this key that all the writers quoted have pitched their praise. So that, if "Oxford College" is ever run upon business lines and turned into a limited company, the promoter will find here ready to his hand material for the most glowing prospectus ever written. The place itself indeed, in the mind of every pious Oxonian, and all who have written of it, "excels the quirks of blazoning pens"—but not because the pens have lacked eloquence, or sometimes even inspiration. It may be that the secret of Oxford's charm is one beyond utterance; but with the material which Prof. Knight has gathered and selected for him, he must be an unimaginative creature who cannot discover some reasons for the faith.

A word of praise is due to the cover and get-up of the book, and author and publisher alike are to be congratulated upon Mr. Blackwell's happy inspiration in the matter of a title.

NEW NOVELS.

Rosanne. By Algernon Gissing. (F. V. White & Co.)

THERE is an undeniable charm about the stories this author writes—the charm which pertains to a sensitive mind void of vulgarity of any kind, and appreciative of moral and emotional delicacy. The present tale is better calculated to hold the interest of a refined woman of leisure than a busy man. There is no single character in it who enlists our affectionate regard. Perhaps that is one reason why

all are somewhat shadowy people. The reader is placidly interested in their affairs, and rather charmed, in a gentle way, by the atmosphere of the countryside in which they move. They, and the story, are far removed from the troublous racket of modern life in cities. Such a book could not have been written with heat or haste. We are grateful for the solicitude which has clearly been expended upon its writing; but we fancy Mr. Gissing might win more of the favour he deserves if he came to closer grips with actual life, as distinguished from spiritual analysis.

The Third Wife. By Herbert Flowerdew. (Stanley Paul & Co.)

THOUGH announced as one of Mr. Flowerdew's delicate studies of sexual relationship, his new book is really nothing more than drawing-room melodrama. As such it is sufficiently arresting, and keeps the reader on tenterhooks of expectancy almost from the first chapter. We are inclined to cavil at the reckless character of the villain here depicted. He would surely not have taken such risks after his early experiences. But granted that he would, the reader will find it an absorbing pursuit to follow and track or anticipate his moves in the horrible game he has inaugurated. The author is well advised in keeping him quiet in demeanour, as quiet as any Adelphi villain who smiled and smoked cigarettes in olden days. There are good sketches of people, notably of an American lady and an admirable English intriguing mother. The heroine is pleasing, and the hero all he should be.

Off the Main Road. By Victor L. Whitechurch. (John Long.)

THE story which binds Mr. Whitechurch's new novel together is constructed of the simplest and oldest materials. It is a pure love-story of a most innocent kind, involving a jilted bachelor of an almost portentous sentimentality. Luckily the interest of the book does not depend upon this main thread of narrative. It is in reality a series of connected pictures of village life and character. These are both humorous and pathetic, and the former are very diverting. This background is the most vital thing in the tale. Mr. Whitechurch knows his rustics as well as he knows his clerics—a knowledge he has demonstrated in various stories. He is the sponsor of modern scenes from clerical life, of which, however, there is only one example here. The rustics are richer and more acceptable material. The Goodman family is a group we would not have missed for much.

The Brand of Silence. By Fred M. White. (Ward, Lock & Co.)

THE conventions of the type of novel which Mr. White writes have been long accepted by its admirers. It is, one supposes,

useless to complain, or protest, or even to make suggestions. It would be time lost, for instance, to beg that the characters appearing in the pages of these detective stories, otherwise tales of mystery, should conduct themselves, at any rate on the surface, more like ordinary human beings. No; their type is cast, just as the prototypes of stage melodrama. A man may call himself Gore Mayne, and be a mystery, and no one will suppose him to be Gore Castlemayne, a name with which all the persons of the drama are familiar. In the same way the villain on the stage is never seen five feet away from the innocently foolish hero and heroine. Mr. White's narrative is always brisk and breathless, and, if one can overlook the melodramatic properties, is invariably readable, because ingenious. His latest book is no exception to the rule.

The Justice of the King. By Hamilton Drummond. (Stanley Paul & Co.)

THE plot of this romantic historical novel is unsatisfactory. The period is that of Louis XI. of France, and the theme is the jealousy of the King displayed towards his son of thirteen. This boy, Charles, lives in Amboise in the charge of a young lady, Mlle. Ursula de Vese; and Louis is represented as fearing the schemes of this very innocent young girl and helpless boy. No; there is another supposed to be involved in the scheming, one Saxe, an innkeeper. In such machinery we cannot believe, and consequently no real feeling for the danger of the hero and his undertakings moves us. Needless to say he is destined for the aforesaid Ursula. There are pictures of contemporary France not without force and realization. Louis himself is depicted with care, and Commynes scrupulously. Also there is some pretty fighting.

The Mating of Anthea. By Arabella Kenealy. (John Long.)

It seems to us that Miss Arabella Kenealy has missed the dramatic chances of her opening chapter. It begins with the discovery of the hero that he has been bitten by a mad dog. Now it is possible to foresee many and various uses to which this accident could be put. However, except to serve as the introduction to an eccentric and rather fanatical doctor the episode comes to nothing. This doctor is apparently a stalwart opponent of modern bacteriology and its results; and he has also peculiar views as to the education and destiny of woman. With the latter he begins to play havoc in his ward's life, a course of fate which is only interrupted by the instinctive opposition of her sex. There is in the story a singularly unpleasant episode concerned with singularly unpleasant characters, which we do not consider to have been in any way necessary.

Marie Claire. By Marguerite Audoux. Translated by John N. Raphael. (Chapman & Hall.)

MR. RAPHAEL has every qualification for translating from the French except a due feeling for style; and he has given us a breezy adaptation of the story of Marie Claire. Unfortunately, what distinguishes 'Marie Claire' is not its story—common-place enough—but the fact that a seamstress takes up such an attitude towards her surroundings as the author does, and still more that her style and diction should have a grave simplicity, a distinction and clarity confined to a few great masters of the language. Mr. Raphael's version shows omissions, some no doubt due to the present epidemic of prurient modesty, some to a momentary hesitation in finding an exact equivalent for such a phrase as "que j'étais dépareillée," and some simply inexplicable; but in the matter of diction he fails. He regroups the author's sentences too much, and his style is not unfairly represented by his translation of the following sentence, "Et enfin deux yeux caressants qui m'apportaient la confiance"—"And last of all I saw two soft eyes which seemed to cuddle me and make me feel comfortable."

SCOTTISH ANTHOLOGIES.

IT is a curious coincidence that two collections of Scottish poetry, almost identical as to their scope and general contents, should have appeared about the same time. Sir George Douglas's *Book of Scottish Poetry* (Fisher Unwin) is avowedly a companion to 'The Oxford Book of English Verse' and 'The Dublin Book of Irish Verse.'

At the outset we are confronted by the question whether "Scottish poetry" can be rightly interpreted as meaning poetry written by Scots, in the vernacular or in English, but dealing with themes that have no special application to Scotland. In the present work it is his vaunted "Italian grace" that is chiefly illustrated in the selections from Drummond of Hawthornden. Again, there are excerpts from Thomson's 'Seasons.' Can these be classed under "Scottish poetry"? John Davidson is here with the 'Ballad of a Nun,' which is as "Scottish" as his Fleet Street Eclogues! The point is curious, and not entirely finical. Mr. J. H. Millar, in his 'Literary History of Scotland,' ignores Carlyle, Thomas Campbell, James Thomson, and even Boswell, on the ground that they all went to England at a comparatively early age, and that none of their work is in the vernacular. It seems to us that Sir George Douglas would have done better in following Mr. Millar's example. At any rate, on that plan he would have been able to include many things he has omitted; and, on the other hand, there would have been less conflict between the title of his book and a considerable part of its contents. Certainly, after meeting with many specimens of purely English verse, we cannot appreciate his total exclusion of Ossian, even if Macpherson was an impostor.

Apart from this, the ground is well covered, and reaches from Thomas the Rhymer to living writers. Among the earlier versifiers represented are James I.

(with 'The Kingis Quair'), Dunbar, Henryson, Huchown, Gavin Douglas, David Lyndsay, Alexander Hume, and Alexander Montgomerie. Linguistic difficulties have thus far operated to prevent these writers becoming known in England, except to specialists. Sir George Douglas is right in saying that such difficulties are often exaggerated; but in a work of this kind it is necessary that they should be smoothed away, and this has been efficiently done by glossarial notes at the foot of the page. The selections from these writers have, in every case, been printed from the most authoritative texts. In the specimens of Scottish ballads, the text of Scott's 'Border Minstrelsy' has been generally followed. In some cases Sir George reprints a poem or song from the original version, because this, being less "common and easy of access," will probably be of greater interest. That, of course, will depend on the class of reader. Many will prefer 'Auld Langsyne,' for instance, as it is usually sung to-day.

It is in the matter of his later selections (for the convenient order of chronology is followed) that Sir George Douglas will find the largest divergence of opinion. Here he has to trust more to his own taste and judgment, with less help from the general verdict of competent critics. Unfortunately, one cannot refrain from questioning his views in several cases. In his Preface he excerpts from verse of living writers which is still on trial the work of "Hugh Haliburton." Now a good deal of that writer's verse has certainly (in Scotland at least) taken its place as classic. But 15 pages to "Hugh Haliburton" and half a page to Stevenson, with "Under the wide and starry sky," is ridiculous. William Sharp is also treated too generously with 17 pages; and 12 pages are certainly too much for the Earl of Southesk's verse. Principal Shairp is largely outspaced by James Thomson of Hawick.

Nor do we think that Sir George has always chosen the best specimens of individual writers. He ought surely to have given Alexander Smith's 'Barbara' among his selections from that now forgotten poet. Among Robert Buchanan's pieces we expect to see that haunting poem on his friend David Gray, the author of 'The Luggie,' and under the name of Lady John Scott 'Annie Laurie,' which is essentially hers, though founded on older lines. Why is James Ballantine's 'Naebodys Bairn' given, without his more celebrated "Ilka blade o' grass keeps its ain drap o' dew"? More astonishing still, why is John Skinner represented solely by 'The Ewie wi' the Crookit Horn'? Did not Burns say that his 'Tullochgorum' was "the best Scotch song Scotland ever saw"?

The book has an Index of First Lines, and an 'Index of Authors' which is defective because it does not give the pages where they are represented.

It is only too easy to find blemishes in even the best of anthologies, and in *The Edinburgh Book of Scottish Verse, 1300-1900*, selected and edited by W. Macneile Dixon (Meklenjohn & Holden), there is not a little that a censorious critic might object to—notably the inclusion of several poems which are neither of high artistic merit nor, as we have hinted above, distinctively Scotch in character. But it is both juster and pleasanter to declare at once that Prof. Dixon has accomplished his task with skill and judgment, and has brought together a delightful body of verse. He has not scrupled to cast his net wide: Scottish verse is defined for

his purpose as "verse which is the work of Scotsmen, whether in English or Scots," and the wealth of material rendered available by such a definition is likely to come as a surprise to readers who are unfamiliar with the by-ways of Scottish literature.

The power and originality of the earlier poets are sufficiently illustrated, a generous, though by no means excessive, space being allotted to that prince of makers, Dunbar; the popular songs and ballads, in which Scotland is astonishingly rich, are well and fully represented; and the selections from the dialect verse of the later centuries is generally happy. Prof. Dixon, in his brief and pleasant Introduction, hits off the characteristics of this typically Scotch verse very fairly:—

"The vernacular poetry of Scotland of the eighteenth and nineteenth centuries," he says, "is not, perhaps, often noble, it is not often greatly distinguished, it is often simple, sweet, tender, touching, humorous—these, and words like these, best describe its prevailing qualities. Its chief defect, a defect to which it is not easy to reconcile oneself, is its sentimentality."

But if this well-packed volume contains a good deal that may fail to satisfy the acutely fastidious reader, it ought none the less to achieve a wide popularity with the ordinary lover of verse. We note, further, that it is adequately equipped with a glossary.

THE RELIGIOUS LIFE OF ISLAM.

The Religious Attitude and Life in Islam. By Duncan Black Macdonald. (Illinois, University of Chicago Press.)

Mystics and Saints of Islam. By Claud Field. (Francis Griffiths.)

THE UNIVERSITY PRESS OF CAMBRIDGE has recently undertaken the publication in England and the British Colonies of books issued by the Chicago University Press. This probably accounts for our receiving Prof. D. B. Macdonald's Haskell Lectures on 'The Religious Attitude and Life in Islam' a year after its publication in America. We welcome it warmly, however late. It is well known to students of Mohammedanism, as every book by so ripe an Arabic scholar must be; for Prof. Macdonald is among the two or three leading exponents of the religion of Islam among English-writing scholars—and admirable English he writes. But the agency of the Cambridge Press will make the book known to others whom it has hitherto failed to reach.

The present volume is the counterpart of the work on 'Muslim Theology,' &c., which appeared in 1903. In that Prof. Macdonald dealt with Islam as a formal religion, a dogmatic system, and a code of jurisprudence. In his new work he considers it as a personal emotional religion. In fact, he has evidently been inspired by the famous book on the 'Varieties of Religious Experience' by Prof. William James, to write a similar exposition of the religious attitude of Muslims. It is singular what wide-reaching effects that lively treatment of solemn subjects has had, upon Divinity Professors in England as well as upon this Professor at Hartford Theological College. In method, however, Prof. Macdonald shows even closer analogy to Myers's 'Human Personality,' and, whilst guarding himself prudently from any confession of faith in many of the alleged results of psychical research, beyond telepathy and possibly telekinesis, he has very properly drawn attention to the points of resem-

blance between mediæval Mohammedan experiences and theories and modern records and explanations of trance states. He is eminently sane and scientific in his treatment, but it is easy to see that he adopts much of James's view of the mystical "vision": which is only to say that he agrees with most modern thinkers. The remarkable thing about his book is that he virtually regards the mystical attitude, whether of the true Sufis or the earlier less pronounced mystics, as the only real form of personal religion in Islam. Perhaps we have misunderstood him, but he does not seem to us to recognize the fact that even traditional formal Islam may be, and indeed is, a personal religious attitude, an inner life, to orthodox Muslims. However, if, like Prof. James, he merely means to select his examples from the more pronounced forms, he is undoubtedly right in holding that mysticism is the most conspicuous and the most vital force in the personal religion of Muslims. It was present in a dim shade in Mohammed himself, though it conflicted flatly with the rest of his tenets. "In the struggle to bring God and his creation together," says Prof. Macdonald,

"the creation had to become an aspect of the creator, and finally to vanish into him. Only in this way could the crass dualism be overcome, and the monism which is the basis or the result of all mysticism be reached. There are stray expressions which suggest that Mohammed—a devout soul if ever there was one, and a mystic in spite of his creed—was adrift himself on that sea and was nearing the shore. But his brain, oriental to the core, contradictoriness never troubled, and Allah could be throned apart in unapproachable grandeur yet be near to every human heart."

One of the most brilliant chapters in this illuminating book deals with the Oriental attitude towards the "supernatural." It is well pointed out that the essential difference between East and West in this matter is not the "credulity" of the Eastern, but his inability to construct a connected and inviolable system of phenomena. He sees no necessity whatever that things which have been must go on being in the same way. He has no "laws of nature." The "supernatural" is familiar to him, and he does not try to fit it into any law. Everything is possible, according to his view, and contradictions do not matter.

This is not to say that Eastern philosophers did not reason out a theory of the "supernatural." On the contrary, it will be amazing to readers unfamiliar with Arabic literature to find how closely the great thinkers of Islam approached the modern attitude towards these experiences, and how nearly they anticipated what we fondly believe to be the achievements of the latest psychology. Prof. Macdonald has drawn largely, indeed preponderatingly, from that mine of wisdom, the 'Prolegomena' of Ibn-Khaldun, most modern of all Muslim philosophers, and from the works of Ghazzali, to whom and to whose school Islam owes most of its vitality as a religion of the inner life. The strange and curious phenomenon, that the materialistic conceptions of Mohammed should have been brought to such a doctrine of inward faith and exaltation as is set forth by Ghazzali, is discussed by Prof. Macdonald with profound insight and sympathy. "It is," he says,

"with Roman rather than with Protestant Christendom that Islam must be compared as to its emotional life. There the likeness is singularly close, reaching down even to the Ghazzalian combination of philosophical agnosticism and supernatural faith. And for this theological likeness there is good ground. Almost certainly Thomas Aquinas was deeply influenced, though indirectly, by al-Ghazzali's views; and he in turn has moulded the Roman theology."

It is permissible to contest some of Prof. Macdonald's deductions, but none may question his learning or his remarkable insight into Mohammedan modes of thought and spiritual emotion. His book will be read with intense interest by all who are following the trend of modern Christian thought, upon which it throws many sidelights. Like everything else that he has written, it is founded on long and minute research, and illuminated by original thought and happy expression.

Mr. Field, who has done useful work in popularizing Oriental classics for Mr. Murray's "Wisdom of the East" series, has collected a number of essays or translations relating to Mohammedan saints and mystics which he contributed from time to time to religious and other periodicals. They are mostly based upon Kremer, Pavet de Courteille, and Mehren's well-known works, but English readers will be glad to have them translated or paraphrased. Mr. Field is also acquainted with Prof. Macdonald's researches, and, like other writers on religion, he has fallen under the influence of William James. The translations are readable, and may serve very well as an illustrative appendix to Prof. Macdonald's book noticed above, though Mr. Field makes no pretension to original research or personal acquaintance with the Arabic sources. The book has not the special stamp of the scholar: there are no references to the originals of the translations, few notes of any importance, and no attempt to systematize the mystical views and experiences recounted in the numerous short essays. Nor is there an Index. But the ordinary reader in search of Mohammedan illustrations of the mystical and pantheistic modes of looking at life will find interesting materials in the biographies and sayings of the mystics here recorded. There are some slips, such as the statement that Dara was assassinated in prison, and the spelling "Mullah," &c.; but these do not seriously injure the usefulness of a rather attractive little book.

OUR LIBRARY TABLE.

THE portraits of Thackeray in the new volumes of the "Centenary Biographical Edition" (Smith & Elder) consist of a third sketch by Maclise (who must have been fond of his model), and of the miniature which was published in 1908 in the 'Blackstick Papers.' There is also a view of Hare Court, Temple, where Thackeray once studied conveyancing under Mr. Taprell; an autograph letter of 1838 sending in his little account to *The Times*; and a photograph of the chair and table used in writing 'Pendennis,' 'Esmond,' &c.—a description which scarcely tallies with the Appleton story in the first introduction concerning the production of these books. The 'Yellowplush Papers' and 'The Great Hoggarty Diamond' are the staple of the new instalments; and the introductions, as usual, contain fresh material. 'Vanity Fair' and 'Pendennis' were "illuminated with the Author's own candles"; here the aid of more modern illustrators has been invoked. To the extremist, who holds that the novelist of manners can only be adequately embellished by a contemporary, some of these will no doubt be unsatisfactory. The designs to 'Men's Wives' are beautiful drawings, well composed and conceived; but somehow do not suggest Thackeray types. Mr. Harry Furniss's sketches for 'Major Gahagan' are open to less objection. The

great Goliath is of the Munchausens of all time; and, in following Thackeray's own presentment of that tremendous hero in the frontispiece to the 'Comic Tales,' the artist has added a rollicking bravura of his own.

Spenser's Complete Works.—Vol. I. *Minor Poems*. Edited by Ernest de Sélincourt; Vols. II. and III. *Faerie Queene*, edited by J. C. Smith. (Oxford, Clarendon Press.)—No poet has received less attention as regards his text than Spenser, and few deserved it more. Perhaps this neglect is explicable: the system underlying his so-called archaisms has yet to be elucidated, and the errors due to misprints and the vagaries of Tudor and Stuart printing houses were received on the same footing as the intentional provincialisms or archaisms. We have now for the first time the materials for a study of Spenser's language, an authentic text from the best editions of all his poems: if not as the poet wrote it, at least as near to it as we are likely to get. Above all, the reproduction of the early texts is as near perfection as it can be: we have not detected a single reading of any important edition which is not recorded in its proper place.

The majority of readers will turn first to 'The Faerie Queene.' Mr. Smith has utilized for the first three books the text of the second edition of 1596, in preference to that of 1590. In this preference we agree, but not so far as to follow him in substituting "can" for the "gan" of the first edition in I. V. xvii. 5,

And softly gan embalme on euery side.

In his very interesting Preface Mr. Smith calls attention to an occasional peculiarity of Spenser. In the heat of composition the poet writes a line such as

But with the wooddie nymphes when she did play,

"play" being intended to rhyme with "support," "resort," and "port." Obviously "sport" was the word in his mind. Mr. Smith quotes nine cases of this kind of substitution.

We must confess that, though we are glad to have a note of the variations in the successive editions of Spenser's poems, and an account of the changes in pronunciation they seem to imply, we have not the least belief in the theory of conscious editing in the output of any Elizabethan printer or bookseller, and in the matter of spelling it is certainly valueless. It has lately been shown, for example, that with the same document before them Jugge and Cawood, two of the best printers of their time, followed different rules as to spelling quite uniformly—one using *y* where the other used *i*, and *e* where the other used *ee*. Spelling was, in fact, entirely left to the compositor, and was modified by the accidents of printing. Even the interpolation of verses is no sure sign of an editor. The printer supplied whole stanzas in Tudor editions of Chaucer and his followers, while the occasional complaints of outraged authors show that he always felt himself free to modify any prose writing that fell into his hands. We may take it as certain that unless an author was too highly placed for it to be safe to offend him, and unless the matter of his book was of political importance, he was the last person considered by an Elizabethan publisher. All students of poetry owe their warmest thanks to the editors of these volumes for the extraordinary care they have bestowed on their task, and editors and publishers alike are to be congratulated on filling a notable gap in our literature, and on a most important service to the memory of a great Elizabethan poet.

The Cape Peninsula: Pen and Colour Sketches. Described by René Juta, painted by W. Westhofen. (A. & C. Black.)—This book contains 25 beautiful water-colour drawings admirably reproduced, with 118 pages of chatty text in elucidation thereof. The latter is evidently the work of an enthusiast, and contains some interesting historical notes, but it is spoilt by various attempts to recreate the past in more or less dramatic form. By way of carrying out this idea, the author has added to the text a list of "Characters," beginning with "Mynheer Van Riebeeck and all the Dutch commanders." The style is not always impeccable: "Lying close to the shore are many wrecks, an old order which has changed but slowly." "The Batavian directors, with great omnipotence, decreed that the homeward-bound fleet should find no room to carry rice to the vegetable settlement of Bonne Espérance." The Dutch poem on p. 4 does not quite agree with the text given in Dr. Theal's 'History of South Africa,' and without reference to the latter it is impossible to know what is meant by "an ophecten" in the fourth line, which should read

Daer 't donderend metael seer weinigh can ophechten.

"Gespreijt," in the second line, surely means "scattered," not "spread." "Saka bona" (p. 93) is probably intended for the Zulu *sakubona*, but would be unintelligible to a native. Not to linger ungraciously over small flaws, it must be acknowledged that there are some pleasing descriptions, evincing a genuine love of Nature in all her aspects, and adequate to the task of reinforcing the impression produced by the illustrations. Of these we may mention as specially striking 'The Old Castle by Moonlight' (p. 5), 'Blue Hydrangeas at Groote Schuur' (p. 41), 'Camps Bay' (p. 95), and 'Simonstown Mountains' (p. 99).

We cannot help thinking it a mistake to have admitted into a book of this kind the horrors recounted on p. 25. Of course the historical retrospect necessitated some reference to slavery; but the ghastly details are out of place in pages concerned with beautiful scenery and picturesque people.

Through Persia in Disguise, with Reminiscences of the Indian Mutiny. By Col. Charles E. Stewart. Edited from his Diaries by Basil Stewart. (Routledge & Sons.)—No one added more to the official knowledge of Persia than the late Col. C. E. Stewart, and this record of his life and services could not have appeared at a better moment than the present, when the affairs of that country are attracting so much attention. Though his reports on his several journeys in Persia (only one of which was in disguise) remain confidential, he left diaries and other papers which supplied sufficient material to enable Mr. Basil Stewart to compile this interesting memoir. There are reminiscences of the Indian Mutiny and of service on the Punjab frontier, but the Persian experiences form the kernel of the book.

Col. Stewart's interest in Persia began with a return journey from India home in 1866, when, instead of taking the overland route, he travelled by the Persian Gulf to Shiraz, Ispahan, and Teheran. He completed his journey by travelling through Russia, and here it may be mentioned that he was always very well inclined towards that country, which made his appointment as Consul-General at Odessa at the close of his official career appropriate.

A second journey across Syria and by the Euphrates and Tigris valleys, when returning to India in 1869, seems to have strengthened the young officer's inclination for exploring the lands of the Middle East. The account of the trip down the Tigris on a raft composed of a hundred inflated goatskins lashed together is distinctly interesting, if only for the statement that "the scenery far surpassed anything we had seen on the Rhine or Danube."

These two journeys, coupled with the fact that Col. Stewart devoted much of his time to the study of Persian in the years that followed them, explain how it was that he undertook to make a tour in disguise through North-West Persia for the information of the British Government. At that time Russia was engaged in a war with the Turcoman tribes, and there was reason enough to obtain some accurate account of the state of things in the Persian border province of Khorassan. At this juncture Col. Stewart expressed his confidence that he could make the more important part of the journey in disguise, and his offer was accepted.

The first part of the journey he performed as an English officer. At Tabriz he met the late Shah Mozaffir, and at Ispahan his elder brother the Zil-es-Sultan, still living, and he tells a story of the latter, who, while still a boy at Teheran, took his younger brother and ducked him in a tank of water for some impertinence, saying: "You may be the heir apparent, but I will teach you to respect your elder brother." Of the Zil Col. Stewart formed a high opinion, and testified to the excellent way in which he maintained peace and order throughout the whole of his governorship, which embraced the south of Persia from the Shat el Arab to Mekran. Incidentally he mentioned a fact which is probably not generally known, viz., the number of languages spoken in Persia. He wrote:—

"As Persia is inhabited by three distinct races, the Shah, if he wishes an edict to be universally understood, must issue it in three languages, Turkish, Persian, and Arabic, and this seems to have been always the case from the most ancient times. The celebrated edict of Darius at Behistun, a part of which was read by Sir Henry Rawlinson, is in three languages, one the Turanian or Turkish tongue, the second the Semitic or Arab tongue, and the third the Arian or Persian tongue; and the present Shah, if he is to be understood by all his subjects, must still issue an edict in modern derivatives of these three tongues. Things really alter very little in Persia in the course of ages."

Two days after leaving Ispahan, Col. Stewart changed his European dress for that of an Armenian or Persian, and assumed a new personality as Kwajali Ibrahim. He wore this disguise for 4½ months, "never but once being suspected of being a European, and that by an Afghan merchant from the Punjab." It was not only on Persians that he imposed, for his disguise was not penetrated by the adventurous correspondent Edmond O'Donovan, who paid him many compliments on the ease with which he spoke English.

On his return from this journey Col. Stewart was sent by the Government to reside at Khaf, and on this occasion he made an extensive examination of the curious *kevir*, or sand desert. Here he came into contact with the fugitive troops of Ayoub Khan, who had just been defeated by Abdurrahman, and the Persian governor was so alarmed lest they should attack the English officer that he sent him to a safe hiding-place in the desert. However, he did meet some of these Afghan soldiers, who had probably fought at Maiwand, and they begged the Englishman to dress their wounds and give them

some medicine. In 1884 Col. Stewart was appointed Assistant Commissioner under Sir Peter Lumsden on the Afghan Boundary Commission, and after Penjdeh he was one of the officers sent to put Herat in a state of defence.

His stay in this interesting place was very pleasant. Encamped in a beautiful garden, full of large rose-bushes and fruit trees of all sorts, he found time to visit the principal mosques and tombs of the district. He describes the faience that covered the walls in one of the mosques as most beautiful, and the enamel on some of the tiles cannot be reproduced, as the art has been lost. On Sir Peter Lumsden's recall to England, Stewart was ordered to follow him, and, curiously enough, in view of the strained relations and war rumours of the time, he decided to travel through Russia. The Russian authorities treated him most kindly, and placed posthorses and all other facilities at his disposal.

In 1886 Col. Stewart was appointed Consul at Resht on the Caspian, and for a time he was acting Consul-General at Meshed, and before he left Persia for good in 1890 he was Consul-General at Tabriz. Altogether he spent twelve years in Persia, and thus acquired a knowledge of the country and the people which no English officer at least has surpassed. For that reason it is highly proper that his work should be placed on record, and, if the internal condition of Persia was better in his time than it is now, there is much in his description of Persian life and character to interest the reader in a people who have many good points, and certainly deserve a better government than they have for a long time past enjoyed.

Chantrey Land. By Harold Armitage. (Sampson Low & Co.)—The North Derbyshire parish of Norton forms a delightful subject for a skilled topographer. Notwithstanding its comparative nearness to Sheffield, the parish is, for the most part, full of rural charms, and in parts well wooded, whilst the village itself is picturesque, and retains some of the old houses and cottages for which it was at one time famed. The church is an attractive and interesting fabric, with details of various periods, especially good arcades of Transitional Norman date, an exceptionally fine example of an Early English font, and an alabaster table-tomb with effigies, erected by Geoffrey Blythe, Bishop of Lichfield, 1503-33, to the memory of his parents, who were natives of Norton. Within the parish, too, are an unusual number of old houses and estates at one time connected, or still connected, with local families of repute, or of literary or industrial renown. Time-honoured associations gather round such places as the ancient timbered house of Norton Lees; Meersbrook Park, long pertaining to the Shores; Norton Old Hall; Old Norton House; the Oakes-in-Norton, with its beautiful iron gates; and above all the farmhouse at Hazelbarrow, interesting in itself, but fairly glowing in the reminiscences of the once "good old mansion" of Hazelbarrow Hall and its successive inmates.

Nearer to modern days is the unimposing farmhouse of Jordanthorpe (less than half a mile from the church), where Sir Francis Chantrey was born in 1781. His father was but a small farmer and joiner, and the house was of much more modest dimensions until Chantrey, after he had made his fortune, enlarged it for his aged mother's comfort. His eventual eminence and romantic career have dwarfed all else in the parish of his birth.

All those who know Derbyshire well and can judge its merits fairly will be ready to admit that Norton exceeds other parishes in its manifold reminiscences, both ancient and modern, and is also possessed of no mean attractions in its varied landscape and general features. Much has been written about Norton and about Chantrey during the last century, in a more or less desultory fashion, but until this book was issued there was no one volume in any way worthy of the subject. Mr. Harold Armitage, saturated with the spirit of the place, and keenly appreciative of its worth and story, has produced a wholly delightful work, which cannot fail to give pleasure to Derbyshire and Yorkshire folk who know anything of this borderland parish. Moreover, it is so well written throughout, and so profusely illustrated by another Norton lover, Mr. Charles Ashmore, that many others, unacquainted with the district, will readily recognize its worth and merit.

The book shows no deep scholarship, and makes no pretence to be an exhaustive history of the parish. Certain manuscript or record sources of manorial descents or genealogies have apparently not been consulted. Nevertheless, each chapter shows abundantly the life of the particular part of the parish, whether it be church, churchyard, village, house, hamlet, farmhouse, or the families connected with them. Moreover certain sections, such as 'Beliefs and Customs,' are both quaint and entertaining. There are some excellent village stories, whilst the chapter entitled 'The Offley Mystery' rightly claims to be "a family romance, a ghost story meet for telling in the light of the Christmas fire."

The sketch of Chantrey's life and work, though brief, is well written, and in some points novel. There is a pretty tale hitherto, we think, untold in print, of the boy Chantrey, when going daily, with his donkey Jock, to Sheffield with milk and eggs and butter, always pausing to pour milk into a hollow which he had scooped out in the top stone of a wall for a cat's refreshment. The cat used to sit beside the hollow every morning, waiting for her young friend to bring her breakfast. Unhappily, the wall with its hollowed stone was recently taken down during the building of a schoolroom.

We find some discussion as to the respective merits of Chantrey's best works. The most popular will ever be 'The Sleeping Children' in Lichfield Cathedral, which drew tears from many of the crowds who saw it in London before its removal to Lichfield. Mr. Armitage thinks that Chantrey's most telling work is the statue of the Duke of Wellington on horseback in the very centre of the busiest scenes of the City of London. The present reviewer is inclined to think that, for attractive grace, the little-known seated effigy of Louisa, wife of the second Earl of Liverpool, who died in 1821, is the sculptor's most masterly production. It is in the old parish church of Kingston-on-Thames.

Guide to Palestine and Syria. (Macmillan.)—Of late years Palestine has become accessible to the hurried tourist, and a demand has naturally grown for guide-books less voluminous and costly than the exhaustive Baedeker. This demand is well met by the work before us, which adheres strictly to the beaten track. The information supplied is accurate, the form handy, and the maps and plans sufficient for the tourist's guidance. We notice some misprints of Arabic terms and proper names (e.g., "naûs" for "nâcûs," "Kaminity" for "Kaminitz"); and the

identification of Cubbet en Nasr on Jebel Kasyûn with the shrine erected where Mohammed took his one look at the earthly paradise will astonish many natives of Damascus.

In the Preface it is said that every effort has been made to bring the accompanying maps, &c., up to date. Yet Sir R. Drummond Hay is named as Consul-General at Beyrout in 'Yachting Notes'; and in the map of Damascus a house is assigned to the Rev. J. Segall. Both statements were correct four years ago. We also think that the list of books recommended to be read by travellers ought to include Mr. Hanauer's entertaining 'Folk-lore of the Holy Land.'

THE thirty-fourth volume of the "Library Edition" of Meredith's works (Constable) contains his *Miscellaneous Prose*, including an unfinished short story and the unfinished comedy, 'The Sentimentalists,' of which one or two scenes are in verse. Fifty or more pages are occupied by letters written in June and July, 1866, from the seat of war in Italy, where Meredith was correspondent for *The Morning Post*. It is interesting to compare the fluency and directness of style which these display with the more punctuated, the sharper, yet far more intricate and conscious manner of his latest prose as exemplified in the review of Mrs. Meynell's essays or the introduction to Mrs. Dora Shorter's collected verse. One could wish that some of his long-forgotten contributions to *The Ipswich Journal* might be recovered, but a few reviews of books written in early days for *The Fortnightly* complete the collection, except for one or two fragments dropped in recent years.

One section of the volume, which occupies three pages and is entitled 'Criticism,' gives Meredith's list of favourite passages in verse or prose, with a scene from 'Henry VIII.,' a paragraph from 'Villette,' and so forth.

The Old Curiosity Shop (2 vols.) and the *Christmas Books* have been added to Messrs. Chapman & Hall's handsome "Centenary Edition" of the works of Dickens. Though the illustrations are, as usual, beautifully reproduced, the grotesqueness of many of the traditional figures in the first-named book—not to mention the preposterous final tableau representing Little Nell borne heavenwards by angels—leads us to hope that some modern artist may be found who will do for Messrs. Swiveller, Brass, Quilp, and the rest what has already been admirably accomplished for Mr. Pickwick and his friends. To each of the three volumes is affixed one of the Dickens memorial stamps recently issued.

The latest volumes in the same edition contain *Barnaby Rudge* and *Hard Times*, together with *Hunted Down*, the *Holiday Romance*, and *George Silverman's Explanation*. We have taken occasion more than once to commend the admirable clearness of the time-honoured illustrations as given in this memorial reissue—a quality which, however, in the case of 'Barnaby Rudge,' is sensibly impaired by the circumstance, it would seem, of the paper upon which they are displayed being identical with that used for the text. The innovation, already introduced less noticeably in 'The Old Curiosity Shop,' is to be regretted here, as certain of the full-page illustrations—like Cattermole's elaborate frontispiece depicting 'The Maypole Inn'—present more than usual complexity of line and detail.

Year-Books of Edward II.—Vol. V. *The Eyre of Kent, 6 and 7 Edward II. A.D. 1313–1314.* Vol. I. Edited by the late F. W. Maitland, the late Leveson W. V. Harcourt, and W. Craddock Bolland. (Quaritch.)—In this volume the Year-Book series of the Selden Society deserts for a time the courts in London, and publishes the first instalment of the reports and records of a general eyre in Kent held in the years 1313 and 1314. The scheme was first devised by Maitland, carried further after his death by the late Mr. Vernon Harcourt, and is now brought to completion by Mr. W. C. Bolland. It would be unreasonable to complain of delay after these fatal mischances, and we are glad to congratulate the Society on having discovered in Mr. Bolland a scholar worthy to complete adequately a task set on foot by two such distinguished men. Mr. Bolland has given us a sound text, a clear translation, and an Introduction written with a liveliness and spirit that will become a successor of Maitland. Our only complaint is that in the Introduction he has rather too strictly limited himself to the legal side of his task, though the criminal trials reported in this volume prove up to the hilt Maitland's contention concerning the unique value of the Year-Books as materials for social history.

Unluckily, there are some indications that the new editor is not very strong as yet in the historical side of his task. Had he consulted the ordinary textbooks, he need not have spoken of so well-known a personage as Bartholomew de Badlesmere as if he were a fresh discovery. Of Badlesmere he writes: "His lands were forfeited, an order for his arrest was issued, but I cannot find that it was ever executed" (p. 26). This is strange language to be used by a Selden Society editor with regard to one of the leading actors in the crisis of 1322. It is widely known that Badlesmere was executed at Canterbury after the triumph of Edward II. Before Mr. Bolland publishes his second volume, he had better include Stubbs's 'Constitutional History' among the works which he consults. He will then realize the uselessness of wasting the space assigned to him by telling at length the well-known story of the illiterate Bishop Beaumont of Durham, which can be read in a note to Stubbs's great work.

With regard to the text, we wish a little more trouble had been taken with the identification of place-names, and that "Burgus" or "borgha," when used to denote villages, had not been translated as "borough." Such slips apart, Mr. Bolland's work is eminently competent.

Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII. preserved in the Public Record Office, the British Museum, and Elsewhere in England. Arranged and catalogued by James Gairdner and R. H. Brodie. Vol. XXI. Part II. (Stationery Office.)—With this substantial "half-volume" the most elaborate and complete of the Record Office Calendars at last attains its goal in the death of Henry VIII. We are nowhere told that it is the last of the long series, and it may well be that additional papers have been discovered since the earlier parts were printed which will require supplementary volumes by way of appendix. However that may be, our first and strongest feeling in dealing with this instalment is to give our heartiest congratulations to the veteran scholar who has carried his great undertaking to its natural end.

It is just fifty-four years since Sir John Romilly commissioned the late J. S. Brewer

to prepare a Calendar of all the State Papers of the reign of Henry VIII., whether they were in the British Museum, the Record Office, or anywhere else. Six years later, in 1862, Brewer's first volume was published, and from that day to this the measure of the growth of our knowledge of the reign of Henry VIII. has been the progress of this Calendar. Brewer died in 1879, when five volumes, which were really ten, had been prepared for publication. The work was then taken up by Dr. James Gairdner, who has thus been engaged upon it more than thirty years, and has during that period published substantially twenty-three additional volumes. Shorn of the perhaps excessive liberty of writing unlimited prefaces which Brewer had enjoyed, and restricted to a bare 50 pages of preface to each instalment, Dr. Gairdner was compelled to be severely practical, and to throw his main energies into the elaboration of the text. In the later volumes Mr. R. H. Brodie has been associated with Dr. Gairdner in this work.

It is needless to speak once more of the high standard which the Calendar has attained, or to say more than that the volume before us is fully on a level with its predecessors. English rule in the Boulonnais, the troubles in Scotland arising from the siege of St. Andrews, the dramatic arrest of Norfolk and Surrey, the gradual drifting of Henry VIII. towards a new tide of reformation, the anxieties about the succession, and the immediate antecedents of the death of the old king, all receive new illumination from these pages. Special attention may be called to the most helpful list of Tudor maps which students of other periods than that of Henry VIII. will find of great service. The Index, which includes both parts of vol. xxi., is, as usual, most elaborate and careful. The only criticism of detail we can make is to suggest that a little more trouble would have led to the identification of more of the names of villages in the neighbourhood of Boulogne. For instance, the "Retty" of pp. 241 and 752 is clearly Réty, near Marquise; while the "parish of Wyre, with the chapel of Hedon annexed," of pp. 239 and 843, is in all probability the neighbouring village of Wierre-Effroy, a little to the south, and the chapel of Hesdres dependent upon it.

One word of regret may be permitted in bidding farewell to this great undertaking. With the cessation of this Calendar, the only official attempt made to deal with all the record sources of any particular period comes to an end. It is natural enough that the authorities of the Record Office should be anxious first of all to get out lists and calendars of the documents committed to their charge, and not to trouble about those in others' keeping. So long as their main efforts are concentrated on series like the Patent and Close Rolls, which are entirely in their custody, the course they have marked out is the best as well as the easiest. The time will, however, soon come when attention will have to be directed to classes of records which have unluckily become widely dispersed. Take, for instance, the Wardrobe Accounts. Even those in the custody of the Record Office are scattered in various departments of the Exchequer and Chancery archives; but some of the most important which survive are to be found in the British Museum, and others only less in value in various other libraries. When the time arrives for the listing or calendaring of these documents, the only right way of going to work will be the method of Brewer and Dr. Gairdner, viz., to give one catalogue of the whole group, wherever they may happen to be preserved.

MISS POLLARD.

WE regret to record the death of Miss Eliza F. Pollard, a well-known writer of books, mainly for young people, during the last twenty years. It was at a much earlier date that Miss Pollard wrote her first book 'Avicé: a Story of Imperial Rome,' which was published by Masters in 1864, and had actually been written some years previously, before she was twenty. Soon after 1864 she went to live with a friend at Tours, where they took a few English girls as pupils. She remained at Tours during its occupation by the Prussians in the war of 1870, and was decorated by the French Government for her services to the wounded.

Shortly after the war she and her friend removed to Paris. About this time she wrote three novels of modern life which achieved only a moderate success. Always keenly interested in history, in 1889, under the guidance of her old friend George Henty, she began writing historical romances for boys and girls, and in this field gradually won for herself a distinct reputation.

Although she gave up her house in Paris in 1890, Miss Pollard continued to live in France for several months in each year, at the cottage which she had built for herself near Cayeux-sur-Mer, and it was here that she died after a few hours' illness on January 31st.

SURVIVING MAYPOLES IN ENGLAND.

The Hudnalls, St. Briavels, Gloucestershire.

IN your review of January 14th of the 'Highways and Byways in Cambridge and Ely,' I see it is said that "at Orwell there stood down to the 'seventies' the last maypole in England."

For the honour of the West Country may I say that this is incorrect? There is a maypole standing now at Bream, in the Forest of Dean, which was last danced round at the late King's Coronation festivities.

Here, at St. Briavels, the maypole stood on the "Bailey Tump," outside St. Briavels Castle, until 1902, when it was blown down, having been burnt half through by foolishly placed Peace bonfires. There was another just over the river Wye at Whitebrook in Monmouthshire, on the site of an ancient camp; it was a landmark for some distance. We of St. Briavels were offered a fresh pole by the Deputy Surveyor of the Forest of Dean, if we would fetch it for ourselves. But I regret to say that the parish could not be bothered.

I have not inquired in villages further afield, but that makes three in fifteen miles, to within the last ten years. L. M. EYRE.

NORTH FRISIAN DIALECTS.

A STRONG appeal is now being made by some prominent Frisians and others for subscriptions towards a fund to assist in preserving the North Frisian dialects spoken in the islands of Sylt, Föhr, Amrum, and Helgoland. The existence of these dialects, which bear the most obvious traces of their close connexion with English, is now seriously threatened by the great annual influx of summer visitors and by immigration from the mainland. To counteract this it is necessary to provide the younger generation with school-books and song-books.

in their own tongue, and an excellent beginning in this direction has already been made in the island of Sylt. For further work of this kind it is estimated that a sum of at least 250*l.* will be required. As the Frisians are the nearest relatives of the Anglo-Saxon race, this appeal on behalf of their interesting language might well receive some support from this side of the North Sea. Subscriptions for the "Friesenspende" may be sent to the Norddeutsche Bank, Hamburg, and it is of importance that the necessary sum should be raised as soon as possible.

W. A. CRAIGIE.

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the fourth part of the list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth and death should be given together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15, Waterloo Place, S.W.

Haden, Sir Francis Seymour (1818-1910), etcher and surgeon.
Haig-Brown, William (1823-1907), master of the Charterhouse.
Haigh, Arthur Elam (1855-1905), classical scholar.
Haines, Sir Frederick Paul, G.C.B., G.C.S.I. (1819-1909), field-marshal.
Haliburton, Arthur Lawrence, 1st Baron Haliburton (1832-1907), army administrator.
Hall, Christopher Newman, D.D. (1816-1902), Congregationalist preacher.
Hall, Fitzedward (1826-1901), philologist.
Hall, Sir John, K.C.M.G. (1824-1907), Prime Minister of New Zealand.
Halliday, Sir Frederick James (1806-1901), Lieutenant-Governor of Bengal.
Hamilton, David James, F.R.S. (1849-1909), pathologist.
Hamilton, Sir Edward Walter, G.C.B. (1847-1908), Treasury official.
Hampden, 2nd Viscount. See Brand, Henry Robert.
Hanbury, Elizabeth (1793-1901), prison reformer.
Hanbury, Sir James Arthur, K.C.B. (1832-1908), army surgeon.
Hanbury, Robert William (1845-1903), President of the Board of Agriculture.
Hankin, St. John Emile Clavering (1870-1909), playwright.
Hanlan, Edward (1856-1908), Canadian oarsman.
Harcourt, Leveson Francis Vernon (1838-1907), civil engineer.
Harcourt, Sir William George Granville Venables Vernon (1827-1904), statesman.
Hardwicke, 6th Earl of. See Yorke, Albert Edward Philip Henry.
Hardy, Gathorne Gathorne. See Gathorne-Hardy, Gathorne.
Hare, Augustus John Cuthbert (1834-1903), author.
Harland, Henry (1861-1905), novelist.

Harley, Robert, F.R.S. (1828-1910), Congregational minister and mathematician.
Harris, Thomas Lake (1823-1906), mystic.
Harrison, Reginald (1836-1908), surgeon.
Hartington, Marquis of. See Cavendish, Spencer Compton.
Hartshorne, Albert (1839-1910), archæologist.
Hastie, William, D.D. (d. 1903), Professor of Divinity at Glasgow.
Hatton. See Finch-Hatton.
Hatton, Joseph (1841-1907), novelist and journalist.
Havelock, Sir Arthur Elibank, G.C.M.G. (1844-1908), Governor of Madras.
Haweis, Hugh Reginald (1838-1901), author and preacher.
Hawker, Mary Elizabeth, "Lance Falconer" (d. 1908), novelist.
Hawkins, Sir Henry, Baron Brampton (1817-1907), judge.
Hayes, Edwin (1820-1904), marine painter.
Hayes, Thomas Crawford (d. 1909), physician.
Hayman, Henry, D.D. (1823-1904), Hon. Canon of Carlisle, head master of Rugby.
Hayward, Robert Baldwin, F.R.S. (1829-1903), mathematician.
Headlam, Walter George (1866-1908), classical scholar.
Hearn, Mary Anne, "Marianne Farningham" (1835-1909), hymn-writer.
Heath, Christopher (1835-1905), surgeon.
Heath, Sir Leopold George, K.C.B. (1817-1907), admiral.
Hector, Mrs. Annie French, "Mrs. Alexander" (1825-1902), novelist.
Hector, Sir James, K.C.M.G., F.R.S. (1834-1907), Canadian geologist and ethnologist.
Hellmuth, Isaac (1819-1901), Bishop of Huron.
Hemming, Sir Augustus William Lawson, G.C.M.G. (1841-1907), Governor of Jamaica.
Hemming, George Wirgman (1821-1905), mathematician and legal writer.
Hemphill, Charles Hare, 1st Baron Hemphill (1828-1908), serjeant-at-law in Ireland.
Henderson, George Francis Robert (1854-1903), lieutenant-colonel; military writer.
Henderson, Joseph (1832-1908), portrait and marine painter.
Henderson, Kenneth Gregg, C.B. (1836-1902), major-general.
Henderson, Robert (d. 1904), miniature painter.
Henderson, William George, D.D. (1819-1905), Dean of Carlisle.
Henley, William Ernest (1849-1903), poet, dramatist, and critic.
Hennessey, John Baboneau Nicklerlien, F.R.S. (1829-1910), Deputy Surveyor-General of India.
Hennessy, Henry, F.R.S. (1826-1901), physicist.
Henry, Mitchell (1826-1910), Irish politician.
Henty, George Alfred (1832-1902), writer for boys.
Herbert, Auberon Edward William Molyneux (1838-1906), political philosopher and author.
Herbert, Sir Michael Henry (1857-1903), diplomatist.
Herbert, Sir Robert George Wyndham, G.C.B. (1831-1905), Colonial official.
Herford, Brooke, D.D. (1830-1903), Unitarian divine.
Herring, George (1832-1906), philanthropist.
Herschel, Alexander Stewart, F.R.S. (1836-1907), astronomer.
Hertslet, Sir Edward, K.C.B. (1824-1902), Librarian of the Foreign Office.
Hervey, Charles Robert West, C.B. (1818-1903), general.
Hibbert, Sir John Tomlinson, K.C.B. (1824-1908), politician.
Hiles, Henry (1826-1904), musical composer.
Hill, Alexander Staveley, K.C. (1825-1905), barrister and politician.
Hill, Frank Harrison (1830-1910), journalist.
Hill, George Birkbeck (1835-1903), editor of 'Boswell's Johnson.'
Hill, Rosamond Davenport (1825-1902), educational reformer.
Hills, Sir John, K.C.B. (1834-1902), major-general, R.E.
Hingeston-Randolph, Francis Charles (1833-1910), Prebendary of Exeter and archæologist.
Hingley, Sir Benjamin, 1st Bt. (1830-1905), iron-master.
Hingston, Sir William Hales (1829-1907), Canadian surgeon.
Hipkins, Alfred John (1826-1903), musical antiquary.
Hoare, Joseph Charles, D.D. (1851-1906), Bishop of Victoria, Hong Kong; Chinese scholar.
Hobbes, John Oliver (pseud.). See Craigie, Mrs. Pearl Mary Teresa.
Hobhouse, Sir Arthur, 1st Baron Hobhouse (1819-1904), judge.
Hobhouse, Edmund, D.D. (1817-1904), Bishop of Nelson, New Zealand; antiquary.

Hodgetts, James Frederick (1828-1906), Commander R.N. and archæologist.
Hodgins, Thomas (1828-1910), Canadian lawyer.
Hodson, Henrietta. See Labouchere, Mrs. Henrietta.
Hoey, Frances Sarah, known as Mrs. Cashel Hoey (1830-1908), novelist.
Hofmeyr, Jan Hendrik (1845-1909), South African politician.
Hogg, Quintin (1845-1903), philanthropist.
Holden, Luther (1816-1905), surgeon.
Holder, Sir Frederick William, K.C.M.G. (1850-1909), first Speaker of the Australian Federal Parliament.
Hole, Samuel Reynolds, D.D. (1819-1904), Dean of Rochester.
Holland, Francis James (1828-1907), Canon of Canterbury; promoter of Church education.
Hollingshead, John (1827-1904), author, journalist, and theatrical manager.
Hollowell, James Hirst (1851-1909), Congregational minister.
Holman-Hunt, William, O.M. (1827-1910), painter.
Holmes (properly Holmes), Augusta Mary Anne (1847-1903), musical composer.
Holmes, Timothy (1825-1907), surgeon.
Holroyd, Henry North, 3rd Earl of Sheffield (1832-1909), sportsman.
Holyoake, George Jacob (1817-1906), secularist and pioneer of co-operation.
Hood, Arthur William Acland, 1st Baron Hood of Avalon, G.C.B. (1824-1901), admiral.
Hook, James Clarke, R.A. (1819-1907), sea painter.
Hope, Sir John Adrian Louis, 1st Marquis of Linlithgow, 7th Earl of Hopetoun (1860-1908), first Governor-General of Australia.
Hope, Laurence (pseud.). See Nicolson, Mrs. Violet Adela.
Hopetoun, 7th Earl of. See Hope, Sir John Adrian Louis.
Hopkins, Edward John (1818-1901), organist.
Hopkins, Jane Ellice (d. 1904), philanthropist.
Hopwood, Charles Henry, K.C. (1829-1904), Recorder of Liverpool.
Hornby, James John (1826-1909), Provost of Eton College.
Horniman, Frederick John (1835-1906), philanthropist.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

MR. UNWIN will publish soon Mr. George Renwick's book 'Finland To-day.' Mr. Renwick, who has spent a long time in Finland, describes the most noteworthy places in the country, and attempts to give a portrait of the Finnish people. Finnish music, painting, sculpture, architecture, and literature are dealt with, and the political situation is discussed. An Introduction is contributed by Mr. H. W. Nevins.

OLIVE SCHREINER's new book, 'Woman and Labour,' will be issued on the 20th inst. by the same publisher. It is a survey of the position of women in the modern world and the problems created by the changed conditions of labour.

THE MEMOIRS OF SIR WILLIAM BUTLER are to be published shortly by Messrs. Constable, a fact Mr. Stephen Gwynn seems to have forgotten in his notice of that distinguished writer and soldier in the current *Nineteenth Century*.

MESSRS. BELL will publish in March 'William Pitt and National Revival,' by Dr. J. Holland Rose, who has made diligent use of hitherto unexplored archives in the Public Record Office, and has had the advantage of numerous unprinted letters in the possession of private owners whose ancestors were connected with Pitt.

THE volume will be followed in the course of the year by another, entitled 'William Pitt and the Great War,' the two constituting a complete survey of Pitt's life and administration. Both volumes will be illustrated by portraits.

MESSRS. GEORGE ALLEN & SONS are publishing 'Memorials of Old Surrey,' edited by the Rev. Dr. Cox, whose 'Rambles in Surrey' we noticed last year. A good list of contributors to the volume is announced, the editor dealing with 'The Forests of Surrey' and 'The Abbeys of Chertsey and Waverley,' Mr. Aymer Vallance with 'Roods, Screens, and Lofts,' and Mr. P. M. Johnston with 'Wall Paintings.'

THE CAMBRIDGE PRESS will publish a royal quarto edition of the Authorized Version just before the Tercentenary of that book, printed in a fine antique type with central references, family register, an exact copy of the Epistle Dedicatorie, facsimiles of the two fine frontispieces in the 1611 Bible, and a number of plates. It will be issued in a variety of suitable bindings, and is intended for a family Bible. A number of smaller editions with the two frontispieces, and probably the Epistle Dedicatorie, will also be issued.

MR. MARMADUKE PICKTHALL gives generous measure in his collection of short stories, 'Pot au Feu,' which Mr. Murray will publish shortly. There are twenty-two tales altogether, and they are divided into three groups—English, Swiss, and Oriental.

MESSRS. BLACK promise 'The Herb Garden,' by Mrs. F. A. Bardswell, illustrated by Miss Isabelle Forrest and Miss Florence Amherst; and 'Highways and Hedges,' painted by Berenger Berger, and described by Mr. Herbert A. Morrah.

THEY are also publishing an elaborate and expensive book on 'The Annals of Hampstead,' by Mr. T. J. Barratt.

MR. HENRY FROWDE will publish next week for Yale University an 'Index Verborum Vergilianus' by Prof. Monroe N. Wetmore.

'THE BEGINNINGS OF THE AMERICAN REVOLUTION' is the title of a work in three volumes, written by Miss Ellen Chase, shortly to be published by Sir Isaac Pitman & Sons. Miss Chase's researches have been carried on among the archives of the British Museum and of American States and cities, and have extended also to many contemporary diaries, English and American. The work is illustrated with 75 plates, some of the portraits appear for the first time.

By an oversight only detected after publication, some paragraphs from 'The Ball and the Cross' have been included, without acknowledgment to the holders of the copyright, in the 'Chesterton Calendar' we noticed last week. The publishers, Messrs. Kegan Paul, are indebted to Messrs. Wells Gardner for permission to quote these passages.

THE literature of the Papal Commission on Anglican Orders is to be enlarged by the immediate publication of Abbot Gasquet's 'Leaves from my Diary, 1894-1896.' The Abbot sat on the Commission, and the daily entries in his journal throw light on some of its doings otherwise, by rumour, rendered obscure. Messrs. Burns & Oates are the publishers.

MR. SIDNEY HODGSON has left for New York in order to help in compiling the catalogue of the Hoe Library.

SIR F. POLLOCK writes:—

"In your issue of the 4th inst. you call James Spedding an able prig. I do not know how you define a prig, but I do know that James Spedding was in truth and in fact a good humorist. About Peacock I am happy to agree with you, having learnt to appreciate him, in large measure, directly or indirectly, from the same James Spedding."

A SMALL volume of personal verse by Mr. Charles Sayle, entitled 'Private Music,' will be published in April by Messrs. Heffer & Sons of Cambridge. A number of the pieces have not hitherto been published. The title was used by Martin Peerson in the seventeenth century.

IN last Saturday's *Star* Mr. James Douglas had a column on the censorship of 'Cottage Pie' by the Libraries. The author of that amusing work, Mr. Neil Lyons, is in good company; but it is high time, as Mr. Douglas suggests, that a Union of Library Subscribers was formed, strong enough to have some say in the matter of the books they are allowed to read or that the Referendum was introduced.

WE have already pointed out that even a small body of the sort, if it were resolute, could do a great deal. The average reader deserves to be bullied, for he does not get beyond grumbling in private, which, a friend of ours says, is about as useful as a Royal Commission.

THE HON. HARRY LAWSON, M.P., will preside at the Annual Meeting of the Newsvendors' Institution on Tuesday, the 21st inst.

MR. LEE WARNER has removed the offices of the Medici Society, also his own publishing offices, from Albemarle Street to 7, Grafton Street, Bond Street, which is next door to the Grafton Galleries.

MR. JOHN MILNE has transferred his business premises from 29, Henrietta Street, Covent Garden, to 6, John Street, Adelphi, Strand.

MR. ST. LOE STRACHEY will preside at the twenty-first dinner in aid of the Readers' Pensions, which will be held at the Holborn Restaurant on Saturday,

March 18th. One proof-reader who is applying for a pension next month is in his 82nd year, and has subscribed annually to the Printers' Pension Corporation for half a century.

MISS NETTIE ADLER will deliver a lecture to the Fabian Education Group on Thursday evening next on 'Trade Schools for Boys and Girls.' The lecture will be at Clifford's Inn Hall, Fleet Street, and is open to all who are interested in the subject.

THE Report of the Scottish Record Society, just issued, states that the following works are in preparation, to be issued, it is expected, during the course of the year: (1) Continuation of the Parish Register of Melrose; (2) Protocol Book of Sir William Corbet; (3) Parish Register of Dunfermline; (4) Canongate Parish Register of Marriages; (5) Durness Parish Register; (6) Torphichen Register of Field Baptisms. The membership of the Society now reaches 130, including 32 libraries and public institutions.

EARLY in March the first volume of Giuseppe Baretta's works will be issued by Laterza e Figli of Bari in their great edition of the "Scrittori d'Italia," which will contain over six hundred volumes. The whole of Baretta's writings in Italian, English, French, and Spanish are to be included, and it is expected they will fill about ten volumes. Luigi Piccioni, who has made a life study of Baretta, is the editor. The first volume is to consist of prefaces and controversial works, and will include a bibliography and an index of names.

THE distinguished philologist Wilhelm Wilmanns, whose death in his 69th year from an accident is announced from Bonn, had been Professor at the University of that town for 34 years. Among his works are the well-known German grammar, 'Beiträge zur Geschichte der älteren deutschen Literatur,' and valuable editions of, and commentaries on the Nibelungenlied and Walther von der Vogelweide, which have taken their place as standard authorities. He was one of the most active members of the Deutsche Sprachverein.

THE MAHARAJA OF AJAIGARH, a leading chief of Central India, has just written a work which aims at educating the youth of India in sound principles, and thus combating sedition. The work will be called 'Tarbiat Atfal.' The Maharaja is the author of more than one volume on medical and social questions.

AMONG recent Parliamentary Papers that may interest our readers we note: Regulations for Magazines, &c., Amendments, February, 1911 (post free 1½d.); Statistics of the Preliminary Examination for the Elementary Teachers' Certificate, 1909-10 (post free 7½d.); Poor Laws Commission, Vol. XXX. Scotland, Statistics (post free 1s. 9d.); and Royal Commission on the Welsh Church, Vol. VII. Appendices to the Evidence, Nonconformists (post free 1s. 10d.).

SCIENCE

OUR LIBRARY TABLE.

The Origin of Civilisation and the Primitive Condition of Man: Mental and Social Condition of Savages. By Lord Avebury. (Longmans & Co.)—If Lord Avebury had not announced as "in preparation" a work 'On Marriage, Totemism, and Religion: an Answer to Critics,' we might have taken this opportunity of examining his well-known and, so to speak, classical views about the origin of civilization in the light of the many new facts and new theories that have accrued since 1870, the year in which the present book made its first appearance. As it is, it would be somewhat unfair to deduce his present position either from what is set forth in this reissue of the 1902 (sixth) edition, or from what is barely outlined in the brand-new Preface. We may take it as fairly certain, however, that Lord Avebury intends on the whole to stick to his guns—weapons which assuredly have proved themselves more time-defying than the finest specimen of ordnance ever turned out at Woolwich.

For instance, his name is especially associated with the theory of communal marriage, as following on a condition of society when the institution of marriage did not exist at all. Does he show the slightest tendency to retract, in view of the counter-arguments of Mr. Lang and his allies Messrs. Atkinson and Thomas? It is, perhaps, hardly likely that he would, since leading first-hand authorities on Australia adopt a very similar hypothesis in order to explain various existing customs; not to mention the fact that Morgan's parallel assumption, framed in order to account for the classificatory system of relationships, finds ardent supporters to-day in such men as Herr Kohler and Dr. Rivers. It is to be hoped, however, that when Lord Avebury comes to justify himself at length he will not waste time over Letourneau, who does not count, and never has counted, amongst the major prophets, but will instead tackle a far more doughty antagonist hailing from the same country, namely, Prof. Durkheim, whose thorough knowledge of the available evidence is matched by his power of subtle analysis.

Again, will Lord Avebury desert his former opinions concerning the origin of totemism? Here, we confess, so many new facts have since accumulated that some graceful concessions to modernism might not unreasonably be expected on his part. Lord Avebury has manfully attacked the four bulky volumes of Dr. Frazer's 'Totemism and Exogamy,' and pronounces that "the result, while interesting, is somewhat bewildering." And so say all of us. In other words, we have read, marked, and learnt, but, most emphatically be it said, we have not yet inwardly digested. When this process has had time to enact itself, then let Lord Avebury speak his mind.

Finally, the eminent author evidently clings to his belief that the lowest races have no religion. As regards the fact that

"sailors, traders, and philosophers, Roman Catholic priests and Protestant missionaries, in ancient and in modern times, in every part of the globe have concurred in stating that there are races of men altogether devoid of religion,"

we confess that our withers are unwrung. With all respect, we would back one man of science against the entire crowd. It is more

to the point to allow that "the question as to the general existence of religion among men is, indeed, to a great extent a matter of definition." Scientific definitions, however, are not an affair of taste. They are relative to scientific purposes. Lord Avebury, then, may at least be called upon to show that the ends of scientific classification are best served by distinguishing religion from something else unnamed, which is not religion, yet directly paves the way thereto—as when, to cite himself as witness, "respect for the totem culminates at length into awe and leads up to religion." It seems to us that it would be better for all concerned if the man of science did not narrow down his conception of human religion to suit the priest or the missionary, however well-intentioned, but, on the contrary, sought to persuade the latter to accommodate his categories to our ever-widening horizon.

The Oak: its Natural History, Antiquity, and Folk-lore, by Charles Mosley (Elliot Stock), is a readable little volume containing much interesting matter relating to the principal forest tree in these islands. The author appears to have studied the oak because he first admired it as something in vegetation which exhibits unrivalled strength of limb and power of resistance to adverse conditions. That he has read much is shown by frequent and liberal quotations from the numerous authors consulted. If it cannot be said that the information is original, nevertheless the reader may be glad of a popular volume containing in a handy form facts that otherwise are not readily accessible. There are chapters on the economic value of the tree, historic and veteran oaks, enemies and parasites, mistletoe-oaks and oak-mistletoe, the oak in myth and folk-lore, and in Holy Writ. Not all the large oaks in the country are mentioned, but the omissions are few, and it is evident that considerable care has been taken in getting the true facts concerning historic examples.

The author quotes a paragraph from White's 'Natural History of Selborne' concerning some oaks on the Blackmoor estate which were 50 ft. long without a bough, and, being specially suited for the repairing of a bridge near Hampton Court, were purchased for 20*l.* apiece. Such prices are still obtained, for, according to *The Gardener's Chronicle*, only last month 105 oaks grown on the Farming Woods estate in Northamptonshire were sold for an average price of 21*l.* a tree. Some of these were of the type known as "brown" oak, and one specimen realized 105*l.*, another 76*l.* Most of these fine trees had grown in isolated positions in an open park, and they possessed short boles of great diameter.

Britain's Birds and their Nests. By A. Landsborough Thomson. With Introduction by J. Arthur Thomson. (W. & R. Chambers.)—It is stated that "the main reason for the publication of this book is Mr. Rankin's magnificent series of 130 coloured plates of British-nesting birds." The letterpress is little more than a descriptive catalogue to the picture gallery. In many respects this work would seem to challenge direct comparison with Mr. Bonhote's 'Birds of Britain.' Both cater primarily for the popular taste. Both fall short of their comprehensive titles.

The volume now under consideration is the bulkier; in general get-up it is very good value for the money. It might not be gathered from the title that such birds as

do not habitually breed in the British Isles are excluded; the fieldfare, for instance, receives only a passing mention. On the other hand, the series of plates "includes nearly all the species which nest in appreciable numbers, and a few rare birds of special interest." Why not all, instead of "nearly all"? There is no sufficient reason for ignoring the lesser whitethroat, tree sparrow, pied flycatcher, the spotted woodpecker, short-eared owl, merlin, Dartford warbler, chough, Kentish plover—to name a few only of those that have been omitted.

Meanwhile the 130 favoured species will carry the novice a long way, and it may be said at once that the plates reach a high level of excellence from a pictorial point of view, and in almost every case should prove a trustworthy aid to identification. It is rather a shock to find a so-called spotted fly-catcher masquerading as a tree pipit in plate 94. This, of course, prepared us for the second impersonation in plate 100. The slip, however, is the more unfortunate because of a superficial resemblance between the birds, while there is nothing in the letterpress to correct it. We condole with the artist, for both are admirably rendered. Mr. Rankin's treatment of his background is generally very pleasing, and the flowers and appropriate vegetation are unusually good. The nests and eggs, as often happens, are not always so convincing. If a photographer had been at work, one would have had occasion to criticize his inartistic tilting of the nests and the ostentatious rearrangement of their contents.

Mr. A. L. Thomson in traversing the well-worn track manages to escape being tedious, which is higher praise than it sounds. He writes in an easy, pleasant style, and he is a sound guide as far as he goes. We observe that he considers it premature to regard the much-discussed willow-tit as a new British species. He has not much to say on the subject of vocal performances, and evidently does not believe in attempts to syllable a bird's song. The limits of the breeding season are often not defined at all. Mr. Thomson adds his protest against the legalized persecution of the black-headed gull in various parts of the country. The wonderful recovery as nesting species made in recent years by the kite and great skua under rigorous protection is good reading; the Kentish plover is another gratifying case in point which is not mentioned.

RESEARCH NOTES.

IN the current number of the Royal Society's *Proceedings* Dr. R. W. Gray and Sir William Ramsay describe their recent experiments undertaken to determine the density of the emanation of radium. Their prefatory remarks affirm that a definite number of atoms of radium constantly disintegrate, each evolving an Alpha particle which ultimately becomes an atom of helium; and from this they show the probability that the atomic weight of the resulting emanation, which they call by its new name of Niton (here defended against critics) is 222.4. To settle this point by another method, it was necessary to ascertain the density of the gas, which involved the determination of its volume, temperature, pressure, and weight. The authors of the paper show in detail how the first three of these measurements were reached; but the determination of the fourth magnitude required the construction of an extremely delicate balance. One made by Mr. Steele and Mr. Grant in the Melbourne

Laboratory gave them the principle of this, and in the result they succeeded in producing an instrument so delicate as to turn with less than the two-millionth part of a milligramme, which is now at University College, London. The general result of the experiments which this machine made possible was to show that four atoms of helium separate from each atom of radium, three of which are lost by the decay of the emanation. Deducting the fourth atom, which escapes in a recognizable form, they decide that the atomic weight of the remainder is exactly 222.4, while the molecular weight of niton is established as 218. The article is as remarkable for its clearness of reasoning as for the extraordinary skill shown in the experiments which it records.

The whole question of the constitution of matter, in which these experiments play a very important part, is raised by Prof. L. T. More (of Cincinnati) in this month's number of *The Philosophical Magazine*. He considers that the mathematical physicists of the present day, in pushing their theories of electrons, every one of which fills all space, and the like, have gone further than the facts warrant, and that it is, as he says, "more natural and more rational to consider electricity as an attribute of matter than matter as a phenomenon of electricity." Hence he goes on to show that all the observed phenomena can be accounted for on the assumption that in the famous ratio of e/m , which forms the starting-point of the mathematical theories, m is the mass of a particle of matter in the Newtonian sense, of constant and small value, and e , the electrical charge, a "force attribute" of matter which varies with the velocity of the particle. The difference between positive and negative electricity, he says, can still be ascribed to the nature of the orbital motion of the electron, and we are not compelled to assume an infinite momentum for a body moving with infinite velocity. At the first glance, these seem eminently reasonable suggestions, and although they do not afford any hint as to how the author would define "force," they should do good service in restraining the tendency to metaphysical or mystical speculation among the "mathematically-minded."

In the meantime Prof. F. Ehrenhaft has also lately made experiments which cast considerable doubt on the factors of the equations on which all the current mathematical theories of electricity are based. These all depend on the assumption, hitherto supposed to be axiomatic, that there is in actual existence an "atom," or residual unit charge, of electricity which is incapable of further division. To demonstrate this Prof. Ehrenhaft employed the ultra-microscope of Siedentopf and Zsigmondy, many times alluded to in these Notes, his particular instrument being made for him by Zeiss. This he brought to bear on the space between two condenser plates placed horizontally, which an aspirator enabled him to fill with different gases; and while the external air was excluded, he was able to create an electric field between the two plates at will. The gas admitted contained the smallest observable fragments of the precious metals produced by the vapourization of those metals in the electric arc.

On the Professor's short-circuiting the condenser plates, the particles suspended in the gas were observed to fall on the lower plate with a regular movement, the larger ones moving faster than the smaller, and the fall being thus evidently due to gravitation. When the electric field was turned on so as to coincide with the gravitational one, certain particles began to fall more rapidly

than before, while others slackened speed, and yet others remained stationary. From these facts Prof. Ehrenhaft draws the conclusion that outside the electric charges already known, which oscillate about the values designated as monovalent or polyvalent ions, there exist in nature, on the one hand charges intermediate between these, and, on the other, quantities of electricity corresponding to only a fraction of the electronic charge which has hitherto been supposed to be indivisible. If this can be substantiated on further investigation, it seems at once to establish Prof. More's hypothesis mentioned above, and to upset all the speculative theories founded on the "atom" of electricity. Prof. Ehrenhaft's paper was read at the last Congress of German Physicists, but this current is taken from the current number of the *Revue Générale des Sciences*.

An article by M. A. Boutaric (Professor of Physics at Pau), dealing with the constitution of matter from another point of view, appeared in last month's *Revue Scientifique*. It is founded on some arguments of Mr. G. Hinrichs, whom M. Boutaric describes as an American chemist, and who has made many communications during the last seventeen years to the Académie des Sciences. Mr. Hinrichs's main contention is that all the atomic weights of the elements as determined by Stas are wrong, and in particular that neither a gas nor a liquid could ever form a satisfactory foundation for a system of atomic weights. Mr. Hinrichs therefore suggested that the present system, based on hydrogen as unity, should be abandoned, and that carbon, in its crystalline form of the diamond, should be adopted in its stead. Taking the value of this as 12, Mr. Hinrichs declared that most of the atomic weights of the elements would become whole numbers instead of compound fractions, calcium, for instance, working out at 40, silver at 108, and so on; and he has since justified this so far as bromine, chlorine, sulphur, and manganese are concerned. M. Boutaric, who summarizes Mr. Hinrichs's contentions rather than defends them, does not assert that they are yet generally accepted, although he says they have been a good deal discussed. His arguments in favour of the ultimate unity of matter are otherwise drawn from some observed inaccuracy in the numbers generally assigned to the atomic weights, from Sir Norman Lockyer's spectroscopic researches upon the cooling of stars, and from the electronic theory impeached in the preceding paragraph.

One other contribution on the constitution of matter may perhaps be mentioned. M. Pierre Weiss in last month's *Comptes Rendus* of the Académie des Sciences announces what he declares to be "a universal constituent of matter" in the shape of a "magneton." This quantity he declares to be "the moment of the elementary magnet itself, corresponding to the aliquot part of the moments of the atoms-grammes." He says that it enters into the constitution of the atoms of iron, nickel, cobalt, copper, manganese, and uranium, and he quotes the researches of Der Bois, Liebknecht, Wills, Stephan Mayer, and Urbain in support. He suggests that this magneton enters into the composition of many other simple and compound bodies, and notably into that of the rare earths. His proof, so far as it is given in his communication, is entirely mathematical.

Some new practical applications of science have appeared during the last month. In the *Physikalische Zeitschrift* Profs. H. Loewy and G. Leimbach describe an electrodynamic method of investigating the cavities

of the earth, which may be summed up as the application of the Hertzian waves to the search for water and deposits of metals. As they describe it, it seems feasible; but it appears unlikely that it could ever be used to ascertain whether the centre of the earth does or does not contain, as has been suggested, a liquid core of metals and rocks in fusion. No one knows anything as yet of the electric conductivity of masses at the enormously high temperatures which such masses would present, and it is possible that they might entirely absorb the Hertzian waves.

The Weston or cadmium cell has been adopted from the 1st of January of this year as the international standard of electromotive force, as the result of experiments made last year at the Bureau of Standards at Washington by the representatives of England, Germany, and the United States; and a similar declaration with regard to the international ohm or standard of resistance is expected to follow shortly.

The Allgemeine Elektrizitäts Gesellschaft of Germany say that they can manufacture electric incandescent lamps of 10, 16, and 25 candle-power to take a current of 14 volts only, and can put them on the market at half the price of those made for the 100-volt and 200-volt circuits. With metallic filaments the life of these lamps should be more prolonged, as the filament is not so long as with the higher voltage.

Aviation has lately come to occupy a large place in applied science, and, while Commandant Paul Renaud contributes articles on aeroplanes to the last two numbers of the *Revue Générale des Sciences*, the *Comptes Rendus* of the Académie admits a communication from M. Girardville describing the application of the gyroscope to an aeroplane, with a view to securing stability. Commandant Renaud's articles give in scientific, but not too technical form all the necessary information about the construction of the most modern forms of flying-machines, together with the theoretical considerations upon which this is, or should be, based. He considers monoplanes and biplanes as the only types worth consideration at present, and says nothing about the ornithoptères, helioptères, and the rest which have appeared in recent exhibitions. As he says, aviation only took a practical form in 1908, and, when the difficulties to be surmounted are considered, the progress already attained is marvellous.

M. Girardville's paper tells us that the gyroscopes employed by him weighed nearly 6 kg., and were capable of 12,000 revolutions per minute, although half that speed was found to give good results. They were tried first in Commandant Renaud's experimental air-blast; then on the Eiffel Tower when the wind was blowing variably at from 12 to 15 metres per second; then on models; and finally on a Farman biplane at the Military Aviation School of Vincennes. In every case, he says, they prevented all oscillation and lateral rocking.

The book of M. Stéphane Ledue (of Nantes) on spontaneous generation is out, under the title of 'Théorie physico-chimique de la Vie.' It has been many times said in these notes that his hypothesis is based on experiments in cytogenesis, or the artificial production of chemical processes imitating the cells of living organisms. Startling as these experiments appeared at first sight, the arguments drawn from them for the beginning of life upon the globe by an accidental process of osmosis are seen to be lacking in consistency when formally put

together, and this seems to be the opinion of M. Leduc's colleague Prof. Cuénot, who has recently reviewed the book.

Another biological event of importance is the announcement made last month at the Société de Biologie by M. Billard, that a substance has been discovered in the liver of the pig which completely destroys the fatal properties of cobra poison within two hours. This is a striking confirmation of the view held even in classical times that pigs cannot be injured by poisonous snakes.

The discovery of a fish, *Kurtus Gulliveri*, in the waters of Dutch New Guinea, the male of which carries the eggs of his partner in a fleshy hook on his head until they are hatched, was announced at a recent meeting of the Academy of Sciences of Amsterdam.

F. L.

SOCIETIES.

ROYAL.—Feb. 2.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Experiments to investigate the Infectivity of *Glossina palpalis* fed on Sleeping-Sickness Patients under Treatment,' by Col. Sir D. Bruce, Capt. A. E. Hamerton and H. R. Bateman, and Dr. R. Van Someren, 'Experiments to ascertain if *Trypanosoma gambiense* during its Development within *Glossina palpalis* is Infective,' by Col. Sir D. Bruce and Capt. A. E. Hamerton, H. R. Bateman, and F. P. Mackie, 'Further Experimental Researches on the Etiology of Endemic Goitre,' by Capt. R. McCarrison, 'On the Leaves of Calamites (Calamocladus Section),' by Mr. H. Hamshaw Thomas—and 'Complement Deviation in Mouse Carcinoma,' by Dr. J. O. Wakelin Barratt.

GEOLOGICAL.—Jan. 25.—Prof. W. W. Watts, President, in the chair.—Messrs. P. Grimley, E. Heron-Allen, F. G. Penman, H. Gladstone Smith, W. Campbell Smith, and W. Trenna Walker were elected Fellows.—The following communication was read: 'The Skomer Volcanic Series, Pembrokeshire,' by Mr. Herbert H. Thomas.

Before the ordinary meeting, a special general meeting, at which 92 Fellows were present, was held, in order to consider the following resolutions submitted to them by the Council:—

1. That the space now occupied by the Museum be made available for the extension of the Library.
2. That it is desirable that the Society's collections of fossils, minerals, and rocks, with certain exceptions to be subsequently specified, be offered to one or more of the National Museums, provided that guarantees be obtained that the specimens will be properly registered and rendered available for scientific purposes.
3. That it is not desirable that the Society should accept money for any part of the collections or in consideration of them.
4. That the Council be empowered to approach such institution, or institutions, with a view to carrying the above resolutions into effect, and that the Council shall call another special general meeting to express approval or otherwise of the arrangement proposed.

Resolutions 1, 2, and 4 were carried unanimously, and resolution 3 was carried by 57 ayes to 10 noes.

ROYAL INSTITUTION.—Feb. 6.—The Duke of Northumberland, President, in the chair.—Mr. and Mrs. A. Carpinuel, Dr. W. S. Colman, Mr. Guy Ellis, Mrs. E. B. Fielden, Dr. A. H. Levy, Mr. Basil Mott, Mr. A. F. C. Pollard, and Dr. N. Raw were elected Members.

FOLK-LORE.—Jan. 18.—Annual Meeting.—Miss C. S. Burne, President, in the chair.—After the business of the meeting, a report was read by the Secretary from Mr. T. F. Ordish on the folk-drama material that he had received in response to an appeal he had made in *Folk-lore*. Mr. Ordish gave an account of the various versions (to the number of 22) he had received, and the progress that had been made towards collating them with material already in hand. An interesting collection of photographs and sketches illustrative of mummers' dresses and the plays in action were shown by Mr. Ordish.

Miss Burne then delivered her Presidential Address, dealing with the essential unity of folk-lore amongst civilized and savage peoples. Folk-lore, Miss Burne said, includes belief, custom, and story. These, however, in reality form one connected whole; for instance, the willow tree decaying in the centre gives rise to the belief that the decay will be communicated by touch; to the custom of refraining from striking a child with a willow stick; and to a song, 'The Bitter Withy.' If either belief or custom be wanting, a survival is the result. Although, for instance, stories of saints are not now told, and belief in their powers is extinct, wakes are still the custom in some parts. There also might be mentioned as cases of survival when belief is absent fairy-tales (in Europe) and common superstitions about luck, salt, the moon, &c. As a case of survival in which custom is absent was mentioned the intelligence ascribed to bees. Such institutions as the couvade and the mother-in-law taboo, and the traces of totemism and of mother-right which are frequently found in savage communities, prove that survivals are not found in civilized lands only. Survivals from different sources show similar characteristics. Not only from ancient rites, &c., are survivals derived; the culture of past ages often remains to us in the form of folk-lore, or is the cause of a survival, as, for example, in the case of folk-medicine, which once was authorized practice; of ballads, which originally were a feature of social life, especially in Scandinavia; of church dedications and village feasts, &c., which have been imported and spread by the Church. Race may colour, but does not form folk-lore.

On the proposal of Mr. Longworth Dames and Mr. Edward Clodd, a vote of thanks was accorded to Miss Burne for her address and for the generous work she had done for the Society during the two years of her Presidency. Mr. W. Crooke was afterwards unanimously elected to succeed Miss Burne as President for the ensuing year.

MEETINGS NEXT WEEK.

- MON. Institute of British Architects, 8.—'The Artistic Development of London,' Messrs. Paul Waterhouse and E. H. Rickards.
— Institution of Mechanical Engineers, 8.—'Wireless Telegraphy,' Capt. H. Kiall Sankey. (Graduate's Lecture.)
— Society of Arts, 8.—'Brewing and Modern Science,' Lecture II. Prof. Adrian J. Brown. (Cantor Lecture.)
— Geographical, 8.30.—'Further Explorations in Bolivia,' Major P. H. Fawcett.
- TUES. Royal Institution, 3.—'Heredity,' Lecture V., Prof. F. W. Mott.
— Asiatic, 4.—'Abid of Asad, an Ancient Arabian Poet,' Sir C. J. Lyall.
— Royal Academy of Arts, 4.—'The Merovingian Abbey of St. Martin of Tours (472-999): the Model of the Great Churches of the Middle Ages,' the Dean of Gloucester.
— Institution of Civil Engineers, 8.—Discussion on 'The Detroit River Tunnel, between Detroit, Michigan, and Windsor, Canada.' Paper on 'Coast Erosion,' Mr. W. Tregarthin Douglass.
— Colonial Institute, 8.30.—'The Industrial Development of Canada,' Mr. E. T. Powell.
- WED. Meteorological, 7.30.—'Variation of the Depth of Water in a Well at Dettling, Maidstone, compared with the Rainfall, 1885-1909,' Messrs. K. Cooke and Spencer C. Russell; 'The Actinograph, an Instrument for recording Changes in Radiation,' Mr. A. W. Claydon; 'New Cloudiness Charts for the United States,' Mr. Kenneth M. Clark.
— Folk-lore, 8.—'Hampshire Folk-lore,' Miss D. H. Montray Read.
— Microscopical, 8.—'On some New Objectives and Eye Pieces by R. Winkel of Göttingen,' Mr. E. M. Nelson; 'On the Recent and Fossil Foraminifera of the Shore-sands of Selsey Bill, Sussex. Addendum,' Messrs. E. Heron-Allen and A. Earland.
— Society of Arts, 8.—'Modern Machine Bookbinding,' Mr. G. A. Stephen.
- THURS. Royal Institution, 3.—'Problems of Animals in Captivity,' Lecture II., Dr. P. Chalmers Mitchell.
— Royal, 4.30.—'The Constitution of the Alloys of Aluminium and Zinc,' Dr. W. Rosenhain and Mr. S. L. Archbutt; 'The Production and Properties of Soft Röntgen Radiation,' Mr. R. Whiddington; 'Experiments on Stream-line Motion in Curved Pipes,' Prof. J. Eustice.
— Historical, 5.—Annual Meeting; President's Address.
— Royal Numismatic, 6.30.—'The Coinage of Antony, Lepidus, and Octavius,' Mr. H. A. Grueber.
— Linnean, 8.
— Chemical, 8.30.—'Different Methods of applying the Grignard Reagents,' Messrs. H. Davies and F. S. Kipping; 'The Formation and Reactions of Imine Compounds Part XV.,' Messrs. F. B. Thole and J. F. Thorpe; 'The Interaction of Copper and Nitric Acid in presence of Metallic Nitrates,' Part II., Messrs. E. H. Rennis and W. T. Cooke.
- FRI. Society of Antiquaries, 8.30.
— Institution of Civil Engineers, 8.—'The Uses of Chemistry in Engineering,' Lecture I., Mr. J. Swinburne. (Students' Meeting.)
— Institution of Mechanical Engineers, 8.—Annual Meeting; Discussion on 'Modern Electrical Dock-Equipment, with Special Reference to Electrically-Operated Coal-Hoists.'
- SAT. Royal Institution, 9.—'The Stimulation of Digestive Activity,' Prof. H. E. Armstrong.
— Royal Institution, 3.—'Architecture: the Byzantine and Romanesque Period,' Lecture II., Dr. T. G. Jackson.

from the 'Souvenirs Entomologiques' of a leading authority on insects, and a charming writer.

WHAT appears to be an excellent syllabus of a course of about 25 Lectures on Entomology has been issued by the Imperial College of Science. As we have already stated, these lectures are to be given by Mr. H. Maxwell-Lefroy; entry to them is free, and the first will be on the afternoon of Thursday, March 2nd.

MR. HORNER's small work 'Weather Instruments and How to Use Them' (Witherby & Co.) is exceedingly handy for those who desire to make accurate meteorological observations and require a guide.

ACCORDING to Mr. Horner's meteorological record, the rainfall at Stow-in-the-Wold, Gloucestershire, amounted last year to 36.04 inches. Of this, 5.12 inches fell in December, a quantity which was slightly exceeded in June, the wettest month of the year. At Tunbridge Wells, however, the fall in November was 4.43 inches; that in February was almost the same, exceeding by half an inch that in December.

THE credit of the invention of the system of "finger-prints," which we mentioned as "devised" by Sir Francis Galton in our notice of his work on January 28th, belongs in the first instance to Dr. Henry Faulds.

SIR DAVID GILL, President of the Royal Astronomical Society, has been elected a Foreign Member of the Swedish Royal Academy of Sciences.

MR. P. J. HEAWOOD has been appointed to the Professorship of Mathematics in the University of Durham, in succession to Prof. Sampson, now Astronomer Royal for Scotland.

NOVA (or var. 137, 1910) LACERTÆ has during the last month been slowly but steadily diminishing in brightness. According to Prof. Nijland of Utrecht, the colour (yellow, with a tendency to orange), agrees nearly with those of the long-period variables R Arietis, T Cassiopeiæ, and S Ursæ Majoris, when at their greatest brightness.

MADAME CERASKI, examining photographic plates taken at the Moscow Observatory by M. Blazko, has detected variability in three stars: one in the constellation Lynx, and two in Cancer. The first is B.D. + 35° 1821, where it is estimated of 9½ magnitude, and appears to change from that to below the twelfth, with a long period. It will be reckoned as var. 2, 1911, Lyncis. The second, B.D. + 24° 1959, is also usually of 9½ magnitude, but sinks occasionally below the eleventh, and is probably of the Algol type. In a general list it will be reckoned as var. 3, 1911, Cancri. The third, var. 4, 1911, Cancri, is not in the Bonn 'Durchmusterung'; its brightness changes from the tenth magnitude to below the twelfth.

FAYE's periodical comet is still within the reach of powerful telescopes. It is now, according to Dr. Ebell's ephemeris (*Astr. Nach.*, No. 4469), in the constellation Taurus, but will enter the northern part of Orion next week, and pass near γ Orionis (a little to the north of that star) on the 10th prox. Its distance from us is now 1.41 in terms of the mean distance of the sun, or about 131,000,000 miles; its distance from the sun is 1.93 on the same scale, which will amount to 2.00 on the 26th inst.

Science Gossip.

MESSRS. BLACK are publishing 'The Life and Love of the Insect,' by M. Henri Fabre translated by Mr. A. T. de Mattos. Many readers should be glad to have this selection

FINE ARTS

ANCIENT AND MODERN EGYPT.

Ruines et Paysages d'Égypte. Par G. Maspero. (Paris, Guilmoto.)

Egypt: Ancient Sites and Modern Scenes. By Sir Gaston Maspero. Translated by Elizabeth Lee. (Fisher Unwin.)

IN these studies, which originally appeared in different French journals and reviews, the Director-General of the Service des Antiquités publishes his impressions, during his yearly tours of inspection of the last decade on the "River of Egypt." Working upwards from Cairo, he takes us with him the whole way to Assuan and the First Cataract, parting from us at the doubly ruined Philæ, the lovely island which modern science has sacrificed to its ideas of the useful, although Sir Gaston Maspero has contrived to save its temples for the benefit of learning. As the distinguished author adds to his pre-eminence in Egyptology a keen artistic perception and a power of charming and graceful expression rare even among his countrymen, the result is literary work of a very high order. The book both in conception and execution is as far above the ordinary guide-book as the works of Kinglake and Doughty are above the clumsy outpourings of the latter-day novelist when confronted for the first time with the glories of the East.

Sir Gaston Maspero's impressions are the more valuable because much of the old river-life of Egypt is, as he notes, passing away. European capital, and the European notion that nothing in the world is so sacred as the making of money, have given industrial Egypt an impulse such as she has not received since the days of the Ptolemies, and the immediate effect is not picturesque. Alexandria has always been, as the great conqueror whose name it perpetuates determined it should be, a European rather than an African city; but from the other three towns in Egypt frequented by Europeans civilization, with its blessings and curses, is every year spreading outward like oil on water, and it is doubtful how long even the desert will remain untouched by it. Cairo, in Sir Gaston's words, "like all rich cities, is beginning to build suburbs"; and he now finds within a few miles of the Nile bridge "verdure and groups of well-built houses where, my memory tells me, was the uninterrupted yellow of the sand and a cluster of wretched hovels." On the outskirts of the native village at Luxor

"an enterprising landlord has built an esplanade fronting the Nile, with a row of shops all resembling one another.... In one of the houses dwells a photographer, in another a chemist and druggist, and in a third wily and insinuating Indians offer to tourists bargains of woven stuff, and exotic knick-knacks at two hundred per cent profit. Two stuffed gazelles flank the door of a shop for antiquities; and drinking-bars with flaring signs try to attract customers with the promise of incomparable whisky."

To Assuan, the Post boat formerly brought up a few dozen tourists, and twice a month Cook's parties arrived in a big steamer, and rioted in excursions, until

"one fine morning the whistle announced their departure, and, amid the sound of paddle-wheels, civilized man set out again for the North as noisily as he had come. The town, delighted with its gains, but tired of the hubbub, gave a sigh of relief, and sank carelessly to sleep to the lullaby of the *sakkiehs*."

Now churches, hotels, and shops are rapidly taking the place of the old native booths, and the place is transformed into a "winter resort" for invalids and persons in search of amusement.

Nor is this sort of thing confined to Europeanized Egypt. Keneh, Sir Gaston Maspero reminds us, now has a municipality, paved streets kept in order by an ox-drawn iron roller, and factories which export their carpets and other wares to Europe, while its outskirts raise poultry and grow vegetables for the supply of the many Luxor hotels. So Assiut (the Lycopolis of the Greeks) can now be "done" by the tourist, as it actually was by Sir Gaston, in a numbered and licensed cab, and rejoices in a "Sudanese bar" and other signs of European influence, besides its shawls of spangled net. With the gradual advance, consequent on increased irrigation, of the belt of cultivated river-bank—of which ancient Egypt really consisted—into the desert, the face of the Nile Valley will before long be entirely transformed.

Yet there are spots unknown to the tourist where a traveller as keen-sighted and as thoroughly acquainted with the country as Sir Gaston Maspero can still find beauty. Such is the Convent of the Pulley at Gebel Abu Feda, where the Copts of the Western Bank still bury their dead, thinking it an honour to rest in ground sanctified by the bones of holy monks.

"The convoy arrives in many boats, lands noisily, and as soon as it is disembarked forms in procession, the clergy in front with the cymbals and the big drum which mark the time for the prayers of the service. Then come the hand-borne bier with its violet pall, the family and friends in their best clothes, and the women methodically dishevelled and ready to howl at the first signal."

These are the words in which the author describes such a burial. The convent itself, lately restored by a certain Emir Tadrus, is almost deserted, and Sir Gaston had to effect a burglarious entry (never very difficult, he says, with Eastern locks) into the church, the key of which is kept six miles away on the other side of the river.

"Yet the view from it," he tells us with reason, "has an irresistible charm for a European. At our feet lay the tombs of a funerary whiteness, the Wady furrowed by the January rains, then the violated pit tombs of the ancients, the mountain scarred and ruined by quarries, beyond which we catch a glimpse of the shining Nile, the to-and-fro of barges under sail, a high bank with its black and green stripes, a background of pink hills, and over all that Egyptian sunlight which harmonizes the most discordant tones, and kisses without wounding the eyes."

Or shall we take the view from the sacked Convent of St. Simeon at the other end of Egypt? Here, after being shocked by the ugliness and flatness of the eleventh-century frescoes of Christ and His angels in the church,

"we look down from the terminal platform upon a panorama of unexpected fullness and beauty. First of all, we see the monastery itself, squat upon its rocky seat, all its buildings and its gutted basilica open to the winds, its courts invaded by the sand, and its walls disrowned. On three sides waves the desert, empty and sad, under the flames of the setting sun. Towards the east, the Nile glitters between its rocks; Elephantine shows its long masses of foliage; Assuan displays its flat profile against a background of granite and sandstone; and beyond, in the far distance, a whole country crenellated with cloud-capped peaks is beginning to colour with the pink and violet tints of evening."

We pass over the chapters on Thebes, including therein Karnak and the Tombs of the Kings, as being more suited to the Egyptologist than the general reader, although even to the latter they will convey

much valuable information upon the often ignored work of the Service des Antiquités in the restoration and preservation of temples and their contents; and we come to the beautiful word-pictures in which Sir Gaston describes the last days of the island of Philæ as the surviving fortress of the religion of Isis. Here, he tells us with the sureness born of perfect knowledge of his subject, the Christian Emperors of Rome were compelled by their fear of the Blemmyes, who had taken possession of Nubia, to hold back the furious monks of Assuan from their attack on the last sanctuary of the goddess who had been adored in Egypt ever since the first of her thirty dynasties. In 451 A.D. Marcianus was compelled to enter into a treaty with the pagans by which they retained the right to worship unmolested at her shrine for another century, and it was not till that time had nearly expired, and the Blemmyes had been in turn conquered by the Nobatae, that the treaty was broken and the sanctuary desecrated by the Bishop of Assuan. During this century-long agony, the few hours of joy which remained to the priests of Isis were those that they yearly knew when

"an embassy sent by the king of the Blemmyes disembarked in pomp with the official offerings. They then put on their ceremonial habits, brought out the statue from her tabernacle, threw open both leaves of the folding doors, and went forth to receive their guests at the chapel of Nectanebo. They formed in procession as of yore, and their faith was so expressive that one might have thought oneself carried back several centuries, when Isis was in truth the mistress of the world."

But when the embassy had to return above the Cataract, the author pictures the unfortunate priests gathering on the pylon to watch the Nubian boats disappearing one by one round the southern bend of the Nile, and to wait with melancholy forebodings for their next coming.

"Every year," he tells us, "since my return to Egypt, I make a pilgrimage to the platform which witnessed their grief; and there, standing before the panorama which has changed so little since their time, I see, like them, the Nubian flotilla vanish to the South, and I feel within me the echo of their anguish."

It only remains to say that the translator has done her work with a sufficient appreciation of the author's meaning to save her generally from failing to convey it to the reader. To turn Sir Gaston Maspero's beautiful French into equally good English was apparently beyond her powers, and even in the passages quoted we have ventured to alter a few words. The original will therefore be preferred by any one who can enjoy it. On other grounds it is a pity that the task was not given to an Egyptologist, or at least that the translator did not have the help of some one acquainted with the subject of the book. The "Sa'id" or Sahid is the name given by the Arabs to Upper Egypt, while the Saite or Twenty-Sixth Dynasty is so called from its capital being Sais in the Delta. The original properly uses *le Saïd* for the first, and *la saïte* (époque or dynastie) for the other. Miss Lee thinks they mean the same thing and translates both by "the Said," which often makes nonsense. Nor does this mistake stand alone.

OUR LIBRARY TABLE.

Building Construction. Vol. I. By Beresford Pite and others. (Longmans & Co.)—To "The Architect's Library" is now added the first volume of 'Building Construction.' The editor, Prof. F. M. Simpson, in a short Preface points out how existing books on

building construction fail to place before students the architectural treatment of the subject, he says: "Building Construction in itself is merely a skeleton; its effective covering is Architecture." That is a definition which many students of architecture will reject; a more satisfactory one of the relation of construction to architecture seems to us to be that architecture is the beautiful expression of sound building construction. In other words, Prof. Simpson's definition is only applicable in the sense that there is art that conceals art.

The volume is divided into four sections: Brickwork, Masonry, Carpentry, and Metal Construction, written respectively by Prof. Beresford Pite and Messrs. F. T. Baggallay, H. D. Searles-Wood, and E. Sprague. Both the general reader and the architectural student will find the first two sections fascinating reading. Prof. Pite and Mr. Baggallay approach their subject in the spirit to make architects of us all. They realize, as every student in turn must realize, that no work of art has been or can be achieved without systematic and laborious research into fundamentals. The literary level of their exposition of the details of the art of building maintains a high standard; the seriousness of their purpose lifts their subject into the realm of art. If we examine the architecture of our forefathers, what is it that attracts the admiration of all cultured people? It is not merely simplicity of design or the beauty of age; William Morris has well said, "if their buildings are beautiful now, what must they have been when they were new?" Until Morris gave life and purpose to the lesser arts by his own enthusiasm and by the thoroughness of his investigation into the essentials of craftsmanship, neither the architect nor the general public realized that the method and materials employed in the building of the walls, roofs, and chimneys of the old work were more than half of the art that held us. Prof. Pite deals with the making of bricks and the method of using them rightly in foundations, in walls and chimneys; Mr. Baggallay does the same for Masonry. Both writers show an appreciation of the limits and possibilities of their subject. Those who master the knowledge set before them will realize the magnitude of their task, even though their ambition rises no higher than building a brick wall that shall be as beautiful and as permanent as that of the unconscious artists of two centuries ago.

Mr. Searles-Wood probably knows his subject, that of Carpentry, equally well. His writing is a model of concise statement of facts; everything that he says the student should know. His section, however, we find disappointing—not, indeed, in what he says, but what he leaves unsaid. The romance of his subject is untouched; its possibilities are not hinted. The sections of this volume dealing with brickwork and masonry will remain the monographs on those subjects for many days; the subject of wood construction remains yet to be satisfactorily treated. Take, for instance, carpenters' roofs or floors: there have been notable instances in recent years which, fully described and illustrated, would inspire fresh effort and attainment in a much-neglected branch of the builder's art.

Mr. Sprague's chapters on Metal Construction are lucid and straightforward; here the subject is too technical, and the field too close to that of the engineer, to awake the interest of the artist. A first-hand knowledge of the principles involved is, however, essential to the modern architect, and he cannot do better than study Mr. Sprague's

clear exposition. Each of the four sections is profusely illustrated with first-rate diagrams. We await with interest the advent of Vol. II.

The Church of the Nativity at Bethlehem. By W. Harvey, W. R. Lethaby, and others. Edited by R. Weir Schultz for the Byzantine Research Fund. (B. T. Batsford.)—The Byzantine Research Fund are to be congratulated on this long-needed and interesting contribution to ecclesiology. They are fortunate in their employment of Mr. Harvey, whose notes and drawings made on the spot show the minutest accuracy. The Church of Our Lady, or the Nativity, at Bethlehem, is not, properly, Byzantine at all, but early Christian, showing the type of Basilica common both to East and West, before the later Eastern style of architecture was evolved. Though now subdivided, and disfigured by adjoining buildings, it is still substantially the same church which Constantine the Great founded—the claims of Justinian to be its founder are here balanced and dismissed—and it is thus the oldest Christian edifice in Palestine. The Church of the Sepulchre has been destroyed and rebuilt three times at least since the reign of Constantine; the church at Bethlehem has escaped destruction, mainly, no doubt, on account of Muslim reverence for the Blessed Virgin.

It seems not to have occurred to Mr. Harvey or to Mr. Lethaby that the bareness of the outside walls was not designed to be austere, but was so much ground for fresco or mosaic decoration, since demolished. That this was the case is suggested by the legend quoted concerning a picture of the adoration of the Magi, and confirmed by the model in the British Museum, of which a photograph is reproduced.

Besides the architectural survey, its main object, the book includes descriptions of every scrap of ancient decoration still extant, and also a list of references to the church by pilgrim writers. The numerous illustrations are essential to a proper understanding of the text.

Medallic Illustrations of the History of Great Britain and Ireland. Plates CXXI.—CXXX. (British Museum.)—The ten plates and accompanying letterpress of the latest section of this important medallic work cover five years of the reign of Queen Anne, extending from the commemoration of various British victories in 1704 to the battle of Malplaquet, which was fought on August 31st, 1709. The medals throughout this period are chiefly concerned with chronicling the perpetual battles and sieges of the time, together with the general successes of the allies both in Spain and Brabant. There is an interesting series connected with the union of England and Scotland, which was effected on May 1st, 1707. The national collection includes various medals of James III., "the Elder Pretender," struck for distribution among Jacobite sympathizers, and also two examples of his touch-pieces for presentation to those suffering from scrofulous complaints. The attempted invasion of Scotland by the French in March, 1708, brought forth a variety of satirical medals.

Queen Anne on one occasion directed medals to be struck in gold and silver which recorded less serious shooting than that of battles. At Dresden, in September, 1707, the annual festival of shooting at the popinjay was celebrated with unusual splendour. John Robinson, the English ambassador, was fortunate enough to shoot down the

last piece of the mark, and was proclaimed King of the Popinjay and winner of the silver cup.

Busts of the Queen, of Marlborough, and of various royal allies are frequently shown. Amid all these warriors and rulers, it is pleasant to find that the medalists of the day did not entirely ignore the world of letters and science: John Locke, the philosopher, was commemorated in copper; and John Ray, the naturalist, who has been termed "the Darwin of the seventeenth century," in copper and silver.

THE MODERN SOCIETY OF PORTRAIT PAINTERS.

SURMISE that the new society showing at the Grafton Gallery might be taken as an amalgamation of the two existing Portrait Societies is promptly belied by the reappearance of this, the junior, in apparently as great activity as ever. We find more than one artist exhibiting impartially at the Institute and Grafton Galleries. To a portrait painter in full practice there is evidently no difficulty in finding material for any number of shows, and the formation of groups is dictated less by community of ideals or principles than by opportunism. There is no need, therefore, to inquire whether these various societies for the exhibition of portraits stand respectively for this or that particular artistic movement: the only difference discernible between the two at present open is that perhaps, on the whole, that at the Grafton contains more commissioned portraits, and the Institute Galleries hold a larger proportion of what are known in the profession as "decoy-ducks."

That there should be a difference between the kind of picture thus indicated and the portrait genuinely supplying the demand the other stimulates results from the complex nature of the art-patron's mind. He wishes to be painted in the most commonplace and photographic manner by some painter recognized as individual and interesting. He who would be successful in portraiture, then, must be for ever destroying with one hand the reputation he makes with the other. He must be brilliant to get a commission, and dull to carry it out; and the strain of this double life, this passing from the æsthetic Jekyll to the commercial Hyde, is wearing to the nerves.

The capital work in the present exhibition, Mr. Glyn Philpot's large group *La Zarzarrosa* (54), is evidently not a portrait group in the commercial sense of the term. The three personages upon the canvas seem good likenesses on account of the painter's familiarity with the sitters, but obviously he was under no irksome necessity of satisfying them in this respect. From the point of view of virtuosity the picture seems to have been painted under ideal conditions, and in this way it forms the high-water mark of its author's achievement. The setting of the heads in their successive planes in the picture is perfect; the marshalling of tones throughout the picture, the measuring [of the values of blacks of different textures, challenge comparison with the portrait groups by Franz Hals, by no means to the Englishman's disadvantage. On the other hand, even the most slapdash portrait by Hals has a homely veracity which gives it a look of responsibility beside this tremendous display of studio effectiveness. It is not that Mr. Philpot has done his heads in other than able fashion. He has made them extraordinarily convincing and elaborate without ever breaking his stride. It is, in fact, the

most masterful piece of sonorous bravura painting shown in England for many years, recalling the earlier, and in our opinion better, works of Mr. Sargent, and equalling these in their own qualities. Obviously, it is painting for display, and there will always be critics to whom such work is inevitably displeasing; but it is equally obvious that, if such a picture, with all its faults, came to us as a legacy from the past, as the work of an old master, we should hear very little of its faults, and treat it with the respect due to the virility and productive power of a sturdy painter. It is evident that, while pictorially the tones in the picture are magnificently combined as notes in a scale, certain planes in drapery and the like are not very finely observed. Mr. Philpot's draughtsmanship, while much improved, still slips in an occasional hand or foot; there are one or two passages which look a little fatigued, but even here the paint remains handsome and the touch assured. Assurance is still more notable in Mr. Lambert's pictures (his three drawings, 97-99, if of a somewhat worldly brilliance, are more completely successful), but there have been signs latterly that this clever painter is relying too exclusively on his native gifts as a painter of still life. The figure of *The Danseuse* (25) and certain passages of his perversely jumbled group (24) show this natural gift in a high degree, but they show very little else. Natural grouping according to probabilities is, after all, harder to do and more satisfactory than this arbitrary patchwork. Mr. William B. Ranken shows a great improvement on his previous work in No. 68, *Mrs. Kelsey, in red*; and there is meritorious painting by Mr. Giuseppe Giusti (28) and Mr. G. T. Kelly (30, 31, 33).

ORIGINAL ETCHINGS AT MESSRS. CONNELL'S GALLERY.

ALTHOUGH something like a fundamental difference of opinion as to the typically desirable qualities in an etching results invariably in the inclusion in these shows of many prints which the present writer finds highly unsatisfactory, yet there is always a residuum of excellent things. Among these we recognize with pleasure work of constantly increasing beauty by certain artists as yet but little known, such as Mr. William Walker, Mr. E. M. Synge, and Mr. H. Frood.

Villeneuve les Avignon (48), by the last-named, is a fine design somewhat in the taste of certain of Mr. D. Y. Cameron's landscapes, and approaching perfection in its way. Two richly wrought plates by Mr. Synge, *The Lock, Wisley* (19), and *On the Canche* (20), are examples of the legitimate use of tone for purposes of elaborate space-composition very different from the dull record of irrelevant local colour displayed by some other works on the walls. Mr. Cameron himself is not shown at his best, though in No. 17, *Laroche*, the tone left upon the plate does at least serve to emphasize, and not to muddle, the disposition of his masses. No. 30, *Rue de Harlay*, is a good example of the compact clarity of statement of that admirable little master Eugène BÉJOT.

ETCHINGS BY HOLLAR.

BÉJOT's most delicate work would look coarse, his most intimate portraiture would look trivial, beside the perfection of Hollar, the monumental exhibition of whose etch-

ings at Mr. Gutekunst's gallery should be visited by every one as a corrective to the modern spirit of pretentiousness. It would be cruel to go to see Mr. Philpot's wonderful ten-foot canvas after seeing these little prints, wherein, upon a few inches of space, are lavished the skill of the most perfect craftsman, the modest devotion of a lover, and the imagination of a poet. No one surely ever had greater mastery of the technique of etching than Hollar. His etchings after portraits by other artists have a fine probity and sufficiency which command respect and admiration; but when he draws the little original landscapes (ostensibly the most matter-of-fact records) by which above all he must be remembered, he becomes an irresistible wizard. In the whole range of art there are probably no more convincing instances of how little the dignity of a task is affected by any question of its apparent importance, its difficulty, or the subtlety of mental processes required for its accomplishment. Hollar's devotion to such beauty as he was cognizant of raises his work to sublimity. We are driven to pious platitudes to express our homage to his moral superiority.

The exhibition is an unusual opportunity for studying the work of the man who in Europe between 1607 and 1677 presented the anachronism of a purity of intention worthy of the springtime of art.

THE BRITISH SCHOOL AT ATHENS.

At the last meeting on January 27th Mr. W. M. Halliday discussed the origins of the myth concerning the burning of Demophoon by Demeter ('Hom. Hymn in Cer.', 254), which has been interpreted as a "survival" of human sacrifice. Two versions of the myth have come down to us. In the earlier the child, on the interruption by his parent of the "burning," perishes in the flames; in the second he loses only his promised immortality. The legend of the children of Thetis is an exact parallel, except that the fire of the Demeter-myth is replaced by water. Here again we find the two variant versions.

These legends are ætiological myths based probably on prophylactic ceremonies like the *Amphidromia*, designed to avert evil from young children. European folk-lore and existing savage practice afford many examples of such ceremonies, in which contact with water or fire plays an important part. Later thought gave these ceremonies a metaphysical interpretation, of which the Homeric Hymn offers us an example, the contact with fire being here regarded as a means of purification from the imperfections of mortality.

The Director, Mr. R. M. Dawkins, traced the artistic development in the long series of ivory and bone carvings (ranging from the eighth to the sixth century B.C.) found on the site of the sanctuary of Artemis Orthia at Sparta. In the earliest of the ivories the drawing is stiff and there is little or no modelling. Those of the next period (about 700 B.C.) are marked by deeper relief and elaborate incised surface-decoration, which compensates for the lack of modelling. The culmination (seventh cent.) is marked by freer drawing and more developed modelling. After about 600 ivory is exchanged for bone, and there is a tendency to cut away the background, leaving the figures free, though the relief technique survives in many cases. This development holds good for all the classes of carvings

(fibula-plaques, combs, seals, &c.), showing that, by whatever foreign influences the art may have been affected, the objects are with some few exceptions indigenous.

SALES.

MESSRS. CHRISTIE sold last Saturday the following works, the property of the late Mr. Theodore Lloyd. Drawing: Turner, *Wolf's Hope*, *Bride of Lammermoor*, 525*l.* Pictures: *Vicat Cole*, *The Decline of Day*, 220*l.* Turner, *Off Margate*, a hazy morning, 997*l.* They also sold Prout's drawing, *The Market-Place, Munich*, for 102*l.*

On Tuesday in this week Messrs. Christie sold a valuable collection of etchings. By D. Y. Cameron: *St. Laumer, Blois* (W. 152), early state, 52*l.* The Belgian Set, a series of ten etchings, 315*l.* The Five Sisters, York Minster, 126*l.* By J. M. Whistler, all printed by the artist: *Fanny Leyland* (W. 94), 99*l.* The *Traghetto* (W. 156), 120*l.* Upright Venice, (W. 172), early impression, 65*l.* The Riva, No. 2 (W. 175), early impression, 63*l.* Garden (W. 180), 152*l.* Dance House, Nocturne (W. 265), 120*l.* Rue des Bons Enfants, 52*l.*

On Wednesday, the 1st inst., Messrs. Sotheby sold engravings, drawings, &c., the property of Mr. Arthur M. Champenowne, including *The Frame-Maker*, by J. Dixon after Rembrandt, 66*l.*; and the following etchings by Rembrandt: *Christ Preaching*, 260*l.*; *Landscape with a peasant carrying milk-pails*, second state, 98*l.*; *landscape with a cottage and a Dutch hay-barn*, 250*l.*; *Clement de Jonge*, second state, 300*l.*; third state, 55*l.*; fourth state, 70*l.*

On Monday, Tuesday, and Wednesday last Messrs. Sotheby held a sale of coins and medals, which included the following important lots: *Mudie's series of medals commemorative of British victories*, presentation set in silver, 47*l.* 10*s.* *Elizabeth, Rial*, 20*l.* 10*s.* *Syracusan Tetradrachm* of *Hicetas*, 40*l.* *Rhodes, Tetradrachm*, fourth century B.C., 21*l.* *Ænus, Tetradrachm* of Rhodian standard, 70*l.* *Elis, Stater* of Æginetic standard, 19*l.* 10*s.* *Otho, Aureus*, 17*l.* *Elagabalus, Aureus*, 17*l.* *Tacitus, Aureus*, 15*l.* *Oifa, Penny*, 20*l.* *Baronial Penny*, attributed to Roger, Earl of Warwick, 30*l.* *Elizabeth, Portcullis Crown*, Half-Crown. Shilling, and Sixpence 30*l.* 10*s.* The total of the sale was 1,594*l.* 17*s.* 6*d.*

Fine Art Gossip.

MR. D. S. MACCOLL is leaving the Tate Gallery to take care of the Wallace Collection, and his place is being filled by Mr. Charles Aitken, who has done much for art in White-chapel. It is pleasant to think that Mr. MacColl will now have more time for work of his own, while he has left his successor excellent traditions.

PROF. ALPHONSE LEGROS, SIR SIDNEY COLVIN, AND MR. E. F. STRANGE have been elected Hon. Fellows of the Society of Painter-Etchers and Engravers.

PAINTINGS AND DRAWINGS by Mr. C. J. Holmes will be open to private view next Wednesday at the Carfax Gallery.

LAST THURSDAY was appointed for the press view of the Jubilee Exhibition of the Glasgow Institute of Fine Arts.

THE Académie des Beaux-Arts on Saturday last elected Mr. A. S. Cope, R.A., as a Foreign Member, in succession to M. Kroyer of Copenhagen.

MR. THOMAS GEORGE LINNELL, who died at Brighton on the 1st inst., at the age of 75, was the youngest son of John Linnell, sen. Like his two brothers, James Thomas and William, he followed in his father's footsteps and became an artist, selecting, as did the other members of his family, scenes of country life. He was a fairly regular

exhibitor at the Royal Academy from 1865 to 1884, and at the British Institution and elsewhere from 1864 to 1867.

IN the *Repertorium für Kunstwissenschaft* (Heft 6, 1910) Dr. Gronau publishes an interesting note about the painter Polidoro Lanzani, commonly called Polidoro Veneziano. The late Dr. Ludwig discovered various documents in Venice relating to this artist, including his will, dated July 20th, 1565, in which he is called "Polidoro da Lanzani," son of the late "Ser Pauli de Lanciano"; and from other records he discovered that his surname was "De Renzi." As no place called Lanzano is known in Venetian territory, Dr. Ludwig surmised that he was a Lombard and came from "Lanzano near Lodi." In point of fact, no such place exists, and Dr. Gronau now proves that Polidoro's native place was Lanciano in the Abruzzi, between Vasto and Chieti. The proofs cited by Dr. Gronau have long been published in 'Monumenti storici ed artistici degli Abruzzi,' by Vincenzo Bindi (Naples, 1889), though no attention had hitherto been paid to them.

DR. GINO FOGOLARI has rediscovered a long-lost picture by Tiepolo, the existence of which was unknown to the painter's most recent biographers. It represents Apollo and Daphne; the composition is familiar through Gregori's engraving after a drawing by Raineri Allegranti. Dr. Fogolari found the picture in the collection of Baron Schlichting in Paris, and reproduces it in the January number of the *Emporium*. Curiously enough, a pen-and-bistre drawing for the composition, signed G. Tiepolo, is in the collection of Dr. E. Sack at Hamburg, and in his exhaustive history of the painter's life and works he reproduces the drawing, speaking of it as a sketch for the lost picture engraved by Gregori.

THE death is announced, on Wednesday, of Mr. Walter Laidlaw, Keeper of Jedburgh Abbey, in his 73rd year. He was a man of marked individuality, with a taste for poetry and archæology. He made some discoveries at the Roman Station at Cappuck, near Jedburgh, about which he wrote; he also wrote on the sculptured stones of the Jedburgh district.

EXHIBITIONS.

- SAT (Feb. 11).—Mr. J. Aumonier's Landscapes in Oil and Water Colours, Private View, Leicester Galleries.
 — Mr. G. Belcher's Drawings of London Types and Characters, Private View, Leicester Galleries.
 Mr. Horace Mann Liven's Oil Paintings and Water Colours, Private View, Goupil Gallery.
 — Mr. Hugh L. Norris's Water Colours, 'In and Around a Painter's Garden,' Private View, Leicester Galleries.
 — Paintings by the late Edouard Rischgitz, and Animal Studies by Mr. W. A. Walls, Bailie Gallery.
 — Persian and Indo-Persian Miniatures, Drawings, and Illuminated Manuscripts, Persian Art Galleries.
 — Mr. W. B. E. Ranken's Water Colours, Private View, Goupil Gallery.
 — Society of Painter Etcher's and Engravers, Exhibition, Private View, 5a, Pall Mall East.
 WED. Mr. J. Reed Dickinson's Water Colours and Sketches of Chinese Life and Californian Landscapes, Private View, Modern Gallery.
 — Mr. C. J. Holmes's Paintings and Drawings, Private View, Carfax Gallery.

MUSIC

THE WEEK.

The Rosé Quartet.

THE ROSÉ QUARTET (Prof. Arnold Rosé and Herren Anton Ruzitska, Paul Fischer, and Friedrich Buxbaum) from Vienna were the sole performers at the Broadwood Concert given last Thursday week in the Æolian Hall. At the head of their

programme stood a very early Haydn Quartet, which was followed by Beethoven's very late one, in E flat (Op. 127). The former contains fresh, objective music. In the first and last movements there are one or two serious passages, yet these are written with the same ease as the lighter portions of the work. The music of the Beethoven Quartet, on the other hand, is introspective: the composer displays gifts of the highest order, but they are merely the means by which he lays bare his own soul with all its fluctuating moods. Of both quartets the performers gave admirable renderings, but in the Beethoven the letter was more difficult, the spirit far deeper; the interpretation was therefore all the more impressive. Their programme ended with Brahms's fine Quartet in A minor.

Two extra concerts were given in the King's Room, Broadwood's. We heard only the second concert last Tuesday evening. The renderings of Schubert's Quartet in D minor, Brahms's Quintet in B minor (with Mr. Draper as clarinettist), and Beethoven's B flat Quartet (Op. 130) gave keen enjoyment. Applause between the movements of a quartet is always disturbing. It was particularly distracting in the Beethoven Quartet, and this the performers must have felt.

QUEEN'S HALL.—*Symphony Concert.*

SIR HENRY WOOD has in many ways shown his love for Mozart's music, and at the Symphony Concert last Saturday afternoon he conducted a Symphony in A by that composer which was written when he was about seventeen years of age. It is a bright, attractive piece, and some of the workmanship gives just a foretaste of the masterly skill in counterpoint which Mozart afterwards displayed. The 'Jupiter' Symphony, the G minor, and the E flat, written in 1788, and one or two others, are familiar; but out of the many which Mozart wrote, there are others worthy of revival.

Herr Emil Sauer was the pianist, and, although his rendering of Beethoven's Pianoforte Concerto in G was in many ways excellent, we could not feel that it was ideal; for that the appeal must be strong enough to make one forget the pianist. The two cadenzas, we presume, were Herr Sauer's. Both were ably performed, but the second, having regard to Beethoven's note in the score, was certainly too long. As an encore Herr Sauer played, and finely, Chopin's Nocturne in C sharp minor.

QUEEN'S HALL.—*Herr Kreisler's Orchestral Concert.*

SIR HENRY WOOD conducted the orchestral concert given by Herr Kreisler last Tuesday evening. The Elgar Violin Concerto has now been performed so frequently that it will suffice to say that the interpreter again rendered full justice to the work. In the earlier part of the con-

cert Herr Kreisler played an early Violin Concerto in D major by Mozart, and his reading of the simple music was full of charm and delicacy. The programme opened with the Introduction to Act II. of Humperdinck's new opera 'Königskinder': it is short, bright, and effectively scored. Though interesting to hear, as a detached piece it is too slight.

Musical Gossip.

WE regret to learn of Dr. Frederick Cowen's illness, which prevented him from conducting his 'Butterfly's Ball' at the Stock Exchange concert on the 2nd inst., and which has caused him to cancel other engagements. It is to be hoped that he will be restored to health in time for the first performance in London of 'The Veil,' which, as already announced, will take place on the 21st of this month.

MR. PLUNKET GREENE gave another lecture on 'Interpretation in Song' at the Æolian Hall yesterday week. He spoke of musical taste being held in suspense by something, that something being the system of royalties. Most composers have hard work to earn a living, so that some are tempted to write songs, not of elevated character, but calculated to appeal to the taste of the general public; while well-known artists receive royalties for singing them, thereby misleading many, who think that what a good singer sings must itself be good. It is easy to see the harm done by such a system.

MADAME CLARA BUTT AND MR. KENNERLEY RUMFORD gave a successful ballad concert at the Albert Hall on Wednesday evening, the singers, in addition to the concert-givers, being Miss Ada Forrest and Mr. Ben Davies. Madame Butt gave a Brahms Lied as an encore, after her effective delivery of "Parto, ma tu, ben mio," from Mozart's 'La Clemenza di Tito.' There were two novelties in the programme: Dr. F. H. Cowen's 'Thanksgiving,' sung by Madame Butt, and the duet 'Crossing the Bar,' by Hermann Löhr. Both may appeal to the public, though neither is likely to increase its composer's reputation.

A CONCERT will be given at Queen's Hall on April 1st, the programme of which will be devoted to the music of Dr. Ethel Smyth. The Palace Choir (by permission of the Crystal Palace directors) and the London Symphony Orchestra will be under the direction of Mr. Thomas Beecham.

MR. THOMAS DUNHILL announces a series of concerts of British works, old and new, to begin at Steinway Hall on the 24th inst.

THE publishers of Wagner's autobiography, mentioned by us last week, are not Schuster & Loeffler, but the firm of F. Bruckmann, of Munich.

PERFORMANCES NEXT WEEK.

- SUN. Concert, 3.30, Royal Albert Hall.
 — Sunday Concert Society, 3.30, Queen's Hall.
 — Sunday League Concert, 7, Queen's Hall.
 — London Symphony Orchestra, 8, Palladium.
 MON. London Symphony Orchestra, 8, Queen's Hall.
 TUES. New Symphony Orchestra, 8.15, Queen's Hall.
 — Sevcik Quartet, 8.15, Bechstein Hall.
 WED. Mr. and Miss Dillon's Vocal Recital, 3, Bechstein Hall.
 — London Choral Society, 8, Queen's Hall.
 — Classical Concert Society, 8.15, Bechstein Hall.
 THURS. Dr. Enrico Tiberio's Concert, 3, Bechstein Hall.
 — Mr. Tait-Knight's Vocal Recital, 8.15, Bechstein Hall.
 — Miss Dorothy Holden's Pianoforte Recital, 8.30, Æolian Hall.
 FRI. Mr. Joseph Holbrooke's Concert, 3, Steinway Hall.
 — Bach Choir ('Matthew's Passion'), 7.30, Westminster Abbey.
 SAT. Queen's Hall Orchestra, 3, Queen's Hall.

DRAMA

THE WEEK.

ST. JAMES'S.—*The Witness for the Defence*.
By A. E. W. Mason.

THIS piece marks a distinct advance in Mr. Mason's mastery of stage technique. Founded though it is on one of his shorter tales, it is no mere "adaptation," but a genuine play, with its story reshaped and worked out in terms of the theatre—a play, too, with a singularly interesting plot.

When the curtain shuts out the heroine from our view in the first act, she is seen priming and aiming her rifle, obviously to safeguard herself from the violence of a husband who has given way to drink, is the victim of hallucinations, and takes a pleasure in hurting his wife mentally and physically. That is the situation which their guest, a former sweetheart of hers, stumbles upon when he comes back to recover his pipe; and it is one about which he kept silence when she was tried for murdering her husband, and he was called as "witness for the defence" and by his evidence secured her acquittal. This first act is really a prologue, and prologues are illegitimate things in the playhouse. But for once we can make allowances. Mr. Mason illustrates so happily the relations of husband and wife, he hits off so vigorously the character of each, he pictures so vividly the relations of this pair, and he stops the action so exactly at the right point, leaving us to speculate and wonder between acts what has happened, that it would be ungracious to wish this prologue away, especially as it demonstrates plainly the author's progress in stagecraft.

Mr. Mason has also learnt how to write a scene that is tense with dramatic, as distinct from rhetorical, emotion. The crucial passage is that in which Stella Ballantyne and her champion are shown meeting and having an explanation two years after the events of the opening act. In the interval the widow has engaged herself to the son of an amiable crank who is always opposed to the national sentiment of the moment. But quixotic though he is, the old man hesitates about putting his principles into practice and accepting a daughter-in-law who has been involved in a scandal. So the "witness for the defence" is invited to his country house and subjected to a cross-examination. It is after this repetition of his evidence that Henry Thresk has his midnight talk with Stella and hears her pitiful account of the martyrdom of her married life.

There are flaws in the playwright's handling of his story: he tells over again what he has told once already; he is over-generous with his dialogue, and leaves several loose ends. But his big scene is

charged with such pathos and passion that it would ensure the success of a much weaker play than this—the more so as Miss Ethel Irving acts here, as indeed throughout the piece, with compelling naturalness and charm. Like Ellen Terry's, her art alternates between smiles and tears, and her tears are as unforced as her laughter is infectious. Here the mood of sadness predominates, and it is not an exaggeration to call hers a beautiful performance. Mr. Alexander does wonders with the thankless part of Thresk, and Mr. Alfred Bishop, Mr. Leslie Faber, and Mr. Valentine all play in a pleasant vein of comedy; but it is Miss Irving that Mr. Mason will have most to thank for the popularity of his St. James's drama.

CORONET.—*Miss Horniman's Repertory Company in 'The Critic.'*

'THE CRITIC' and its prototype 'The Rehearsal,' and Beaumont and Fletcher's 'Knight of the Burning Pestle,' have a place apart among our dramatic classics, and this, though burlesque, both in its legitimate and in its wrong sense, has had many examples on our modern stage, and indeed many of Mr. Bernard Shaw's earlier works should really be classed as mock-plays. 'The Critic,' however, takes first rank in this style, and it is curious to note its effect on an audience of to-day. It has been possible to enjoy such an experience this week at the Coronet, where Sheridan's travesty has been presented by Miss Horniman's Manchester Repertory Company. Theirs is not the only revival of 'The Critic' in recent years, for Mr. Philip Carr and his Mermaid Society produced the piece some few years ago. But theirs was a special audience; Miss Horniman appeals to the ordinary playgoer in a week-night bill.

The audience laughed heartily at many points, and chuckled over well-known lines such as those referring to the Spanish fleet and the wonderful unanimity of the stage crowd "when they do agree." But they hardly seemed to appreciate the fun of the mock-heroic verse. With the extinction of the type of play burlesqued and the bombast which it contained and Sheridan here parodied seem to have departed not a little of the potency of the joke and the modern playgoer's capacity for appreciating this side of the author's humour.

Every farcical expedient of the play which had its parallel in Mr. Weedon Grossmith's 'Pantomime Rehearsal'—the author's pride in his work and indignation over the "cuts"; the pettishness of the actors and their complaints of having their scene spoilt or their threats to throw up their parts; stage misadventures such as Don Whiskerandos's dropping of his hat, the sudden coughing of a "super," an actor's need of his handkerchief, and the awkward clash of the sentries' pikes; mistakes in cues or giving the text, or in positions or exits—everything of this sort was caught up

at once and hailed as ridiculous and amusing. But merely literary travesty had to concern itself with some very famous theme, such as Ophelia's "mad" scene, before it could win similar tokens of approbation.

Dangle, Sneer, Puff, and the immortal Fretful Plagiary, Lord Burleigh with the nod, and Raleigh and Hatton all found vivacious interpreters. To give even the names of these players would occupy some space, but mention must be made of Miss Edyth Goodall, whose Tilburina, especially in the mock scene of madness, was extremely ludicrous.

The Madras House: a Comedy in Four Acts. By Granville Barker. (Sidgwick & Jackson.)—The publication of 'The Madras House' will remind the playgoer of an experience that was at once pleasant and exasperating; but, reading the play at his ease, he will renew the pleasure he gained from its first-night performance, and forget all the annoyances. A drama issued in book-form, and furnished with that brisk commentary on the text which Mr. Bernard Shaw set the fashion of supplying, takes on something of the character of a novel, and has the advantage of being very much shorter. In the study, disregard of the laws of stage-technique does not affect us so disturbingly as in the theatre; a careless "joining of the flats," whether deliberate or unconscious, matters less when we have time to stop the action at will and turn back over the pages to relate this point with that, and to perform for ourselves the work of connexion.

There is no use denying that Mr. Granville Barker has gone "off the rails" in this play. Its lack of form, its disdain of plot, its waste of material, are obvious, however much they may be due to the author's desire to break new ground, attempt reforms, and widen the scope of the theatre. To our mind, at least, the breach which Mr. Barker has made with the traditions of his art results, so far as representation is concerned, in more loss than gain. By putting an additional strain on the attention of his audience, by robbing them of those aids which a carefully planned scheme and the development of plot provide, by depriving them of the delight of meeting in a later act characters with which they made acquaintance earlier, he prejudices against the serious drama playgoers who are only too ready in these days to turn aside to the variety entertainment and its equivalent, musical comedy. And we cannot afford to lose this section of the public. Mr. Barker should remember that the majority of the theatre's patrons are, and always have been, inveterately lazy; they want to be saved as much trouble as possible—want reminders and helps of all sorts. In his earnestness he seems resolved to make their task of listening as difficult as he can. It is not merely the critics whom he challenges with his "new" technique.

The reader of this play, on the other hand, is not confronted with the difficulties which beset the hearer. He has the leisure to enjoy those argumentative discussions and set debates which Mr. Barker, like his friend "G. B. S.," loves to conduct on the stage. He can revel in the wit and the paradoxical audacity with which the problems of sex are canvassed from different points of view. It does not concern him that the author is wasteful with his

characters. That group of unmarried girls, for instance, to whom he is introduced in their suburban home—he knows all he wants to know about them (though they appear only in a single act), thanks to the laughable description of them now appended to the text; by the time they quit the scenes they have served his turn as they have the playwright's. Similarly the reader finds sufficient connexion of idea in the play, slight though that is, to atone for the lack of plot: as he is not sitting in the theatre, the constant shifting of interest, so far from disconcerting him, affords him the satisfaction of novelty and variety. Not a single one of the objections which applied to the piece as acted play is at all relevant to the printed text. It is thoroughly entertaining from cover to cover.

That means a great deal. For, besides showing a more than ordinary vitality and mental alertness, this play covers a wide range of observation. Ostensibly it is a picture of the conditions under which a large drapery establishment is run in London, and by the way it is an indictment of the "living-in system." But it is something more than either of these things. Woman in all her modern varieties is the heroine of 'The Madras House,' and all those varieties pass in procession before our gaze. The suburban girl who cannot get married; the shopgirl who makes a slip; the employé's wife who has to live apart from her husband and can have no children; the mannequins whose beauty and charm are exploited in borrowed plumes; the woman whose husband has polygamous instincts; and the sheltered young wife who is the product of our civilization at its best—these, every one, parade the stage, and each of them, we are to suppose, is to a greater or less extent, living an unnatural life, and to that extent unhappy and discontented. Mr. Barker sketches in these various types of womanhood with a vivacity and an insight that are undeniable. He is just as successful with his men. We have a conventionalist trying to readjust himself to realities in old Mr. Huxtable. We have the incurable romanticism of the American man of commerce, shown under certain manifestations. There may be something of caricature in the conception of Constantine Madras, the polygamist who has found salvation in Mohammedanism, and is horrified by our Western street-advertisement of sex; but he is gloriously full-blooded in himself, and daring in his analysis of feminism. And by way of contrast we meet his son Philip, who is impatient with "the farmyard world of sex," and is a little too spiritual and ascetic for the rough-and-tumble of married life. Thus Mr. Barker offers us a survey of the relations of modern men and women which takes a wide sweep on both sides, and the reader, at any rate, will find his studies of the sex-question as amusing as they are thoughtful.

Dramatic Gossip.

'THE POPINJAY,' the play of Messrs. Boyle Lawrence and Frederick Mouillot which now fills the bill of the New Theatre, is very much the story of Daudet's 'Rois en Exil' told in terms of commonplace melodrama. Conceive a rollicking profligate of a king who rather welcomes banishment from his realm because it makes him free of Paris, and who decidedly prefers a gay life there to royal duties, and the society of other women to that of his consort; imagine a queen beautiful and majestic, austere to her

husband's follies, tender as a mother, and fiercely jealous for her son's rights; cast Mr. Fred Terry for the part of king, and Miss Julia Neilson for that of the queen, and suppose her Carpathian Majesty to have the most magnificent of courts, and you will gather the sort of dramatic fare that the joint authors have provided.

THERE is not overmuch coherence or plausibility about the succession of scenes which make up the play; the sentiment or fun is not too subtle; and the dialogue is curiously prosaic. Still, the setting of the story is picturesque; the authors have got hold of a happy notion when they suppose the scapegrace king to be "run" financially by a firm of universal providers; and Miss Neilson's picture of the Queen is impressive in its dignity and womanliness. Mr. Fred Terry is less fortunate.

'GRACE,' the most ambitious play Mr. Somerset Maugham has written since his 'Man of Honour,' was far too good a piece of work to be dismissed with the short run it obtained at the Duke of York's before the revival of 'Peter Pan'; and now that Mr. Barrie's annual has had its turn, the comedy it replaced should be able to count on a further lease of popular favour. That there is a certain touch of artificiality about Mr. Maugham's story is not to be denied; its whole atmosphere of aristocratic conservatism seems to belong rather to the early nineteenth than to our own century; and the circumstances which are suffered to make the peccant heroine fall in love with her husband are too conventional and theatrically convenient. On the other hand, the part of Grace furnishes Miss Irene Vanbrugh with opportunities for acting of rare sensibility and emotional sincerity. Her performance lacks none of its former intensity.

BOHN'S LIBRARIES.

"Bohn has soared beyond criticism. It is a national institution."—DAILY CHRONICLE.

This famous series now includes nearly 750 volumes in all departments of Literature.

THE NEW CATALOGUE

of the Libraries, with full particulars as to recent and forthcoming additions will be sent post free to any address.

"'Bohn's Libraries' still hold first place in the estimation of those who value scholarly accuracy of text rather than ornateness of binding, and the comprehensiveness of the scope has never yet been excelled in a uniform series."—OUTLOOK.

"The new series of Bohn's Libraries on which judicious book-buyers have long learned to keep a careful eye."—ATHENÆUM.

WEBSTER'S NEW INTERNATIONAL DICTIONARY.

CONTAINING

over 400,000 Defined Words and Phrases,
2,700 pages, 6,000 Illustrations.

A

COMPLETE ENCYCLOPÆDIA IN ONE COMPACT VOLUME.

☞ A NEW ACHIEVEMENT IN DICTIONARY MAKING. Never before has so much information been gathered between two covers. Upwards of 400,000 words and phrases are defined in the New International, (a greater number than in any other Dictionary), and the definitions are aided by no fewer than 6,000 illustrations.

☞ THE NEW INTERNATIONAL re-presents the fruit of ten years' work on the part of a large body of trained specialists backed up by an expenditure of £280,000.

☞ A FEATURE OF SPECIAL INTEREST is the new divided page. By the use of this ingenious device—entirely new in lexicography—it has been made possible to include twice the amount of information contained in the old 'International' without materially increasing the size of the volume.

On receipt of a post card mentioning 'The Athenæum' Messrs. Bell will be happy to send an Illustrated Booklet with Specimen pages describing the 'New International.'

LITERATURE

Reminiscences. By Goldwin Smith.
Edited by Arnold Haultain. (Macmillan & Co.)

IN these 'Reminiscences' three men notable in their day, Deans Milman, Stanley, and Lake, are spoken of as "now forgotten." This is not altogether true; but the fate assumed for them has befallen its predicator: those who remember his overpowering renown in times long gone are astonished to find to-day that none of the younger men, few seniors even outside Oxford, seem ever to have heard his name; the Lethæan oblivion, which in spite of gods and men, says Horace, enveloped chaste Hippolytus and Pirithous the well-beloved, has settled upon Goldwin Smith.

His opening record was astonishing and long sustained. In the forties, as undergraduate and bachelor, he was *juvenum publica cura*, higher by a head and shoulders than any of his contemporaries, though one of them was John Conington. In the fifties he became the most efficient member of the Parliamentary Commission which revolutionized the University. In the sixties he drew crowded audiences to his Lectures on Ancient History; while his pretty home in the Parks, known popularly as "Class" to distinguish it from the adjacent "Pass" of a less exalted colleague, was the *ὀμφαλὸς* of intellectual Oxford. Suddenly he left Oxford in order to nurse a dying father; joined himself on his

father's death to the inchoate Cornell University as Professor of History; married, settled in Canada, and there died in his 88th year, leaving a cluster of personal reminiscences such as, unless inspired by the pen of a Montaigne or a Sully, cannot render to their author's memory the service of a well-constructed biography.

From Eton, where he won the New-castle Scholarship, he came up in 1841 to a Demyship of Magdalen, then the smallest, pleasantest, and with one exception the idlest of undergraduate Colleges. To such a young lion its tuition was *arida nutrix*, but he read privately with Congreve, not as yet a Positivist prophet; Bernard, afterwards editor of *The Guardian*; and Linwood, a queer Bohemian, but a consummate scholar, editor of *Æschylus* and compiler of the 'Anthologia Oxoniensis.' Their pupil came out double first and Ireland Scholar, also characteristically going through a course of practical physiology under Acland: he was elected to a Fellowship at University, succeeding Stanley as Tutor.

A strong Radical by instinct and conviction, he saw in University corruption a first call to his reforming energies. With Stanley, Mark Pattison, and Jowett he addressed a letter to Lord John Russell, praying him to appoint a Commission of Inquiry into the state of Oxford and Cambridge. Gladstone denounced interference, and the Prime Minister wavered, but was convinced by a series of powerful letters in *The Times*, the signature, "Oxoniensis," being known to mask the authorship of Goldwin Smith. The Commission, to which he was Secretary, presented a strong Report; the Bill founded thereon was mutilated in the Commons by Disraeli: Goldwin Smith, appointed to coach the Duke of Newcastle, who had charge of it in the Lords, induced him, with the approval of Gladstone, who had by this time changed his mind, to move and carry a reversal of Disraeli's hostile amendments; and the Bill, sent back to the Commons, passed in its original integrity. To the consequent executive Commission Goldwin again was Secretary. Many of the Colleges refused access to their statutes, which existed only in manuscript; but Goldwin had for some years made a study of these documents, and the reformed statutes, abolishing religious tests and qualifications of locality and kinship, were drafted by his hand. Amongst the Colleges which he thus transformed was Magdalen, and he owns to having felt some sadness in breaking up that "little nook of unprogressive felicity."

Called to the Bar, he travelled the Western Circuit. Of its seniors, Crowder impressed him more than Cockburn; the most august judge encountered by him was Baron Parke, whose every utterance resembled "a die stamped by a mighty engine." He obtained no briefs, but his reputation as a Commissioner introduced him to London life, and made him acquainted with men of public eminence.

Of Macaulay, Samuel Rogers, Lord Houghton, Thackeray, Tennyson, he has nothing new to tell, though we learn with amusement that the last-named would never read his verses aloud in the presence of Carlyle; and that once, at Lady Ashburton's, Goldwin Smith removed this obstacle by taking Carlyle for a walk.

But the young man's chief friendships at this time were political—with Gladstone, the Duke of Newcastle, Cardwell, Bright, and Cobden. To these last, to the Manchester School in its political and commercial aspects, two chapters are devoted: though this narrative is ancient history to-day, its revival is of interest at a time when theories pronounced by Disraeli to be "dead and damned" have found resurrection. Attached to the staff of the newly formed *Saturday Review*, he formed a lifelong friendship with the late Lord Salisbury, whose vitriolic pen was then employed upon the political articles of the paper. We have an interesting account of its genesis, its writers; its rough, strong editor, John Douglas Cook, of unknown antecedents, without literary culture, but with unflinching journalistic tact—unable to write, but a judge of good writing. The relations of Goldwin with Disraeli were hostile: the former abhorred the "black-guard combination," as the Duke of Wellington called it, engineered by Disraeli, of "office-seekers, Whigs, and Corn-Law Tories," to drive Peel from power. The animosity was also personal on Disraeli's part, and the identity of the "Oxford Professor" in 'Lothair,' described there as "a social parasite," could not be mistaken. The Professor attributed this bitterness to Disraeli's knowledge that his opponent possessed the secret of the office-seeking letter which he had written to Peel, which he had denied in the House, which Peel magnanimously suppressed, but which, published by Mr. Charles Parker in 1891, is here reproduced. Disraeli is not the only statesman, nor is his policy the only public action, which is bitterly condemned in these pages: approved or disapproved to-day, Goldwin Smith's judgments are always instinct with the sincerity of a critic who looked through party passion up to principle.

We have lively character-sketches—of Hawtrey, of Roundell Palmer and his eccentric elder brother William, of Cardwell, Henry Smith of Balliol, Bodleian Coxe and his discomfiture of the literary forger Constantine Simonides. Marvelous George Waring is resuscitated. A miracle of erudition, he produced nothing, but amused himself with obtaining high honours in several Universities. At Oxford he almost lived in the Bodleian; the present writer used to meet him on his way thither, half-blind, abstracted, muttering his wayward fancies in a buzzing voice, like the recluse of Gray's 'Elegy.' Scholars went to him for advice on every conceivable subject: when the Bodleian Delegates were on the point of

giving a large price for a supposed Samaritan manuscript, one of them showed it to Waring, who at once detected the imposture. For Peel Goldwin had a whole-hearted admiration, seeing in him not only the greatest of public servants, and a man sacrificing place, party, repute, to a conviction slowly reached, yet firmly settled, but also an unequalled manufacturer of statesmen: Gladstone, Sidney Herbert, Cardwell, the Duke of Newcastle, and "Clemency" Canning who steered us through the Mutiny, were all trained and bequeathed by him. Lavishing appreciation on Gladstone's greatness as a statesman and as a man, the critic touches with no irreverent hand the weaknesses which chequered it—impulsiveness, casuistry, self-deception, combative impetuosity, which made him at times what his friend Lord Selborne called "morally insane." "We are better off than you," said a Conservative M.P. to a Liberal; "our leader is only an unprincipled scoundrel, yours is a dangerous lunatic." That Gladstone would on Peel's death have assumed leadership of the Tory party, had Disraeli stepped aside, and that his sudden dissolution of Parliament in 1874 was due to a personal embarrassment, are statements made by Goldwin Smith as having *connaissance de cause*, but they may not be universally accepted.

Of the anecdotes some are old, and have been better told before. The Duke of Wellington's *mot* when, at a royal levee, Napoleon's marshals turned their backs upon him; Dr. Jeune's explanation of the grounds on which College Heads are chosen; Bob Lowe's allocutions to his kind, dull wife; the curate's criterion of social merit in his parishioners; and the Zouave who had been at Eton, will be best read in their original setting. Neat sayings and epigrams abound: Matthew Arnold was a "prince of connoisseurs"; the old Master of Balliol was an "antiseptic element" in Oxford; General Grant's war-policy was "a strategy of attrition." Of an American statesman risen from the ranks the writer says that "his strong point was having been a stonemason, his weak point remaining a stonemason still." Amongst interesting dicta by remarkable men we have old Lord Russell's tribute to the finest orators whom he remembered—Plunkett supreme in eloquence, Canning in charm, Peel in convincingness; Lord Lawrence's statement that Competition Wallahs made finer administrative implements than the old nominated Civil Servants; and Bright murmuring to himself, as he sat in the Parks at Oxford listening to the tintinnabulation of the bells, "It would be very pleasant to be eighteen and to be coming here."

In two long visits to Ireland Goldwin Smith tried to gain impartially the views of the rulers and the ruled. He saw in the popular discontent a craving not for political autonomy, but for access to the land; and fearing that a "vassal Parliament" such as Gladstone contemplated would reproduce the evils of the time

before the Union, he spent all his energies in opposition to the Home Rule Bill.

The American Civil War he witnessed on the spot, paying a high tribute to the leaders, civil and military, on both sides. The disruption seemed to him natural and politically justifiable: he regretted that Lincoln had not seen this before the war, and blamed the Federal Government for excluding the Southerners from partnership in the work of reconstruction. But when the progress of the war had made inevitable a choice between slavery and freedom, he championed vigorously in England the unpopular cause of the North. In the seventies, when a citizen of Canada, he often revisited the States: saw in Washington the best-governed city in the world, in the unacoustic Capitol a "babel with a gavel (President's hammer) accompaniment"; in place-hunting, the seamy side of democracy. American oratory he found much superior to ours; American statesmanship as far below it. He was intimate with Bancroft, Curtis, Lowell, Bayard, Forbes; knew and depreciated Emerson. In Canada he joined the Reciprocity movement, but found political principle subordinated to struggle for place and power. Admitting the root evil of racial dualism, he saw salvation for the country in a voluntary junction with the United States.

The editor, in a modest Preface, pleads for indulgence, alleging the chaotic state of the manuscript entrusted to him, and his want of acquaintance with his friend's country, University, and early surroundings. He need not, we think, have preserved the numerous disturbing repetitions which occur, often in adjacent pages and almost in the same words. An English coadjutor would have corrected errors, added value to notes now limited to bare chronology, and modified one or two statements in which an old man's memory was imperfect. The book is adorned with six portraits of different dates. In the forties and early fifties the camera had not attained its strength; we have therefore no presentment of the commanding presence, meditative yet dominating look, and "bar of Michael Angelo," which a few old men can still recall when they think of "vastest Goldwin" in his early Oxford days.

The Works of John M. Synge. 4 vols.
(Dublin, Maunsel & Co.)

THE publication of these volumes is an event of great importance, and the fact that they appear without that preface by Mr. W. B. Yeats which we had been led to expect throws a grave responsibility upon critics. The poet who could have explained, finely and faithfully, the art and purpose of his friend, is silent, and it remains for reviewers to indicate, as best they may, the nature of Synge's achievement.

Synge saw deeper than others, not into the motives, but into the significance, of

men and things; that, we think, is the peculiar quality of his genius. He reminds us oddly of Gauguin; for, like that painter, he sought amongst simple people to discover the significance of human life, and came in his search to feel the mysterious solidarity of the Universe. He is an epic rather than a lyric poet; he goes beyond the expression of particular and definite emotions to give a general sense of continuity and reality. He has to make us believe in his vision, and this he does by convincing us that his emotions are felt for a world more real than the world that is known to common men.

It is the 'Aran Islands,' the third volume of this edition, that reveals the dramatist's sense of epic. This volume is also to be regarded as the reliquary of his narrative style; for the fourth—a collection of studies and sketches—contains a good deal of journalism that should never have been reprinted. Of the tourists and Irish-scholars who visit these islands, few, assuredly, see what Synge saw. All that is superficial and quaint and pretty has been brushed away. Nature he rids of meretricious glamour and sham romance. Man and the Universe confront each other without a single barrier of unreality between them. Only what is fundamental remains; and that is neither squalor nor brutality, but the essential dignity of Man and the awfulness of Nature. If Synge is always in touch with the earth, he touches it with wings; and surely the earth beneath him is a mountain top. The loftiness of the regions to which we are transported is made manifest by a curious accident. In describing an interior the author allows himself to use one or two rather commonplace expressions, and to compare it with a picture—probably he has a Millet in mind. The intrusion of this note of culture produces the same kind of shock that would be produced by an odious and unexpected piece of vulgarity in an ordinary book. The reader is pitched suddenly from a world of impressive reality into that familiar world where worn counters are the current coin of expression; and it requires a dozen pages of Synge's finest prose to lift him back into an atmosphere where prettiness and taste are irrelevant.

The medium in which the artist expresses his sense of this new world is itself new and superbly adequate. It is simple, sensuous, musical English prose, moulded in a Celtic mind and spoken by Celtic lips. We take as an example a passage from 'The Playboy of the Western World,' which will also serve to introduce another aspect of the author's genius:—

Pegeen. Providence and Mercy, spare us all!

Christy. It's that you'd say surely if you seen him and he after drinking for weeks, rising up in the red dawn, or before it maybe, and going out into the yard as naked as an ash tree in the moon of May, and shying clods against the visage of the stars till he'd put the fear of death into the banbhs and the screeching sows.

Pegeen. And there was no one in it but the two of you alone?

Christy. The devil a one, though he'd sons and daughters walking all great states and territories of the world, and not a one of them, to this day, but would say their seven curses on him, and they rousing up to let a cough or sneeze, maybe, in the deadness of the night.

A man who has penetrated the web of accidents that hides one human being from another will be restless and unsatisfied till he has dived deep beneath the surface of Nature and, if he be an artist, brought up to common light a handful of realities. That strange confusion of shapes and colours and sounds and smells had for Synge an essential unity. Also, he felt that, animate or inanimate, all spin together on one planet. Great is the antagonism between man and man, between Man and Nature greater, but between Fate and the Universe greatest of all. At worst men feel this in common—they are all in the same rudderless boat. At best they can read profound meanings in Nature, and feel with her subtle sympathies. Dan, in 'The Shadow of the Glen,' turns his wife out of the house; the old vagabond she has sheltered bids her take heart; there is a world out of doors, let her come and tramp it along with him:—

Tramp. You'll not be getting your death with myself, lady of the house, and I knowing all the ways a man can put food in his mouth.... We'll be going now, I'm telling you, and the time you'll be feeling the cold, and the frost, and the great rain, and the sun again, and the south wind blowing in the glens, you'll not be sitting up on a wet ditch, the way you're after sitting in this place, making yourself old with looking on each day, and it passing you by. You'll be saying one time, "It's a grand evening, by the grace of God," and another time, "It's a wild night, God help us; but it'll pass surely." You'll be saying....

Come along with me now, lady of the house, and it's not my blather you'll be hearing only, but you'll be hearing the herons crying out over the black lakes, and you'll be hearing the grouse and the owls with them, and the larks and the big thrushes when the days are warm; and it's not from the like of them you'll be hearing a tale of getting old like Peggy Cavanagh, and losing the hair off you, and the light of your eyes, but it's fine songs you'll be hearing when the sun goes up, and there'll be no old fellow wheezing, the like of a sick sheep, close to your ear.

The contrast between the smug security of a yeoman's cottage and the fine life of the roads and commons is not greater than the contrast between the roads and commons of the fine writer and the motorist, and this country discovered by the poet's imagination.

But Synge is most profound when he turns his emotional insight upon men and women in great and moving situations. As a revelation of the logic of the heart the second act of 'Deirdre' is hardly surpassed. The story is well known. Deirdre, having overheard a conversation between her lover Naisi and Fergus,

emissary of Conchubor, High King of Ulster, realizes, in a spasm of clear vision, what she had never guessed before—that love is mortal, and that her lover's passion, great though it be, is less pure, less simple, and less confident than her own. He can doubt, and love dies. She feels that the only thing left to do is to end well what began beautifully, to see that nothing fair is spoilt. They must go back to King Conchubor in his city of Emain, though there is more than a suspicion of treason, and a certainty of sorrow and emptiness. No one who reads the play, whose mind has been exalted by what has gone before, doubts for a moment that Deirdre is right, though her reasons are not those that cold sense can approve. The argument is emotional, not intellectual; and we feel at every turn that emotion is right. It is something greater than instinct or intuition: it is the sure and perfectly lucid perception of a higher truth than can be reached by chopping logic.

Deirdre (in a very low voice). With the tide in a little while we will be journeying again, or it is our own blood maybe will be running away. (*She turns and clings to him.*) The dawn and evening are a little while, the winter and summer pass quickly, and what way would you and I, Naisi, have joy for ever?"

Naisi protests that they will stay in safety.

Deirdre. There's no place to stay always. It's a long time we've had, pressing the lips together, going up and down, resting in our arms, Naisi, waking with the smell of June in the tops of the grasses, and listening to the birds in the branches that are highest.... It's a long time we've had, but the end has come, surely.

He still protests.

Deirdre (shaking her head slowly). There are as many ways to wither love as there are stars in a night of Samhain; but there is no way to keep life, or love with it, a short space only.... It's for that there's nothing lonesome like a love is watching out the time most lovers do be sleeping.... It's for that we're setting out for Emain Macha when the tide turns on the sand.

Naisi (giving in). You're right, maybe. It should be a poor thing to see great lovers and they sleepy and old.

Deirdre (with a more tender intensity). We're seven years without roughness or growing weary; seven years so sweet and shining, the gods would be hard set to give us seven days the like of them. It's for that we're going to Emain, where there'll be a rest for ever, or a place for forgetting, in great crowds and they making a stir.

Synge died before he was forty. To assign a class and a division to imaginative artists, to register marks and award prizes, is the privilege and pleasure of examiners and literary historians. It is not for the contemporary critic to order niches in the Temple of Fame. Neither should he place poets, nor pronounce irrevocable dooms. Therefore we draw no comparisons, we have avoided even the obvious pleasures of contrast; only we are sure that John Synge was a great artist who expressed in beautiful language his sense of reality.

My Life's Pilgrimage. By Thomas Catling. With an Introduction by Lord Burnham. (John Murray.)

THIS record of a long and honourable career has been "paragraphed" rather too freely. A good deal of it reads like the 'Faits Divers' of a French newspaper, Mr. Catling having a disconcerting trick of jumping from subject to subject. Thus, though he has known the stage intimately, both before and behind the scenes, he nowhere supplies a coherent chapter on the Victorian drama, but sandwiches it between topics with which it has nothing to do. The allusions, too, to historic events might easily have been condensed; and one or two incidents are treated with undue solemnity. The late King, when Prince of Wales, did not, it appears, call for a well-known ale when he was recovering from typhoid fever; five-and-twenty years afterwards Mr. Catling was able to deny the baseless legend "on the very highest authority."

Apart from method, Mr. Catling's reminiscences have in full measure the peculiar charm that belongs to the modest autobiography of a self-made man. The son of a Cambridge gardener, he rose from "the case" to the editorial chair, and his opening chapter gives a capital account of a boyhood in the "hungry forties," with a public execution or two by way of spectacle. So minutely did young Catling survey the gallows that when he reached home he constructed a perfect model, and hanged his little sister's doll thereon! On his twelfth birthday he was employed on *The Cambridge Chronicle*, a paper printed one side at a time, two sturdy navvies supplying the motive power by turning a wheel. Work went on all Friday night, and the boy, whose duty it was to "take off" each sheet, got into trouble by falling asleep at his post. Before he was sixteen he had burnt his boats and started for London, where, after a period of anxiety, he was fortunate enough to get work on *Lloyd's*.

Mr. Catling has much of interest to tell of the changes that have come over Fleet Street since he has known it—changes emphatically for the better. Landladies were chary about taking in compositors, and not without cause:—

"Journeymen were content to wait about all day on the chance of getting a night's work. Public-houses were of necessity their chief resort, affording amusement as well as shelter—cards, bagatelle, skittles, and other games being permissible. An incident that might have made shipwreck of my whole career marked the first week. When apprentices were bound, or completed their period of service, certain fees were demanded by the men. The fact of two being "out of their time" together led to a double allowance for drink, to the potent influence of which my young stomach was altogether unaccustomed."

The revolution in printing due to the introduction of the Hoe rotary machine

is clearly described, and another well-informed paragraph sets forth the development of stereotyping.

In Edward Lloyd, Mr. Catling had a proprietor as steady of purpose as himself, who frequently ended a week without knowing whence the money for bringing out the next number was to be procured, and whose methods of pushing his paper were highly ingenious. Alive to the importance of a name, Lloyd appointed Douglas Jerrold editor at 1,000*l.* a year, and to cheer his last hours, made his son Blanchard Jerrold his successor. Blanchard Jerrold seems to have interpreted his duties in an easy spirit. Mr. Catling declares that during eighteen years he only once visited the office; his leading articles more than once arrived too late from France, and sometimes had to be suppressed because they were not in keeping with the tone of the paper. Meanwhile, a happy accident dexterously turned to account had led to the appointment of Mr. Catling as sub-editor, and he has also some good stories to tell of the difficulties he experienced in his early days as dramatic critic and reporter. When his fate was in suspense after Blanchard Jerrold's death, "exclusive" information about a City murder settled the matter, and he became editor of *Lloyd's*.

The social side of London life is abundantly illustrated in Mr. Catling's unpretentious pages. He just saw the last of Bartholomew Fair, but he passes rapidly over its squalid end; and in his account of the entertainments carried on at the Johnson Tavern, Bolt Court, he has converted "Sam Hall" from a song into a singer. The theatrical reminiscences—though, as we have hinted, rather sporadic in character—recall many a famous actor and performance. We get Macready as Macbeth hissing abusive epithets at the astonished Macduff to put spirit into the final combat; Phelps with his sniff; Irving confessing that he could not play Othello; Miss Larkin telling David James that "Our Boys" would be his greatest failure; and Col. Kitchener drilling the Drury Lane "supers" for the military scene in "Human Nature." We join in rollicking suppers at the vanished Albion Tavern in Drury Lane, and get agreeable glimpses of literary clubs and their frequenters. Mr. Catling has known nearly every Fleet Street character of his time, and he has a kind word to say of all his many friends.

As editor of *Lloyd's*, Mr. Catling skilfully extracted an article from Gladstone after an apparently conclusive refusal, though H. M. Stanley, on his return from the Emin Relief Expedition, declined a blank cheque. The journal has—to use Delane's phrase—been "lucky in murders," and we are told of numerous instances when it has been first in the field. Among Mr. Catling's weirdest experiences must have been that of smoking a cigar with Treadaway, the Pimlico assassin, when he was brought to Rochester Row police-station.

In his later years Mr. Catling has been an extensive traveller, and he dwells on his tours with unmistakable pleasure. His readers will no doubt join us in wishing him health and strength for the enjoyment of his amply earned leisure.

Famous Impostors. By Bram Stoker. (Sidgwick & Jackson.)

WHY did Queen Elizabeth never marry? The ingenuity of an historical novelist has suggested that, on accepting the well-known proposal of Sir James Melville, Elizabeth went with him to the Court of Holyrood disguised as a man, excited the jealousy of Darnley, was wounded by him in a duel, was carried to Kirk o' Field, and was there blown up by Bothwell; for Darnley had fled to England, disguised as a woman, and there, being very like his cousin the Queen, personated her for the rest of his life; of course he could not marry.

There are weak points in this theory, but it is not much feebler than Mr. Bram Stoker's tale of "the Bisley Boy" who, on the death of Elizabeth at about the age of ten, in 1543-4, personated that princess during the rest of his life; of course he could not marry. Mr. Stoker actually leans to a favourable view of this legend. He arranges his narrative badly. His chief source seems to be a book called "The Girlhood of Queen Elizabeth" by Mr. Mumby, who, for his part, cites Miss Strickland. From a letter for which no reference to documents is given it appears that, in 1549, Tyrrwhit believed that there was a secret between Elizabeth, Mrs. Ashley, and Thomas Parry, faithful servants to whom their mistress was grateful. Well, there are secrets of many sorts! We are next introduced (p. 286) to a letter of Elizabeth to Seymour, the admiral, "taken from Leti's 'La vie d'Elizabeth.'" Who was Leti? asks even the general reader, one hopes, and fourteen pages later it comes out that Mr. Mumby quoted a French translation (1694) of Leti's book; that Leti was born thirty years after Elizabeth's death; and that the English translation of the French translation of the late Italian original is wrong. Then why open the inquiry by quoting an erroneous English translation of a French translation of what purports to be an Italian translation of an original English letter written by Elizabeth in 1548? Where is that original? Historical mysteries cannot be cleared up by this casual method.

Mr. Stoker next describes Bisley in the Cotswold Hills, and the manor house there, with a flower-bed "set in an antique stone receptacle of oblong shape, which presents something of the appearance of a stone coffin of the earlier ages." Without ascertaining whether this setting of a flower-bed is or is not a stone coffin (and only a very minute flower-bed could be "set in" a coffin), Mr. Stoker says "of this more anon." We know what to expect:

an ætiological myth is coming, but an account of the dimensions of the "stone receptacle" is not coming.

Bisley is an accommodating place. In 1544 it was "comparatively easy of access from London" (p. 290), but also far indeed from being easily accessible (pp. 293-4). The silly legend is that Elizabeth, as a child, was at Bisley, that her governess (Mrs. Ashley, apparently) received news that the King was coming to visit her; that Elizabeth died; and that the governess, unable to find a convenient little girl, dressed up a convenient little boy in the raiment of the defunct princess. Neither Henry, when he came, nor any one else, detected the imposture. Only four persons "must have been" in the secret—the boy, Mrs. Ashley, Parry, and the boy's parent with, one supposes, the rest of the parent's family circle. Was Elizabeth, that all-important card in her father's game, left in the hands of only two attendants? She must have had a household, who, even if her death could possibly be kept secret from them, must have perceived the change, while all the village would miss and ask for the boy.

The date of the adventure, Mr. Stoker argues, must be "the year ending with July, 1544." Then we have mention of an undated letter "given by Leti," from Elizabeth to Catherine Parr. Mr. Stoker fixes the date of this letter between July 12th and 31st, 1543, and he does not know where Elizabeth was, if not at Bisley, between July 12th, 1543, and July 31st, 1544, when she again writes—apparently with no address—to Queen Catherine Parr. Perhaps Mr. Stoker has not perused all the manuscripts domestic of 1543-4. As Henry's last marriage was in July, 1543, and as "ever since his last marriage he had been an invalid," while Bisley, previously so accessible, "was a long way from London," and Henry was "so heavy that he had to be lifted by machinery," one does not think it probable that he did visit Bisley, between June, 1543, and July, 1544. But the legend says that his visit, or the apprehension of it, drove the governess to substitute a living little boy for a dead little girl. Even if "Martin Hume and F. A. Mumby.... confess themselves puzzled by Elizabeth's attitude to men," her "attitude" was not that of a man; and a puzzling attitude of a woman to men is not so rare that we need account for it by the theory that the woman is a man. All of Elizabeth's attitudes towards men, and all of her attitudes towards women, were entirely feminine. If she had a great many wigs (p. 333), Mary Stuart—who was no man—had also a large collection.

At last we come to what we have always expected—the fable about the hiding of Elizabeth's body in the stone coffin now occupied by a flower-bed; and the discovery, "some tens of years ago," of the bones of a young girl and the remnants of her clothes in the coffin. The whole affair is on a level with the legend that the bones of the genuine James VI. were found

built up in a wall in Edinburgh Castle, while the apparent James VI. was the son of Lady Athole, Lady Mar, or any lady you please.

When we turn to Mr. Stoker's account of Cagliostro, we learn that "he called himself Comte de Saint-German [*sic*]"; that he had claimed, "as the Comte de Saint-German (*sic*) said, that he had already existed for many centuries"; and we hear of "a girl," "one Olivia," in the affair of the Diamond Necklace. This is too much, even for the general reader. He has heard of the Comte de St. Germain and of Gay d'Oliva.

NEW NOVELS.

Mac's Adventures. By Jane Barlow. (Hutchinson & Co.)

THIS, so far as we remember, is the first time that Miss Barlow has, on any considerable scale, attempted a study in child-life, but the experiment is fully justified by its success. Her infant hero Mac (otherwise Macartney Valentine O'Neill Barry, the grandson of an Irish peer) is certainly an *enfant terrible*, and we are conscious of a disloyal preference for the society of children who conform to a more ordinary type. But from a literary point of view we find his forceful originality delightful, and all the more so from its piquant contrast with his methods of expression. Like all persons of his tender age, he borrows both sentiments and phrases wholesale from the grown-ups of his environment, who are chiefly Irish peasants described with the perfect familiarity and sympathy of the author. The effect is deliciously quaint, but arouses a certain prospective sympathy for those hereafter to be charged with the task of Mac's education.

Lady Fanny. By Mrs. George Norman. (Methuen & Co.)

LADY FANNY, a young *femme incomprise*, is ordered abroad alone by her doctor, on the understanding that in foreign parts she is to devote herself, by way of mental tonic, to a course of mild flirtation. Her first experiment in this direction is fairly successful, but the second lands her in a serious *affaire de cœur*, from which she emerges blameless, but blighted, and only slightly consoled by the renewed devotion of her negligent husband. It is an entertaining story, written with fluency and grace, but the characters, though well drawn, produce, perhaps designedly, an impression of futility.

Creatures of Clay. By W. Teignmouth Shore. (John Long.)

THE "Too old at Forty" problem is seldom a cheerful study, least of all when personified, as here, in an automaton-like

City clerk, without initiative or adaptability, who, through no active fault of his own, unexpectedly finds himself out of employment. Mr. Teignmouth Shore has, however, sketched this humdrum central figure with insight and feeling, qualities which lend distinction also to the portrait of the wife whose one-time devotion to her inexpressibly foolish husband changes, with the process of revelation, to a pitying contempt. Mr. Shore is an ardent Dickensian, and his imitative zeal shows, not always to advantage, in his minor characters. These comprise a churlish old builder with the inevitable warm heart, and a paragon among physicians so beloved as to have earned the sobriquet of "Dr. Joy." Such people do not convince us, neither does the book gain anything from that semi-confidential garrulity of style which many latter-day emulators of Dickens seem to cherish.

Half a Truth. By Rita. (Hutchinson & Co.)

FATHER, DAUGHTER, AND STEPMOTHER form a group with which we are tolerably familiar in fiction, but Rita has contrived to invest the relations of such a trio with fresh interest, increased by a touch of well-sustained mystery. The man and the girl belong to a more or less commonplace type, but the older woman strikes us as an original and vivid creation. The beginning of the story shows all three on the point of sailing from America to take possession of a property in Ireland acquired under peculiar conditions. In London, where they stop for a while, they have an opportunity of studying the unedifying manners of the smart set, and we find this part of the book more amusing than the Irish scenes, which are conventional and not over-convincing. The catastrophe has a flavour of melodrama, and the love-interest is scarcely absorbing; but on the whole we are well entertained and enjoy a pleasant atmosphere of high spirits.

The Inevitable Marriage. By Dorothea Gerard. (John Long.)

A YOUNG English lady, poor but beautiful, accompanies her brother, a junior member of the Civil Service, to India. His early marriage, or rather his wife's ill-temper, leaves her without a home, and a long series of misfortunes ends in a serious illness in a Bombay hospital. Here she is discovered by a military gentleman as reticent as he is valorous, who, in order to be in a position to provide her with the means of returning to England, goes through the ceremony of marriage with her. Such are the principal events in this unconvincing story, in which the marriage is perhaps the least inevitable of all the things that happen. When once the marriage is accepted, the happy reunion, however long delayed, is bound, by all the

laws that govern such fiction, to follow. It is a simple story unaffectedly told, but the writing is often very loose, and grammatical mistakes are not uncommon.

The Way of a Man. By Emerson Hough. (Methuen & Co.)

A HARD matrimonial problem is the main topic of this sensational tale. The period is that just before the outbreak of the American Civil War, and the two athletic heroes who share the leading interest are introduced through their relations thereto; John Cowles is a landowner's son of West Virginia, and eventually an officer in the Federal forces; Gordon Orme, an Australian, is in the country as agent between the Confederate party and such of the English cotton merchants as conceive that partition may turn to their trade advantage. From this point of view we obtain several side-lights on politics, while the local description of an old-fashioned country-side is enhanced by the contrast of the wilderness where John and Ellen wander, "lost on the plains."

The Lass with the Delicate Air. By A. R. Goring-Thomas. (John Lane.)

MR. GORING-THOMAS's heroine presents a cleverly conceived study of a girl drawn from the "betwixt and between" class, and introduced, during the first week of her marriage, to unexpected luxuries which the slender income of her husband, a somewhat diffident young barrister, cannot possibly provide. It would be unfair to give more than the merest outline of the career of this inhuman young person, who among other accomplishments gains a lyrical reputation by the simple process of paraphrasing the work of the less-known Elizabethan bards; but as a skilful, if cynical analysis of sexual contrariety, she is a notable figure, and justice (poetical at least) is realistically flouted by the worldly prosperity in which we leave her. An ordinary Chelsea lodging-house and its extraordinary inmates, who act in some degree as chorus to the domestic tragedy are drawn with a humour that is distinctly original. Mr. Goring-Thomas has the rare Dickensian gift of imparting life and personality to his characters.

Periwinkle. By William Farquhar Payson. (Gay & Hancock.)

A LIFE-SAVING station on Crooked Bar, where, isolated from the rest of humanity by vast expanses of sand, the lonely surfmen keep their vigil against the Atlantic, is the finely pictured scene of this American tale. The narrative, which opens with the rescue of the girl who gives her name to the book, never relaxes its hold upon the attention, though occasionally an inartistic touch of sentiment introduces a false note. Periwinkle makes

a fascinating figure, full of the gaiety of girlhood, most feminine when she voluntarily helps in masculine toil. Admirably sketched, too, are the rugged men among whom the "sea-waif" spends her days contentedly until the wreck of a yacht off the Bar dramatically brings a new element into her life. But the real merit of the tersely written story lies in its atmosphere. The salt of the sea and the spirit of the dunes are in its pages.

The Tyranny of Honour. By Constantine Scaramanga-Ralli. (Chapman & Hall.)

THIS is a deftly woven piece of sensationalism. The story opens at Sedan, with a young Prussian officer, Arthur von Crozier, bearing dispatches through a storm of shell. He comes upon a dying Frenchman who is exactly like his father, Philip von Crozier. But, though he hates his father intensely, his heart goes out to the Frenchman. The latter is moved, too, and entrusts Crozier with a letter to be delivered in Paris to the dying man's daughter. The scene changes to the siege of Paris: after much difficulty Arthur executes his mission, which is followed by another complication and a surprise at the end. The story is told in a fluent style which gains an air of forcibleness from a free use of rather turgid metaphor.

The Davosers. By D. Brandon. (John Long.)

PERUSAL of this fundamentally mournful book calls to mind Mrs. Lee-Hamilton's 'The Valley of the Great Shadow,' published in 1900. In both cases the pathos of an Alpine resort crowded with invalids heavily taxes the reader's sympathy, but Miss Brandon justifies her choice of theme by a touching record of friendship between two men, butterfly and cynic respectively, and by the fire which animates her picture of a love triumphant over irony and death. Her story is a series of episodes, most of which produce the effect of complete tales or sketches. In humour the author is inventive and artificial, giving us, for instance, a hypnotist who avenges herself on a bad-tempered card-player by instructing his opponent by telepathy.

VERSE.

MR. H. BELLOC's volume entitled *Verses* (Duckworth) is a delectable harmony of essences ordinarily conflicting. He is a poetical adventurer, in the ancient and honourable significance of that much-abused word, faring forth, as it were, into all lands, and setting up his rest at either Pole in turn. The simple reverence of the mediæval carol is found here side by side with modern satire at its subtlest; the bluff poet of the open air—the Sussex Downs and the Sussex Weald—is one with the courtly trifter who invokes "the Influence of a Young Lady upon the Opening Year"; the visionary

hobnobs with the frivolous, the reformer with the reveller. One is led to wonder on what road Mr. Belloc will, in his poetical capacity, finally choose to travel, and to incline to the view that satire is his best course. Good as are his achievements in other kinds, they lack the finish, the sense of completeness, which distinguish the satirical pieces. The note is struck at the beginning by the characteristic lines 'To Dives,' and reappears triumphantly in 'The Fanatic,' 'The Happy Journalist,' the 'Newdigate Poem' (a masterpiece of fooling), and the 'Short Ballad and Postscript on Consols'; attaining perhaps its most relentless pungency in the 'Verses to a Lord who, in the House of Lords, said that those who Opposed the South African Adventure confused Soldiers with Money-Grubbers,' from which we quote:—

You thought because we held, my lord,
An ancient cause and strong,
That therefore we maligned the sword:
My lord, you did us wrong.

We also know the sacred height
Up on Tugela side,
Where those three hundred fought with Beit
And fair young Wernher died.

The daybreak on the failing force,
The final sabres drawn:
Tall Goltman, silent on his horse,
Superb against the dawn.

The little mound where Eckstein stood
And gallant Albu fell,
And Oppenheim, half blind with blood
Went fording through the rising flood—
My Lord, we know them well.

'Courtesy,' 'The Rebel,' and numerous other poems in this volume merit respect for high ideals, fittingly set forth, and a technique without flaw; but it is, we feel, as a satirist that Mr. Belloc should court supremacy.

The spirit of William Morris breathes perceptibly in *Songs of a Shopman*, by Arthur Hickmott (A. C. Fifield), but it is the militant Morris shorn of that visionary magic which gave dignity, strength, and, not seldom, sweetness even to his denunciations. Mr. Hickmott is an enthusiast, and, like many enthusiasts, prone to haste, as well in his adoption of words and phrases as in passing judgment upon the more thorny social problems. Wealth, tyranny, Humanity, and Justice dominate his pages, and we have overmuch of "gilded halls" and "hollow grandeur," which is the more to be regretted inasmuch as the resuscitation of these ancient shibboleths seems likely to obscure the note of deep sincerity and the loftiness of purpose which give distinction—not always poetical—to the little volume.

Though Mr. Hickmott's Nature poems suffer from the same inclination to rest content with the conventional epithet, he succeeds more than once in producing a word-picture of singular charm. We may cite, for example, the opening stanzas of 'Chiddingstone':—

From Eden's banks when lilies bloomed,
I saw the towers of Chiddingstone,
In strange sweet light of other years,
'Mid meadows newly mown.

A rainbow hung above the trees,
A mist rose slowly from the land,
A storm-cloud tried to hide the blue
With dome-like masses grand.

Technically, as may be inferred from the last line of the above, Mr. Hickmott's verse has flaws, and his scansion is often faulty, but these are shortcomings which time and experience may well remove.

Though the mystical form of drama which has taken root in modern Ireland shows frequently a tendency to bewilder rather than satisfy, no such exception can be taken to Mr. W. B. Yeats's latest achievement in

this kind—the "heroic farce" which gives its title to *The Green Helmet, and other Poems* (Dundrum, Cuala Press). It is a haunting piece of work, lucid and musical, wrought with delicate suggestion and a vivid sense of atmosphere that communicates itself even to the stage directions, and the elaborate colour-scheme propounded for its production at the Abbey Theatre. Humour is a species of poetical ballast, and it may well be that the admittedly farcical element here present—the "wide high man" with "half-shut foxy eyes and a great laughing mouth," his company "coal black and headed like cats," and the squabbling wives of the three heroes involved—has saved the poet's allegory from soaring to those scarcely visible heights which are sometimes the bourne of mysticism unrestrained; in any case, the imaginative reader, unversed though he be in Gaelic mythology and tradition, will return to the little play again and yet again, with increasing zest.

The short lyrics which serve as a prelude to 'The Green Helmet' are, if anything, overweighed with thought not always unambiguous. We would quote, however, the following stanzas called 'Consolation,' from the sequence inspired by the alchemist 'Nicolas Flamel and his wife Pernella':—

I had this thought awhile ago,
My darling cannot understand
What I have done, or what would do
In this blind bitter land;

And I grew weary of the sun
Until my thoughts cleared up again,
Remembering that the best I have done
Was done to make it plain;

That every year I have cried at length
My darling understands it all,
Because I have come into my strength
And words obey my call;

That had she done so who can say
What would have shaken from the sieve?
I might have thrown poor words away
And been content to live.

In the poem beginning

All things can tempt me from this craft of verse,

Mr. Yeats hints at a growing distaste for his chosen calling, a phase of mind which, it is to be hoped, may prove transitory.

Based, as the Preface informs us, on Locker-Lampson's 'Lyra Elegantiarum,' and expanded so as to take in the new material that later years have brought forth, *A Book of Light Verse*, edited by R. M. Leonard (Henry Frowde), is a welcome addition to the constantly swelling ranks of the Anthology. The line of demarcation separating light verse from serious is often difficult to fix, and it seems curious that Lovelace's famous lines 'To Lucasta, on going to the Wars,' should be capable of being grouped under the same heading as Thackeray's 'The Battle of Limerick'; yet the title chosen doubtless justifies the seeming anomaly, and the wide scope of the compilation becomes immediately apparent.

Mr. Leonard has made his selection with considerable taste and judgment. Close on five hundred poems are included, ranging in point of time from Chaucer to Swinburne, and the notes appended (some of them taken from the 1867 edition of Locker-Lampson's work) contain much that will be of interest to the literary-minded. For example, Swinburne's heterodox views on Clough and Calverley are characteristic of his outspoken style, and we fancy that few lovers of 'Alice in Wonderland' are aware of the original that inspired "You are old, Father William." The volume, available in several attractive bindings and printed in small, but sufficiently clear type, should have a wide success, as the different editions are published at very moderate prices.

In the course of her able Introduction to *A Book of Verse by Living Women* (Herbert & Daniel) Lady Margaret Sackville comments with much satisfaction and some reason upon the striking advance discernible in feminine poetical ideals since the vogue of Adelaide Procter. Yet the change, with its widening horizon of realism and unhampered thought, is one by which men have not been unaffected; neither is its operation confined to poetry. It should be borne in mind that the "golden gates" type of sentiment won for Miss Procter the approbation of the creator of Little Nell, because there existed, so to say, reciprocity of feeling between them—a reciprocity in which the bulk of the reading public has, unhappily, not yet ceased to share. Progressive ideals, however, have failed to modify to any great extent the outlook of the woman poet upon life. There may be truth in Lady Margaret Sackville's contention that it is possible for woman to "write good poetry without the personal note," but it is also true that more often than not she has no desire to do so; while the present charming little volume affords ample evidence that those much-harassed epithets "subjective" and "objective" still indicate the general cleavage between feminine inspiration and that of man.

Among the poets included are Mrs. Meynell, Miss Jane Barlow, Miss Alma Tadema, Mrs. Marriott Watson, Mrs. Shorter, Michael Field, and many others—a sufficiently representative gathering—and curiosity is likely to be kindled by the excellence of certain anonymous verses. The anthology, daintily bound and produced, should serve to gain a wider appreciation for much valuable work which has hitherto enjoyed something less than its meed of fame.

OUR LIBRARY TABLE.

DR. GEORGE BRANDES'S monograph on *Ferdinand Lassalle* (Heinemann) has two serious disadvantages to contend with in the English version in which it has been lately issued. Lassalle's death occurred in 1864; ten years after that time the first draft of the essay now before us was printed, and a German translation of it in its present form appeared in 1881. English readers have never suffered from over-acquaintance with the details of Continental politics. Perspectives alter as events recede, and the mists of forgetfulness perpetually close in. Even those to whom Lassalle remains a significant and memorable figure will not now enter readily into the history of the party conflicts he was involved in, especially when the lessons drawn from them are applied to a situation which is itself a generation old. Dr. Brandes in 1881 described the book as an account of "the historical development during one generation of the spirit which inspires modern Germany," the personality of Lassalle being made the "point of connexion between a series of ideas." It is easy to understand that this and other connexions may be less conspicuous now than when the book was written. Not only do the larger outlines seem blurred, but the centrality of Lassalle becomes sometimes hardly more than nominal, while at other times ideas of secondary value, and even errors, are traced out with disproportionate elaboration, merely because they are his.

Abstract topics tend to predominate, and—we come with this to the second of the disadvantages above referred to—the English

version lacks the vigour and precision which such topics demand. "One event during the nineteenth century has provoked the greatest surprise and astonishment in Europe"; such is the sentence with which the translation opens, and its auguries are fulfilled. "I am attracted by the great and permanent ideas of the age upon its civilization" may be quoted from the Preface as another typical sentence. Dr. Brandes's reputation deserved something better. His book might have been in any case rather stiff reading, but the ideas expounded in it, which include the aims and theorizings of other great German Socialists as well as of Lassalle, are many of them growing in imminence and vitality, and a sketch of their incubation in another country should have been equally instructive and absorbing. It may be noted that in his short account of the circumstances which culminated in Lassalle's tragic death Dr. Brandes is in substantial agreement with Princess Helene von Racowitza.

FEW words are needed to introduce *Charles II. and his Court*, by A. C. A. Brett (Methuen & Co.). We are told in the foreword on the wrapper that "the earlier chapters deal chronologically with the life of Charles and his followers up to the Restoration." In other words, the book is, to that point, a mere compilation. Mr. Brett's industry is indisputable; but the public might expect upon so well-worn a theme some touch of originality, some hint of freshness of treatment; and we have been unable to discern any such things. Mr. Brett, unaware of the powers of astronomical retrospection, does indeed quote Lilly the Astrologer as the only authority for thinking that the "star" which was conspicuous at Charles's birth was the planet Venus; the marked sympathies which he mentions later with satisfaction compel him to call the Commonwealth forces in 1651 "rebels"; he gives to Sophia, unmarried daughter of Elizabeth of Bohemia, the title of "Princess Palatine"; and he leaves out all mention of the birth of Charles's son in Jersey. On the whole, we would advise the reader to begin at the third chapter, in which Mr. Brett has collected in a convenient form the various accounts (including the King's own) of the escape after Worcester.

"After the Restoration strictly chronological order is abandoned, and an attempt made to portray vividly and in some detail the life of town, country, and Court." We have the first phase in chap. vi., where liveliness of portrayal is somewhat imperfectly secured by a frequent change from the past tense to the historic present and back again. For the life of the country we look in vain, although the 'Verney Memoirs' appears in the list of authorities; but in chap. ix. we have a picture of what "was perhaps a typical week in the life of a courtier not holding any great office of state."

Mr. Brett would perhaps have done well to confine himself to matters such as the above, where licence can be granted to imagination. Neither his historical equipment nor his power of condensation is at present sufficient to enable him to write effectively on what he calls "la haute politique." We find him endorsing the blunder, which incessant exposure fails to kill, that Louis XIV. promised money and soldiers to enable Charles "to establish the Catholic religion"; and we are told that as early as 1675 Shaftesbury "nearly overthrow the King," but that "Charles still undercut him." Mr. Brett actually thinks that after Shaftes-

bury's escape "the rest of the Whig chiefs" decided on attempting to kill the King.

"The final chapter discusses the mysteries of Charles's death and personality." The piecing together—without comment—of the varying narratives of the King's death is scarcely discussion; and Mr. Brett seems unaware of recent literature on the subject.

The Appendix contains some interesting little facts of detail; and the reproduction of the portraits is satisfactory.

TEN years ago we noticed a volume dealing with life in Scotland as reflected in Sir John Sinclair's famous 'Statistical Account,' issued in twenty-one volumes between 1791 and 1799. Now, from the same publisher (Paisley, Gardner), comes Mr. Alexander D. Cumming's *Old Times in Scotland*, which may be regarded as a companion and supplement to the earlier work, if not also to Mr. Henry Grey Graham's 'Social Life of Scotland in the Eighteenth Century.'

Mr. Cumming covers a smaller field than his predecessors as regards the life, manners, and customs of old Scotland, but his information is much more detailed and complete under certain of the heads he has chosen for illustration. It may be objected by some that he makes too much of the Kirk, and too little of the social and domestic life of the people. But no one needs to go further back than the works of Burns to realize how old Scotland was dominated by ecclesiastical tyranny; how at every point in her public and private concerns the minister and the kirk session stepped in, and, in the words of Henley, did their best "to make life miserable, to warp the characters of men and women, and to turn the tempers and affections of many from the kindly, natural way." If any one still wants to learn the paramount influence of the Kirk in narrowing the minds, perverting the instincts, and constraining the spiritual and social liberties of its subjects, he will find abundant means of instruction in the details drawn by Mr. Cumming from local records and general ecclesiastical history. This is a distinct feature of the book; and we emphasize it the more because the author is content for the most part to leave the facts to speak for themselves, neither, on the one hand, censuring the Kirk, nor, on the other hand, exaggerating the part which her severities may have played in the making of the nation. For the rest, we have much interesting information about education, schools and schoolmasters, old-time Scots at home and abroad, holidays and holiday observances, nature festivals, and many other things which differentiated Scotland of the past from Scotland of the present.

Mr. Cumming is so accurate as to leave little room for correction or criticism. But it is a point for debate whether he is right in his contention that the phrase "all tarred with the same stick" is derived from the Scottish Kirk practice of rousing sleepers during the sermon with a tarred stick. Brewer is more probably correct in deriving it from the custom of marking sheep. Curiously enough, "Tullochgorn" is twice so misspelt; and John Skinner, the author of this famous song, much praised by Burns, was not "under 17 years of age" in 1740, having been born in 1721. The book, which is commended in an introductory note by Prof. Cooper of Glasgow University, is furnished with a full Index.

If the reprint of *The Essays of Elia* (Chapman & Hall) is a fair sample of "the best books in the best form," such as the publishers promise to supply in their new

series, "The Books of the Verulam Club," then the engagement must refer to externals merely, for the text reprinted here is neither the author's nor "the best," but that of a posthumous edition disfigured by four grievous misprints, which are here reinforced with three original, but happily less disastrous errors. "Times" (tides), p. 40; "natural" (National), p. 109; "gallantly" (gallantry), p. 177; "art" (ark), p. 195—these are old blunders exploded long since, though three yet survive in Ainger's *édition de luxe*. Besides these, "of" intrudes in l. 2, p. 9, and vanishes from l. 7, p. 170 of the reprint before us; while "intellect," l. 14, p. 110, is docked of its final s. The cheapest texts—Kent's or Shepherd's—are free from such ugly blots.

But in another respect, and with results far more disastrous to the sense, this reprint does violence to "Elia": for Lamb's numerous and never otiose italics are here swept clean away. A licence more high-handed, or more astounding, it would be hard to find. A minor blemish arises from the fashion of omitting to indent the first line of the paragraph. The consequence is that, where a paragraph closes with a full line, all distinction between it and the succeeding matter is lost—as on pp. 114, 117, and 179. Altogether, notwithstanding its bold type, good paper, and attractive binding, it is impossible to commend this reprint of 'Elia.'

The Closet of Sir Kenelm Digby, Knight, Opened. Newly edited, with Introduction, Notes, and Glossary, by Anne Macdonell. (P. Lee Warner.)—Miss Macdonell, having come upon a posthumous publication compiled by Sir Kenelm Digby, has had the thought to issue it afresh, introducing it by a lengthy biographical notice. This Introduction, though not always conceived in a severely critical mood, is spirited and whole-hearted in its appreciation of its subject. We cannot admit that of all Digby's works his 'Closet,' "with the doubtful exception of his 'Memoirs,'" was best worth printing. For the 'Closet' is nothing but a book of still-room recipes and cookery receipts. "Its connection with his life and career is of the closest," writes Miss Macdonell, which assuredly is an extravagant saying.

The first thing that strikes one is that Sir Kenelm must have been seized of a tremendous passion for mead, for there are nearly one hundred pages dedicated to various receipts for meath or metheglin. The next point of interested wonder concerns the fantastic methods of the culinary art in those days. Almost anything and everything seems to have gone into the pot, and there was never a herb or growing plant which was not called into requisition. In these more eclectic days, with the railways, roads, and steamships at our service, perhaps there is no need to cull at our porch-door or from hedges and meadows. Somehow one doubts the efficacy of many of these recipes. Would they turn out all right? Would one fancy "a good quaking bag-pudding" with its muscadine and ambered sugar and its orange-flower water? On the other hand, "My Lady Diana Porter's Scotch collops" has a pleasant sound, and there is something attractive about "my lord of St. Alban's Cresme fouettee." Who would not drink a "tansy" if he had the chance offered to-day, even at the risk of subsequent repentance? House-keepers, if they find nothing more in this "Opened Closet," will find material for interest and wonder and compassion.

The Library for January (A. Moring) opens with an account of Worcester Cathedral Library by Archdeacon Wilson, which gives a great deal of information, not about the printed books in the library so much as about the early history of the library itself. Dr. Wilson, who is the librarian of the Cathedral, traces its mutations with great minuteness. The library consists of 277 manuscripts of the eleventh to sixteenth centuries, and about 5,500 printed books, together with the diocesan muniments. Mr. Axon contributes an addition to the contemporary criticism of Coleridge, this time from the pen of James Amphlett "the Father of the Press" in 1860. Mrs. Rose-Troup prints some book-bills of Katherine Parr from Berthelet, the King's Printer, which she came upon in the Record Office in the course of her investigation of the rebellions of Edward VI.'s reign. The books are religious—primers and the like—and are not easy to identify. Berthelet's prices for printing and binding are given. Miss Lee has an unusually good article on 'Recent Foreign Literature'—French and German. We sympathize with her indignation at being told that English literature lacks good biographies. The fact is that French and English biographies differ in method.

Miss Fowler summarizes the history of the Petrarch autographs and their relation to the printed text of the 'Canzoniere.' The permanent value of the article is enhanced by a useful bibliography of good texts of Petrarch, and of other works bearing on the subject. Mr. Pollard in 'False Dates in Shakespeare Quartos' congratulates bibliographers on the fact that the conclusions reached on technical considerations as to the false dates have been confirmed in another way capable of convincing persons who could not appreciate the force of the earlier arguments. It will be remembered that some correspondence on the subject appeared in our own columns. Mr. Pollard now directs attention to what appears to have been an attempt by Jaggard to remove the untrue dates from many of the copies.

"THE OXFORD LIBRARY OF PROSE AND VERSE" (Frowde) now adds to its repertory the *Poems of Clough*, edited by Mr. H. S. Milford, and—with the original designs of Charles Keene, and a nimbly allusive Introduction by Mr. Andrew Lang—Reade's quasi-historical romance *A Good Fight* (better known in its later and extended shape as 'The Cloister and the Hearth'), with which, after their quarrel with their old caterer Dickens, Messrs. Bradbury & Evans solicited the capricious palate of the British public at their new hebdomadary picnic, vigorously advertised as *Once a Week* (July–October, 1859).

Mr. Milford reprints in full Clough's part in 'Ambarvalia' from the first edition (1849), adding from the posthumous volume of 1862 (1) 'Mari Magno' and the short poems then first printed; (2) 'Amours de Voyage,' then collected from *The Atlantic Monthly*; and, lastly, (3) the revised text of 'The Bothie,' to which he appends the readings of the first (1848) edition as footnotes. By way of Introduction he prefixes a critical and historical sketch of the English hexameter, to the possibilities of which, as exhibited "clearly if imperfectly" in 'The Bothie,' he holds that Clough's significance in English poetry is chiefly owing. This brief essay (xiv pp.) shows a firm grasp of the terms of a complex problem, and is a genuine and substantial contribution to the study of English metre. Clough realized clearly, says Mr. Milford, what Southey, Longfellow, and Kingsley more or less dimly

felt—that stress, and not quantity, must be the foundation of an English hexameter; moreover, he did not trouble himself, as Southey did, to count the number of syllables in a verse, for he knew that this has nothing to do with an English (*i.e.*, accentual) hexameter, in which the so-called "extra-metrical" syllables serve to lighten the thump of the beat: indeed, it is the position and emphasis of the beat in each foot that alone determines the number and place of the unaccented syllables adjoining it. Again, Clough

"came near to knowing that if the accentual hexameter was to become naturalized... it must drop any pretension to imitate the music of the Homeric or Virgilian [quantitative] hexameter, and confine itself to producing legitimate effects of its own and in its own way. The English accentual hexameter is a stress-rhythm moving in triple time; when it comes to be scientifically written, quantity will be, so to speak, counterpointed to it. The classical hexameter is based on quantity, and the natural speech accents, frequently conflicting with the quantities, give it variety; if it must be expressed in the terms of modern accentual verse at all, the nearest equivalent is duple and not triple time."

Accentual verse is, in one sense, as old as English poetry; its birth as a mode of conscious art, however, dates from the preface to 'Christabel' (1816). "Since then," writes Mr. Milford,

"the tendency has been towards ever-increasing reliance on stress. From Shelley's.... 'Sensitive Plant,' through Browning's 'Prospice,'.... Matthew Arnold's 'Forsaken Merman,' Morris's 'Summer Dawn,'.... Meredith's 'Love in a Valley'.... to Swinburne's 'Hesperia' and 'Hymn to Proserpine,' the tendency is clear: the number of stresses, not the number of syllables, is what constitutes the metre...."

"The prosody of stressed verse still remains to be constructed.... when it appears it will not neglect Clough's 'Bothie.'"

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the fifth part of the list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth and death should be given together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15 Waterloo Place, S.W.

Mellon, Mrs. Sarah Jane, born Woolgar (1824–1909), actress.
Meredith, George O. M. (1828–1909), novelist and poet.
Merivale, Herman Charles (1839–1906), playwright and novelist.
Merriman, Henry Seton (pseud.). See Scott, Hugh Stowell.
Meyrick, Frederick (1826–1906), Prebendary of Lincoln.

Michie, Alexander (1833-1902), writer on China.
 Micklethwaite, John Thomas (1843-1906), architect.
 Midlane, Albert (1825-1909), hymn writer.
 Milbanke, Ralph Gordon Noel, 2nd Earl of Lovelace (1839-1906), author.
 Mitchell, Sir Arthur, K.C.B. (1826-1909), Scottish Commissioner in Lunacy and antiquary.
 Mitchell, John Murray, D.D. (1814-1904), missionary and author.
 Moberly, Robert Campbell, D.D. (1845-1903), Canon of Christ Church, Oxford, and theologian.
 Mocatta, Frederic David (1828-1905), Jewish philanthropist.
 Moens, William John Charles (1833-1904), Huguenot antiquary.
 Moir, Frank Lewis (1852-1904), song writer.
 Molloy, Gerald (1834-1906), Rector of the Royal University of Ireland and popular scientific writer.
 Molloy, James Lynam (1837-1909), song writer.
 Molloy, Joseph Fitzgerald (1858-1908), author.
 Molyneux. See More-Molyneux.
 Moncreiff, Henry James, 2nd Baron Moncreiff (1840-1909), lord of session.
 Moncrieff, Sir Alexander, K.C.B., F.R.S. (1829-1906), colonel and engineer.
 Mond, Ludwig, F.R.S. (1839-1909), man of science.
 Monkhouse, William Cosmo (1840-1901), poet and writer on art.
 Monro, David Binning (1836-1905), Homeric scholar; provost of Oriel College, Oxford.
 Monson, Sir Edward John, G.C.B. (1834-1909), diplomatist.
 Montagu, Lord Robert (1825-1902), political and religious controversialist.
 Montgomerie, Robert Archibald James, C.B. (1855-1908), rear-admiral.
 Montmorency. See De Montmorency.
 Moon, George Washington (1823-1909), author and inventor.
 Moor, Sir Ralph Denham Rayment, K.C.M.G. (1860-1909), High Commissioner of Southern Nigeria.
 Moore, Arthur William (1853-1909), Speaker of House of Keys and Manx antiquary.
 Moore, Stuart Archibald (1842-1907), legal antiquary.
 More-Molyneux, Sir Robert Henry, G.C.B. (1839-1904), admiral.
 Morfill, William Richard (1834-1909), Slavonic scholar.
 Morgan, Edward Delmar (d. 1909), linguist and traveller.
 Morgan, John (1827-1903), Welsh clergyman and author.
 Morley, 3rd Earl of. See Parker, Albert Edmund.
 Morris, Sir Lewis (1833-1907), poet.
 Morris, Sir Michael, Lord Morris and Killanin (1827-1901), Lord Chief Justice of Ireland.
 Morris, Philip Richard, A.R.A. (1833-1902), artist.
 Morris, Tom (1821-1908), golfer.
 Morris, William O'Connor (1825-1904), Irish county court judge and historian.
 Morris and Killanin, Lord. See Morris, Sir Michael.
 Mountford, Edward William (1855-1908), architect.
 Mowat, Sir Oliver, G.C.M.G. (1820-1903), Canadian statesman.
 Muir, Sir William, K.C.S.I. (1819-1905), Principal of Edinburgh University.
 Mullins, Edwin Roscoe (1849-1907), sculptor.
 Munby, Arthur Joseph (1829-1910), barrister and poet.
 Munro, James (1832-1908) Prime Minister of Victoria.
 Murphy, James (1826-1901), Irish judge.
 Murray, Alexander Stuart (1841-1904), classical archaeologist.
 Murray, Charles Adolphus, 7th Earl of Dunmore (1841-1907), traveller and author.
 Murray, David Christie (1847-1907), novelist and playwright.
 Muybridge, Edward (1830-1904), pioneer of the cinematograph.
 Napier, William Craig Emilius (1818-1903), general.
 Neil, Robert Alexander (1852-1901), classical scholar.
 Nelson, Eliza (Mrs. H. T. Craven) (1827-1908), actress. See under Craven, Henry Thornton.
 Nelson, Sir Hugh Muir, K.C.M.G. (1835-1905), Prime Minister of Queensland.
 Nettleship, John Trivett (1841-1902), artist and author.
 Neubauer, Adolf (1831-1907), Hebraist.
 Neville, Latimer, 6th Baron Braybrooke (1827-1904), master of Magdalene College, Cambridge.
 Neville, (Thomas) Henry (Gartside) (1837-1910), actor.

Newdigate-Newdegate, Sir Edward, K.C.B. (1825-1902), lieutenant-general.
 Newdigate, Sir Henry Richard Legge, K.C.B. (1832-1908), lieutenant-general.
 Newmarch, Charles Henry (1824-1903), divine and author.
 Newnes, Sir George, 1st Bt. (1851-1910), newspaper and magazine proprietor.
 Newton, Alfred, F.R.S. (1829-1907), zoologist.
 Nicholson, Sir Charles, 1st Bt. (1808-1903), Chancellor of the University of Sydney.
 Nicholson, George (1847-1908), botanist.
 Nicol, Erskine, A.R.A. (1825-1904), painter.
 Nicolson, Mrs. Violet Adela, "Laurence Hope" (d. 1904), poetess.
 Nightingale, Florence, O.M. (1820-1910), hospital reformer and philanthropist.
 Nodal, John Howard (1831-1909), journalist and writer on Lancashire dialect.
 Norman, Sir Henry Wylie, G.C.B., G.C.M.G. (1826-1904), field-marshal.
 Northbrook, 1st Earl of. See Baring, Sir Thomas George.
 Northcote, James Spencer, D.D. (1822-1907), Principal of Oscott College and archaeologist.
 Norton, 1st Baron. See Adderley, Charles Bowyer.
 Norton, John (1821-1904), architect.
 Novello, Clara Anastasia, Countess Gigliucci (1818-1908), singer.
 Nunburnholme, 1st Baron. See Wilson, Charles Henry.
 Nunn, Joshua Arthur (1853-1908), veterinary surgeon.
 Nutt, Alfred Trübner (1856-1910), publisher and Celtic scholar.
 Oakeley, Sir Herbert Stanley, 4th Bt. (1830-1903), musical composer.
 O'Brien, Charlotte Grace (1845-1909), Irish novelist and social reformer.
 O'Brien, Cornelius (1843-1906), Roman Catholic Archbishop of Halifax, N.S., and theologian.
 O'Brien, James Francis Xavier, M.P. (1831-1905), Fenian; member of Parliament.
 O'Callaghan, Sir Francis Langford, K.C.M.G. (1839-1909), Indian railway engineer.
 O'Connor, James (1836-1910), Fenian and journalist.
 O'Connor, Charles Owen, The O'Connor Don (1838-1906), Irish politician.
 O'Connor, Sir Nicholas Roderick, G.C.B., G.C.M.G. (1843-1908), diplomatist.
 O'Doherty, Kevin Izod (1825-1905), Irish agitator and physician.
 Ogle, William (1827-1905), physician and statistician.
 O'Hanlon, John (1821-1905), hagiologist.
 Oldham, Henry (1815-1902), obstetric physician.
 O'Leary, John (1830-1907), Fenian writer.
 Oliver, Samuel Pasfield (1838-1907), captain R.A., geographer and antiquary.
 Olpherts, Sir William, V.C., G.C.B. (1822-1902), soldier.
 Ommamney, George Druce Wynne (1819-1902), theological writer.
 Ommamney, Sir Erasmus, F.R.S. (1814-1904), admiral.
 Orchardson, Sir William Quiller, R.A. (1835-1910), artist.
 Ord, William Miller (1834-1902), physician.
 O'Rell, Max (pseud.). See Blouët, Paul.
 Ormerod, Eleanor Anne (1828-1901), entomologist.
 Orr (Mrs.), Alexandra Sutherland, born Leighton (d. 1903), biographer of Browning.
 Osborne, Walter Frederic (1860-1903), Irish portrait painter.
 O'Shea, John Augustus (1840-1905), journalist.
 O'Shea, William Henry (1840-1905), Irish politician.
 Osler, Abraham Follett, F.R.S. (1808-1903), meteorologist.
 Otté, Elise C. (1818-1903), writer on Scandinavian history.
 Ouida (pseud.). See Ramé, or De la Ramée, Maria Louise.
 Overton, John Henry (1835-1903), Canon of Peterborough, Church historian.
 Overton, 1st Baron. See White, John Campbell.
 Owen, Robert (1820-1902), writer on canon law.
 Oxley, James Macdonald (1855-1907), Canadian lawyer and novelist.
 Paget, Sidney Edward (1860-1908), portrait painter.
 Pakenham, Sir Francis John, K.C.M.G. (1832-1905), diplomatist.
 Palgrave, Sir Reginald Francis Douce, K.C.B. (1829-1904), Clerk of the House of Commons.
 Palliser, Henry St. Leger Bury (1839-1907), Admiral, Commander-in-Chief on Pacific Station.
 Palmer, Sir Arthur Power, G.C.B. (1840-1904), General, Commander-in-Chief in India.
 Palmer, Sir Charles Mark (1822-1907), ship-builder and colliery owner.

Palmer, Sir Elwin Mitford, K.C.B., K.C.M.G. (1852-1906), Egyptian finance official.
 Palmer, Samuel (1820-1903), biscuit-maker and philanthropist.
 Panton, Arthur William (d. 1906), mathematical writer.
 Parish, William Douglas (1836-1904), writer on provincial dialects.
 Parker, Albert Edmund, 3rd Earl of Morley (1843-1905), politician.
 Parker, Charles Stuart (1830-1910), politician and author.
 Parker, Joseph, D.D. (1830-1902), preacher.
 Parr, Louisa, born Taylor (d. 1903), novelist.
 Parry, Joseph (1841-1903), musical composer.
 Parsons, John R. (1826-1909), portrait painter.
 Parsons, Sir Lawrence, Bt., 4th Earl of Rosse, F.R.S. (1840-1908), astronomer.
 Paton, John Gibson, D.D. (1824-1907), missionary to the New Hebrides.
 Paton, Sir Joseph Noel, R.S.A. (1821-1901), painter.
 Paul, Charles Kegan (1828-1902), publisher and author.
 Paul, William (1823-1905), horticulturist.
 Pauncefoot, Sir Julian, 1st Baron Pauncefoot of Preston, G.C.M.G., G.C.B. (1828-1902), diplomatist.
 Payne, Edward John (1844-1904), historian of America.
 Payne, Joseph Frank (1840-1910), physician.
 Pearce, Stephen (1819-1904), portrait painter.
 Pearce, Sir William George, 2nd Bt. (1861-1907), benefactor to Trinity College, Cambridge.
 Pearson, Sir Charles John, Lord Pearson (1843-1910), Scottish judge.
 Pease, Sir Joseph Whitwell, 1st Bt. (1828-1903), Quaker and director of mercantile enterprise.
 Peek, Sir Cuthbert Edgar, 2nd Bt. (1855-1901), man of science.
 Peel, Sir Frederick, K.C.M.G. (1823-1906), railway commissioner.
 Peel, James, R.B.A. (1811-1906), landscape painter.
 Peile, Sir James Braithwaite, K.C.S.I. (1833-1906), Anglo-Indian civilian.
 Peile, John (1838-1910), Master of Christ's College, Cambridge.
 Pelham, Henry Francis (1846-1907), President of Trinity College, Oxford.
 Pell, Albert (1820-1907), agriculturist.
 Pemberton, Thomas Edgar (1849-1905), journalist and biographer.
 Pennant, George Sholto Gordon Douglas, 2nd Baron Penrhyn (1836-1907), colliery owner.
 Penrhyn, 2nd Baron. See Pennant, George Sholto Gordon Douglas.
 Penrose, Francis Cranmer, F.R.S. (1817-1903), architect and antiquary.
 Penrose, Sir Penrose Charles (1822-1902), general.
 Percy, Henry Algernon George, Earl Percy (1871-1909), politician.
 Perkin, Sir William Henry, F.R.S. (1838-1907), discoverer of aniline dyes.
 Perkins, Sir Æneas, K.C.B. (1838-1901), general R.E.
 Perowne, Edward Henry, D.D. (1827-1906), Master of Corpus Christi College, Cambridge.
 Perowne, John James Stewart, D.D. (1823-1904), Bishop of Worcester.
 Petit, Sir Dinshaw Manockjee, 1st Bt. (1823-1901), Parsee merchant and philanthropist.
 Petre, Sir George Glynn, K.C.M.G. (1822-1905), diplomatist.
 Petrie, William (1821-1908), electrician.
 Pettigrew, James Bell, F.R.S. (1834-1908), anatomist.
 Phear, Sir John Budd (1825-1905), judge in India and author.
 Piatti, Carlo Alfredo (1822-1901), violoncellist.
 Pickard, Benjamin (1842-1904), labour leader.
 Pirbright, 1st Baron. See De Worms, Henry.
 Pitman, Sir Henry Alfred (1808-1908), physician.
 Platts, John Thompson (1830-1904), Persian scholar.
 Playfair, William Smoult (1836-1903), obstetrician.
 Plunkett, Sir Francis Richard, G.C.B., G.C.M.G. (1835-1907), diplomatist.
 Podmore, Frank (1856-1910), writer on psychical research.
 Pollen, John Hungerford (1820-1902), artist and author.
 Pooley, Edward (1838-1907), cricketer.
 Poore, George Vivian (1843-1904), physician.
 Pope, George Uglow, D.D. (1820-1908), missionary and Tamil scholar.
 Pope, Samuel, K.C. (1826-1901), barrister.
 Pope, William Burt (1822-1903), President of Wesleyan Conference and theologian.
 Pott, Alfred (1822-1908), Principal of Cuddesdon.
 Powell, Frederick York (1850-1904), Regius Professor of Modern History at Oxford.
 Pratt, Joseph Bishop (1854-1910), mezzotint engraver.

Price, Frederick George Hilton (1843-1909), antiquary.
 Price, Thomas (1852-1909), Prime Minister of South Australia.
 Pringle, John Eliot (1843-1908), Rear-Admiral.
 Prinsep, Valentine Cameron, R.A. (1838-1904), artist.
 Prior, Melton (1845-1910), war artist of *The Illustrated London News*.
 Procter, Francis (1813-1905), writer on the Prayer Book.
 Proctor, Robert (1868-1903), bibliographer.
 Probert, Lumsden (1835-1902), physician and art critic.
 Prout, Ebenezer (1835-1909), musical composer and critic.
 Pryce, John (1830-1903), Dean of Bangor.
 Prynn, George Rundle (1818-1903), hymn writer.
 Puddicombe, Mrs. Beynon ("Allen Raine") (d. 1908), Welsh novelist.
 Pullen, Henry William (1836-1903), author of 'The Fight at Dame Europa's School.'
 Pyne. See Bodda-Pyne.
 Quilter, Harry (1851-1907), art critic.
 Rae, William Fraser (1835-1905), author.
 Raggi, Mario (1821-1907), sculptor.
 Railton, Herbert (1857-1910), black-and-white artist.
 Raine, Allen (pseud.). See Puddicombe, Mrs. Beynon.
 Raines, Sir Julius Augustus Robert, G.C.B. (1827-1909), general.
 Rainy, Robert, D.D. (1826-1906), Principal of New College, Edinburgh.
 Ramé, or de la Ramée, Maria Louise, "Ouida" (1839-1908), novelist.
 Ramsay, Alexander, LL.D. (1823-1909), Scottish journalist.
 Randall, Richard William, D.D. (1824-1906), Dean of Chichester.
 Randles, Marshall, D.D. (1826-1904), President of the Wesleyan Conference.
 Randolph. See Hingeston-Randolph.
 Randolph, Sir George Granville, K.C.B. (1818-1907), admiral.

The author is an Alsatian, and the story is concerned with the generation of Alsatis who have grown up since 1870.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

AMONG the books to be published shortly by Messrs. Macmillan are 'War Rights on Land,' by Dr. J. M. Spaight, with a Preface by Mr. Francis D. Acland; 'The Nature of Personality,' a course of lectures by the Rev. W. Temple; and 'The Revelation of the Son of God,' the Hulsean Lectures 1910-11, by the Rev. E. A. Edghill.

THE English translation of Prof. Henri Bergson's 'Creative Evolution,' by Dr. Arthur Mitchell, will be published on March 3rd by the same firm.

MESSRS. KEGAN PAUL will publish early this spring four travel-books: 'How to See Italy (by Rail),' a profusely illustrated handbook by Mr. Douglas Sladen; 'Through the Alps to the Apennines,' by Mr. Paul G. Konody, the record of a motoring trip, also well illustrated; 'Letters from Finland' by Miss Rosalind Travers; and 'The Fair Dominion,' a volume of Canadian impressions and reflections by the clever young novelist Mr. R. E. Vernede, with illustrations in colour by Mr. Cyrus Cuneo.

MESSRS. DENT's new books will include 'Adam Mickiewicz, the National Poet of Poland,' by Monica M. Gardner; 'The Coast Scenery of North Devon,' by Mr. E. A. Newall Arber; 'Sinai in Spring,' by Mr. M. J. Rendall, with photographs taken by the author; an 'Historical Guide to London,' by Mr. G. R. S. Taylor; and 'International Law,' by Mr. F. E. Smith, M.P.

MESSRS. MACMILLAN have two new novels nearly ready: 'Nina,' by Miss Rosaline Masson, the story of the daughter of a pretty French singer; and 'Trevor Lordship,' by Mrs. Hubert Barclay, the history of a husband and wife who fall in love after marriage.

NEXT Tuesday Messrs. Smith & Elder will have ready 'The Story of Cecilia,' by Katharine Tynan. This, like many of the author's tales, has an Irish setting. Cecilia's love-story is strangely interwoven

with her mother's history, and almost misses its happy conclusion by a chapter of accidents.

THE same firm are adding to their "Waterloo Library" Mr. A. E. W. Mason's Indian story 'The Broken Road,' of which six editions have been called for in the more expensive form; and on the 27th inst. they promise a volume of stories of the sea and fishermen's lives, entitled 'The Wine-Drinker,' by Mr. W. J. Batchelder.

THE March number of *Harper's Magazine* will include 'Man and Dog,' a story of the supernatural, by Mr. Laurence Housman; 'Exploring the Ocean's Floor,' an account of the recent English Deep-Sea Expedition, by Sir John Murray; and 'A Modern Temple of Education,' in which Mr. David Gray writes on the new public library of New York shortly to be opened.

AMONGST other papers in *Chambers's Journal* for March are the following: 'The Elephant's Dying Ground,' by Mr. Douglas Blackburn; 'The Latest about Radium,' by Mr. Robert S. Ball; 'Continental Schools and Schoolgirls,' by Miss May Baldwin; and 'A Memory of Olney,' by Mr. H. H. Brown.

MESSRS. SIDGWICK & JACKSON promise 'The Glory that was Greece,' by Mr. J. C. Stobart, an account of the ancient Hellenic civilization; 'The Celestial Omnibus, and other Stories,' by Mr. E. M. Forster; and a reissue of the novels of George Gissing.

MR. JOHN N. RAPHAEL writes from Paris:—

"While bowing under the rod of your critic's disapproval of my translation of 'Marie Claire,' I protest against his accusation of prurient modesty. I have doubts as to my modesty, prurience I dislike, but a combination of the two is anathema to me."

The definite instance of an omission which Mr. Raphael adds seems to us to be justified, and everybody must agree as to the difficulty of deciding on such matters.

WE regret to record the death, at the age of 86, of Mr. John Dennis, who was for several years a regular contributor to *The Athenæum*. Mr. Dennis, who was the younger brother of the antiquary Mr. George Dennis, the author of 'Cities and Cemeteries of Etruria,' was a sympathetic and discriminating critic of English literature, and his writings include: 'Studies in English Literature'; 'English Sonnets: a Selection'; 'Heroes of Literature: English Poets'; 'The Age of Pope' (one of the "Handbooks of English Literature" edited by Prof. Hales); 'Robert Southey: his Life told in his Letters'; 'The Realms of Gold'; 'English Lyrics from Shakespeare to Milton'; and 'Jeremy Taylor's Golden Sayings.' He also edited the Aldine edition of Scott's 'Poetical Works' and 'The Chiswick Shakespeare.' He was the author of some original sonnets and poems, which mainly appeared in *The Spectator*.

THE death is announced of Mr. John Ingram, for thirty years sub-librarian of

the Mitchell Library, Glasgow. He was an authority on Scottish poetry, and edited a number of small volumes, including 'Tales of the Scottish Peasantry,' by Alexander and John Bethune; 'Graphic Scottish Anecdotes'; and a new edition of Cleishbotham's 'Dictionary of the Scottish Language.'

FOLLOWING the meeting held in Ecclefechan in November to promote a Scottish memorial to Carlyle, another with the same object was held in Glasgow last week. Memorials at Ecclefechan and at Glasgow were both suggested; and a Committee was appointed to consider further the whole matter. The Ecclefechan birth-house, which was recently purchased for preservation as a Carlyle shrine, has frequent visitors from all quarters of the globe.

MR. F. A. TALBOT, who went last year on a mission to Canada on behalf of *The World's Work*, has written an account of his experiences in Western Canada, which Messrs. Cassell are to publish shortly under the title of 'The New Garden of Canada: by Pack-horse and Canoe through Unexplored British Columbia.'

THE CHARLES LAMB DINNER last Saturday at Cambridge was a success, Prof. Raleigh's discourse being admirable alike in style and matter. The dinner itself had a flavour of Elia's tastes, and offered to residents deep in University politics an agreeable interlude.

SIR LAUDER BRUNTON has been elected to fill a vacancy on the Committee of the London Library.

THE REV. KIRKWOOD HEWAT will shortly publish with Messrs. Stephen & Pollock of Ayr 'Peden the Prophet.' Mr. Hewat makes use of fresh material bearing on the life and times of his subject.

M. HENRI DE RÉGNIER, who has been elected to the French Academy in succession to the Vicomte Melchior de Vogüé, is known as a writer of verse, a novelist, and a dramatic critic.

THE Belgian press has lost a prominent representative in Léon Chomé, the editor of *La Belgique Militaire*. Born in 1864, and educated at the École Militaire, he entered the Carabinier regiment as a sub-lieutenant in 1882. After seven years of soldiering, during part of which he was teacher of military history at his old school, he quitted the army and devoted himself to journalism. In 1896 he became editor of the paper with which he was associated till the day of his death. He was the promoter and founder of the League of Retired Officers, and took an active part in the agitation which resulted in the recent Army Bill abolishing the privilege of substitution.

RECENT Government Publications of some interest include Register of the Privy Council of Scotland, Third Series, Vol. III., 1669-72 (post free 15s. 6d.); Scotch Education, Minute, and Circular (½d. and 1d. each); and Education, Syllabus for Art-Class Teachers (post free 1½d.).

SCIENCE

The Mutation Theory: Experiments and Observations on the Origin of Species in the Vegetable Kingdom.—Vol. II. *The Origin of Varieties by Mutation.* By Hugo de Vries. (Kegan Paul & Co.)

PROF. FARMER AND HIS COADJUTOR MR. DARBISHIRE are to be congratulated on the completion of their translation of Prof. de Vries's 'Mutation Theory,' the first volume of which was noticed in *The Athenæum* of May 7th, 1910. The excellence of the translation referred to then is maintained in the concluding volume, and the English version of this important work will be of great assistance to those biologists who are unable to read the original.

In the present volume the author deals with the origin of varieties, and the explanation of them which the mutation theory affords. Although the facts and experiments recorded are drawn almost entirely from the vegetable kingdom, Prof. de Vries believes that the principles upon which they are founded are equally applicable to animal organisms. The keystone of his argument is the contention that the hereditary characters of a species, transmitted from generation to generation, are transmitted, not as a composite whole, but as separable unit-characters which are liable to change and variation in regard to the appearance or form of the units. It is these partial changes in the new generation which constitute varieties. Prof. de Vries represents his idea as a struggle between two antagonistic characters—one being the original or normal character of the species; the other, the new character or anomaly. In such a contest the normal character may be active and the anomaly latent or semi-latent through various grades until the position is reversed, the normal character becoming latent and the anomaly active, thus producing a new variety of the original species which is maintained without further selection. The older or specific character is intensified by unfavourable conditions, while the anomaly or younger character is intensified by favourable ones, and the most susceptible stage seems to be that of the young embryo in the ripening seed. As an example the author cites a variety with variegated leaves, and traces its origin as follows: original species, leaves green; half-race, rarely variegated; ever-sporting variety, Var. *variegata*; constant variety, Var. *aurea*. In the "half-race" the anomaly or new character is only occasionally present, the majority of the seedlings corresponding to the parent form. In the "ever-sporting" variety, or, as he also calls it, the "middle race," the proportion of the two characters appearing is more nearly equal; whilst in the constant variety the new

character has established itself, and the normal character has become latent or semi-latent.

In the development of a new character, therefore, Prof. de Vries recognizes two phases: the production of the new internal character, and its "activation" or manifestation. These may, or may not, occur at the same time. He says:—

"Every mutation consists fundamentally in the transposition of an internal character; from being latent it becomes active; from semi-latent, semi-active; and so on. If new factors are becoming active for the first time after having been latent through a shorter or longer series of ancestors, we speak of PROGRESSIVE mutations. If the active characters again become latent, the process is a RETROGRESSIVE one. In all other cases it is DEGRESSIVE."

Vegetative mutations, or bud-variations, also occur, and are seen as vegetative segregation in hybrids, as vegetative atavism in ever-sporting varieties, or as true vegetative mutations, usually atavistic in nature.

The author believes that the real difference between the terms "species" and "variety" corresponds to the difference between the formation of a new character and the simple transposition of a pre-existing one. Those forms which arise from the production of a new character he would regard as species; those which depend upon its latency or activity he would term varieties. According to this view, he would look upon Mendelian hybrids as retrogressive or degressive mutations, i.e., true varieties, and unisexual hybrids as progressive mutations, or elementary species; this opinion is supported to some extent by the fact that the latter are much less fertile than the former. He claims that the extinction of large groups of species proves that the variability resident in them was insufficient to adapt them to a changing environment, and that ordinary fluctuating variability is linear, oscillating only in a plus or minus direction, whilst adaptations demand a variability in all directions. Natural selection, he says, "is a sieve....How the struggle for existence sifts is one question; how that which is sifted arose is another." Further, the first insignificant beginnings of new characters do not come under the operation of natural selection, since they are of no value in the struggle for existence; hence there is some justification for the conclusion that every organ must have originated from a mutation, and not through fluctuating variations.

It has been impossible to give more than a brief outline of some of the main arguments by which Prof. de Vries supports his theory. They have been before the scientific world for some years, and it may be said that, aided by the work of Prof. Bateson and the discoveries of the Mendelian school, they have continued to gain adherents. In this volume, in particular, they are supported by an array of facts and experimental observations which cannot lightly be passed over.

The truth of the hypothesis of the existence of unit-characters is now generally conceded, and there is little doubt that the distinction Prof. de Vries draws between the value of fluctuating and discontinuous variations in progressive evolution is a real one. On the other hand, some varieties are not constant when expected to be so, and there is always the difficulty of transgressive variability, which produces forms, apparently transitional, whose true nature is only revealed by breeding experiments. Many of these changes, also, appear to depend to a considerable extent on external conditions—cultivation and so forth. The author states: "Fluctuating variability is a phenomenon of nutrition, whereas mutability is the result of hitherto unknown causes." If the causes are unknown, is he certain that he can exclude nutrition? And if cultural conditions cannot be excluded in the observations of mutability so far made, would mutability have occurred under natural conditions?

Sir W. T. Thiselton-Dyer concluded, after observing a number of mutations in cultivated plants, that the specific stability at the beginning of the experiments was such that the changes would not have occurred in nature: in fact, that it was a question of external conditions and environment. It may safely be said that the more the life-habits of a plant are disturbed, the more probably will mutability ensue. Prof. de Vries's attempt to locate the unit-characters by his theory of Intracellular Pangenesis is too speculative to be of much use. It is possibly true that the evidence adduced in support of the theory of mutation suggests that some such explanation would fit the facts, but a final judgment must depend not so much upon the applicability of any theory as on proof of its accuracy.

In spite, however, of these criticisms, the book is one to be read, and read again.

OUR LIBRARY TABLE.

Waves of the Sea, and other Water Waves. By Vaughan Cornish. (Fisher Unwin.)—All science is measurement, and knowledge is scientific in proportion as the mind of the man seeking it conforms itself to this habit of measurement. In these days, when the striking results—but the results only—of particular departments of science are published in magazines and newspapers, in a form that may be described as at least semi-digested, fit for assimilation by any mental dyspeptic, the minds of the majority tend to become less and less scientific, whilst appearing to be more so. The scientific observations that can only be made by the few are talked about familiarly by the many, and, almost as a consequence, the scientific observations that might be made by the many are made by very few. Thus all the world talks glibly of the wonders that Madame Curie and Prof. Schiaparelli have discovered, though these require not only patience, accuracy, skill, and long training in the worker, but also elaborate and expensive apparatus, and only the Curies and Schiaparellis, and not the world at large, possess these requisites.

To observe waves, however, no elaborate apparatus—no apparatus at all—is required, but only the patience and care, the seeing eye and the scientific habit, which are within the reach of all. But who observes waves? who even conceives that it is possible to observe them scientifically? Yet all come in contact with wind and water (the factors in wave-formation), though the latter may be only a pond; many go to the seaside, where waves of the sea are always to be seen; and others go down to the sea in ships, where waves may be not only seen, but also felt. Yet probably the only scientific information that these all express is that “they have heard from some one that the seventh wave is always the biggest, but that they have never counted to see if it is so.”

To all such Mr. Vaughan Cornish's book will be a revelation. It is written simply; technical expressions that give the appearance of learning are avoided; it is easy to understand; but it is absolutely scientific, for the habit of measurement is conformed to throughout. We will not give any of Mr. Vaughan Cornish's results, for, as we said above, scientific knowledge is not the possession of scientific results, but the power of correlating facts, and of deducing results from the correlation. We will, therefore, only indicate his method in one particular line, and perhaps his investigation of the size and speed of deep-sea waves may best show how he chooses his facts to correlate. Here he takes as his basis of measurement, not primarily the size and length of the waves themselves, but the area of the water on which they are formed. He starts with small ponds, then greater ponds, then great lakes and greater lakes—Coniston Water, Lake Geneva, Lake Superior—then semi-enclosed seas such as the Mediterranean and the China Sea, then the North Atlantic and North Pacific Oceans, then the more stupendous oceans of the South Atlantic and South Indian, and finally that greatest of all the oceans, stretching right round the globe, the South Pacific. And he shows that there is a connexion, and how it may be found, between the characteristics of the waves produced on the Round Pond in Kensington Gardens and on the greatest ocean of the world.

We recommend all who go on or beside the sea to read Mr. Vaughan Cornish's book, and when they have read but a little way in it, to accord him the sincerest form of flattery by imitating him in observing, and in his manner of observing, the “Waves of the Sea and other Water Waves.”

Inorganic Chemistry. By F. Stanley Kipping and W. H. Perkin. Part II. (W. & R. Chambers.)—This second volume on ‘Inorganic Chemistry’ by the Professors of Chemistry at Manchester and Nottingham is a necessary adjunct to Part I., and is of the same high standard of excellence. The earlier part of this volume is devoted to a further consideration of physical and chemical change, a study of chemical equilibrium, and short discussions on osmotic pressure, the ionic dissociation theory, and other fundamental principles and theories of the science. The later part of the volume gives a systematic account of the better-known elements arranged on the periodic system, and short references to spectrum analysis and radio-activity. The more advanced matter, suitable for a third-year course, is distinguished by a marginal dark line. There are 120 figures, a coloured plate of spectra, and two large tables illustrative of the periodic arrangement of the elements. The matter and arrangement, it is almost

needless to say, are excellent, and make the book a valuable substitute for many of the numerous text-books on the subject.

One or two minor matters only strike us as capable of improvement, e.g., on p. 514 we wish that the expression “albuminoids or proteids” might be modified; in modern phraseology the words are not used by physiologists as synonyms, and the word *protein* has largely replaced *proteid*. Again, on p. 518 the authors speak of “the ‘nitrifying’ bacteria obtained from leguminous plants,” and state in a foot-note that “the term ‘nitrifying’ bacteria is applied not only to organisms which are capable of fixing atmospheric nitrogen, but also to those which bring about the formation of nitrates from nitrogenous organic matter.” Now the term “nitrifying” was first applied (possibly unfortunately) to the last-mentioned, but earlier discovered bacteria, whilst the first-mentioned, but later discovered bacteria were, and still are, called “nitrogen-fixing” bacteria: any confusion between the two groups is to be deplored.

The Birds of the British Islands. By Charles Stonham. Part XVII. (Grant Richards.)—This work is proceeding by somewhat slow stages to its twentieth and last section. The present part is devoted to some of the gulls and their dainty cousins the terns. These lend themselves perhaps better to Miss Medland's delicate treatment in black and white than any other birds on the list. A liberal number of plates is devoted to the careful delineation of the chief phases of immaturity and adolescence. The picture of the lesser tern on the wing is singularly beautiful. The text still adheres strictly to the restrained style of a book of reference.

SOCIETIES.

ROYAL.—Feb. 9.—Sir Archibald Geikie, President, in the chair.—The following papers were read: ‘Certain Physical and Physiological Properties of Stovaine and its Homologues,’ by Messrs. V. H. Veley and W. L. Symes; ‘The Effect of some Local Anæsthetics on Nerve,’ by Messrs. W. L. Symes and V. H. Veley; and ‘Experimental Researches on Vegetable Assimilation and Respiration,’ Parts VIII. and IX., by Messrs. F. F. Blackman and A. M. Smith.

SOCIETY OF ANTIQUARIES.—Feb. 2.—Dr. C. H. Read, President, in the chair.

Mr. Charles Foulkes read a paper on ‘Italian Armour from Chalcis in the Ethnological Museum at Athens.’ This collection of armour of the fourteenth and fifteenth centuries was discovered during some alterations to the Castle of Chalcis in Eubœa in 1840. It has never been carefully examined or labelled, and it is only recently that Mr. Ramsay Traquair, acting on behalf of the Byzantine Research and Exploration Fund, has photographed, and made notes upon, the most important pieces. There are some sixty helmets of various types, the most important of which are three great basinetts and a large variety of salades. There is a great deal of body-armour in a more or less dilapidated condition, amongst which some breastplates worn with the brigandine are worthy of notice, particularly so because they bear armourers' stamps, one of which suggests Milanese origin. There has been no attempt at restoration, and portions of lining, straps, and coverings are still *in situ*. The Castle of Chalcis was taken from the Venetians by the Turks in 1470, and the specimens exhibited range from the latter part of the fourteenth century to this date.

Mr. O. M. Dalton read notes on a collection of personal ornaments and rings from Chalcis, now in the British and Ashmolean Museums, and on finger-rings bearing representations of the five wounds of our Lord.

Feb. 9.—Dr. C. H. Read, President, in the chair.

Mr. Neil Baynes, in presenting his Report as

Local Secretary for North Wales, gave some descriptions of the megalithic remains of Anglesey. Out of 54 cromlechs which are known to have existed, only 27 remain at the present day, and of these the examples at Bryn Celli ddu, Plas Newydd, Presaddfed, Bodowyr, Pant y Saer, Ty Newydd, and Lligwy are in the best state of preservation. Twenty-five meini hirion are still standing, but 14 at least have been destroyed. The finest stones are to be found at Bryn Gwyn in the parish of Llanidan. A chambered mound at Plas Newydd has been roughly excavated and its cist laid open; at its entrance is a curious stone with two semicircular depressions in its upper edge.

The safe custody of certain monuments has recently been entrusted to the Commissioners under the Ancient Monuments Protection Act, 1882. Lord Sheffield has transferred the cyttiau on Holyhead Mountain; the meini hirion at Plas Feilw, Ty Mawr, and Dindryfal; and also the cromlechau at the last-mentioned spot and at Trefignath. Lord Boston has secured protection for the cromlechau at Bodowyr and Lligwy; and Major Fox Pitt has done the same for the cromlechau at Presaddfed. It is expected that before long other monuments will be placed in the custody of the Commissioners.

Mr. P. M. Johnston drew attention to a series of small carved heads on the south door of Wotton Church, Surrey. These heads are those of a layman, a priest, a queen, a king, a peasant, and a Pope wearing the early form of pyramidal tiara. The doorway can be ascribed architecturally to a date between 1200 and 1215. This being so, Mr. Johnston was of opinion that the carved heads are a pictorial record of the great Interdict, and he would identify them as follows: The layman, the lord of the manor of Wotton; the priest, the Rector of Wotton; the queen, Isabella of Angoulême; the king, King John; and the Pope, Innocent III. who put England under the Interdict. The face of the Pope appears to be distorted with rage. Mr. Johnston was of opinion that the man who carved these heads, or his employer, whatever his views as to King John's actions, deliberately proclaimed that his sympathies in the matter of the Interdict were with the people, and not with the Pope, whom he therefore caricatured in his carving.

Mr. H. Clifford Smith exhibited an English carved wooden reliquary case, dating about 1500. The case is apparently of pear or box wood, and bears in front figures of St. James and St. John, and on the back and sides the conventional flower pattern common in embroidery and other works of art of this date.

ZOOLOGICAL.—Feb. 7.—Prof. E. A. Minchin, V.P., in the chair.—The Secretary read a report on the additions to the menagerie during December, 1910. Dr. C. W. Andrews exhibited a skull of a sabre-toothed tiger (*Smilodon californicus*) from an asphalt deposit in California.—The Secretary exhibited a mounted specimen of the Platypus, which had been lent by Mr. P. St. Michael Podmore.—Mr. Edward Gerrard exhibited the head of a caribou, shot by Sir John Rogers in British Columbia, which had a distinct third antler over the centre of the orbital arch of the frontal bone. A very fine eland head, obtained by Major Gordon on the Bahr-el-Ghazel, and three fine heads of white-tailed deer were also exhibited.

Dr. W. N. F. Woodland gave an account of a paper on the structure and function of the gas-producing mechanism (“red body”) found in connexion with the gas-bladders of many Teleostei (Physoclisti and Physostomi).—Prof. J. Cossar Ewart gave a summary of his memoir entitled ‘Skulls of Oxen from the Roman Station at Newstead, Melrose,’ illustrating his remarks by lantern-slides.—Mr. G. P. Farran presented a paper, communicated by Dr. W. T. Calman, on Copepoda of the family Corycæidæ collected by Sir John Murray and Dr. C. W. Andrews at Christmas Island. The collection, though small, was exceedingly rich in species, and the genus *Corycæus* was especially well represented.—Mr. H. R. Hogg read a paper on ‘Some New Zealand Spiders,’ based on a small collection sent by Prof. C. Chilton of Christchurch, New Zealand.—Mr. Oldfield Thomas read a paper on mammals collected in the provinces of Kan-su and Szechwan, Western China, by Mr. Malcolm Anderson, for the Duke of Bedford's exploration of Eastern Asia. This collection, from a region hitherto almost unrepresented in the British Museum, was perhaps the finest that had ever come from China, at least so far as small mammals were concerned: 47 species were included, represented by 350 specimens, presented, as on previous occasions, to the National Museum by his Grace.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 7.—Mr. Alexander Siemens, President, in the chair.—The paper read was 'The Detroit River Tunnel, between Detroit, Michigan, and Windsor, Canada,' by Mr. W. J. Wilgus.—It was announced that 18 candidates had been admitted as students.—The monthly ballot resulted in the election of 4 Members, 37 Associate Members, and 1 Associate.

SOCIETY OF BIBLICAL ARCHEOLOGY.—Feb. 8.—The Rev. W. T. Piltner in the chair.

Dr. Pinches read a paper on Enlil and Ninlil, the older Bel and Beltis. The author said that, though much is known concerning these divinities, there is still a great deal to be learnt, and many known facts concerning them could be treated in a new way, especially in the light of fresh material. Enlil was cast in a severer mould than "the merciful Merodach," the patron-deity of Babylon, who was placed at the head of its pantheon when that city became the capital of united Babylonia. In primitive times, however, it was, to all appearance, Enlil who held the highest place, and indeed his name became synonymous with Bêlu, "Lord," especially when speaking of a god. He was in fact the "Lord of the earth" or of "the world" *par excellence*, and was always, on that account honoured by the Babylonians, who worshipped him in conjunction with his father Anu under the name of Ana-Enlila, or Anu-Ilil, when Merodach, having failed his people, apparently ceased to be the great object of worship among the remnant who remained in ruined Babylon. Besides being the god of the earth and of the air, Enlil was the god of gold, the maker of oracles, and, in connexion therewith, the god of dreams. But the most interesting thing concerning this deity is the legend referring to him and his spouse Ninlil. It begins with a reference to the dwelling of certain inhabitants of the Babylonian plain as being in Dur-ana, in Nippur, and in Dur-gisimmar, which is described as a city, and apparently means "the date-palm-home." The names are then given of the holy river of the place, its well of sweet water, and its sparkling brook. Its young hero and its young handmaid were Enlil and Ninlil; and its patriarch was Nun-bar-se-gunnu, who, from what follows, seems to have been the father of Ninlila. In the inscription there is a considerable gap, which makes it difficult to understand what follows. Some personage is mentioned as taking Enlil to the portal, and it is desired that some unclean thing or undesirable person might be made to leave the city. Such a thing could not remain within its walls when the king visited it, and especially on account of the presence of Ninlil. Twice Enlil calls to the watchman of the gate and announces the arrival of himself and the lady Ninlil.

An interesting commentary upon the text was given, and its literary merits were dealt with. A description was supplied of Enlil's divine attendants and his relationship to other gods, and of some of his numerous names. Enlil appears as a god of plenty and fruitfulness, and as such seems to have been identified with Dagan or Dagon, the Syrian god of corn.

SOCIETY OF ENGINEERS.—Feb. 6.—The chair was first occupied by the retiring President, Mr. Diogo A. Symons, who presented the following premiums awarded for papers published in the *Journal* during 1910: the President's Gold Medal to Mr. W. C. Easdale for his paper on 'Sewage Disposal Ideals'; the William Clarke Premium to Mr. S. M. Dodginton for his paper on 'Public Slaughterhouses'; the Bessemer Premium to Mr. C. W. V. Biggs for his paper on 'The Inspection and Testing of Engineering Materials and Machinery'; the Nurse Premium to Mr. H. C. Adams for his paper on 'Current Professional Topics'; a Society's Premium to Mr. A. H. Allen for his paper on 'Electricity from the Wind'; and a Society's Premium to Mr. C. R. Enock for his paper on 'Engineers and Empire Development.'

Mr. Symons then vacated the chair in favour of Mr. F. G. Bloyd, the President for 1911, who delivered his Inaugural Address, which noted with regret the loss which had been sustained by the death of Sir John Aird, who had been a member of the Society of Engineers since 1855. The main portion of the address was devoted to a review of the growth of railways in this country since their inception, the legislation which governed their working, and some of the most important details of their construction and equipment as exemplified in modern practice.

MATHEMATICAL.—Feb. 9.—Dr. H. F. Baker, President, in the chair.—The following papers were communicated: 'The Application of the

Mathematical Theory of relativity to the Electron Theory of Matter,' by Mr. E. Cunningham,—'On the Reduction of Arithmetical Binary Forms which have a Negative Determinant,' by Messrs. G. B. Mathews and W. E. H. Berwick,—and 'On Certain Vectors associated with an Electromagnetic Field and the Reflection of Light at the Surface of a Perfect Conductor,' by Mr. H. Bateman.

ARISTOTELIAN.—Feb. 6.—Prof. G. Dawes Hicks, V.P., in the chair.

Miss H. D. Oakeley read a paper on 'Value and Reality.' The theory that the world of values is objective in its source may be connected with Natural Realism. The qualities of the objects of perception which are objective for Natural Realism are the experiential foundation of our estimates of value. The "secondary qualities" have a degree of reality; the stage at which the recognition of value is aroused in consciousness is a higher degree. This view is founded on the exposition of Natural Realism in the late Prof. Laurie's 'Synthetica,' though it does not follow that exposition into the Absolute Idealism in which it seems to culminate. A recognition of the reality of value seems also to be involved in the metaphysical meaning of Plato's Ideal theory. The character of experience as not only significant, but also symbolic, is not adequately explained either psychologically as association, or epistemologically as expression of that which is universally valid. The reality of the world increases in proportion to its increase in value, and the valuable is a force with power over the existent. The ideas cannot intelligibly be reduced to forms of a force originally without value. From the point of view here taken, the appearance of things as in space and time, if symbolic, must be so in that sense in which the symbol is part of the truth. Reality must also be allowed to Individua, since the simple witness of experience, if not corroborated on the plane of the understanding, has its credentials in the recognition of value. Of this reality, however, the inner side seems to be unknown to us. The account of the reality of things as ultimately purpose is unacceptable, since experience of reality would thus be inseparably associated with practical experience. The truth in this view appears to be that there must be some value as the substance of any reality. The law of value in nature, corresponding to that of purpose in human life, may be described as manifestation. The metaphysical relation of purpose to that of other values is in this view the struggle from a lower to a higher grade of reality, or a form of the tendency of any existence to increase its value.

The paper was followed by a discussion.

MEETINGS NEXT WEEK.

- | | |
|--------|--|
| Mon. | Royal Academy of Arts, 4.—'The Du Cerceau, Prof. R. T. Blomfield. |
| — | Surveyors' Institution, 4.—'Sugar Beet: will it pay to grow it in Great Britain?' Mr. F. J. Lloyd. |
| — | Society of Arts, 5.—'Brewing and Modern Science,' Lecture III., Prof. Adrian J. Brown. (Cantor Lecture.) |
| Tues. | Royal Institution, 3.—'Heredity,' Lecture VI., Prof. F. W. Mott. |
| — | Colonial Institute, 4.—'The Origins of the New Zealand Nation,' Mr. Guy H. Scholefield. |
| — | Statistical, 5.—'The Fatality of Fractures of the Lower Extremity and of Lobar Pneumonia: a Study of Hospital Mortality Rates, 1751-1901,' Messrs. M. Greenwood, Jun., and R. H. Candy. |
| — | Institution of Civil Engineers, 8.—Discussion on 'Coast-Erosion.' |
| — | Anthropological Institute, 8.15.—'Prehistoric and Aboriginal Pottery Manufacture,' Rev. J. W. Hayes. |
| — | Zoological, 8.30.—'Report on the Deaths which occurred in the Zoological Gardens during 1910,' Dr. H. G. Plimmer; 'On <i>Tragelaphus buxtoni</i> , an Antelope from Abyssinia,' Mr. R. Lydekker; 'A Contribution to the Study of the Variations of the Common Salamander (<i>Salamandra maculosa</i>),' Mr. E. G. Boulenger; and other Papers. |
| Wed. | Society of Literature, 5.—'Sources of Longfellow's "Tales from a Wayside Inn,"' Mr. W. E. A. Axon. |
| — | British Numismatic, 8.—'Numismatic History of Edward I., continued, 1272 to 1279,' Mr. H. B. Earle Fox; 'Find of Gun-Money near Dundrum, co. Dublin,' Mr. J. B. S. MacIlwain. |
| — | Geological, 8.—'The Geology of the Districts of Worcester, Robertson, and Ashton, Cape Colony,' Mr. R. Heron Rastall; 'The Geology of Northern Albania,' Baron Ferencz Nopcsa, Jun. |
| — | Society of Arts, 8.—'Water-Flinders,' Prof. J. Wertheimer. |
| Thurs. | Royal Institution, 3.—'Problems of Animals in Captivity,' Lecture III., Dr. P. Chalmers Mitchell. |
| — | Royal Academy of Arts, 4.—'French Architecture of the Sixteenth Century,' Prof. R. T. Blomfield. |
| — | Royal, 4.30.—'Transmission of Flagellates living in the Blood of Certain Freshwater Fishes,' Miss M. Robertson; 'Report on the Separation of Tonium and Actinium from Certain Residues and on the Production of Helium by Tonium,' Dr. B. B. Boltwood; 'The Secondary Gamma Rays produced by Beta Rays,' Mr. J. A. Gray; and other Papers. |
| — | Institution of Electrical Engineers, 8.—Adjourned Discussion on 'Long-Distance Transmission of Electrical Energy.' |
| — | Society of Antiquaries, 8.30. |
| Fri. | Institution of Civil Engineers, 8.—'The Design and Construction of Works for the Bacterial Purification of Sewage,' Mr. Reginald J. Samuel. (Students' Meeting.) |
| — | Royal Institution, 9.—'Mouvement Brownien et Réalité Moléculaire,' Prof. Jean Perrin. |
| Sat. | Royal Institution, 3.—'Architecture: The Byzantine and Romanesque Period,' Lecture III., Dr. T. G. Jackson. |

Science Gossip.

Six Hunterian Lectures on 'The Fossil Remains of Man and their Bearing on the Origin of Modern British Types' are to be delivered in the theatre of the Royal College of Surgeons in Lincoln's Inn Fields by Prof. Arthur Keith. These lectures, which begin next Monday and end on March 3rd, are designed to serve as an introduction to the study of the anthropological collection in the Museum of the College, and will be illustrated by means of the epidiascope.

ANOTHER small planet was discovered by Dr. J. Palisa at Vienna on the 29th ult., and observed again on the 31st. Two are also announced as detected photographically by Herr Helffrich at the Königstuhl Observatory, Heidelberg, on the 29th and 31st respectively.

FURTHER observations of the spectrum of Nova Lacertæ obtained by M. P. Idrac at the Meudon Observatory show, in addition to the great breadth and brilliancy of the hydrogen lines, three brilliant bands in the yellow part of the spectrum, a very wide band in the green, and other lines less strongly marked.

FINE ARTS

OUR LIBRARY TABLE.

Raphael and the Portrait of Andrea Turini. By Tom Virzi. (Nutt.)—The purpose of Signor Virzi's book is to prove that a picture belonging to him, now at the Burlington Fine-Arts Club, is a portrait of Andrea Turini by Raphael. Andrea Turini was a younger brother of Baldassare Turini, the datary of Pope Leo X. and a frequenter of Raphael's studio whom the painter appointed his executor in his will. Andrea himself was physician to Popes Clement VII. and Paul III. He attained some renown as a controversialist in medical science, and treatises by him bear dates from 1528 to 1543. There is no record of Raphael ever having painted his portrait, and at the time of the painter's death in 1520 he was a comparatively obscure professor at Pisa. To assume that because Raphael was on terms of intimacy with Baldassare he would be intimate with Andrea, and therefore would probably desire to paint his portrait, is to rest one unsupported hypothesis upon another.

Signor Virzi's portrait represents a man with an open book in front of him. On a cartellino in the background of the picture are the letters 3^a TI AVIC. It is therefore a natural inference that the book is by Avicenna. Andrea Turini makes frequent references in his works to those of the Arab physician, but this is not sufficient to establish the identity of the portrait, since Andrea Turini is referring to what were in fact common textbooks. Leonardo also in his writings makes several references to the works of Avicenna; and Dante placed their author in Limbo amid a group of great philosophers, Hippocrates, Galen, and Averroes.

The consideration of stylistic evidence of authorship traverses wide ground. "I propose," says the author, "to review as rapidly

as I am able, and with every care and without bias, the characteristics of the schools of Florence, Venice, Milan, Bologna, Ferrara, Umbria, and Rome." The result is not commensurate with the promise the words convey. Enthusiasm proves a poor substitute for ripe sanity of judgment. "At first sight," it is said, "the picture appears to belong to the Venetian school." This is certainly the case. The Venetian character of the work seems strongly marked. Signor Virzi, however, pronounces it superior to the most famous Venetian works both in draughtsmanship and colour, and arrives finally at the work of Raphael as furnishing its parallel.

Some of his conclusions are hard to follow, but the picture is well worth the attention of the connoisseur.

Art in Northern Italy. By Corrado Ricci. (Heinemann.)—The General History of Art published simultaneously in five languages, and issued in this country by Mr. Heinemann, is a noteworthy example of international enterprise in artistic matters. The art of Northern Italy could have fallen into no fitter hands than those of Signor Corrado Ricci, whose term of office at Parma, Milan, and Florence was marked in each case by important changes in arrangement, and who now holds the office of Director-General of Fine Arts and Antiquities in Italy. In a compact volume of about three hundred and fifty pages he has succeeded in presenting an entirely lucid outline of the development of architecture, sculpture, and painting in Northern Italy from the Byzantine period to modern times.

Venice and the surrounding provinces are treated with most detail, as their importance justifies, but the space is admirably proportioned throughout the book. The bibliographies which follow each chapter add considerably to its value. They are especially useful to the student from the number of references to Italian and German periodical publications, because the results of much recent critical work in investigation find expression only in the pages of a *Jahrbuch* or *Bulletin*. Italian art is to be discussed in two volumes on account of the quantity of work to be passed under review. The line of demarcation between North and South is, of course, artificial, and as a consequence the work of Leonardo in Milan is treated without reference to his Florentine upbringing.

The illustrations number 600. They are admirably chosen; the architectural subjects form an attractive section. Some of those of pictures might have been larger with advantage, even although there were fewer of them, in order to give more indication of the quality of the work, e.g., in Jacobello del Fiore's 'Coronation of the Virgin,' in Masolino's 'The Feast of Herod,' in the triptych by Defendente de Ferrari.

In the selections from Sir William Stirling-Maxwell which Señor Luis Carreño has arranged under the title of *Stories of the Spanish Artists until Goya*, Messrs. Chatto & Windus have given to the world a charming volume, which cannot fail to stimulate the interest of the ordinary reader in the great painters of Spain. Those who have already some knowledge of the Spanish School will not always agree with the verdicts here recorded. The critical point of view has shifted, since Stirling-Maxwell wrote these pleasant pages, by more than a degree or two; consequently, some of his judgments will appear to modern students to miss, now and then, the true significance

of a painter's achievement. For instance, Stirling-Maxwell appreciated the best work of El Greco as warmly, and is as generously ready to award him high place among his peers, as any present-day enthusiast could desire; but with him appreciation and homage are based on grounds other than those which appeal to the contemporary. The chapter on Velasquez creates a suspicion that, with all his admiration for the latter's genius, this cultivated amateur never caught sight of the great Spaniard's loftiest quality—the broad humanity that lies behind every experiment, and informs with life the technical triumphs of his matchless craftsmanship. Stirling-Maxwell does not only fail to pluck out the heart of his hero's mystery: he does not dream that a mystery exists. So he writes of "copies," and "facsimiles" of nature, while Mr. Edward Hutton, in the preface to his volume, speaks—with perhaps even less of truth—of "Velasquez' dream of a world."

Stirling-Maxwell's canons of taste were old-fashioned: he can pay no higher compliment to one of his favourite Spaniards than to compare him to Domenichino at his best. Nevertheless, interspersed with agreeable biographical gossip, this volume contains much sound criticism as well as passages of admirable writing. It is a pleasure to read again the pages which contain the graceful description of Aranjuez, the gorgeous picture of the meeting of royal France and Spain in the Isle of Pheasants, and the vivid account of Murillo's masterpieces in the chapel of the Hospital de la Caridad at Seville.

Greater care should have been taken to bring the foot-notes referring to pictures named in the text into harmony with existing knowledge. Notes which, being supposed to stand in correction of statements that the lapse of time or continued research has rendered out of date, are content to describe as "not an authentic picture" (of Velasquez) the famous canvas at Vienna known as 'The Family of Mazo,' and do not hint that the attribution of the National Gallery 'Admiral Pulido Pareja' is doubtful, serve no useful purpose. It is a pity that the editor did not expunge the passages referring to illustrations specially prepared for the original work; they can only serve to increase the reader's discontent with the photographs and colour-plates in the present volume.

WE have received the second part of Dr. George A. Fothergill's *Stones and Curiosities of Edinburgh and Neighbourhood* (Edinburgh, John Orr), of which we might say very much what we said about the first part. Dr. Fothergill has not only the zest of the antiquary and the feeling for things long forgotten or totally ignored by the average person, but he has also an unusual talent for reproducing by pen-and-ink sketch what he sees. His illustrations are indeed of much more account than his letterpress, which rambles about in a discursive and inconsequent way. Thus, in dealing with a holy well at Liberton, he branches off into a discussion of modern hygiene which includes this passage:—

"The corpulent, overfed hunting man, whose body may be subject to eczema, is recommended by his physician to eat less and hunt more—at least that was my advice to the few hunting magnates whom I (previous to 1899) had the good fortune to attend. Golfing by the seashore is equally beneficial to men and women who will overstock their bread-baskets, and so lay themselves open to a variety of cutaneous diseases."

One does not usually find this kind of writing in an antiquarian work; but Dr.

Fothergill's services as a collector and illustrator are so valuable, and his enthusiasm is so obvious, that we can even forgive him for his literary and historical slips. Thus it is hardly worth correcting him about the date of the founding of the Bannatyne Club (1823, not 1827), or pointing out that the Tully-veolan of 'Waverley' was most improbably the Ravelston associated with Scott's early days. We are sufficiently grateful for the illustrations of such antiquities as remain at the Ravelston of to-day.

For the rest, we have accounts and pictured reproductions of the oldest dated stone extant in an Edinburgh house, of various tradesmen's signs and effigies dating from the past, of carved and other reproductions of the Scots thistle, of the old barber-surgeon's "bleeding dish," and so on. But for Dr. Fothergill's sketches many of these things, now passing out of memory and disappearing before the craze for so-called "improvement," might vanish without remaining token or record. We hope to see much more of Dr. Fothergill's work.

Indian Drawings. By Ananda K. Coomaraswamy. (Essex House Press.)—Judged simply as an example of bookmaking, 'Indian Drawings' is a welcome change from the usual type of work which comes before the reviewer of art publications. It is printed not upon clay, but a fine quality of paper, and it is pleasant to see the beautiful Morris type serving for the nonce not to embalm a classic (the reprinting of which is undertaken a little for the sake of having something to print), but for the everyday purpose of producing a book of current interest, yet worthy of a permanent and beautiful form. The illustrations are of two kinds. The more usual "facsimile" reproductions of drawings are rightly relegated to the end of the book, though still printed on relatively imperishable material; while the drawings in the text, made by the author from Oriental originals, are splendid examples of line-drawing suitable for setting amongst type. Mr. Coomaraswamy is inclined to apologize for the latter, confessing that the line is rather heavier than in the originals; but we can hardly blame a modification which has been suggested by so splendid a decorative instinct, and which produces such fine results. The effect upon the page of some of these drawings—such as the 'Three Lions' (Tanjore School) on p. 25, or 'The Musicians' (Figure I.)—is magnificent. 'The Princess with the Lotus' (Fig. II.) would be almost more effective, but for the oddly topheavy distribution of the type above and below it.

The two last-cited drawings, from "Frescoes" at Ajantā and Sigiriya respectively (at Sigiriya, at any rate, they seem rather to be tempera than true fresco paintings), open the book in a manner which raises our expectations somewhat unduly. The author begins here in tantalizing style by dealing in rather more dynamic fashion and with rather more creative art than satisfies him in his later pages. Certain passages of a previous work ('Medieval Sinhalese Art,' same author and publishers) had led us to hope that we might get from him that authoritative exposition of the principles of Oriental art we have long been waiting for. Mr. Coomaraswamy seemed conceivably the man for such a dissertation, and the wall-paintings from the caves of Ajantā and from Sigiriya (in Ceylon) might be no unsuitable text.

'The Musicians' gives us a far higher opinion of these Ajantā wall-paintings than Mrs. Herringham's records recently published in *The Burlington Magazine* (June, 1910), and we would willingly see more of them, and

hear more of the intellectual outlook of the race of artists who produced them. Nor are we entirely satisfied when our author, after quoting Blake's admirable dictum, "The distinction that is made in modern times between a painting and a drawing proceeds from ignorance of art," renounces speedily all attempt to establish the identity of the two forms, and settles down to discuss, not Indian drawing, but, in accordance with his title, *Indian drawings*, which as a rule, charming as they are, prove to be of the familiar Indo-Persian type—restrained within the bounds of a convention others have made, and reminding us a little of certain modern portraiture prudently executed in the manner of Holbein. The convention of Oriental drawing is not seen in these Indo-Persian drawings at its highest pitch of vitality, but appears as a somewhat negative restriction upon an impulse towards naturalism not very different from that animating much European drawing in all periods. So far as we can follow the author in his sorting of schools, he seems to claim this insistence on human and dramatic interest ('The Four Yogis' here reproduced is a good example of such sincere character-drawing) as typically indigenous and Indian, as against an emptier and more calligraphic Persian manner. This may be geographically correct, but leaves such drawings as 'The Musicians,' 'The Princess with the Lotus,' or the 'Seated Sage' (Figure IV.) outside both categories. Such work—which might, quite arbitrarily, be christened Indo-Chinese in spirit rather than Indo-Persian—reveals a mastery of line as an instrument of expression, and an insight into natural structure which is in complete harmony with it.

PERSIAN AND INDIAN MINIATURES AND DRAWINGS.

PERHAPS in our notice of Mr. Coomaraswamy's book on 'Indian Drawings' we are tempted to exaggerate the perfection of Oriental art, which has upon the imagination of the modern painter an influence akin to that which the small available remnants of antique art exercised over the artists of the Renaissance. Most which we see is but degenerate stuff, mere parrot talk, in which, however, we catch the accent of a language nobler than our own. Intrinsically it would rarely be easy to justify our enthusiasm for Oriental over Occidental art. For such as have this enthusiasm for imaginative reconstruction is the exhibition of Mr. Kevorkian's collection at the Persian Art Gallery. This collection we have already briefly referred to, but now that it is adequately displayed, it offers a more extensive opportunity for studying "the combination of grandeur and coquettish elegance" of Mughal culture than we had realized at a semi-private inspection. To see so many examples of an art which achieves with such certainty qualities which our finest artists get only tentatively, and on occasion, tempts us to over-estimate the work shown, because we take it as a symbol of what the civilization must have been which could have produced it. It is a prodigal reflection of some previous age of gold.

The rather literal, yet nobly serious realism of such Indian drawings as the 'Four Yogis' already cited or the 'Man in a Garden,' also reproduced by Mr. Coomaraswamy (Plate VI.), is but little represented in Bond Street, though Nos. 100 and 138, for instance, belong to this category. Merely from internal evidence we can see no reason why this development should not be set

down to European influence. When grafted upon the Persian School of illumination which is the main theme of this exhibition, it produced something more pictorial. No. 69 with its strong landscape sentiment is a typical instance with its delicate compromise between the art of East and West, and in this obviously poetic aspiration the amateur of European Art will probably find his first introduction to that of the Orient.

The bulk of the exhibition, however, is made up of Persian illumination pure and simple, marvellous in its artificial brilliance and certainty of execution, if on the whole somewhat shallow in content. Nos. 70, 71, 67, 27, 97, 73 may be mentioned as especially beautiful of their kind. Of the numerous illustrations of Christian subjects, borrowed from the Italians, which are to be found in Indo-Persian art, we may note No. 78, *John the Baptist*, as an example of European mastery of tone going with the subject. No. 140, *Portrait of the Virgin Mary*, shows an artist using colour with a grand intention of simplicity, enforcing his main contrast of blue and yellow by a muffled echo in the background of warm ivory and black, yet striking a weird note of discord by the equality in mass of the two primary colours. One can hardly imagine a Persian designing so unless his standards had been unsettled by foreign intervention.

OTHER EXHIBITIONS.

A REPRESENTATIVE collection of the work of Mr. H. M. Livens at the Goupil Gallery shows him as, within a somewhat narrow range, a master of water colour. No. 10, *Low Tide*, is perhaps the subtlest and most beautiful of all in its realization of the clarity of grey morning light; but Nos. 21, 25, 34, and 40 are also admirable instances of his broad and constructive use of an exacting material. We have frequently called attention to these qualities in Mr. Livens; and the good colour and intimate characterization of his little portrait groups 46-51 have also previously been noticed in these columns. The large collection of oil paintings in the further gallery, however, while as a whole inferior to the water-colours both in draughtsmanship and in the constructive planning of technical processes which enables the beholder to watch an artist sorting, as it were, his facts into categories, yet contains one or two noticeable surprises. Of these, one of the most striking is No. 79, wherein the artist uses the *papillotage* which is so characteristic an effect of a group of dappled fowls in a diffused light, as a foil to the sudden dart of a black hen pecking something off the ground. It is a dramatic contrast vividly seized, and expressed in suitably concise terms. *A Summer Day* (95), a pang of violent and harmonious colour, is in the style of Monticelli, but with closer allusion to nature. It shows again a group of fowls whose satin and tinsel robes light up a bowered alley of green as effectually as any bevy of Court ladies from the brush of the older painter. It is the first success in riotous colour of a painter occasionally attempting such things, but hitherto more at home in schemes almost of monochrome with a few notes of colour glimmering in their bath of shade. Nos. 78 and 88 are instances of such schemes brought to a successful issue, and, in crisper fashion, Nos. 57 and 66. Other canvases show that the use of impasto is still a difficulty with Mr. Livens, and in certain pictures of tumbledown houses he is inclined to rely too much on the sentimental interest of his subject.

In the upper of Mr. Marchant's galleries Mr. William Ranken's water-colours are as yet somewhat wanting in seriousness—even such seriousness as belongs to his portrait at the Institute. They are insistent and restless, and fluently—too fluently—confident. No. 25, however, shows some attempt at mastering a colour-scheme with possibilities of beauty.

Mr. James Aumonier's exhibition at the Leicester Galleries is chosen and hung in too haphazard a manner to make an agreeable ensemble. Mr. Aumonier is, moreover, by nature a painter of large pictures, and it is only rarely that, denied an ample space to model, he brings to a small canvas the clearly differentiated motive and its own nicely adapted technique which make a little picture, in the highest sense, worth while. Thus No. 34, *Sunset*, a finely executed water-colour design of boldly ordered flakes of cloud, is the only work which shows him at his best. *Sandy Lane, Corfe* (2), and *The Old Clay Pits, Corfe* (57), are delicately wrought, but in the first aspect slightly wanting in physiognomy. Had the artist been content to show a larger number of mere notes for pictures, he would have done himself more complete justice, so far as that is possible within such limits of scale.

Mr. George Belcher's exhibition would be more satisfactory artistically had it been confined to his clever studies of single figures, instead of consisting of their artificial conjunction in groups, such conjunction being necessary for carrying a comic-paper anecdote. Doubtless the mere confrontation of contrasted types intensifies the humour of characterization, just as we often see a pair of comedians working in combination, each of whom alone we should regard as fairly normal, though together they represent so wide a range of character as to astonish us. The comedian working alone makes up frequently in such a fashion as to provide variety within himself by stressing some latent contradiction of character. If two comedians thus made up were set to play together, the advantage of character would not be the same as is got by contrasting simple types. They are already fully developed compositions, taxing to the full the beholder's attention, and it is by thus adding one over-analyzed piece of characterization to another that Mr. Belcher, with all his ready observation, becomes heavy-handed.

The habit of compilation, moreover, accustoms him to multitudinous form. He grows to tolerate repetition, and his single figures have less simplicity than in his previous show. Economy, after all, is the essence of fun, not the industrious elaboration of points irrelevant for the nonce, though once perhaps they may have raised a laugh.

SADE.

MESSRS. CHRISTIE sold on Saturday last the following works, from various collections. Drawings: Rowlandson, Chevalier d'Eon fencing with Sergeant Léger of the Guards, 1781. Early English School, Mrs. Robert Hodshon Cay (formerly Elizabeth Liddell), in blue striped dress and black lace shawl, 3151. Pictures: F. Guardi, *The Dogana*; and *The Church of the Redentore, Venice*, with boats, gondolas, and figures (a pair), 7561. F. Goya, *Interior of a Spanish Tavern*, with figures round a table, 1991. G. Stubbs, *Waldershare Park, Kent*, with a lady, a gentleman, sportsmen and dogs, 2201. G. Morland, *Tom Oldacre and the Old Berkeley Hounds*, 2831. Early English School, Admiral Samuel Graves, commander of the British fleet at the time of the American War, 5461. P. de Koninck, *Distant View of the Town of Haarlem*, with

figures on a road in the foreground, 315l. Lawrence, Mr. Hunter, in brown coat, white vest and stock; seated in a crimson chair, holding his glove and a letter, 367l. : Mrs. Hill, in dark cloak edged with fur, 283l. N. Hone, Mrs. Anastasia Blake-Forster, in pink dress trimmed with white lace, 1,102l. Early English School: Mrs. Mills, in white dress with pink bow; powdered hair, with white ribbon, 273l. W. A. Hobday, Portrait of a Lady, in white dress, open at the neck, with white sash; a pink cloak, lined with white fur, by her side, 1,417l.

Fine Art Gossip.

THE offices on the ground floor of the South-West Wing of the National Gallery and the rooms above, which have for so long contained the pictures of the British School, have now been given over to the builders for reconstruction with fireproof material. The rooms in the South-East Wing which have during the last year been almost entirely rebuilt are fast approaching completion.

THE FERRARESE - BOLOGNESE ROOM (Room VI.) has been dismantled, and the rooms in the new wing, which has lately been added at the north-west corner of the building, are now being hung with pictures of the French, Ferrarese, Bolognese, and English schools. The new wing is likely to be thrown open to the public during the next two or three weeks.

WE have to express our sympathy with Mr. A. H. Buttery, the official picture-cleaner to the National Gallery, and well-known as an expert judge of pictures, who has lately, we understand, broken his leg at a skating rink.

MR. PERCIVAL GASKELL AND MR. W. LEE HANKEY, Associates, have been elected Fellows of the Society of Painter-Etchers and Engravers.

AN exhibition of Etty's works at the York Art Gallery will be opened next Monday, when also a statue of Etty will be unveiled.

DR. OLDENBOURG, the Director of the Old Pinakothek at Munich, a nephew of Dr. Bode of Berlin, is preparing a much-needed monograph on the life and works of Thomas de Keyser (*circa* 1595-1679), many of whose works are still at Amsterdam, where he was born and where he died.

M. ANATOLE GUILLOT, the French sculptor, whose death is announced this week at the early age of 45, was a pupil of Gautherin and Falguière. He was a member of the Société des Artistes Français, and was represented at the last Salon by a plaster group, 'Le Matin au Bois.' His best-known works are the statue to Vauban and his sculptures on the tomb of Coquelin at Pont-aux-Dames.

THE death is also announced, at the age of 68, of M. Urbain Bourgeois, a former Second Grand Prix de Rome, and a well-known painter.

The Irish Architect and Craftsman, the first number of which appeared last week, has been founded in the hope of creating a greater interest in architectural projects in Ireland. The new College of Science in Dublin forms the subject of one of the articles; and prizes are offered for designs for a small village church.

At the annual distribution of prizes to the students of the Dublin Metropolitan School of Art last week, the head master, Mr. James Ward, gave a review of the work of the School, and referred to the high place it had

taken in metalwork. At recent exhibitions held in Berlin and Weimar the enamels and metalwork from the Dublin School won the highest appreciation, and formed the subject of a special article in the German goldsmiths' journal. An extension of the School buildings will be carried out during the present year.

Two pictures were last month added to the collection in the Brera: a portrait of a lady by Nicolas de Largillière, assigned to his first Parisian period between 1678 and 1684; and a Madonna and Child with two angels, ascribed to Civerchio, and acquired in Florence. The latter is a good Lombard work, luminous and characteristic in colour, and in a remarkable state of preservation. The attribution to Civerchio is, however, gratuitous and of very recent date.

A SIGNED picture by Basaiti, belonging to a late period of his career—discovered by Count Malaguzzi-Valeri in a private collection at Milan, and acquired for the Brera some two years ago—has only recently been exhibited in the Gallery. It now hangs amongst the Bellinesque pictures, and next to the 'Noli Me Tangere,' which the authorities at the Brera also ascribe to Basaiti, though Freiherr Von Hadeln has sought to identify it with the picture of this subject by Catena mentioned by the "Anonimo" in the church of the Spirito Santo at Crema. The new Basaiti, which represents the 'Lament over the Dead Body of Christ,' is reproduced in the *Rassegna d'Arte* (No. 12, 1910).

IN *Staryje Gody* for December Dr. W. Stchawinsky writes on an unknown landscape painter of the Netherlands, who probably came from Antwerp. The writer considers that he was connected with Jan Breughel I. (1568-1625) and Abraham Govaerts (1589-1626), basing his conclusions on pictures in private collections at St. Petersburg and on a drawing in the Hermitage. The painter is henceforth to be known as the "Master of the Winter Landscapes."

No fewer than two hundred drawings by Andrea del Sarto and Jacopo Pontormo were seen in the exhibition recently organized by the Department of Engravings and Drawings in the Uffizi. Among them were studies for the frescoes in the vestibule and cloisters of the Annunziata, in the cloisters of the Scalzo, in the Villa of Poggio a Cajano, and for many other well-known works. Some excellent articles on these drawings by Andrea del Sarto in the Uffizi were published in the Sienese periodical *Vita d'Arte* by Dr. Filippo di Pietro, who has now issued them in collected form in a well-illustrated volume.

COL. EUSTACE BALFOUR, the youngest brother of the ex-Premier, who died at Whittingehame on Tuesday last, was well known as an architect. The firm of Balfour & Turner (Mr. Thackeray Turner) designed several London buildings of note, including the late Mr. Beit's house in Park Lane and the new National Scottish Church in Covent Garden. Mr. Balfour published various essays on architectural and military subjects, and was a keen Volunteer.

EXHIBITIONS.

SAT. (Feb. 18).—Mr. E. Wake Cook's Water-Colours, 'Nature's Pageantry: Scenes in Flowery Lands, Real and Ideal, Private View, Fine Art Society's Gallery.
—Mr. J. R. K. Duff's Pastels, Private View, Goupil Gallery.
—Friday Club, Pictures by Members, and Drawings and Lithographs by Honoré Daumier, Alpine Club, Mill Street, W.
—Mr. Arthur Severn's Picture, 'An Angry Sea,' Messrs. Graves's Gallery.
—Turner's Vignette Drawings Lithographed by M. H. Long, Messrs. Rowney's Gallery.
—Water-Colours by Deceased and Living Artists, Messrs. Agnew's Gallery.

Musical Gossip.

WE are indeed glad to learn that the King has consented to deposit on loan at the British Museum the whole of his valuable Musical Library. For the present, the collection will be placed temporarily in a separate room; later, however, it will be housed in a specially constructed room in the New Galleries now in course of construction in Montague Place. Until its removal this library will not be accessible to the general public.

ONE of the great treasures of the Buckingham Palace Collection is undoubtedly the series of Handel autographs presented to George III. by John Christopher Smith, amanuensis of the composer: 32 volumes of operas, 21 of oratorios, 7 of odes and serenatas, 11 of cantatas and sketches, and 12 miscellaneous. Next to these may be named a large volume almost entirely in the autograph of Henry Purcell. There is also a fine series of manuscripts by Agostino Steffani, whose connexion with Handel makes it of marked interest. This, the most complete collection of his works extant, was probably brought to England by George I. or II.

THE ROYAL LIBRARY contains many works by Johann Christian Bach, the eleventh son of Johann Sebastian Bach. There is also a copy of Mozart's early Sonatas, Op. 6, dedicated to Queen Charlotte; in these the violin parts are in the handwriting of Leopold Mozart, the composer's father. These Sonatas were presented to the Queen by Mozart in 1765, when he was nine years old.

THERE are many volumes containing autograph inscriptions by Mendelssohn; full scores of Wagner and many other composers; also an almost complete set of piano-forte scores of Auber's operas. A catalogue of the library was begun by Sir William Cusins, but was left unfinished. The manuscripts are about 1,000 in number, and the printed music and books about 3,000. This munificent loan by the King will be highly valued by all earnest musicians.

DR. HANS RICHTER (then plain Mr. Richter) came to London for the first time in 1877, and appeared at the memorable Wagner Festival held at the Albert Hall in May. He came only as assistant conductor to Wagner, but his merits were at once recognized. Two years later he was again in London, and founded the "Richter" Concerts, though at first under another title. Of the work accomplished by him at these concerts, which lasted over twelve years, we now see the rich fruit. But his task was no light one. He had to overcome the prejudice which existed concerning the new art, and to fight against the misrepresentations circulated about Wagner's disdainful attitude towards his illustrious predecessors; and in this he was greatly helped by the noble performances which he gave, especially of all the Beethoven Symphonies, and of works by Bach, Mozart, &c. By these he won over his audiences to listen attentively to excerpts from Wagner's later music-dramas.

As early as 1882 he gave 'Tristan und Isolde' and 'Die Meistersinger'—for the first time in England—at Drury Lane. The cause of Wagner gradually triumphed, and numerous cycles of the 'Ring,' also other performances of Wagner operas, were given at Covent Garden under his direction; while during the winter of 1907-8 a bold scheme,

long desired by Richter, was carried out, namely, a complete cycle of the 'Ring' in English. A second followed, and since then the tetralogy has been successfully given (though not under his direction) at Edinburgh.

IN 1885 Richter was appointed conductor of the Birmingham Festival, a post which, some thought, ought to have been offered to a native conductor. It was, however, unanimously conceded that the directors had selected a man of pre-eminent gifts. After Richter became conductor of the Manchester Orchestra, his appearances in London were confined almost entirely to the concerts of the London Symphony Orchestra. He conducted their very first concert; and at their concert on March 15th he will presumably make his final public appearance in London, but will not finally lay down his magic wand until the 20th of March, when he conducts at Manchester for the last time.

THE great conductor will be missed, but he has laboured for many years—we have referred here only to his work in England—and will, we hope, fully enjoy the rest he has so richly earned.

THE grand season at Covent Garden opens on Saturday, April 22nd, and will end on July 29th. A gala performance, commanded by the King, will be given on Monday, June 26th. The operas announced for the season include 'Carmen,' 'Faust,' 'Louise,' 'Pelléas et Mélisande,' 'Roméo et Juliette,' 'Samson et Dalila,' and, by way of novelty, 'Thaïs' by Massenet, originally produced at the Paris Opéra in 1894—all these in French. Those in Italian will be familiar operas by Verdi, Rossini, Bellini, Donizetti, Mascagni, Leoncavallo, and others. Puccini will be represented by no fewer than five works. His latest, 'The Girl of the Golden West,' will be given with Emmy Destinn, who created the title-part at New York.

MESDAMES MELBA, TETRAZZINI, EDVINA, AND KIRKBY LUNN are announced; also Maria Kousnietzoff, who will appear in 'Thaïs.' Of other artists may be named MM. Dalmorés, McCormack, Burke, Marcoux, and Sammarco. The conductors will be MM. Campanini, Panizza, Pitt, and Tchernepine.

THE concluding string recital of the series given by the Royal Dublin Society took place on Monday afternoon, when the Hans Wessely Quartet and Dr. Esposito were the instrumentalists. The works performed were Beethoven's Quartet in F, Opus 18, the 'Kreutzer' Sonata, and Schumann's Piano Quintet.

MR. ANDREW DE TERNANT is engaged in collecting materials for an 'International Bibliographical Dictionary of Writers on Music,' and invites British and foreign publishers and authors to send him lists of their works dealing with the history and criticism of music. The book will contain notices of some 5,000 authors, from the earliest times to the present, including editors and leading contributors to the musical journals, musical critics and lecturers, and literary men and women, travellers, and others, who have contributed valuable reminiscences of music and musicians. Mr. de Ternant's address is 25, Speenham Road, Brixton, S.W.

MRS. KENNEDY-FRASER of Edinburgh has received a sum of 200*l.* out of the Royal Bounty Fund. This recognition is doubtless due to Mrs. Fraser's successful and valuable efforts in collecting and recording

the songs and music of the Scottish Highlands; and it is interesting to recall that she is a daughter of the late David Kennedy, who was eminent as a Scottish singer.

A SPECIAL novelty will be the arrival in June of the Imperial Russian Ballet from St. Petersburg. The following ballets are announced: 'Cléopâtre,' Arensky-Glazounoff; 'Scheherazade,' Rimsky-Korsakoff; 'L'Oiseau de Feu,' Stravinski; 'Les Sylphides,' Chopin; 'Le Carneval,' Schumann; 'Le Pavillon d'Armide,' Tchernepine; and 'Prince Igor,' Borodin. Six evenings will be devoted to ballet only; on other occasions short operas will be followed by ballets. The Chopin and Schumann ballets will be curiosities.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	Sunday League Concert, 7, Queen's Hall.
MON.	London Trio, 8.30, Æolian Hall.
TUES.	Mr. Lengyel's Pianoforte Recital, 3, Bechstein Hall.
—	Miss Adela Verne's Pianoforte Recital, 3.30, Bechstein Hall.
WED.	Classical Society Concert, 3, Bechstein Hall.
—	Miss Ruby Holland's Pianoforte Recital, 3.15, Steinway Hall.
—	Société des Concerts Français, 8.30, Bechstein Hall.
THURS.	Miss Walter Lewis's Vocal Recital, 5, Bechstein Hall.
—	Broadwood Concert, 8.30, Æolian Hall.
FRI.	Mr. Plunket Greene's Song Recital, 3.15, Æolian Hall.
—	Miss Lily Crawford's Vocal Recital, 8.15, Æolian Hall.
—	Mr. Dunhill's Choir, 8.15, Steinway Hall.
SAT.	Chappell Ballad Concert, 2.30, Queen's Hall.
—	Mr. Marmaduke Barton's Pianoforte Recital, 3, Bechstein Hall.
—	Miss Mania Seguel's Pianoforte Recital, 3.15, Æolian Hall.

DRAMA

THE WEEK.

HAYMARKET. — *All that Matters: a Comedy of English Life.* By Charles MacEvoy.

THE oddest medley this, yet packed with thought and observation and real drama—a wild farrago of styles, in which the grotesque jostles the poetic, and the clown disputes with young love for pride of place—a play incoherent, exasperating, unsatisfactory, patchwork-like, yet one which the spectator is glad, after all, to have seen. At one moment we are in an Arden constituted by the Dorset Downs, and see an old Adam watching over his Orlando and a Rosalind who quarrels with her sweetheart in sheer perversity. At another we might be at Southend, and are plunged into the company of Cockney trippers and buffoons. At one moment we are out on the hill-top with the sweet summer breezes in our lungs, and the scent of hay in our nostrils, and the garnered wisdom of a shepherd in our ears; at another we are in the parlour of gentility, and are treated to the small talk of the tea-table. Mr. MacEvoy's piece baffles description, so quickly is the sublime followed by calculated bathos, so artless is the author's notion of plot-making and of varying his effects, so disconcerting are the moods of his two leading characters. The play is everything by turns, and nothing long. The dialogue is now dithyrambic, now facetious, now trivial. There is portraiture that is so clear-cut as to compel admiration, yet on the other hand hero

and heroine are so wayward, so wrong-headed, so self-conscious, that their conduct at any particular time can never be calculated upon. Mr. MacEvoy has got material enough here for two or three plays, and he tumbles it out with scarcely an attempt at "joining his flats."

His "comedy" is a succession of loosely connected scenes, but even a single scene may shift its key in the most capricious manner. He starts by presenting a couple of studies of rustic types—a shepherd and his wife in the employ of a young squire who is the last of a gradually disinherited race. On their austere loyalty intrudes the vulgarity of a troop of excursionists, who can only see something funny in the spectacle of an old house and family going to ruin. Here the playwright strikes the first of those discords on which he seems to dwell with purposeful delight. Hey, presto, he wafts us away to the downs, and there opens up an idyllic love-scene between his impoverished squire and the daughter of one of Allan's rich rivals. From the ludicrous we have passed into the sphere of high-flown sentiment, but before we can get used to the change the lovers have come to words over some quixotic matter of dispute and have parted unhappily. The next two scenes take place in the drawing-room of the heroine's mother. The note is now one of teacup-and-saucer comedy. The misunderstanding progresses between Olive and Allan; she engages herself to another suitor, and for the first time we learn that she has had a miserable home-life. Another quick-change, and we are in a cave by the sea. Here is to be the climax of the hero and heroine's misery; they are to be cut off by the tide. Yet upon their melodramatics Mr. MacEvoy does not scruple to hurl his crowd of Cockney trippers, who scream with fright, and reduce the whole scene to the level of farce. Finally, we are once more transported to the heights, where before dawn on the downs the faithful shepherd comforts his master, and tells him most affectingly his simple philosophy of life just before Olive creeps on to renew her vows of love, and so to secure a romantic ending of the story.

The outstanding feature of the performance is that of Miss Phyllis Neilson-Terry. To say that she as Olive, or that virile young actor Mr. Norman Trevor as Allan Hyde, can make consistent characters the author has left inconsistent would be to say too much. But the charm of youth in the actress is reinforced by a command of pathos not usually possessed by one of her years, and she does not shirk representation of the less pleasing and more egoistic side of the girl's temperament. She has the support of Miss Helen Haye, delightful as the genteel and simpering mother of the heroine, and Mr. Fisher White, whose shepherd will rank as one of his most memorable impersonations; and also of a group of players (including Miss Sydney Fairbrother) who are unsparing of themselves in their endeavour to give point to the humours of Mr. MacEvoy's Cockneys.

Dramatic Gossip.

A STRIKING feat was accomplished by Princess Bariatinsky last Tuesday afternoon at the Royalty Theatre. Within a year she has mastered our language sufficiently to take a long part such as that of Nora Helmer in English and win the favour of a critical audience. There were signs of strain, to be sure, about her performance. The tirades of the Nora of the last act—as the wife in revolt—were given with rather too halting and laboured a delivery. Struggling as she was with a foreign medium, she scarcely attempted to reconcile those two phases of the heroine, or rather those two different heroines, that Ibsen never reconciles.

It would seem as if any actress who chooses the leading part in 'A Doll's House' must accentuate the features of either the earlier or the later Nora—emphasize either the kittenishness of the doll-wife or the suddenly developed pride of the woman who desires to be free. The latest interpreter has from the first got an eye on the last scenes of the play, and shapes her conception of Nora accordingly. She therefore seems to condescend only to the heroine's moods of childish frivolity and irresponsibility. She dances the tarantella without any fire or provocativeness; she is more womanly and serious than most Noras; and she plays the whole of the second act with an emotional intensity which is in excess of what is warranted by the text. Her best moments are those in which Nora, gradually learning the exact value of her husband's affections and character, tries to disengage herself from his wine-inspired caresses or listens in silence to his angry and egotistical complaints. Here her looks and gestures were full of eloquence.

MESSRS. BELL'S BOOKS.

SIXTH EDITION. REVISED AND ENLARGED.
Now Ready, demy 8vo, 7s. 6d. net.

A TEXT-BOOK OF GAS MANUFACTURE for Students.

By JOHN HORNBY,
Honours Medallist in Gas Manufacture.

For this new edition the whole work has been revised and recast, and the result is a thoroughly up-to-date text-book on the subject of gas manufacture.

TWO SHILLING NET NOVELS.

With Pictorial Cloth Covers.

A TRIUMPH OF PROPHETIC IMAGINATION. THE WAR IN THE AIR.

By H. G. WELLS.

With 16 Illustrations by A. C. MICHAEL.

"The narrative is astonishingly vivid and direct; no writer since Swift has described what has not been with such absolute precision, a precision like Mr. Kipling's in describing 'things as they are.'...The most powerful of the many books of prophetic forecast that have recently attracted attention. It is a book that enthralled."

Morning Post.

A STRIKING ROMANCE OF DUAL PERSONALITY. AN IMMORTAL SOUL.

By W. H. MALLOCK,

Author of 'A Human Document,' &c.

"Mr. Mallock's new novel must be read through with that attention which every line of his demands...By far the most remarkable and impressive piece of English writing yet produced in connection with modern psychic research."—*Outlook.*

BOHN'S LIBRARIES.

NEW VOLUME IN BOHN'S STANDARD LIBRARY.
NOW READY, 3s. 6d.

THE ROMAN JOURNALS OF FERDINAND GREGOROVIVUS 1852-1874.

Edited by FRIEDRICH ALTHAUS

and Translated from the Second German edition by
Mrs. GUSTAVUS W. HAMILTON.

Times.—"Of the things and the people he saw, it is impossible to give even an outline here. Few people, one might imagine, could have written a dull diary of events in Rome between 1852 and 1874; yet few could have combined so vivid an account of the steps in the struggle between old and new with so accurate a judgment of the forces at work, and so haunting a spirit of affectionate reverence for the old. He loved Rome, and he understood, if he could not love, the Latin character. To read his journal is to see Papal Rome through keen but reverent eyes."

BOHN'S LIBRARIES.

Messrs. BELL will be happy to send, gratis and post free, the

NEW CATALOGUE

of BOHN'S LIBRARIES on receipt of a post card.

"Messrs Bell & Sons are still energetically pursuing their task of adding to and improving the famous series of Bohn's Libraries, which Thomas Carlyle pronounced to be 'the usefulest thing I know,' and...are constantly adding to the Libraries, in the new and certainly pleasanter form, reprints of standard works which no gentleman's library should be without."

LITERATURE

Martha, Lady Giffard, her Life and Correspondence (1664-1722): a Sequel to the Letters of Dorothy Osborne. Edited by Julia G. Longe. With a Preface by Judge Parry. (Allen & Sons.)

THE lady whose 'Life and Correspondence' has been edited by Miss Longe may be remembered by readers of Macaulay as "the indefatigable sister" of Sir William Temple, who lived with him, accompanied him in his diplomatic missions, and survived him some years. If the essayist really meant to be sarcastic (as the editor of the volume thinks he did) when he wrote of her as one "who seems to have been a more important personage in his family than his wife," he was not justified in such an attitude. But, as Miss Longe points out, the sister was without the domesticities of the wife, being a childless widow, and had other qualifications as a counsellor. As a letter-writer she is far indeed from shining in comparison with her sister-in-law (Miss Longe herself admits Lady Giffard's lack of humour), but it must always stand to her credit that she was one of the first to maintain that Dorothy Osborne's letters should be given to the world. Lady Temple's sister considered his wife "a very remarkable woman"; and there is no trace of any such friction between them as might easily have arisen.

This volume is, in a sense, a sequel to the 'Letters of Dorothy Osborne.' Although it contains but a few of Lady Temple's own communications, it carries on the story of her husband's life which

they begin. Miss Longe has introduced some connecting narrative among the chapters of correspondence and comment which make up the bulk of her book; and admirers of Temple will now owe her almost equal gratitude with that which the "servants" of Dorothy Osborne have already acknowledged to her family. In saying this we but echo Judge Parry, whose praise of the editor's courage in printing the letters exactly as they were spelt and written we must also endorse. Miss Longe has expended much care and enthusiasm on her task, and her commentaries are ample to a fault. Sometimes, indeed, they tend to overshadow the text; but the matter is always interesting, if not invariably strictly relevant. In general, she maintains a good level of accuracy, but has fallen into some slips which might have been avoided.

In a brief but sufficient Introduction the editor assures us that the husband whom Temple's sister lost after a month's marriage belonged, without doubt, to the same family as that of Lord Halsbury. She admits that the lady herself was distinguished neither for beauty nor wit, and rests her claim to remembrance upon the capacity for friendship shown by her correspondence. It is satisfactory to hear that Lady Giffard's life and character of Temple have been studied in the original manuscript; but the statement that the latter was written "in vindication of Bishop Burnet's aspersions on his religious principles" is couched in rather misleading English. It is noteworthy, by the by, that even Macaulay dismisses the aspersions of the Whig prelate.

The five letters of Lady Chesterfield to Lady Giffard are of little interest, and need not keep us from those of Dorothy (Lady) Temple to her husband which follow. Both belong to the years 1664-5, when Temple was in London seeking his fortune, while wife and sister kept house at Sheen, which was probably Richmond. There are seven of these Temple letters, to which is added a long epistle (dated January 22nd, 1664) from the poet Mrs. Philips (known to her contemporaries as "Orinda") to Dorothy. The young wife is cheated by a horse-dealer, and has other domestic difficulties. She is "as weary as a dog without his Master" without her "Dearest Heart." Their son, "your poore Jack, is all the entertainment I have hee men's [sic] his little duty and grows & thrives every day," she adds, alluding to him who, as a young man in his prime, drowned himself in the Thames in the first year of William and Mary, having found the duties of War Secretary beyond his powers.

The most attractive passage occurs in the second letter, where Dorothy rallies her husband on wishing for letters from her "such as I used to write before we were married." She will send them, if he likes, but has "none in my head I can assure you" of similar quality. She explains why:—

"Tis not the great abundance of diversion I finde heer though, nor want of any kind-

nesse (I think) that hinders mee from being just what I was then, but a dullnesse yt I can give no account of and that I am not displeased with but for your sake and because it is many times an occasion of the making good one of my Brothers propheys [sic] whoe used to tell mee often I had more kindnesse for you then became mee, and that I might assure myselve if I ever came to bee your wife you would reproach mee wth it."

That all was right between the pair is clear enough from the concluding passage of the last letter:—

"My dear dear heart make haste home, I doe soe want thee that I cannot imagine how I did so endure your being soe long away when your businesse was in hande."

The chapter headed 'Diplomacy,' which tells of Temple's rise as a public man, should be read as a corrective to Macaulay's estimate of him as a person who loved soft ways. It concludes with Lady Giffard's translation of a Spanish letter addressed to her from Antwerp by an old archer of the King's Guards, who had given her lessons in his language at Brussels whilst her brother was at the Congress of Aix. Miss Longe upholds the seriousness of the document against its first printer, who judged it to have been a jest of Sir William's.

Part IV. of the book consists of three letters of Sir William Godolphin (brother of Sidney) to Lady Giffard—of whom, there seems some reason to suppose, he may have been an admirer—and some gossip communications from Lady Sunderland, Waller's "Sacharissa." The lady, of whom Temple had been at one time an admirer, was now the wife of Sir Robert Smythe, and Miss Longe recalls Dorothy Osborne's disapproval of this second marriage of her namesake. The other Dorothy's letters—there are only two—are easily dated by their contents. The editor helps out the reference to the strange affair of Lady "Harvie" by a citation from Pepys. "Tis a dangerous thing I finde for ladyes to brage of power in State affaires," remarks Lady Giffard's correspondent with regard to it. "I think there is noe Premier Minister here nor any greate favorite, those who have had most have soe still," is her summary of the general situation at Court; for Lady Castlemaine, though menaced by the King's passion for "la Belle Stewart," had not yet lost her hold on him.

In the second letter the description of Charles II.'s dismissal of Ormond from the Viceroyalty of Ireland is followed by the significant comment: "The Duke of Buckingham has his greatest desire in his being out but not all tis thought because he did not choose his successor."

A very indifferent dinner given to Charles II. at the Dutch Embassy (with ludicrous details); the recent abolition of the custom of the drawing of valentines by the Maids of Honour; the Duchess of Monmouth's fear of a surgical operation; and the quarrels of Rochester with "Tome Keeligrew" and of "Brunkard" (Brouncker spells more correctly Mr.

Pepys) with Sir John Morton (printed as "Norton" a few pages later), are other topics glanced at, the final subject being the unwilling wooing of Lady Rich by Lord Burleigh. By the way, there is an obvious misprint in the fourth line of La Fontaine's verses 'A Madame Harvie' cited on p. 102; and the comment on Buckingham (the second and last Villiers duke) erroneously implies that the title had always been in one family, of which he was the "fifth and last" representative (p. 107).

The succeeding chapter, which describes Temple's doings at the Hague and the rapid breakdown of his work, the Triple Alliance of 1668, contains a more serious two-fold error in the description of William of Orange (King William III.) as "the son of William the Silent, that brave, quiet soldier who bore the burden of statesmanship and generalship unflinchingly through the great Dutch revolution of 1643." But we get another glimpse in it of the charming Dorothy, coming home in a King's yacht which had been instructed to fire on the Dutch unless they lowered their flag, and referring the perplexed captain (who appealed to her) to his orders. Also we are told of a later attempt of the French king to make use of Lady Giffard's influence with her brother for diplomatic purposes—the information coming, it is noted by the editor, not from the English envoy's sister, but from a letter of Colbert's.

In Part VI. ('A Chronicle of Family Events') mention is made of a packet of newly discovered letters from Jack Temple (the unfortunate son of Sir William and Dorothy) to his French wife. The editor dates them not earlier than 1688, and remarks that, though written in all probability not very long before his death, they show no sign of melancholy, but, on the contrary, "testify to the delightful, eventful, and varied life he must have led at the French Court." The stoicism with which Sir William took his heir's death Miss Longe prefers to attribute to fatalism rather than his reputed approval of self-murder.

The Moor Park chapter introduces us to Temple's secretary, Swift, and to another member of the Temple household, Stella. Since Lady Giffard "cordially disliked" the future Dean and he "literally hated her," it is curious that Lely's portrait of the lady should have come into the latter's hands. The editor suggests that it must have been given to Stella, "her sometime waiting-maid," who got a small legacy from Temple's sister. The Dean surrendered it to Sir William's heir on condition of a legacy to Martha Dingley. A bad misprint disfigures the Latin heading of some verses of Swift's on 'A Description of Mother Ludwell's Cave,' copied out in a hand conjectured to have been Hester Johnson's. A copy of Swift's abject letter to his patron, when soliciting a testimonial with a view to ordination, is given, with the remark that the writer

in his capacity of literary executor probably destroyed the original, but overlooked this.

One of Lady Giffard's letters to her niece, Lady Berkeley (conjecturally dated 1697), contains a reference to the secretary having been sent "with another compliment from Papa [Temple] to ye King, where I fancy he is not displeased with finding occasions of going." The same letter mentions "Hetty's place" as the height of "my cousin Martha's" ambition—these, of course, being Stella and her future housemate in Ireland.

The editor in commenting upon Swift's relations with Hester Johnson is very severe upon the former, assuming that there was no marriage, and excluding the possibility of other than selfish motives in Swift's conduct. She also is inclined to withhold from Stella the good sense which Sir Walter awarded her, though adducing some good specimens of her wit.

Swift's conduct as literary executor of Temple is probably less capable of defence; and the indignant strictures of Lady Giffard's correspondents upon his publication of the third part of Sir William's memoirs are naturally emphasized by Lady Giffard's editor. Macaulay, as Miss Longe observes, certainly understated the gravity of the matter: it put the finishing touch to all connexion between the Temple family and their former dependent.

Besides other family correspondence, there are several letters from Edward Young, the author of 'Night Thoughts' (then an Oxford don), and the old Duchess of Somerset, who succeeded to Duchess Sarah's place at Queen Anne's Court. In reference to the former Duchess, the editor should have known better than to place Longleat (the seat of her second husband) in Northamptonshire. The Lord Privy Seal who died in 1700 was certainly not "Ralph Montague, Lord Halifax" (p. 259); but William Savile, the second Marquis, did die that year. The celebrated Jacobite doctor and rival of Mead should be Radcliffe, not "Ratcliffe." "Carnworth" (p. 293), Archbishop "Tennison" (p. 295), and "Brandenberg" are other examples of loose spelling. A comparison of p. 311 with p. 292 will help to show the baselessness of the editor's strange notion that the Duchess of Somerset could have been prevented from appearing at the Court of George I. because she had been in a former reign "too intimately associated with the Königsmarks": the young Lady Ogle had been a purely passive victim in the disgraceful affair which ended in Thynne's murder. Her father was the eleventh Earl (not "Duke") of Northumberland. "Marcissue Lutterell" (p. 159) and "Van Der Moulen" (p. 161) are bad misprints. Our praise of the admirably reproduced portraits and other illustrations cannot be extended to the Index, which is bafflingly meagre.

Economic Annals of the Nineteenth Century: 1801-1820. By William Smart. (Macmillan & Co.).

UNEXPECTED and highly useful results sometimes spring from the efforts of Royal Commissions, which may be regarded as by-products influenced by the character of the main work. A good example of this description has proceeded from the recent Royal Commission on the Poor Laws and the Relief of Distress through the labours of Prof. William Smart, which incidentally enables us to gauge the vigour with which he performed his service on that body. As a member of that important Commission it fell to his lot to write several memoranda "on the history of the Poor Laws and on the industrial social developments of the past century." In the course of doing this he

"realised how little can be said, to useful purpose, of any one historical movement if it be taken and studied by itself. The history of pauperism, for instance, is the history of social failure. But failure is the other side of success, and, in its very simplest aspect, pauperism is the reverse of growing wealth and growing freedom."

Following out this train of thought, which no doubt was engendered by his lifelong study of economic fact, Prof. Smart "discovered," to use his own words,

"that, to form any adequate judgment of the phenomena with which the Poor Laws directly deal, it was necessary first to know the history of the working world at the time,"

and further, that the economic history of the nineteenth century had not yet been written.

With praiseworthy energy he set to work at once to remedy this deficiency. He may rest assured that, while the volume he has written will be a satisfaction to himself, there will be many besides his own students who will thank him for his elucidation. He modestly declines any claim "to have written 'history,'" but he has done what will be more useful than much which passes under that name by chronicling the main course of events at the beginning of the nineteenth century. The twenty years from 1801 to 1820 were amongst the most stirring and eventful which the century, with its many and varied experiences, knew. They were largely occupied with the deeds of our armies in the terrible war which was then being waged, and it was inevitable that those events should be recorded, and the annals of that period would have been indeed incomplete without them. The serious anxieties through which this country was then passing impressed the minds of the generation which was then living very strongly, and the few who now remember the last survivors of those days remember also how the sorrows of the time had impressed themselves on their habits of life and

thought. All these events have their place in these pages.

"While I am quite certain," Prof. Smart says, "that the historian who ignores the economic life of the people must go wrong in his interpretation of history, I am not sure that economic history can ever profitably be separated from political. However that may be, in the period covered by this volume the two sides are more closely bound up than, perhaps, at any other period."

Slowly and sadly the country wore through the struggle. Prof. Smart does ample justice to the "two sides of the one national life, the England which was 'saving Europe by her example,' and the England which was quietly pursuing her everyday work at home." Gradually the conditions on which modern England is carried on emerged. Thus up to 1800 "scarcely an improvement had been made" in the manufacture of wool since the time of Queen Elizabeth. After reading this we shall not be surprised to find that the "Assize of Bread," the law regulating the price of the loaf, which dated "back to the reign of Henry III.," was not repealed till 1815. It was not till 1792 "that the four-course system" of agriculture, long the basis of farming in the corn-growing districts, came generally into use; and the improvement in manures only began in 1800. The number of improvements which seem to the present generation as if they had always existed, and the lateness of the dates at which they were introduced, will interest the reader. Attempts to do away with the practice of chimney-sweeping by "climbing boys"—a barbarous method scarcely known to the generation before the present—are continually mentioned. The first effort was made in 1804, but in 1819 the practice still continued. At that date Sydney Smith, usually foremost in reform, did not bestir himself to assist, and considered that the matter must wait till a new Building Act was passed. The remembrance of the cruel work is still preserved by the poetry of William Blake and the prose of Charles Lamb. Education for the working classes was again and again discussed; many of the strong men of the century saw the need for it, Samuel Whitbread and Henry Brougham being foremost in this. The schools instituted by Lancaster in 1810, and supported by James Mill, Henry Brougham, Samuel Rogers, Samuel Romilly, Francis Place, and others, principally Nonconformists, had considerable influence. In the next year the National Society, providing education "in the principles of the Established Church," followed. Elementary education in England was carried on mainly by those two organizations till the system of 1870 came into force.

The earliest Factory Act was brought in by the first Sir Robert Peel in 1802. The cruelties practised on the children forwarded to the manufacturing districts by "waggon loads at a time" are almost incredible. Even more incredible, were it not vouched for by Francis Horner, was

the agreement "made between a London parish and a Lancashire manufacturer that, for every 20 sound children, one idiot should be taken." It was not, however, till 1819 that the amended Factory Act was passed—a law which has needed frequent emendation since to keep it abreast of the requirements of the time.

The reform of the criminal law had the unremitting support of Samuel Romilly, Sir James Mackintosh, and Sir Fowell Buxton. The treatment of criminals was perfectly barbarous. Transportation was carried out with an utter disregard of decency in the arrangement of the ships which conveyed convicts to Botany Bay. The Game Laws received some improvements. A Licensing Bill, which began to be considered in 1812, was discussed again in 1816, and finally dropped in 1817. The miserable condition of the jails corresponded with that of the criminal law. Mrs. Fry paid her first visit to Newgate in 1813. Romilly narrated in his diary an interesting conversation he had with her on her devoted work among criminals. In 1814 a Committee of the House of Commons was appointed to inquire into the state of the prisons in London and Southwark. The Report "was not pleasant reading. There was great overcrowding; liquor was sold as in public-houses"; but the Bill to remedy some of the abuses was lost, "it would seem because it was a reflection on the magistrates of the City of London." Some improvements were made in 1815. A further Report followed in 1818, and a Select Committee was appointed in 1819. It became clear that a reform of the criminal laws was essential to any improvement. Sir James Mackintosh carried his resolution in favour of this in 1819 against the opposition of the Government, but nothing further was done at the time.

The history of the twenty years contained in this volume is very striking. It is full of vigorous efforts made by great men to remove many blots in the annals of the time—efforts stifled almost as much by the mass of troubles which required reform as by the indifference of those in power, an indifference which was based greatly on ignorance. This is incidentally shown in the article on Banks in 'The Encyclopædia Britannica,' vol. ii., published in 1817, which concluded: "Taken by itself, it is at least a doubt whether Savings Banks may not produce as great a quantity of evil as good." In every direction reform was called for.

That women were whipped in the public streets as late as 1817 is clear. Prof. Smart adds that it seems incredible that they were "burned alive for certain offences till nearly the end of the eighteenth century"; but he does

"not see what else can be gathered from a passage in 'Hansard' of 10th May, 1790, when Sir Benjamin Hemmet secured the deletion of the penalty from the statute book (Geo. III. 30, c. 48), 'it having been his official duty to attend on the melancholy occasion of seeing the dreadful sentence put in execution.'"

Throughout Prof. Smart maintains a distinctly impartial attitude, and gives chapter and verse for all that he relates. 'Hansard' is referred to virtually on every page. There is no better source, as the Preface tells us, for acquiring a clear knowledge, "a unifying view of the development of the nation," than the debates at Westminster.

It has only been possible to give here a scanty sample of the interesting contents of the volume. Our readers should study it themselves. An Index both of the persons named and a Subject Index will be found very useful. A General Index, when the work is completed, will make the contents accessible to the ordinary reader.

The Roman Empire: Essays on the Constitutional History from the Accession of Domitian (81 A.D.) to the Retirement of Nicephorus III. (1081 A.D.). By F. W. Bussell. 2 vols. (Longmans & Co.)

THE scheme and the chronological limits of these two imposing volumes are alike remarkable. Distinguishing an objective and a subjective treatment of history, Mr. Bussell comes forward in the first volume as a political theorist, and offers "a subjective appreciation" of the period which he has defined; in the second, he undertakes the task of an ordinary historian, and professes to write objectively a history of the facts. This method, which the author defends in his Introduction, leads to a good deal of repetition, and subjective appreciations have a way of reappearing in the objective volume. If he had contented himself with a relation of the facts, adding his comments and modern instances at suitable points, the work would have been shorter and more readable. He has a high standard of diction; his style is his own; like Gibbon's, it never flags; but, though it is very agreeable for an essay or two, we confess that its elegance becomes a little wearisome through two long volumes.

Mr. Bussell has delimited a completely new constitutional period for subjective treatment, beginning with Domitian, and ending with the accession of Alexius Comnenus. In Vol. II. the terminus is the same, but he starts from A.D. 400. He does not offer a formal vindication of his points of departure, but he gives a curious reason for halting at A.D. 1081. The date was suggested to him by a passage in Zonaras (a writer of the twelfth century), who, in recording the prophecy of an astrologer that Constantinople would fall 696 years after its foundation, observes that, as this time is now long past, the seer must have been in error, or else have signified the period "during which the ancient usages of the republic were maintained." The horoscope of the astrologer takes us to the year 1025, which was marked by the death of the Emperor Basil II., and, in

the view of Mr. Bussell and Zonaras, the end of the old Imperial constitution. Mr. Bussell considers that the judgment of Zonaras is borne out by the evidence of the historian Psellus, who played an ambiguous political part under the sovereigns succeeding Basil; but he brings his exposition down to 1081 in order to show how the "feudal and patrimonial idea seizes upon and submerges the poor remnant of 'republican' tradition."

Every one will agree that there was a conspicuous *social* difference between the Empire of the Basilian and the Empire of the Comnenian dynasty; but Mr. Bussell has not shown, so far as we can find, that there was a conspicuous difference in the working of the *constitution*. In order to demonstrate this, a careful examination of the Comnenian period would be requisite, and this he has not furnished. Without further proofs, we are not prepared to believe that the ancient usages of the republic were more faithfully maintained in the tenth than in the twelfth century. Change there was, but does it mark a constitutional epoch? We are not inclined to ascribe any importance to the complaints of Zonaras. We suspect that if he had lived two centuries earlier, he would have made the same complaints, with as much right, about modern tyranny and the extinction of the old practices.

Mr. Bussell is best when he passes A.D. 400. He has a good grip of the development, and his perspective is clear. He is learned and accurate; he has studied the original sources with diligence; he has thought for himself; and he is frequently suggestive. He has done well to enlarge on the truth that the Empire was representative of the "Will of the Age," and that the world had no wish for self-government. He asks characteristically:—

"Can it be honestly maintained, with the whole turbulent history of the conciliar period before us, from Nice, let us say, to the 'robber-den' at Ephesus, that any question of universal moment could have been safely intrusted to the people's representatives?"

We may call attention to his sensible suggestions on the excuse for venality of office, and his pertinent criticisms on the fanciful speculations of Finlay concerning the "extinction of the Roman power" at the end of the seventh century. He is assuredly right in finding the great epoch of change a hundred years earlier, in the period after the murder of Maurice. His view of Justinian is sympathetic; he is inclined to think that no one else would have done better; but we may wonder whether he is justified in supposing that Justinian was "sadly ignorant of the real state of affairs." He presents with force the apparent contradiction between the direct and the indirect data bearing on the rule of Constantine V.: the chronicle suggesting that it was "the very nadir of this period, grossly barbarous and violent, yet ineffective, the least Roman of all reigns"; while the indirect evidence points to the conclusion that it was a time

of salutary reform and renovation. He infers from this discrepancy that we must suspend the historical judgment. Yet is not the difficulty largely met by the fact that the author of the chronicle was a bigoted image-worshipper, in whose nostrils the very name of Constantine stank? We cannot think that Mr. Bussell throws much light on Julius Cæsar when, rejecting the divergent views of Mommsen and Signor Ferrero (whom he calls "Ferrari"), he writes:—

"Cæsar is neither the tranquil guide of events towards a predestined goal, nor the worried creature of circumstances. But he represented the larger interests and the wider suffrage, the more spacious opportunity."

This sounds fine, perhaps profound, but what exactly does it mean?

When the author brands "the barbarism of the Empire" after the middle of the sixth century, and connects it with the growing influence of the priests, he is right, no doubt, in his view that the influence of the clergy signally increased during the Heraclian period. But he puzzles us when he observes in this context that in the sixth and seventh centuries "history is forced once more to become mere biography." If this is specially true of that period (a proposition which we should question), it surely depends not on the particular circumstances of the age, but on the personal predilections and interests of the writers who chose to record the history of the time.

Historical parallels are often more misleading than illuminating, and Mr. Bussell, with his eye on the "modern politician" is naturally tempted to urge them to excess. He wearies us with the perpetually recurring Shogunate, but this comparison is far apter than his designation of the Armenians of the eighth century as Protestants. And he seems to equate the Armeniacs with the Armenians. Did not the Armeniac province at that time include a great part of Cappadocia as well as of the Pontic coast where the population was not Armenian? He has made a special study of Armenian affairs, and the sketch of Armenian history from A.D. 540 to 1120, appended to Vol. II., deserves particular recognition as one of the most useful portions of his work.

An obvious criticism which these Essays invite is that they ignore markedly modern research, with the exception of a few English works. It is a merit to build on original sources, but it is not a merit to discard the assistance which the labours of others can afford. Such help would have saved the author from some mistakes, and might have given him profitable hints. He might have learnt, for instance, that the date of the restoration of images and the first Sunday of Orthodoxy is A.D. 843, and not (according to the vulgar error) A.D. 842. Most critics, we believe, now acknowledge the Procopian authorship of the 'Historia Arcana'; but Mr. Bussell pronounces it spurious, adopting the theory of Ranke, which he attributes

to Prof. Bury, who, however, in his edition of Gibbon accepts the work as genuine. As to Caballinus, the nickname of Constantine V. (see Vol. II. p. 174), though interpreted as an odious epithet, is it not now held that it properly meant "belonging to the town of Caballa"?

But when all is said, Mr. Bussell has made a learned and interesting contribution to the history of the Eastern Empire. The book is singularly free from the misprints which have become increasingly common in modern publications of a learned character.

A Book of Sacred Verse. Compiled and edited by William Angus Knight. (Religious Tract Society.)

If it is a difficult thing to write religious poetry, it might seem easy to make a selection from what has been written which should contain only what is good. But this has not proved true. The first Lord Selborne, if we remember right, was the earliest in modern days to attempt the task; and he succeeded very well. There is much, especially in his latest edition, which deserved preservation, and perhaps but for him would not have been preserved. One later collection certainly deserves a permanent place on our shelves: it is Canon Beeching's 'Lyra Sacra,' in which the wide knowledge of a scholar and the inborn taste of a poet have combined to produce an excellent selection. Yet it is a pleasing employment for the autumn of a cultivated life to collect the thoughts of men of letters which have influenced a sterling character: different men have divergent tastes; and we would not check an enthusiasm for anthology which seeks to atone for the barrenness of present-day invention. We extend our welcome, therefore, to Emeritus Professor William Knight, so long the honoured teacher of philosophy at St. Andrews, when he comes to us with a new 'Book of Sacred Verse.'

He starts with "a somewhat new principle." He has confined his selection to what he considers "the noblest products of English and American genius, during the last four centuries, on the subject with which it deals," and made it a miscellany, not for public use, but for private study. He has endeavoured to please all schools of thought.

In a Preface, which is partly a reprint of what he wrote for a public hymnal forty years ago, he states his view of religious poetry. He is emphatic in his belief that "all the highest poetry of the world is religious, when that word is widened out and rightly understood," and that there is much religious poetry outside the region of hymns. He thinks, further, that a good hymn cannot be "doctrinaire." We presume that he means "doctrinal," and he continues: "Details of dogma may be stated in a creed, but they should not be obtruded, far less sung, in a poem." There seems to us,

we are bound to say, some confusion of thought here. What does he mean by "details"? Should poetry not teach anything? It is all very well to say that the religious poet must leave out "the contentious points on which the sects differ"; but what are "the sects," and what are "the contentious points"? Prof. Knight, indeed, cannot, even in his own anthology, adhere strictly to the rule which he imposes on his poets. If ever there was dogmatic verse—even to "details of dogma"—it is in the hymn in 'The Dream of Gerontius,' "Praise to the Holiest in the height." Prof. Knight includes it; but this, if it is hardly poetry "which even Agnostics may value," is an almost solitary exception in the volume. Prof. Knight has set before himself an impossible task in the endeavour to form a collection of beautiful pieces which shall not wander outside the limits of what, to all Theists, are the mere "elements of religious knowledge."

O how much more doth beauty beauteous seem
By that sweet ornament which truth doth give!

The intelligent Christian echoes the lover
in the Sonnets.

The fact is that religious poetry which does not teach anything is not religious, even if it succeeds in being poetry. That is the defect of Prof. Knight's collection. On the "dogmatic" side it is so weak as to be without colour, and therefore, loses one main source of attraction. Many of its pieces fail, in consequence, to show any real poetic fire. If the good poems of Christianity are few, the amount of good poetry, in the last four centuries, that is merely Theistic, is slighter still.

Thus almost the first thing we are struck by in Prof. Knight's volume is the omissions. An eminent critic has said truly that "the high-water mark in the religious lyric in England is fixed by Herbert: Vaughan in one or two pieces reaches as high; so in another style do Crashaw and Marvell." Will it be believed that Prof. Knight prints but three poems of Herbert, two of Vaughan, one of Marvell, and does not insert a single line of Crashaw, who, in our judgment, at times soars higher than any of the others? We miss the wonderful 'Easter Day'; the hymn 'To the Name above Every Name,' the 'Song of Divine Love,' the 'Dear Bargain,' 'St. Mary Magdalen,' the version of the Twenty-Third Psalm, the lines on St. Teresa's book and picture, and that glorious hymn to her beginning,

Love, thou art absolute, sole lord
Of life and death.

Is the Professor afraid that the last would not please his broad-minded auditory? Does he forget that Crashaw followed it by an apology "as having been writ when the author was yet a Protestant"? But it is not only the seventeenth century that is neglected. There is not a line of

Crabbe or of Blake, or Campbell. Surely those lines in 'The Pleasures of Hope,' beginning

Unfading Hope when life's last embers burn

have the very spirit which Prof. Knight seeks to represent in his book. And we have nothing among moderns, of Mr. Bridges or Prof. Dowden, Myers or Wilton. The poems of Keble that are quoted are, as poetry, conspicuously not his best; it is the same with John Ellerton, and Samuel Stone, and William Bright; while of Bishop Christopher Wordsworth what is printed is almost the worst, as poetry, that he could write. Is the objection to Dr. Beeching's 'God who created me' that it is too distinctly Trinitarian to please "the devotionally-minded of every sect"? We find it in most modern anthologies, so difficulties of copyrights are not likely to have stood in the way. At any rate, it is good verse and good religion. We do not like to make a mere list of omissions, which are in some cases noted, perhaps, by individual rather than assured taste, but we must express our surprise at finding two conspicuous women poets of our day excluded, Christina Rossetti and Harriet Eleanor Hamilton-King. There may be, for all we know, commercial reasons for this; but no anthology can claim completeness which ignores the authors of 'Goblin Market' and of 'The Disciples' and 'The Hours of the Passion.'

Now it is inevitable that where we lose from English religious poetry so much that is good, we may hope to include some verse that is not so generally printed in such anthologies; but we must expect also to put up with a great deal that is not good at all. Briefly, this happens to us under Prof. Knight's guidance. We have the two best poems of Stevenson (though 'The Celestial Surgeon' is changed into 'The Celestial Surgery'), Mr. Benson's 'O Lord of Hosts,' and Mr. Kipling's 'Recessional.' But also we have pages and pages of verses, English and American, which can hardly stir the most undenominational emotions, and never come near being poetry at all.

NEW NOVELS.

Defender of the Faith. By Marjorie Bowen.
(Methuen & Co.)

THE work of Miss Bowen, so far as it is historical, renders no account of her sex. It is indistinguishable from the writing of a man in its largeness of feeling, virility, and restraint. Perhaps the sex of the author is patent in her delicacy of handling in the love-passages; but even so much is not clear. Beyond doubt, the author takes rank as one of the two or three writers to-day of historical fiction.

This book is a pendant to her previous 'I Will Maintain,' which, likewise, was a serious study of William of Orange. The earlier book was a brilliant *tour de force*; and this strikes one as being on the same level. But it showed a better continuity of plot. It may be recalled that the other book dealt with the emancipation of William from the control of the De Witts, and the hideous assassination of the latter. This takes up the story later, and involves a mission of vengeance in which Cornelius de Witt's son takes part. The tale is the stronger for being knit by this interest; but even so it fails to cohere properly as a story. It is nearer to history than fiction, and it has something of the dignity and the inevitableness of history. Once again the figure of the Stadtholder is of the chief importance, and once again Miss Bowen achieves a marked success with it. William is limned as that able, conscientious, individual, and rather repellent character which he may well have been. We are inclined to think that the author finds him attractive, but it is not certainly with the attractiveness of a romantic hero. Among the intrigues of the day she moves with a deftness which can only have come of patient and enthusiastic study.

The White Peacock. By D. H. Lawrence.
(Heinemann.)

THIS novel is a characteristic specimen of the modern fiction which is being written by the feminine hand. The older ideas and ideals are sacrificed ruthlessly to an attempt to breathe vitality into a succession of cinematographic pictures illustrative of the lives of the *dramatis personæ*. There is, however, no selection, as this method would suggest; impressions are merely scattered at random. It is, as it were, paulo-post-Impressionism in fiction. That there is cleverness in this modern study of nerves is obvious from the first chapter, but it is equally impossible to avoid the conclusion that the characters were spun in the author's brain. There is no verisimilitude. Farmer's daughters talk high culture, and an ordinary reader's head whirls in trying to determine the social relations of the sundry people involved. Scenes seem introduced merely because the author has observed them or thought of them, not because they add anything to the plot, or even to the atmosphere. Such is the modern method which a growing school of writers in this country encourages, but which, as we have pointed out before, owes its conception rather to Zola than to English sources.

The author of 'The White Peacock' is never realistic with the crudity of the master, but she is needlessly frank to a fastidious mind. As the trend of the novel in general seems to be in this direction, she should be successful, particularly when she has learnt her craft better. There are suggestions, and even more than suggestions, of the makings of a fine style in her writing.

Wilson's. By Desmond Coke. (Chapman & Hall.)

'WILSON'S' is a capital study of boy-nature, which will be read with interest by others than boys at school. Dick Hunter is a successful athlete, popular with all and sundry, but it falls to him to be transferred to a weakling house as its head-boy, and to do the uphill work of infusing life and energy into a clique of "slackers." Dick is in the main a strong character, with, as Mr. Desmond Coke says, an "odd streak of feebleness." The problem is: Will this sunlight-loving boy be able to win through the dark days of stress and trial, and in the process develop the sense of responsibility which will make him a man and satisfy his reserved but sympathetic father? The powers of evil are represented by two youths, Stone and Best, but the greater of these is Stone. If Mr. Coke strays at all from probability, it is in his portraiture of Stone, who seems an almost impossibly unregenerate blackguard. In thirty-four years of direct connexion with school life the present writer has never met his like. The development of Hunter, however, is admirably portrayed. We have, too, specimens of the author's exceptional descriptive powers where school functions are concerned, whether it is a speech day, a cricket match, or a bumping race. Be it observed that he describes Public School life as it is, with all its love of "beef" and athleticism, and its masters pandering to this spirit—not the Public School as it might be, estimating intellectual things and finer motives somewhat more highly.

Billy. By Paul Methven. (Chatto & Windus.)

GIVEN a marriage of convenience on both sides, with the subsequent development of love in the less intelligent of the contracting parties—in this case the husband—and matrimonial trouble becomes simply a question of degree. Mr. Methven handles the uncomfortable situation with skill and resourcefulness. His athletic heroine, "Billy," is attractive, though she is not always sympathetic or convincing. Charming unconventional as she is, imagination boggles at the spectacle of a young married woman, in full possession of her faculties, wandering up and down Europe for some six months, in the capacity of sister to a man who is neither brother nor husband, without any apprehension of possible consequences. The divorce suit which, notwithstanding her technical innocence, is the natural corollary to such proceedings is responsible for some vivid chapters, and its dramatic and unexpected climax puts no strain on probability. "Billy's" weakling husband is a figure of ingenious humour tempered with pathos. The co-respondent, on the other hand, leaves us wondering at the magic dormant in golfing proficiency and "fancy" roller-skating.

Impatient Griselda. By Laurence North. (Martin Secker.)

A NEAT style, sparkling with gentle humour, and references to Virgil as well as the frivolities of the present day, carries the reader pleasantly from beginning to end of this domestic comedy. The heroine is endowed with musical genius, but her mother, prejudiced against anything which savours of Bohemianism, refuses her the advantage of tuition in a foreign land. A young inmate of the household, who is a friend of the family, falls in love with the thwarted maiden, and is indirectly responsible for her flight from home. A character of importance in her development is a lady who has experimented in platonic marriage, and written forcibly on a subject repellent to old-fashioned British matrons. The atmosphere of the upper middle class of London is adequately suggested, but the novel is essentially a literary bonbon, and as such we recommend it.

A Fair House. By Hugh de Sélinecourt. (John Lane.)

RAISING his curtain over the ruin caused by a death in childbirth, Mr. de Sélinecourt shows how paternal love took the place of rebellious despair in the breast of the bereaved husband. The latter is a noble and attractive figure, and his business (that of a publisher) enables the author to illustrate the evil wrought by an indiscriminating censorship of literature. Before accepting a suitable lover, the child in the story gives her heart to a coarse and arrogant novelist who is unable to marry her: he is drawn with vigour and sympathy and serves to deepen the reader's interest in the relations between the heroine and her father. The book, despite the author's experience, is not free from amateurishness, but it is tender and pathetic, and occasionally exhibits considerable literary skill.

Mr. Perrin and Mr. Traill. By Hugh Walpole. (Mills & Boon.)

AN obtuse reader would in all probability define this as a school story. The scene is laid in a Cornish school; the whole of the action passes between the beginning of a term and the second day of the vacation following it; the principal characters are schoolmasters. But the boys, except one or two typical figures, are a mere crowd, devoid of face and speech: the author concentrates his remarkable talent upon the development of a tragedy from an atmosphere of struggle and suspicion, in which his pedagogues exasperate each other under the rule of a malevolent hypocrite. The savage irony of that excess of life which causes overwork and morbid companionships is admirably depicted by Mr. Walpole; and there is much in his drawing of Perrin,

driven out of his mind by fatigue and jealousy, to haunt a sympathetic imagination. Of the description of Perrin's madness we cannot speak so highly: it lacks eeriness. Humour and some aspects of good luck relieve the gloom of the book, which, apart from the above defect in its pathology, is alive from cover to cover.

BOOKS ON THE EAST.

Regilding the Crescent. By F. G. Aflalo. (Martin Secker.)

The Desert Gateway. By S. H. Leeder. (Cassell & Co.)

WE were somewhat at a loss to discover why a Fellow of the Zoological Society, distinguished above most by his learning in the ways of fish, should have written a book on the Turkish question, until we came across this sentence: "The Turk is essentially a fighting animal." Mr. Aflalo extends his interest to the Othmanli as a mammal. He has much to say about him that is interesting and true, but we cannot help thinking that he writes both too late and too soon—too late, because Mr. Knight and Mr. McCullagh have already told the story of the Turkish Revolution as fully as is possible at the present time; too soon, because the Young Turks are still on probation. Mr. Aflalo admits that no one can yet foresee success or failure for the Committee of Union and Progress. He preserves an open mind, and prefixes the significant motto from Burke, "To innovate is not to reform." His personal qualification for writing on the subject consists in a residence of some months in Turkey, where he was an eyewitness of the counter-revolution of April, 1909. He was in the streets of Constantinople during the fighting, and records this high testimony:—

"During that trying week of April, when Constantinople lay at the mercy of thousands of revolted troops, whose officers were either murdered or in hiding, the writer had many opportunities of observing the wonderful discipline maintained by the matineers, who not only restrained the brutish Kurds from loot and massacre, but (what must have been far harder) restrained themselves as well. In Stamboul, even at the height of the excitement, with the rabble shouting itself hoarse for the Sheri'at (*i.e.* Koranic law), he found the rebel soldiers invariably courteous to foreigners, and quick to thrust their importunate countrymen on one side to make room for them."

His account of the revolution and the reaction is confused, but it was not his intention to retell the thrice-told tale. He wishes rather to consider the various factors in the problem which the Young Turks are trying to solve, and he sketches the characters of some of the leading Turkish politicians. We gather that he has his doubts of the Committee and their mode of influencing the elections, and sees danger in the present situation, based upon military force; and that his sympathies are rather with the Liberal party, which does not support the Committee, one of whose prominent figures is Sabah-ed-din, "the Lord Rosebery" of Ottoman politics. The description of Ahmed Riza Bey by an opponent as "just the hole in the gruyère" strikes one as felicitous, though possibly untrue. Mr. Aflalo seems to contradict himself when he writes in one place that the revolution "was for an idea...not a sudden mutiny on the part of a disaffected army corps"; and in another, "The Turkish

revolution was essentially a military movement," as it undoubtedly was and still is. He is fair to the Turks, and freely admits that there is six to one and half a dozen to the other when it is a question of massacres between Turks and Armenians: it merely depends upon which of the two is uppermost. Luckily for the Turks under the new *régime*, the Armenians are cowards, as a rule, and do not fully use their opportunities.

Mr. Aflalo does not see his way to prophesy the future any more than other writers. He talks of "rebinding the Koran in two volumes," and separating the spiritual law from the statutes; and he praises the ex-Sheikh el-Islam for his enlightened views, which are said to extend to the abolition of polygamy; but no one at present sees how the divorce of religion and law is to be accomplished. The danger which the author himself points out, that the extension of the conscription to Christians would weaken the fighting qualities of the army, largely founded upon Islam and martyrdom for the faith, proves the difficulty of tampering with the religious basis.

On the whole, Mr. Aflalo inclines to conservative views. He is not for a sudden emancipation of women, and deprecates the exaggerated notions entertained by Westerns on the evils of polygamy and the seclusion of women. As he wisely remarks, "the trouble is not so much that the average Turkish woman is actually disgusted with her empty and purposeless existence as that she ought to be." He is firm about the impossibility of abolishing the Capitulations in the present state of the Turkish law courts. He upholds the new press law, and gives a remarkable account of the development of trumpery and malicious newspapers in Turkey, which caused a dearth of paper on which to print them: "The Turks have been so long without papers," under the stringent censorship of Yildiz, "that they believe everything that they read in print," sometimes with dangerous results. He sees no signs of any enthusiasm for the Constitution in the provinces of Asia, and realizes that the true menace to the Committee lies there.

There is much in the volume with which most people who know the subject will agree, but there is nothing very new, and the book does not give one the impression of a mature and well-considered judgment. It is essentially the writing of a journalist, offering examples of the style which flourishes in the newspapers. We need hardly say that no journalist is happy till he has written "happenings." Mr. Aflalo admits his ignorance of Turkish, so there is no need to criticize him on this score, but the admission surely destroys the worth of his appreciation of Turkish rhetoric in the Parliament.

The illustrations are unimportant. One is described as "A verse from the Koran," but really shows two complete chapters. The best is a cartoon of Enver Bey and the Dawn of Liberty, with winged angels blowing trumpets and bringing a wreath to the hero of 1908, and a beautiful blackfaced sun, the *Shems Hurriyet*, beaming over St. Sophia.

Mr. and Mrs. Leeder spent the winter of 1909-10 at Biskra, and were instantly made captives by the charm of the Oriental life. They were also captured at once by a remarkably intelligent boy whom they call Taïb, and who thenceforward directed their movements, whilst a "courteous Arab gentleman," one 'Ali ibn Mes'ud, who was

also singularly sophisticated, instructed them in the religion and ritual of his people, fortifying his discourses by numerous appeals to the Koran and the Traditions. So far did the process of initiation go that Mr. Leeder was not only allowed to take photographs—and very clear and sharp his numerous photographs are—of Muslims in the various postures of the *Grande Prière*, as the French call it, at the 'Id after Ramadan, but was even permitted to take part, with his friend 'Ali, in prayer at the mosque of Sidi 'Okba. Nay, *mirabile dictu*, he was actually taken by Taïb and 'Ali to their respective homes, and introduced to their enchanting young sisters, both married and unmarried, but all unveiled. He was naturally astonished, and so, we confess, are we. Even the presence of Mrs. Leeder hardly accounts for this extraordinary breach of Muslim manners, and we must suppose either that the Europeanizing of the Biskra Arabs has made vast strides in the last few years, or that Mr. Leeder is a docile subject for hypnotism. It is rather a relief, after this singular revelation, to read that young Taïb firmly turned the key on his harem as they passed his door in the evening. "I always lock my women in at five o'clock," said the boy; and his brief reply to the expostulations of his English friends was, "C'est l'habitude!"

In a modest Preface Mr. Leeder claims only to have penetrated a very little way, by means of sympathy and kindness, through the barriers of Eastern reserve. No doubt he did; but he must not imagine that he would be equally successful in places where Europe has taken no such hold and the local conditions are different. Nor would a longer and more intimate acquaintance with Muslims at home induce him to see them invariably in the very rosy hue which suffuses his account of his friends at Biskra. The experiences were exceptional.

The idea of the writer is to provide the sort of book he needed himself when he arrived, a stranger, at Algiers. We should have thought there were plenty already; but 'The Desert Gateway' will serve as a pleasant introduction to visitors who are wholly ignorant of Mohammedan ways and thoughts. It is written in an innocent spirit of childlike faith, and its optimism is refreshing, if a little surprising. A dim refrain from one of Miss Edgeworth's books surges up from the present writer's infancy as he reads Mr. Leeder's glowing praises of all things Muslim: "And good little Frank believed it!" Let him by all means go on believing, for half at least of his beliefs are true; but let him at the same time modify just a few exuberances. Let him not imagine that the street letter-writers indite "classical Arabic"; or that 'Okba "conquered, in 680, the whole of Northern Africa from Egypt to Tangier," and "began his brilliant career as the barber of the Prophet"—so rapid a conquest would hardly have been believed if told of the barber of Bagdad; or that "Islam means the Baptism of God"; or that the famous Ayat el-Kursi consists of seven verses; or that "classical literature must have been lost but for" the libraries of the Moors. To say that "actual divorce is rare" is misleading, for repudiation comes to much the same thing, as Mr. Leeder admits. Some of his ideas about Mohammedan law are peculiar; and his term "dependent women" is perhaps overnice. It is better to recognize Mohammedan facts as they are. In the case of streets full of the damsels of the Ulad Nail, Mr. Leeder is forced to recognize them, but he does not quite realize the primitive point of view which makes legal marriage with them not impossible.

But if he is not very learned and rather too credulous, he has nevertheless written a pretty, sympathetic little book, which may be more serviceable and informing than more pretentious works.

OUR LIBRARY TABLE.

Studies in Arcady, and other Essays from a Country Parsonage, by R. L. Gales (Herbert & Daniel), covers a wide field. In addition to the 'Studies in Arcady' there are essays grouped under the headings 'Folk-lore and Tradition,' 'Speech and Language,' 'Discussions and Digressions.' The 'Studies in Arcady' reveal a real knowledge of rural life. The tone is somewhat pessimistic. According to the writer, rural England and the labourer appear to be in a bad way. Still, he is not unmindful of the brighter side, and his essay on 'The Humours of Parish Visiting' is most entertaining. The chapters on 'Folk-lore and Tradition' are full of charm, whilst those on 'Speech and Language' show keen observation. The closing chapters, entitled 'Discussions and Digressions,' are calculated to provoke thought. We cannot follow the argument on 'Catholicism and Happiness.' For instance, the author says:—

"If in some pre-natal state one could have chosen the scene of one's entrance into this planet, knowing only that one must be one of the toiling myriads, the 'dim common population,' where would one have chosen one's lot, in Scotland or the Tyrol, in some forgotten corner of Brittany or Spain, or in some great manufacturing town like Leeds or Sheffield? For any one who has seen the benighted Popish countries, to ask the question is to answer it."

We fail to see what Catholicism has to do with this question at all. It is a matter of climate and the presence of the manufacturing arts. Notwithstanding this disagreement, we acknowledge the ability and charm of these essays.

The Intimate Life of Alexander Hamilton. By Allan McLane Hamilton. (Duckworth & Co.)—Till a comparatively recent date, the fine and fascinating figure of Alexander Hamilton, the Federalist, was less known than it deserved in this country. The admirable romance of Mrs. Atherton ('The Conqueror') and the solid and ingenious essay of Mr. F. S. Oliver did much to redeem us from the reproach of ignoring one of the most interesting personalities in the early history of the United States. To these books Hamilton's grandson, Mr. Allan McLane Hamilton, now adds a very entertaining volume dealing with the intimate life of the famous statesman. Mr. Hamilton possesses what Johnson regarded as the leading qualification for a biographer: he knows how to write trifles with dignity. He has had the advantage of drawing upon a large stock of family documents and tradition, and his work is an invaluable quarry for those who wish to understand the career and the times of a great constitutional statesman. We may call attention in particular to two very curious instances, not generally known, of the influence which the work of Alexander Hamilton still exercises upon the world in the twentieth century:—

"The Baron Kaneko, one of the most learned and advanced Japanese, who has had much to do with the renaissance of his native land, told me" (writes Mr. Hamilton) "that when the Japanese Constitution was framed, reference was frequently made to 'The Federalist,' which was considered by them to be the greatest authority upon constitutional subjects extant."

Sir Walter Hely-Hutchinson, the late Governor of Cape Colony, adds a still more striking testimony to Hamilton's influence on the movement which recently brought about the South African Union:—

"The unificationists went about, so to speak, with a copy of Alexander Hamilton's 'Life' in one pocket, and a copy of 'The Federalist' in the other, preaching unification, and advising their friends to read, before making up their minds against unification, about the birth-throes of the Constitution of the United States; and to note Hamilton's words of wisdom both as to the weakness likely to arise from over-assertion of State rights, and as to the folly of rejecting a Constitution which was, of necessity, a compromise, merely because some of its provisions did not square with one's own particular or particularist views.... I am, of course" (adds Sir Walter) "far from saying that the study of your grandfather's life brought about unification, but there is no doubt that it was one of the influences which materially contributed to that end."

Only the other day the abiding influence of Hamilton's work was again illustrated in the effect produced by the letters of "Pacificus" in *The Times*. The truth is that Hamilton wielded one of the most dominating influences ever brought to bear on constitutional politics, and we welcome the opportunity here afforded of learning what kind of man he was in private and domestic life, as well as how he devoted all his unique powers to the single end of making a thoroughly democratic government consistent with an enduring international policy.

Tales from the Old French, translated by Isabel Butler (Constable & Co.), is in every respect a charming book. It is the work of one of the best printers in America; it is translated with simplicity and directness from a selection of the best of the Old French short tales; and it is accompanied by a short and sympathetic epilogue which shows a true understanding of the period in which the various stories were written. The selection comprises five lais, three fabliaux (we prefer this spelling), and four didactic tales. Among the lais is included that of the two lovers; the mountain on which they met their fate is seen on the left from the line between Rouen and Paris, just after passing Ponte de l'Arche. The lay of the bird was translated by Lydgate as 'The Chort and the Bird,' and Lydgate's version was reprinted by Ashmole as one of the classics of English alchemy. The translator has noted the previous appearance of others of her tales in our literature. We commend this dainty volume to any one who wishes to sample mediæval French literature at its best. Incidentally the volume offers a puzzle to experts in typography: an initial O appears twice, and obviously one of them is reversed, but which?

Life of the Black Prince by the Herald of Sir John Chandos. Edited from the Manuscript in Worcester College, with Linguistic and Historical Notes, by Mildred K. Pope and Eleanor C. Lodge. (Oxford, Clarendon Press.)—We may congratulate the Oxford school of Romance languages on possessing such worthy associates as the editors of this volume, and the editors themselves on their subject and the fullness and accuracy with which it has been treated. The poem has hitherto been known to students in the very rare edition by Dr. Coxe, prepared for the Roxburghe Club in 1842, which aimed at a literal reproduction of the unique manuscript, and the "critical text" (which was neither critical nor a text) published in 1883 by Francisque Michel. The editors now aim

at preserving the features of both these editions, since they give us in parallel columns a transcript of the manuscript, and an approximation to what may have been the original poem as written by the author, and add a literal translation. These are introduced by a thorough study of the linguistics and phonetics of the poem, and an historical introduction, and followed by critical and historical notes, a glossary, and an index of proper names. The most exigent student could desire nothing more, except indeed a facsimile of some portion of the original text which would enable him to judge how far the few variants in this text from Coxe's very careful transcript are justified.

As a poem the work has few merits: its value is that for a couple of years it is a first-hand authority for the events of the Black Prince's life. It opens with the campaign of Crecy, the capture of Calais and the plot of Aimery of Pavia to surrender it to the French, and then passes to the campaign of Poitiers—the battle being fully described. Up to this point the Herald has been writing on the authority of common report, but when he goes on to treat of the expedition into Spain on behalf of Pedro, and describes the battle of Navarete, his work is the chief authority on the subject. Froissart seems not only to have founded his narrative on the Herald's information, but also to have revised the 'Memoires' when he had, later, the written poem before him. The history of the events of 1366 and 1367 depends on the poem almost entirely.

The linguistic introduction, as befits its authors, does not leave itself open to general criticism. A point of terminology seems of some importance—the use of the term Anglo-Norman for works of the period of Gower. It seems to us that the term should be restricted, as we have already contended, to works such as the 'Bestiary' of Philippe de Thaon, written during the existence of a real organic connexion between England and Normandy. Books written in French by Englishmen or in the French spoken by Englishmen might be described generally, yet correctly, as Anglo-French. The characteristics common, say, to Marie de France and Gower are not Norman in any sense; and to call the latter Anglo-Norman simply obscures this fact. We congratulate the editors on their localization of the Herald, and on their ingenious reconstruction of his original; but we would repeat their caution to beginners that this must not be taken as final. It must be remembered that the representation of sounds in writing was entirely an individual matter in those days; and though it was in the main phonetic, yet every writer had his own system. The text given is consistent with itself, probable, and linguistically correct. The historical notes are usually accurate and full, but occasionally betray a certain unfamiliarity with mediæval life outside the range of the subject. An error has been pointed out in *Notes and Queries* for Jan. 14th, p. 25. A note should have emphasized the presence of Queen Isabella at the return of the Black Prince with the King of France after Poitiers as almost the last public act of her life; while a statement that Cardinal Talleyrand de Perigord was in 1343 "Head of the Order of St. Francis" is due to a misunderstanding of his position—he was "Protector" of the Order. The head of the Order is the Minister General, who cannot hold any ecclesiastical preferment. We have, however, seen few works of scholarship lately produced in so satisfactory a manner. It is evidence of the distinction of women in linguistic studies long noted by those who follow University class-lists.

THE 'DICTIONARY OF NATIONAL BIOGRAPHY.'

THE new Supplement to the 'Dictionary of National Biography,' which will be published early in 1912, is intended to commemorate all persons of adequate distinction who died after the death of Queen Victoria on January 22nd, 1901, and before January 1st, 1911. The following is the sixth part of the list of names which the Editor, Mr. Sidney Lee, has selected for notice out of the obituary records of the past ten years. The less important names will be dealt with briefly, and a few may on further inquiry be rejected as falling below the requisite level of interest.

The Editor will be happy to consider proposals of new names which seem to satisfy the necessary conditions of repute. When a new name is suggested, the dates of birth and death should be given together with a very short statement of the main facts which appear to justify the claim to admission. Wherever possible, there should also be supplied a precise reference to an obituary notice or other source of authentic information.

All communications should be addressed to the Editor of the 'Dictionary of National Biography,' care of Messrs. Smith, Elder & Co., 15, Waterloo Place, S.W.

- Sackville, 2nd Baron. See Sackville-West, Sir Lionel Sackville.
- Sackville-West, Sir Lionel Sackville, 2nd Baron Sackville (1827–1908), diplomatist.
- Sadlier, Mrs. Mary Anne (1821–1903), Canadian writer.
- St. Helier, Lord. See Jeune, Sir Francis Henry.
- St. John, Sir Spenser, G.C.M.G. (1829–1910), diplomatist and author.
- Salaman, Charles Kensington (1814–1901), musical composer.
- Salisbury, 3rd Marquis of. See Cecil, Robert.
- Salmon, George, D.D., F.R.S. (1819–1904), Provost of Trinity College, Dublin.
- Salmoné, Habib Anthony (1860–1904), Orientalist.
- Salomons, Sir Julian Emanuel (1836–1909), Australian judge.
- Salting, George (1836–1909), art collector and benefactor.
- Salvin, Francis Henry (1817–1904), writer on falconry.
- Sambourne, Edward Linley (1845–1910), *Punch* artist.
- Samuelson, Sir Bernhard, 1st Bt., F.R.S. (1820–1905), ironmaster.
- Sandberg, Samuel Lewis Graham (1852–1905), Tibetan scholar.
- Sanderson. See Burdon-Sanderson.
- Sanderson, Edgar (1838–1907), historical writer.
- Sandham, Henry (1842–1910), Canadian artist.
- Sandys, Frederick (1832–1904), pre-Raphaelite artist.
- Sanford, George Edward Langham Somerset (1840–1901), lieutenant-general R.E.
- Sankey, Sir Richard Hiram, K.C.B. (1829–1908), lieutenant-general, Anglo-Indian administrator.
- Saumarez, Thomas, C.B. (1827–1903), admiral.
- Saunders, Sir Edwin (1814–1901), dental surgeon.
- Saunders, Howard (1835–1907), ornithologist.
- Saunderson, Edward James (1837–1906), Irish politician.
- Savage-Armstrong, George Francis (1845–1906), poetical writer.
- Savill, Thomas Dixon (1856–1910), neurologist.
- Saxe-Weimar, Prince Edward of (1823–1902), field-marshal. See Edward of Saxe-Weimar.
- Schunck, [Henry] Edward, F.R.S. (1820–1903), chemist.
- Scott, Clement William (1841–1904), dramatic critic.
- Scott, Hugh Stowell, "Henry Seton Merriman" (1863–1903), novelist.
- Scott, Sir John, K.C.M.G. (1841–1904), judicial adviser to Khedive.
- Scott, John, C.B. (1830–1903), shipbuilder and pioneer of Volunteer movement.
- Scott, Leader (pseud.). See Baxter, Mrs. Lucy E.
- Scotter, Sir Charles, 1st Bt. (1835–1910), railway manager.
- Seale-Hayne, Charles (1833–1903), politician and benefactor.

- Searle, Charles Edward (1828-1902), Master of Pembroke College, Cambridge.
- Seddon, Richard John (1845-1906), Prime Minister of New Zealand.
- See, Sir John, K.C.M.G. (1845-1907), Prime Minister of New South Wales.
- Seeley, Harry Govier, F.R.S. (1839-1909), geologist.
- Selby, 1st Viscount, See Gully, William Court.
- Selby, Thomas Gunn (1846-1910), Wesleyan missionary in China.
- Selwin-Ibbetson, Henry John, 1st Baron Rookwood (1826-1902), politician.
- Selwyn, Alfred Richard Cecil, F.R.S. (1824-1902), geologist.
- Sendall, Sir Walter Joseph, G.C.M.G. (1832-1904), Governor of British Guiana.
- Sergeant, [Emily Frances] Adeline (1851-1904), novelist.
- Sergeant, Lewis (1842-1902), journalist and author.
- Seton, George (1822-1908), Scottish genealogist.
- Severn, Walter (1830-1904), water-colour artist.
- Sewell, Elizabeth Missing (1815-1906), writer.
- Sewell, James Edwards (1810-1903), Warden of New College, Oxford.
- Shand, Alexander Burns, 1st Baron Shand (1828-1904), Scottish judge.
- Shand, Alexander Innes (1832-1907), traveller and author.
- Shand, James (1823-1902), improver of fire engines.
- Sharp, William, "Fiona Macleod" (1856-1905), man of letters.
- Sharpe, Richard Bowdler (1847-1909), ornithologist.
- Shaw, Alfred (1843-1907), cricketer.
- Shaw, Sir Eyre Massey (1830-1908), head of the Metropolitan Fire Brigade.
- Sheffield, 3rd Earl of. See Holroyd, Henry North.
- Shelford, Sir William, K.C.M.G. (1834-1905), railway engineer.
- Shenstone, William Ashwell, F.R.S. (1850-1908), writer on chemistry.
- Sherrington, Madame Lemmens (1834-1906), soprano singer.
- Shippard, Sir Sidney Godolphin Alexander, K.C.M.G. (1838-1902), commissioner for Bechuanaland.
- Shorthouse, Joseph Henry (1834-1903), novelist.
- Shrewsbury, Arthur (1856-1903), cricketer.
- Shuckburgh, Evelyn Shirley (1843-1906), classical scholar.
- Sieveling, Sir Edward Henry (1816-1904), physician.
- Simmons, Sir John Lintorn Arabin (1821-1903), field-marshal.
- Simon, Sir John, K.C.B., F.R.S. (1816-1904), sanitary reformer and surgeon.
- Simonds, James Beart (d. 1904), Principal of the Royal Veterinary College.
- Simpson, Maxwell, F.R.S. (1815-1902), chemist and physician.
- Sinclair, James, M.D. (1832-1910), surgeon, major-general.
- Skipsey, Joseph (1833-1903), miner and poet.
- Slaughter, Walter Alfred (1860-1908), musical composer.
- Smeaton, Donald Mackenzie (1848-1910), Anglo-Indian official.
- Smiles, Samuel (1812-1904), author.
- Smith, Sir Archibald Levin (1836-1901), Master of the Rolls.
- Smith, Sir Francis Villeneuve (1819-1909), Prime Minister of Tasmania.
- Smith, George Barnett (1841-1909), author and journalist.
- Smith, George Vance, D.D. (1816-1902), Biblical scholar.
- Smith, Goldwin (1824-1910), historian and political writer.
- Smith, Henry Spencer (1812-1901), surgeon.
- Smith, James Hamblin (1827-1901), mathematician.
- Smith, Reginald Bosworth (1839-1908), biographer and schoolmaster.
- Smith, Samuel (1836-1906), politician and philanthropist.
- Smith, Thomas, D.D. (1817-1906), missionary.
- Smith, Sir Thomas (1883-1909), surgeon.
- Smith, Thomas Roger (1830-1903), architect.
- Smith, Walter Chalmers, D.D. (1824-1908), Scottish preacher and poet.
- Smith, William Saumarez, D.D. (1836-1909), Primate of Australia.
- Smyly, Sir Philip Crampton (1838-1904), Irish surgeon.
- Smyth, Sir Henry Augustus, K.C.M.G. (1825-1906), Governor of Malta.
- Snelus, George James, F.R.S. (1837-1906), metallurgist.
- Solomon, Simeon (1843-1905), Pre-Raphaelite painter.
- Sorby, Henry Clifton, F.R.S. (1826-1908), mineralogist, past founder of Sheffield University.
- Sotheby, Sir Edward Southwell, K.C.B. (1813-1902), admiral.
- Soutar, Mrs. Robert. See Farren, Ellen.
- Southey, Sir Richard, K.C.M.G. (1809-1901), Lieutenant-Governor of Griqualand West.
- Southward, John (1840-1902), writer on typography.
- Southwell, Thomas (1830-1909), Norfolk naturalist.
- Spencer, Herbert (1820-1903), philosopher.
- Spencer, John Poyntz, 5th Earl Spencer (1835-1910), statesman.
- Sprengel, Hermann Johann Philipp, F.R.S. (1834-1906), chemist.
- Sprott, George William, D.D. (1829-1909), liturgiologist and Scottish Church historian.
- Stables, William Gordon (1840-1910), writer for boys.
- Stacpoole, Frederic, A.R.A. (1813-1907), engraver.
- Stafford, Sir Edward William, G.C.M.G. (1821-1901), Prime Minister of New Zealand.
- Stainer, Sir John (1840-1901), musician.
- Stamer, Sir Lovelace Tomlinson, Bart., D.D. (1829-1908), Bishop Suffragan of Shrewsbury.
- Stanley, Sir Frederick Arthur, 16th Earl of Derby, K.G., G.C.B. (1841-1908), Governor-General of Canada.
- Stanley, Henry Edward John, 3rd Baron Stanley of Alderley (1827-1903), diplomatist and Orientalist.
- Stanley, Sir Henry Morton (1841-1904), explorer.
- Stanley, William Ford (1828-1909), scientific instrument maker and writer.
- Stannus, Hugh (1840-1908), architect.
- Steggall, Charles (1826-1905), organist and composer.
- Stephen, Sir Alexander Condie, K.C.M.G. (1850-1908), diplomatist.
- Stephen, Sir Leslie, K.C.B. (1832-1904), man of letters and philosopher.
- Stephens, Frederick George (1829-1907), artist and critic.
- Stephens, James (1825-1901), fenian.
- Stephens, James Brunton (1835-1902), Queensland poet.
- Stephens, William Richard Wood (1839-1902), Dean of Winchester, Church historian.
- Sterling, Antoinette (Mrs. John MacKinlay) (1850-1904), singer.
- Stevenson, David Watson (1842-1904), Scottish sculptor.
- Stevenson, John James (1832-1908), architect.
- Stevenson, Sir Thomas (1838-1908), physician and analyst.
- Stewart, Charles, F.R.S. (1840-1907), physiologist.
- Stewart, James, M.D., D.D. (1831-1905), African missionary.
- Stewart, Sir William Houston, G.C.B. (1822-1901), admiral.
- Stirling, James Hutchison (1820-1909), metaphysician and philosopher.
- Stokes, Sir George Gabriel, 1st Bt. (1819-1903), President of the Royal Society, mathematician.
- Stokes, Sir John (1825-1902), lieutenant-general R.E.
- Stokes, Whitley (1830-1909), Anglo-Indian civilian and Irish scholar.
- Stoney, Bindon Blood, F.R.S. (1828-1909), Irish engineer.
- Story, Robert Herbert, D.D. (1835-1907), Principal of Glasgow University.
- Strachan, John Alexander (1862-1907), philologist.
- Strachey, Sir Edward, 3rd Bt. (1812-1901), author.
- Strachey, Sir John, G.C.S.I. (1823-1907), Anglo-Indian administrator.
- Strachey, Sir Richard, G.C.S.I., F.R.S. (1817-1908), lieutenant-general R.E., and Anglo-Indian administrator.
- Strong, Sir Samuel Henry (1825-1909), Chief Justice of Canada.
- Strong, Sandford Arthur (1863-1904), Librarian to the House of Lords.
- Stubbs, William, D.D. (1825-1901), Bishop of Oxford, historian.
- Sturgis, Julian Russell (1848-1904), novelist.
- Sturt, Henry Gerard, 1st Baron Alington (1825-1904), sportsman.
- Sutherland, Alexander (1852-1902), writer on Australian history.
- Swain, Joseph (1820-1909), wood-engraver.
- Swan, John Macallan, R.A. (1847-1910), artist.
- Swayne, Joseph Griffiths (1820-1903), obstetrician.
- Swinburne, Algernon Charles (1837-1909), poet.
- Syme, David (1827-1908), Australian newspaper proprietor and economist.
- Symes-Thompson, Edmund. See Thompson, Edmund Symes.
- Synge, John Millington (1871-1909), Irish dramatist.
- Tait, Peter Guthrie, F.R.S. (1831-1901), physicist.
- Tallack, William (1831-1908), prison reformer.
- Tangye, Sir Richard (1833-1906), mechanical engineer.
- Taunton, Ethelred Luke (1857-1907), ecclesiastical historian.
- Taylor, Charles, D.D. (1840-1908), Master of St. John's College, Cambridge.
- Taylor, Charles Bell (1830-1909), ophthalmic surgeon.
- Taylor, Helen (d. 1907), advocate of women's rights.
- Taylor, Isaac (1829-1901), Canon of York; archæologist and philologist.
- Taylor, Sir Richard Chambré Hayes, G.C.B. (1819-1904), general.
- Taylor, Walter Ross, D.D. (1837-1907), Scottish ecclesiastic.
- Tearle, Osmond (1852-1901), actor.
- Temple, Frederick, D.D. (1821-1902), archbishop of Canterbury.
- Temple, Sir Richard, G.C.S.I., F.R.S. (1826-1902), Indian administrator and author.
- Tennant, Sir Charles, 1st Bt. (1823-1906), politician and art patron.
- Tennant, Sir David, K.C.M.G. (1829-1905), Speaker of Legislative Assembly, Cape Colony.
- Thesiger, Frederic Augustus, 2nd Baron Chelmsford, G.C.B. (1827-1905), general.
- Thomas, William Moy (1828-1910), journalist and author.
- Thompson, Edmund Symes (1837-1906), physician.
- Thompson, Francis (1860-1907), poet.
- Thompson, Sir Henry (1820-1904), surgeon and artist.

Literary Gossip.

IN *The Cornhill Magazine* for March Mr. A. C. Benson takes for his subject Prof. Newton. Writing on 'The Authorized Version of the Bible,' Canon Vaughan celebrates the tercentenary of its publication. 'Temptin' Providence,' by Mr. W. J. Batchelder, and 'Margaret Elizabeth,' by Miss Dorothea Deakin are short stories. Following 'In the Footsteps of Sindbad the Sailor,' 'The Subaltern' offers impressions of life in the Persian Gulf and Busra. 'The Hunting of the Snark' is interpreted in terms of company-promoting. 'Garibaldi in South America' is a new document now first published by Mr. G. M. Trevelyan, together with a letter from Mazzini. The answers are given to the Browning paper, and a set of questions on the works of Lewis Carroll, by Viscount St. Cyres.

IN the March *Blackwood* Sir H. Mortimer Durand brings to a close his series of papers 'A Holiday in South Africa.' The number also contains an article on 'Political South America' and a continuation of 'Tales of the Mermaid Tavern' by Mr. Alfred Noyes. Col. Sir Charles Watson describes 'The Cavalry March to Cairo' and the occupation of the citadel by stratagem. 'A Study in Failure,' by Mr. Orlo Williams, deals with George

Burnett, the unfortunate friend of Charles Lamb, Coleridge, and Southey. 'A Ride to the Wady Salamuni,' in Upper Egypt, is described by Mr. A. E. P. Weigall.

MR. FISHER UNWIN is publishing this spring 'More Letters of Edward Lear,' edited by Lady Strachey of Sutton Court; 'Original Records of Early Non-conformity under Persecution and Indulgence,' transcribed and edited by Prof. G. L. Turner, 2 vols.; and 'The Tragedy of St. Helena' by Sir Walter Runciman, the work of an enthusiastic admirer of Napoleon.

THE Rev. Hugh Chapman is publishing through Messrs. Duckworth a book of essays entitled 'At the Back of Things.' The author has based each essay on some proverb or maxim, seeking to avoid the commonplace interpretation usually assigned to it by insisting on its moral or spiritual significance.

THE appointment of Dr. A. W. Verrall to the new Professorship of English Literature at Cambridge is very satisfactory. Dr. Verrall is familiar to the world as a classical scholar, but Cambridge already knows his eminence in English, while few living writers have a more graceful and persuasive style.

MESSRS. SONNENSCHN will publish immediately a well-illustrated volume by Captain B. Granville Baker entitled 'The Danube with Pen and Pencil.'

THE same firm have also in the press the first volume of a new series of "Dublin University French Texts," supervised by Prof. M. A. Gerthwohl, 'Le Mariage de Figaro,' edited by M. E. Renault. Two other volumes, 'La Satire Ménippée,' edited by Mr. P. Demey, and 'Selections from Saint Simon,' edited by Mr. Neville Perkins, will be ready in March. The editors, who are all English teachers, supply a full Introduction and Notes.

MESSRS. Constable & Co., (10, Orange Street, Leicester Square) are anxious to obtain Wordsworth autographs, and will be glad to hear of any that can be had at the above address.

Scribner's Magazine for March will include 'Religion and Caste in India,' by Mr. Price Collier; the beginning of a series of 'Recollections Grave and Gay,' by Mrs. Burton Harrison; an Australian story by Mr. E. W. Hornung; and an article on the pictures in Sir Alma Tadema's London house.

MESSRS. SOTHEY'S sale on March 17th will include the late Sir John Evans's Horn Books, with specimens from A. W. Tuer's collection and others fully described by him in his 'History of the Horn Book.' They mostly date from the seventeenth century; the earliest is apparently the specimen assigned at the Caxton Celebration Exhibition in 1877 to the time of James I.

MR. LEE WARNER will publish early in March Vol. II. of the Riccardi Press edition of 'Le Morte Darthur,' by Malory. The same publisher will also

issue early in April 'Catulli, Tibulli et Properti Carmina,' uniform with the Riccardi Press 'Horace' of last year.

MESSRS. JACK are publishing in 'The Pilgrim Books' 'William Morris,' by the Countess of Warwick; and 'Ruskin,' by Mr. J. D. Symon.

THEY will also have ready in March 'The Woman's Book,' which is uniform with their 'Reference Book,' and covers a wide field of feminine activity.

MESSRS. GEORGE PHILIP & SON announce 'Eight Lectures on India,' prepared for the Visual Instruction Committee of the Colonial Office, by Mr. H. J. Mackinder; and 'A Synopsis of the Leading Movements in Modern History,' by Mr. F. R. A. Jarvis.

'THE HOPE OF GLORY' is the title of a new work by Archdeacon Wilberforce announced for immediate publication by Mr. Elliot Stock. The author, using as a basis the words of St. Paul—"Christ in you, the hope of glory"—has written a devotional work suitable for the Lenten season.

MR. G. M. FRASER has in the press 'Aberdeen Street Names: their History, Meaning, and Personal Associations.' The book will be published by Messrs. William Smith & Sons of Aberdeen, where Mr. Fraser is Public Librarian.

MESSRS. OLIPHANT, ANDERSON & FERRIER, of Edinburgh, are publishing shortly a volume of collected opinions on the problem of "the lapsed masses." The book will be entitled 'Non-Church-going: its Reasons and Remedies.' Among those who will contribute their views are Sir Oliver Lodge, Prebendary Carlile, Mr. J. Ramsay Macdonald, Prof. Stalker, the Rev. J. E. Rattenbury, and the Rev. Dr. Martin. The book will be edited, with an introduction, by Mr. W. Forbes Gray.

SIR HERBERT MAXWELL is issuing through Messrs. MacLehose the lectures on the Scottish War of Independence which he recently delivered in the University of Glasgow. The title of the work will be 'The Making of Scotland.'

THE UNIVERSITY OF LIVERPOOL SCHOOL OF LOCAL HISTORY AND RECORDS has just issued its annual report. The school now numbers 171 members, and is vigorously at work. The first volume of the Liverpool 'Town Books,' facsimiles of early Liverpool charters, the Registers of St. Nicholas's Church, 1604-1704, and 'Lancashire Place-Names' are to appear shortly.

AT the meeting of the Newsvendors Benevolent Institution last Tuesday satisfactory progress was reported. The receipts for last year were 2,712l. 19s. 6d., and pensions and relief given amounted to 1,396l. The total funds exceed 32,000l.

AMONG recent Parliamentary Papers of interest we note: Education, Scotland, Superannuation Scheme for Teachers (post free, 1½d.); and Report on Imperial College of Technology, year ending July, 1910 (post free, 4d.).

SCIENCE

Seventeen Years among the Sea Dyaks of Borneo. By Edwin H. Gomes. With an Introduction by the Rev. John Perham. (Seeley & Co.)

THIS book, judged according to the high standard of the anthropologist, who is nowadays prepared relentlessly to weed out from the shelves apportioned to his science any work that smacks of un-intelligent and loose observation, is of high value, though perhaps not absolutely of the highest. The author has laboured faithfully as a missionary amongst the Sea Dyaks of Sarawak for many years, and has obviously acquired such a working knowledge of his flock as must have been eminently suited to further his special ends. He is not a trained ethnologist, and makes no claim to be one. He abstains, therefore, with admirable self-restraint, from explanations. Once only, to our knowledge, does he transcend the limits of pure description, and then it is to say, with almost unnecessary caution, about various tabus connected with the practice of couvade—for instance, the rule that the parents must in no circumstances tie up anything with a string, lest parturition be impeded—"It is probable that they are founded on some theory of sympathy." *O si sic omnes!* On the other hand, he manages to present objectively and without bias whatever facts are of the class that mainly appeals to him. For with him, as indeed with our countrymen in general, interest tends to centre in what may be comprehensively termed the "superstitions" of primitive folk. Under this head there are, in regard to the Sea Dyaks, curiosities in plenty to report.

The so-called Sea Dyaks (Dayaks), perhaps more conveniently known as the Iban, form but one amongst a considerable number of Ethnic groups to be found in Sarawak. The Land Dyaks of the interior, the Kayans, Kinyehs (Kenyahs), Pundus, and so on, are quite distinct as concerns both language and customs. Mr. Gomes might with advantage have sketched for our benefit the recent movements of the Sea Dyaks, since we are under the impression that ever since the country has enjoyed the firm and beneficent government inaugurated by Sir James Brooke, this people has been rapidly spreading along the coast, a process which has entailed considerable intercourse with strangers. By means of such a history our author might have afforded his readers some chance of eliminating foreign influences, and extricating the things that belong to the immemorial tradition of the race. As it is, there occur at every turn suspicious parallelisms that call aloud for critical handling. Perhaps only a regional survey, more thorough and comprehensive than even Mr. Ling Roth's excellent

compilation, will finally resolve these difficult questions of borrowing.

Again it is from the standpoint of strict science a serious omission that the topic of social organization is wholly neglected. It is almost an axiom with the enlightened field-worker that such a study, carried out by means of the so-called genealogical method, should precede and condition all research into customs and beliefs, since kinship, together with the marriage system on which it rests, is the very mainspring of primitive life. Thus it is most tantalizing to be told that in some cases, though apparently not in all, the husband lives with the wife's people—an arrangement which must have its drawbacks when "it is considered a terrible crime for a man to mention the names of his wife's parents, and he dare not disobey their commands." There is a favourite theory of the day which regards matrilocal marriage and the system of matrilineal descent as going naturally together, whereas a change to the patrilocal mode would, on this view, be likely sooner or later to lead to the reckoning of descent through the father. Amongst a people who apparently practise the matrilocal and patrilocal customs concurrently, exact observations might provide that crucial case of transitional development for which all anthropologists are seeking.

To pass on to the more grateful task of recording positive achievement, we find a host of accurate and in many cases novel statements concerning magico-religious observances. The character of the *manang*, or medicine-man, is analyzed, not very sympathetically, it may be—that was hardly to be expected; his *pelian*, or ceremonies, are explained in a systematic and most interesting way. We note the important part played by the quartz crystal—*batu ilau*, "stone of light." Crystal-gazing would seem undoubtedly to account for its function here, and we are left wondering whether the magic crystals in which the Australian doctor's supernatural power tends especially to reside are not used in this way more often than European witnesses have been hitherto permitted to observe. The initiation ceremonies of the *manang*, again, are described fully, if perhaps inevitably from a somewhat exoteric standpoint. Only in the light of such initiation—a subject naturally shrouded in the greatest secrecy—can the relation of magic to religion in primitive society be properly appreciated. Further, we are glad to see Bishop Hose's valuable description of 'The Contents of a Dyak Medicine-chest' rendered more accessible by being reproduced in Mr. Gomes's pages.

Apart from these more systematic records of fact, the book teems with odd bits of curious observation. The polite way of dispatching a crocodile, the ritual of camphor hunting, the consulting of omen birds, the peculiar ways and ideals of the head-hunter, the singular practice of constructing "the liar's mound"—

apparently a form of curse—here are plums galore wherewith to fill the greedy maw of the anthropologist, the folk-lorist, and their thousand followers of like tastes, but less discriminating appetites. We heartily commend the book to the learned public, even though it shows gaps, and never goes deeply into things. Every type of European observer has difficulties of his own to face in getting to know the native mind, and the missionary not least of all. Thus it is characteristic that, seemingly, the Sea Dyaks have in no case confided to Mr. Gomes their beliefs in that very private possession of theirs, the *nyarong*, or spirit-helper. The word does not even occur in his glossary of native terms. Yet the institution, we have good authority for saying, plays an important part in the lives of many of these people.

IRRIGATION WORKS.

Notes on Irrigation Works: a Course of Lectures delivered at Oxford. By N. F. Mackenzie. (Constable & Co.)

The Practical Design of Irrigation Works. By W. G. Bligh. Second Edition, Revised and Enlarged. (Same publishers.)

No department of engineering, as that science is now constituted, can exceed, or perhaps equal, its hydraulic branch as regards comprehensive training and as affording an opportunity for a successful career. For a great field is covered, and in addition to the ordinary demand for works of water supply, drainage, river management, and so forth, the construction of canals on an extensive scale in various parts of the world has for many years been in progress, with every sign of future increase. These canals may be conveniently divided into two kinds: those primarily for navigation, of which the greatest examples are the works of Suez and Panama; and those whose main object is irrigation, whereby cultivation may be secured where it is now precarious, and made possible where want of rain precludes agriculture.

With the latter class, or irrigation canals, we are now concerned, and in many ways they are the more important; for, not to mention immediately apparent benefits, they represent an effort of man to assist water in its unequal contest with desert and the consequent desiccation of the world. Whether ultimate success is possible may be open to doubt, for the streams grind and carry the sand which, being ultimately deposited, reinforces the enemy: but that desiccation may be retarded by prudent irrigation and cultivation is self-evident. By their means the face of the desert becomes clothed with verdure, and the sand, which was carried by every blast of wind, is restrained from choking the flow of streams and overwhelming vegetation. Thus, as cultivation is pressed forward, it invades the desert, and the limit to its advance is the distance from the sources of supply to which water can be profitably carried.

There are endless examples of this warfare now in progress: indeed, wherever a river is lost or fails to reach the sea, the process is either going on, or equilibrium has been established. A striking case, at present interesting the scientific world on account of the researches of Dr. M. A. Stein, is that of

the desert in Chinese Turkistan known as Taklamakan. Here, no further back than the early centuries of our era, the valley was well watered, cultivated, and inhabited; the road from Kapilavastu in India to China, via Tibet, crossed it, rich in towns with shrines and temples, frequented by Buddhist pilgrims and merchants. Now it is a sea of sand, the cities buried, the rivers choked, their course obliterated except near the edges of the desert, where they can be traced by the dead and half-buried trees which flourished on their banks. And yet into this depression an enormous volume of water is every moment poured; great rivers, fed from extensive glaciers, flow by Kotan, Yarkand, and Kashgar; smaller, but important supplies find their way to the basin from the Thian Shan on the north, and the Altyn Tagh on the south; yet all are swallowed up by the advance of sand from the east. Here, therefore, is a place where, by judicious application of water, desiccation may be retarded, if not arrested, and the person to deal with such trouble is the Irrigation Engineer.

His ordinary duties, however, if less heroic, are more immediately profitable, and to them Mr. Mackenzie's book is a useful guide. Unable in the scope of six lectures to deal with all the problems which present themselves to the canal officer, he has selected the following:—

(1) Introductory, giving some general idea of irrigation works and their results.

(2) The statistics required for the preparation of an irrigation project.

(3) Types of weirs and the principles on which their design is based.

(4) The development of Egyptian irrigation since 1834.

(5) On the design of irrigation channels.

(6) Irrigation revenue and land revenue in India.

These are dealt with from the Indian or Egyptian point of view very fairly, and as fully as limits of space allow. The author cites Mesopotamia as an example of irrigation works of great antiquity, prosperous beyond conception whilst they were maintained, sunk in desolation when they were neglected, but offering fair hope of revival if they can be scientifically reconstructed. Of this, happily, there is a reasonable prospect:—

"Sir William Willcocks has reported that for an expenditure of seven-and-a-half millions sterling some 5,000 square miles of land could be brought under cultivation, and made capable of producing an annual revenue of one million sterling, or some 13½ per cent on the capital outlay. The immediate effect of the realisation of this scheme, which has no engineering difficulties, would be to convert Mesopotamia from a desert into one of the granaries of the world."

So, if the political horizon is clear, England may do for Mesopotamia what her engineers have done for Egypt, and revive the prosperity which was famous four thousand years ago.

In his introductory lecture Mr. Mackenzie invites attention to the wideness of the term "Irrigation Works." Of this there can be no question, for they include machinery for the application of water to land, varying from the humble watering-can or well and bucket to the great canal carrying thousands of cubic feet a second, and irrigating three or four thousand square miles. He further divides the works into productive, or those which pay, and protective—those which are ordinarily worked at a loss, but which in very dry seasons may preserve the country from famine; he shows, moreover, that these may overlap, mentioning the Swat Canal in the Punjab, which, though originated for political reasons to induce civilized behaviour among lawless folk, now pays from 8 to 10

Per cent on its capital. Naturally there are other less pleasing instances, where the engineer's judgment seems to have been warped. Money was wasted on canals in Bengal in places where water lay within a few feet of the surface, and was usually a drug in the market.

To help in the consideration of any irrigation project much information has to be collected; besides maps and levels, the rainfall, the depth at which water is found in wells, the nature of the soil, the volume of water available—all these and many more particulars have to be investigated and recorded. When this is done, the design may be projected and its prospects examined. Should they prove attractive, further detail is prepared; works are designed; estimates are produced, and with the assistance of the revenue authorities an idea of probable return on the outlay is obtained. All this is dealt with by Mr. Mackenzie in a sensible way; what has been done recently in Egypt is described; and finally the highly important question of administration is given the weight which it deserves.

Mr. Bligh's book is less literary and more technical than Mr. Mackenzie's, being largely a collection of designs, formulae, and tables from various sources, illustrated by diagrams, and explained by comment based on the author's experience. Thus, retaining walls, dams, weirs, regulators, bridges, drainage works, &c., are treated in a way which should be useful to students, but which cannot here be examined in detail. India, Africa, and America are laid under contribution, and the types of works, varying as they do according to place and circumstance, repay careful study. "The author's endeavour," he tells us, "throughout this work is to smooth the rough paths, and render the designing of works an easy as well as a certain matter." To a great extent he has succeeded, and his book, as well as Mr. Mackenzie's, should be welcome in every canal engineer's library. Here and there an obscure passage may be found, and possibly some of the criticisms may be questioned. Thus in Mr. Bligh's book, p. 256, we read: "it is disappointing not to find in these latest productions no improvement over the oriental types," &c.; and at p. 280 he refers to a new bridge and fall on the Jamrao Canal as "a relict of old times." But these are small matters, and do not detract from the value of the work as a book of reference.

To pass from these books, and return to the question of employment for young men in a profession but too often overcrowded, the expansion of irrigation is a fact of vast importance. In India alone prospects are encouraging, and no better school, for design of works or for distribution of water, exists; in Mesopotamia there is, as stated, a great opening. So, too, in Africa, where, specially in the South, development is certain—likewise in Australia, the United States, and, perhaps even more notably in Canada, where already a great block of country east of Calgary is marked off by the Canadian Pacific Railway Company for irrigation—qualified men are sure to be wanted. And, all things considered, the life is pleasant; much of it is in the open air, and to an unusual extent a man may see the result of his work, which follows fast on completion, for no sooner is water available than it is used, and revenue results. Earlier in India the position of canal officer was specially good. Of old the élite of the Engineer Corps served in it, as the following names, selected from

memory, may testify: Sir Arthur Cotton and his brother Frederick, masters of deltaic irrigation in Madras; Napier of Magdala, who, when Civil Engineer of the Punjab, set going the project for the Bari Doab Canal; Durand, whose career began on the Western Jumna Canal, and ended as Lieutenant-Governor of the Punjab; Strachey; Baird Smith; J. Anderson; Dyas; and others, not to mention living men. Whether recent departmental changes have improved matters in this respect may be doubted; on the other hand, the pay of junior grades is probably better than of old, and the canal officer has of necessity a responsible and influential position in the civil administration of the country.

THE SURVEY OF INDIA REPORT FOR 1908-9.

THE Report of the Survey, 1908-9, which has just arrived from Calcutta, is of more than ordinary interest. Besides a full record of the year's work in surveying and mapping, it gives some account of the results attained by recent administrative changes. Particulars are also supplied of a large increase in the staff, and other measures taken or sanctioned for the promotion of general topographical surveying by troops employed in the field. Col. F. B. Longe, Surveyor-General of India, administered the department throughout the year, and as a frontispiece the volume has a medallion portrait of his great predecessor, Major James Rennell, F.R.S. (1742-1830), who was appointed by Clive the first "Surveyor" in Bengal.

The total return of topographical and forest surveys in the year was 42,600 square miles, as against 35,968 in the previous twelve months, and, with the exception of a small tract in the Mishmi hills, no survey was carried out on a smaller scale than 1 inch to the mile. The improvement in the productiveness of the map department due to changes in organization is remarkable, and for the first time since the inception of the new system the publication of standard sheets has kept pace with the survey and drawing. Several highly creditable specimens of the cartographical art are included in the present volume. The work is all the more creditable because economy has to be considered, and the more expensive processes cannot be adopted. The largest coloured map that the Department has yet undertaken is the 32 miles to an inch general map of India in six sheets. It has also brought up to date its 80 miles to an inch railway map of the peninsula. As a special work outside the ordinary routine, 94 sheets on the 1-inch scale of Dr. Stein's exploration in Chinese Turkistan were compiled. The drawing of all except four hill sheets was completed, and most of the work was sent to the press.

Formerly it was the practice to give extracts from the reports of parties carrying out topographical surveys in districts or regions that attracted notice for political reasons, but this practice has been superseded by official caution and silence. With regard to the survey of about 200 miles of the Burma-China frontier north of the Kengtung Shan State it is reported that the villagers were found most friendly and hospitable, and no difficulty was experienced in obtaining supplies and labour.

Some particulars concerning the discoveries in the Mishmi and Lushai hills, especially as to the state of society among these primitiv

hillmen, would have been interesting and have lightened the somewhat heavy reading to which the Report is now restricted. The record of the fact that a single tiger mauled three men, killed one, and put a stop to any further survey proceedings in its neighbourhood for that year at least is an indication that some members of the Department are of the same way of thinking. That Indian surveyors are exposed to other dangers besides the attack of man-eating tigers was proved by the murder of Mr. H. W. McDonald and the killing of one surveyor, Yakub Ali, and two khalasis by raiders all in the Shirani country on the Afghan frontier.

SOCIETIES.

ROYAL.—Feb. 16.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'The Constitution of the Alloys of Aluminium and Zinc,' by Messrs. Walter Rosenhain and S. L. Archbutt; 'On the Production and Properties of Soft Röntgen Radiation,' by Mr. R. Whiddington; and 'Experiments on Stream-Line Motion in Curved Pipes,' by Prof. J. Eustice.

GEOLOGICAL.—Feb. 17.—*Annual Meeting.*—The officers were appointed as follows: President, Prof. W. W. Watts; Vice-Presidents, Dr. C. W. Andrews, Mr. Alfred Harker, Dr. J. E. Marr, and Prof. W. J. Sollas; Secretaries, Prof. E. J. Garwood and Dr. A. Smith Woodward; Foreign Secretary, Sir Archibald Geikie; Treasurer, Dr. A. Strahan. The following awards of Medals and Funds were made: The Wollaston Medal to Prof. Waldemar C. Brögger.—The Murchison Medal to Mr. R. H. Tiddeman.—The Lyell Medals to Dr. F. A. Bather and Dr. A. W. Rowe.—The Bigsby Medal to Prof. O. Abel.—The Wollaston Fund to Prof. O. T. Jones.—The Murchison Fund to Mr. E. S. Cobbold.—The Lyell Fund to Dr. C. G. Cullis.—The Barlow-Jameson Fund to Mr. J. F. N. Green.

The President delivered his Anniversary Address, which dealt with the evolutionary aspects of geology, and especially with the mode and order of deposition of the various formations.

ASIATIC.—Feb. 14.—Lord Reay, President, in the chair.—Sir Charles Lyall read a paper entitled 'Abid of Asad, an Ancient Arabian Poet.' Sir Charles paid high tribute at the outset to the Schweich lectures of Dr. George Adam Smith, delivered in December last before the British Academy, on the 'Early Poetry of Israel,' which showed the close relationship in language, theme, and method of treatment of their poetry to the poetry of their cousins of the Arabian desert. The poet in the ancient Arabian tribal system held a very high place; he might almost be called the prophet of the tribe, and he was often their champion too. It was his duty to sing of the great deeds of the warriors, to uphold the heroic ideal, and to heap scorn upon their enemies.

The songs were not written, although writing was well known in Arabia in the century before Mohammed; it was, however, no more practised by the nomads then than it is now. Yet there were very definite and rigid forms of verse, and a conventional order of treatment of subjects. But, just as in the great period of Italian art there is no difficulty in detecting, despite the limited range of subject, the characteristics of the great masters, so it was possible for ancient Arabian poets to make their individuality felt, though using conventional methods. The themes and methods still reign in the minstrelsy of the desert which prevailed centuries ago. It is the actual life as he sees it which the poet sets forth, the people among whom he lives, the desert in all its many aspects, and sung in a voice which even now conveys a convincing impression of reality.

Of Abid, of the tribe of Asad, Sir Charles gave interesting particulars: he was born about 470 or 475 A.D. and died before 554, which was sixteen years before the birth of Mohammed. At this period Northern Arabia played an important part in the long warfare between Rome and Persia, and a new power, that of the kings of Kindah, was pushing up from the south. These conditions are reflected in Abid's poems, and he represents himself as a leader and chief of his tribe. Sir Charles read a number of his translations from the Arab poet, showing him in many moods, skilled in observation and expression.

Prof. Margoliouth, Miss Ridding, and Mr.

Longworth Dames took part in the ensuing discussion, and Sir Charles replied.

SOCIETY OF ANTIQUARIES.—Feb. 16.—Prof. F. Haverfield, V.P., in the chair.—Mr. F. King read a paper by Dr. Ashby, Mr. Hudd, and himself on 'The Excavations at Caerwent in 1910.' A field and garden, called the "Gaer," to the west of and adjoining the churchyard on the south side of the main road, have been excavated with very interesting results. Fronting on the main road, which was the Roman road, a series of shops and workshops was discovered. The buildings, in their early states, were all very similar in plan, but some had been altered considerably, and in two cases others had been combined to form one large building. The shops naturally occupied the front of each house and were small, being only from 8 ft. to 9 ft. square. They all had wide entrances or openings at the front and, where the alleys between them were wide enough, at the sides also. Running just outside the front of these shops was the street drain. The large rooms behind the shops had been fitted with furnaces, but only sufficient was left to show that a great deal of heat had been used. In one of the rooms three small bars of lead, 6½ in. long, 1 in. wide, and ¼ in. thick, and a small piece of ornamental lead were found, suggesting that the working of that metal formed part of the trade carried on. The furnaces, from the scanty remains, appear to have been built of the local yellow sandstone, which soon goes to pieces under the action of fire.

The three westernmost shops were combined at a later date to form one large house (House No. XV.), as were also the three next again to the east on the opposite side of the cross street (House No. XVI.).

In the east block of the former was a cellar unlike anything yet found at Caerwent. It measured 12 ft. 9 in. by 8 ft. 9 in., and was approached by a flight of five steps in the north-west corner, having a total descent of 4 ft. 2 in. The floor was of good lime concrete, and it had a narrow window in its south wall blocked up in later Roman times.

In House No. XVI. the best find was a small sandstone altar *in situ*, bearing the inscription: DEO MARTI OCELO AEL. AGVS TIVS O P V S L M.

In House No. XIX., further to the east again, a quantity of fine coloured plaster was found belonging to the early building. To the east again was another cross street, a continuation of the one from the North Gate. Just here a large sinkage had taken place, part of the street and the wall of the house adjoining having gone down bodily. Apparently there had been a natural hollow filled up in early Roman times (for several fragments of Samian ware, Dragendorff shape 29, were found), and the filling was then consolidated with the weight above.

ROYAL NUMISMATIC.—Feb. 16.—Sir Henry H. Howorth, President, in the chair.—Mr. F. A. Walters exhibited a rare bronze medallion of Antoninus Pius with reverse, the Earth seated with the Four Seasons, and Mr. Bernard Roth showed a very rare gold stater of Dubnovellanus and a gold stater of the Vellocasses, a Gaulish tribe.

Mr. H. A. Grueber read a paper on the 'Coinage of the Triumvirs, Antony, Lepidus, and Octavian,' illustrative of the History of the Times. Mr. Grueber selected this period as in his estimation no other series of coins illustrated more fully or vividly the development and extension of the Roman Empire. The series opened with a coin of Mark Antony bearing his portrait and struck almost immediately after the death of Julius Caesar. The next series of coins was that relating to the formation of the Triumvirate which gives portraits of the three Triumvirs. These were struck at Lugdunum by Antony. From that date the series is almost continuous, and the more important events commemorated were the first war with Sextus Pompey in Sicily; the victories of Brutus and Cassius in Asia Minor; the battle of Philippi; the siege of Mutina and its capture by Octavian; the second war with Sextus Pompey and his defeat at Naulochus; the wars with the Parthians and the victories of Vestidius and the death of Labienus; the triumph of Antony at Alexandria; and lastly the battle of Actium and the subsequent rejoicings at Rome. It is to this date that Mr. Grueber ascribes the origin of the Roman Imperial coinage. As all these coins were struck outside Italy Mr. Grueber gave a summary of the history of the Provincial issues and of the gradual development of portraiture on coins of the Republic.

The President pointed out how well the series chosen by the lecturer illustrated the richness in

historical significance of ancient as contrasted with the monotonous types of modern coins in which commercial needs rendered frequent changes of types undesirable. Mr. Walters and Mr. Harrison also spoke.

LINNEAN.—Feb. 16.—H. W. Monckton, Treasurer and V.P., in the chair.—The Vice-President announced seven vacancies in the List of Foreign Members.—Prof. Dendy showed three lantern-slides of some remarkable growth-forms in sponges, and exhibited a singular horny sponge collected by him in New Zealand, which has not yet been described.—The Rev. T. R. R. Stebbing referred to some curious sponges in a collection possessed by him, and Prof. Dendy replied.

The first paper, by Mrs. L. J. Wilsmore, was entitled 'On some Hexactiniae from New South Wales.' The second by Canon Norman, 'Three Species of Harpacticid Copepoda.' The remaining papers were by Mr. Hirst, 'Report on the Araneae, Opiliones, and Pseudoscorpiones'; by Mr. G. A. Boulenger, a 'List of the Batrachians and Reptiles obtained by Prof. Stanley Gardiner on his Second Expedition to the Seychelles and Aldabra'; and 'On the Marine Brachyura from the Indian Ocean collected in 1905,' by Miss Mary Jane Rathbun.

ENTOMOLOGICAL.—Feb. 1.—Mr. G. T. Bethune-Baker in the chair.—It was announced that the Council had nominated the Rev. F. D. Morice President for the current year.—Mr. W. J. Kaye exhibited several species of the genus *Heliconius*, including the forms *rubripicta*, *adonides*, and *feyeri* with streaked hind wings. These forms seem likely to cause *H. plesseni* and *H. notabilis* to be sunk as forms of *melpomene* and *erato* respectively.—Dr. Nicholson exhibited and described a new species of *Tachyporus*, *T. fasciatus*, intermediate between *T. chrysomelinus* and *T. solutus*.—Mr. H. J. Turner exhibited interesting forms of *Luperina guenei*, including two new aberrations, *ab. murrayi* with pale submarginal area, and *ab. fusca* a melanic form.—Mr. Champion exhibited, on behalf of Mr. J. H. Keys, his black var. of *Athous haemorrhoidalis* from Dartmoor and a red variety of *Agabus bipustulatus*.—The Rev. A. Stiff brought bred specimens of *Polygonia c. album* var. *hutchinsoni*, believed to be the first known English examples of this form in the second brood.—Dr. O. M. Reuter communicated a paper on 'Bryocorina nonnulla Æthiopica,' and Col. Manders a paper on 'A Factor in the Production of Mutual Resemblance in Allied Species of Butterflies.'—A vote of condolence was passed with the family of the late Mr. J. W. Tutt, the President nominate for this year.

METEOROLOGICAL.—Feb. 15.—Dr. H. N. Dickson, President, in the chair.—Mr. R. Cooke and Mr. S. C. Russell submitted a joint paper on the 'Variation of the Depth of Water in a Well at Detling, near Maidstone, compared with the Rainfall 1885-1909.' This well is on the chalk formation at the foot of the range of the North Downs, 358 ft. above sea-level; its present depth is 118 ft. Weekly plumbings of the water in the well have been taken without interruption since 1885, and the authors have compared these with the rainfall of the previous week. The extreme variation of the water-level during the whole period was 30 ft. 3 in. Successive weeks of steady rainfall exercise a far greater effect upon raising the water-level than weeks of heavy but intermittent rainfall. As a rule the effect of the autumn rains is not felt on the well until the month of December, but the winter rainfall penetrates most readily. Following a series of wet years a high limit of saturation is attained; and when once this condition is thoroughly established the water remains at an almost constant level throughout the seasons, excess or deficiency of rain causing very little effect.

Mr. A. W. Clayden exhibited and described the actinograph, a new instrument which he has constructed for observing and recording changes in radiation.

A paper on a 'New Set of Cloudiness Charts for the United States,' by Mr. K. M. Clark, of Harvard University, was also read.

HISTORICAL.—Feb. 16.—*Annual General Meeting.*—Archdeacon Cunningham, President, in the chair.—After the acceptance of the report and the re-election of retiring Vice-Presidents and Councillors, the President delivered his annual address. He dealt with the question of nationality and the reasons for the very different courses of its development in England and Scotland.—Miss Abram, Mrs. Routledge, Messrs. F. J. Pope

and S. Partington were elected Fellows, and the Library of the Royal University, Bonn, was admitted as a subscribing library.

HELLENIC.—Feb. 14.—Dr. Kenyon, V.P., in the chair.—Prof. Ernest Gardner read a paper on 'A "Polyclitan" Head in the British Museum.' This head, from Apollonia, was recognized as a replica of the head of the Westmacott athlete; several other copies were known, and the relation of these offered an interesting problem. In the case of the Diadumenus of Polyclitus they had an independent Attic variant as well as Atticising copies; and in the case of the athlete pouring oil—probably an invention of the Myronic School—they had a Polyclitan variant. The motive of the Westmacott statue had been variously interpreted; the view that had met with most acceptance was that he was placing a wreath on his head; the identification as the statue of Cyniscus rested on no certain evidence, and was made improbable by the dating of Cyniscus to 460 B.C.

The Westmacott and other copies seemed to be derived from a Polyclitan bronze original. But other copies of variants differed considerably from these; the Barracco copy showed Myronic tendencies; the Eleusis copy and the Apollonia head both showed the softer, almost sentimental tendency of Attic art, leading towards the character associated with Praxiteles. The type was found in the Parthenon frieze. The question, in the case of the Apollonia head, was whether it was to be regarded as a more or less independent Attic variant upon the type, or as an Atticising imitation of the Polyclitan variant; it was probably the latter. It certainly seemed nearer to the original of the Westmacott statue than were the Barracco and Eleusis copies. Whether that original was by Polyclitus himself or only a work of his school was another problem; probably the latter, if they took the Doryphorus and Diadumenus as characteristic; but it was not easy to limit the possibilities of variation.

In the discussion which followed Mr. E. N. Gardiner, Mrs. Esdaile, Mr. Baker-Penoyre, Mr. G. F. Hill, and Mr. H. B. Walters took part.

CHALLENGER.—Jan. 25.—Dr. G. H. Fowler in the chair.—The following gentlemen were elected Fellows: Mr. G. H. Drew, Mr. J. Johnstone, and Mr. R. A. Todd.—Commander Campbell Hepworth read a paper on 'Remarkable Displays of Phosphorescence in the Sea.' One of the latest of these displays was witnessed in the Malacca Straits on June 9th, 1909. Light waves were observed moving over the surface of the water. They gradually extended until they appeared to radiate from a centre situated on the horizon, round which point they rotated with increasing brilliancy and velocity. The rays, though curved, were likened to those of a swiftly revolving light. Close to the ship they measured about 6 ft. across, the dark intervals being about twice as wide. A very similar display was witnessed two months later in the South China Sea; while in April, 1901, a moving luminescence, resembling the ripples caused by the passage of wind over a cornfield, was observed in the Persian Gulf. In the last-mentioned case the bands of luminescence overtook the ship and passed ahead of her. Commander Hepworth attributed the displays to the stimulation by tide ripples of organisms capable of phosphorescence, pointing out that the phenomena frequently occurred in narrow waters. The apparent rotation was in his opinion due to this cause combined with the motion of the ship. In the subsequent discussion Dr. Calman suggested that the tide ripples might produce their stimulating effect by causing the mixture of water-strata of different salinity, and Mr. Lister gave instances of both marine and land organisms which became phosphorescent when the light from similar organisms impinged upon them.

Mr. G. P. Farran read a paper on the breeding seasons of *Calanus finmarchicus*. Mr. Farran said that, though it was widely distributed over much of the North Atlantic, the area in which it occurs in great abundance is sharply defined, the seaward limit being approximately the isohaline of 35.25 per mille. Examination of the proportion of the numbers of the various stages present at different seasons would seem to show that at the close of the year the small stock of *Calanus* present is in stage V., the adults having died off. As soon as favourable conditions occur, probably early in March, the stock reaches maturity, and rapidly reproduces. By May immense shoals have been formed, consisting mainly of the youngest stages, but with some adults. Reproduction gradually diminishes in rate, and by November appears to have completely ceased.

MEETINGS NEXT WEEK.

- Mon. Royal Academy of Arts, 4.—'The End of Gothic in France,' Mr. R. T. Blomfield.
 — Institute of Actuaries, 5.—'The Assurance Companies' Act, 1909; Some Explanatory Notes on such portions of the Act as relate to the business of Life Assurance,' Mr. A. R. Barrand.
 — Institute of British Architects, 8.—Business Meeting.
 — Society of Arts, 8.—'Brewing and Modern Science,' Lecture IV., Prof. A. J. Brown. (Cantor Lecture.)
 — Geographical, 8.30.—'Labrador,' Dr. Wilfred T. Grenfell.
 Tues. Royal Institution, 3.—'Crystalline Structure: Mineral,' Dr. A. E. H. Tutton.
 — Society of Arts, 4.30.—'The Resources and Problems of the Union of South Africa,' Sir Richard Solomon. (Colonial Section.)
 — Institution of Civil Engineers, 8.—'Modern Railway-signalling: Some Developments upon the Great Western Railway,' Mr. A. T. Blackall.
 Wed. Society of Arts, 8.—'Caisson Sickness and Compressed Air,' Dr. Leonard Hill.
 — Entomological, 8.—'Persistence of Bacilli in the Gut of an Insect during Metamorphosis,' Mr. A. Bacot.
 Thurs. Royal Institution, 3.—'Ruskin,' Lecture I., Mr. A. C. Benson.
 — Royal Academy of Arts, 4.—'Henri IV.,' Mr. R. T. Blomfield.
 — Royal, 4.30.—'Reversal of the Reflex Effect of an Afferent Nerve by altering the Character of the Electrical Stimulus applied,' Prof. C. S. Sherrington and Miss S. C. Sowton; 'Carbon Dioxide Output during Decerebrate Rigidity,' Dr. H. E. Roaf (Preliminary Communication); 'The Alcoholic Ferment of Yeast Juice,' Part VI. The Influence of Arsenates and Arsenites on the Fermentation of the Sugars by Yeast Juice,' Dr. A. Harden and Mr. W. J. Young; 'Experiments to ascertain if certain *Tabanidae* act as the Carriers of *Trypanosoma pecorum*,' Sir D. Bruce and others.
 — Liuneean, 8.—Meeting.
 — Chemical, 8.30.—'Potassium cupricarbonates,' Mr. S. U. Pickering; 'Studies in the Camphane Series. Part XXIX.,' Messrs. M. O. Forster and A. Zimmerli; 'Synthesis of Dipeptides of Lauric Acid with Glycine, Alanine, Valine, Leucine, and Asparagine,' Messrs. A. Hopwood and C. Weizmann; 'Fluorine Derivatives,' Messrs. F. G. Pope and H. Howard; 'The Constituents of Witharia Somnifera,' Messrs. F. B. Power and A. H. Salway.
 Fri. Institution of Civil Engineers, 8.—'Lagos Harbour Survey, 1909-1910,' Mr. H. E. Hill, Jun. (Students' Meeting); 'Design and Construction of Works for the Bacterial Purification of Sewage,' R. J. Samuel (Students' Meeting).
 — Royal Institution, 9.—'The Inadequacy of Causation in Modern Science,' Prof. Karl Pearson.
 Sat. Royal Institution, 3.—'Radiant Energy and Matter,' Lecture I., Prof. Sir J. J. Thomson.

Science Gossip.

MESSRS. GEORGE PHILIP & SON include in their spring announcements 'Ship Economics,' practical aids to shipmasters on maintenance, repairs, surveys, &c., with glossary, by Mr. H. Owen; 'A Practical Guide in the Preparation of Town Planning Schemes,' by Messrs. E. G. Bentley and S. Pointon Taylor, with a foreword by Mr. Raymond Unwin; and 'The Nations of the Modern World,' with particular reference to the British Empire, by Mr. H. J. Mackinder, completing the series of "Elementary Studies in Geography."

THE following Parliamentary Papers have just been published: Scientific Investigation, Fisheries, Ireland, 1910, No. II. and No. III. (post free 1s. 2d. and 7d.).

THE sun will pass vertically over the equator at 6 o'clock in the evening (Greenwich time) on the 21st prox. The moon will be full about two minutes before midnight on the 14th, and new at thirty-eight minutes past noon on the 30th. She will be in perigee on the evening of the 6th, and in apogee on the afternoon of the 21st.

No eclipses are due next month. The naked eye double star A Tauri will be occulted by the moon about midnight on the 6th, and ω Cancri on the evening of the 10th, but the disappearance of the latter will be difficult to see on account of the twilight.

MOST of the astronomers who have undertaken a voyage to the Pacific Ocean in order to observe the eclipse of the sun, which will be total there on the 28th of April, have selected one of the Tonga (formerly called Friendly, a name proposed by Capt. Cook) Islands as the station for the purpose. That called Vavau seems to be preferred, and thither Father Cortie of Stonyhurst College is going.

The planet Mercury will be at superior conjunction with the sun on the 20th prox., and will not be visible during the

month in the northern hemisphere. Venus will set later each evening and increase in brightness, moving from the constellation Pisces into Aries; she will be in conjunction with the moon a little before sunset on the 2nd. Mars rises a little earlier each morning, moving from the constellation Sagittarius into Capricornus; he will be near the moon on the 26th. Jupiter rises now about midnight and earlier each night, situated not far from the star α Libræ; he will be in conjunction with the moon about 2 o'clock on the morning of the 19th. Saturn is in Aries, east of Venus, until the 28th, and afterwards to the west of her, their conjunction taking place on the morning of the 29th.

Two new small planets were photographically discovered by Herr Helffrich and Herr Ernst respectively at the Königstuhl Observatory, Heidelberg, on the 3rd inst.

HERR ENEBO, of Dombaas, Norway, noticed last November a sudden diminution of light in a faint star situated in the constellation Lacerta; and, as this has recently been confirmed by a further decrease (the star's light on the 23rd ult. scarcely exceeded the thirteenth magnitude), it will be reckoned in a general list as var. 5, 1911, Lacertæ. The period is probably long, or perhaps irregular.

FINE ARTS

THE ROYAL SOCIETY OF PAINTER-ETCHERS AND ENGRAVERS.

THIS Society, which has now completed thirty years of more or less prosperous existence, has doubtless proved of modest utility in stimulating the practice of original etching, its influence in this respect probably extending indirectly to artists who have never actually been among its members. When we consider how artificial was the revival which launched the Society, how much it was the work of amateurs determined to do etchings because good etchings had formerly been done rather than of professional artists bent on making fine plates because plates of some sort had to be etched and paid for, it is surprising that the movement should have received so much support as it has, and the Society persisted so long in the culture of an art abstractly desirable rather than actively desired.

It has not so survived without betraying frequently and in increasing degree the nature of its support. The trail of the amateur is over the whole movement, and the amateur has his virtues as well as his weaknesses. He is virtuous considering because it is to him that we must look, if not to produce the whole art of the future, at least to bridge the gulf which separates the firm ground of yesterday's popular demand from that good time for which the optimist hopes.

Work which one has enjoyed doing has always a certain charm, and obviously the better class of amateur enjoys his etching or his painting. He is inclined, however, to limit that etching or painting to the sort of thing that he enjoys. He develops himself along the line of least resistance, while the professional artist, if working for any exacting public, must strengthen himself in those

qualities in which he is naturally weak. The late Mr. Brabazon was an ideal example of the former policy, which in any but a robust talent leads as a rule to the more noteworthy results, and, if it is a little difficult to name as typical a modern instance of the professional line of conduct, that is because all successful artists of our day have been somewhat of the amateur class. It was, perhaps, a little in order to give the amateur as large an opening as possible that criticism has obligingly taken up the position that there are no absolute canons of Art; that it is all a matter of personal feeling; and that it is in proportion as he gives full way to his personality that an artist is interesting. Critics and artists alike have been dupes of this doctrine, and have set themselves to the discovery and cultivation of odd lop-sided talents fit enough for attracting prompt journalistic notice, but with none of the all-round competence which fits a man for any task which falls within the compass of his craft. Most of the idols of our day are in this sense amateurs. The Post-Impressionists are noticeably amateurs; nor is it astonishing that we should set small value on efficiency, since there is no longer any demand for a competent artist in illustration, while the competent artist in decoration (except for the unaccountable anachronism of Alfred Stevens) has not yet been bred. The competent portrait painter alone commands respect.

The revival of etching thirty years ago started in an atmosphere as artificial as that in which painting lives to-day, and the present Exhibition of the Society gives us fair warning of the ultimate degeneration awaiting an art which has no root in popular necessities, but is merely kept alive by enthusiasts eking out a livelihood by mutual support. As in many previous shows the most noteworthy work is contributed by Mr. Robert Spence (180, 181, 183), who happily seems to have secured one commission—to illustrate the life and works of George Fox. He has been doing this ever since we first noticed his etchings, and we tremble for the day when he shall finish and be free to do work like *The End of the Play* (182), in which, relieved of the strain of realizing the intense life of actual historical characters, he shows himself a facile illustrator of the ordinary type. The bulk of the prints on the walls show a similar facility in going through the special small performance each artist finds easy for one of his temperament. Too many exhibitors, indeed, seem to base their love for etching mainly on the opportunity it offers for evading the demand for careful proportion and discriminating use of shading which a black line on a white ground inevitably makes. A meaningless scribble is certainly less offensive when printed in brown ink on a toned paper, but the privilege of a draughtsman as against a photographer is that he not merely records forms, but also divides them into categories, and there are few etchers who avail themselves of this advantage to an adequate degree. Niceties in biting legitimate to perfect a carefully distributed scheme of line become absurd when lavished upon a plate in which the more obvious means of securing exact gradation of tone have been neglected. Among the artists displaying most attention to such fundamental qualities of planning may be cited Mr. Nelson Dawson (40, 42, 43), Mr. Frederick Marriott (82), Mr. Sidney Lee (89), Sir Charles Holroyd (96), Mr. Malcolm Osborne, who utilizes some of Mr. Muirhead Bone's devices of composition in No. 229, and Miss Katherine Kimball (308). We welcome also once more the

clean-bit line of Mr. J. R. G. Exley (41), and of Mr. Eve in his book-plates for Sir Ernest Cassell (205), and His Majesty the King (211).

Somewhat apart from the rest of the exhibits are two little plates, *Early Morning* (238), by Miss Mary E. Kershaw, and *October Rainfall in Spain* (second state) (165), by Sir J. C. Robinson, the former naive and primitive, the latter powerful and impressive, while both reveal the intense sincerity of the ideal amateur disinterestedly absorbed in a delightful task. The charming work of the late Sir F. Seymour Haden is a little prudent and negative compared with either of these—his delicate scribble of intricate line—half bent on describing surface detail, half on establishing masses of tone—having neither the intimacy of Miss Kershaw's delineation nor the breadth and vitality of Sir J. C. Robinson's design. It is this vitality rather than technical sufficiency which is wanting in the Exhibition; and, if we have criticized it as representative of the weakness of amateur work, we do not mean to deny that there are considerable signs of technical training in latter-day shows. Still less have we any intention of scoffing at the exponents of an art for a lack of popular support, for which, of course, they are not to be blamed. We are often told that no fine work is done for the sake of money, and in a measure that is doubtless true. Only a commercial demand implies popular interest, and failure to come into contact with this implies a detachment ultimately disastrous, even if unavoidable. It is well to remember that an artist who performs a utilitarian task, yet produces a fine thing, is the more an artist because he is a contemporary artist. It is an odd fact when one thinks of it that while both at South Kensington and under the County Council there are quite rightly classes for etching, an art by which perhaps a dozen men in the city make a living, there is not, so far as we know, a school in London where scene-painting is taught, an art which must employ hundreds, yet the demand is surely a measure, albeit a rough and ready one, of public utility.

OTHER EXHIBITIONS.

At Messrs. Goupil's Gallery in Bedford Street the members of the Society of Graver-printers in Colour are holding an exhibition of works in monochrome, of which the most important are a series of etchings by Mr. Theodore Roussel (67-83). These would call for lengthy notice but for the fact that almost all of them have been shown on previous occasions, when we have made due acknowledgment of their distinguished and sometimes exquisite qualities. An artist rather less delicate and personal of the same name, Mr. Raphael Roussel, is showing work alongside of some vitality. *The Leaner* (52) and a study of light (57a) are examples of vigorous realism somewhat resembling the earlier water-colours of Mr. Sargent. Mr. Douglas Almond's chalk drawings are also noteworthy, No. 21 for easy rendering of pose, and No. 23 for brilliant suggestion of colour. M. Lucien Pissarro is the only one of the company who pretends to the quality of invention, which should surely be the sheet-anchor of the engraver in black and white. His inventions, nevertheless, rather lack physiognomy, resembling a little in their failure to suggest human types at all vividly, the work of Kate Greenaway. He cuts woodblocks nicely, however, and has a care for pattern and feeling for the

essentials of landscape which gives his work value.

At the Fine Art Society's Galleries Mr. Lamorna Birch shows considerable cleverness in popularizing the knowledge of natural effect brought into English painting by the researches of such men as Buxton Knight and James Charles. We do not know whether in fact he was a pupil of the former, but such works as Nos. 9, 17, 35, 63, or 74 bear a relation to the work of the earlier painter that suggests an intelligent disciple who has come rather more easily by his knowledge than the pioneer who had to dig it out for himself. They are more facile than the rugged and sincere studies of Buxton Knight, and prudently limit research within acceptable bounds. *Leafy June* (40) and the clever pastel *The Brimming River* (28) have a similar half-resemblance to the work of James Charles, being a little less poignant and intimate, yet really very like. These pictures are the best in a show which is of very uneven merit.

SALE.

MESSRS. CHRISTIE sold on Saturday last the following works. Drawings: Rosa Bonheur, Otter Hounds, 50*l.* W. Hunt, The Christmas Pie, 147*l.*; Pineapple and Grapes, 50*l.* Pictures: Vicat Cole, Bury Village on the Arun, 220*l.* Peter Graham, Highland Cattle, on the edge of a loch, 210*l.* Erskine Nicol, Asking a Favour, 152*l.* E. Verboeckhoven, Sheep, Rabbit, and Chicken, in a Shed, 126*l.* Fritz Thaulow, A River in Normandy, Evening, 109*l.* E. de Blaas, Two's Company, Three's None, 210*l.* F. Viney, Love under the Rose, 199*l.*

Fine Art Gossip.

ORCHARDSON's picture, 'The Young Duke,' which was lent to the Winter Exhibition at the Academy, has now been removed to the International Exhibition at Rome. Its place is filled by another work by the same artist, a portrait of Sir David Stewart of Banchory.

THE annual exhibition of the Royal Amateur Art Society and Loan Annexo will be open for a press view on Saturday next at 27, Grosvenor Square. The show will be opened officially by the Duchess of Connaught on the following Monday.

THE annual exhibition of the Water Colour Society of Ireland is now open in the Leinster Hall, Dublin. Amongst the artists represented are Mr. Frank Brangwyn, Mr. Lee Hankey, Mr. Evert Moll, Mr. R. C. Orpen, Mr. T. W. Sturge, Miss Mildred Butler, and Miss Mary Barton.

At the Atkinson Art Gallery at Southport a private view of the thirty-third Spring Exhibition of Pictures, &c., took place last Friday.

A NEW edition of the Catalogue of the Pictures in the Fitzwilliam Museum, Cambridge, has just been issued. It contains over a hundred new entries, among the pictures acquired since the last issue being examples of Reynolds, Gainsborough, Hogarth, Romney, Etty, Rossetti, Burne-Jones, J. F. Millet, and Daubigny. The contents of the Museum are now very well exhibited.

M. EMILE CAGNIART, who died at the age of 55 on Wednesday week last, was a well-known landscape painter and member of the Société des Artistes Français. He studied under A. Guillemet, and first exhibited at the

Salon in 1877. His 'Vue du Palais de Justice,' in the Salon of 1897, was purchased by the State. At last year's exhibition there were two pictures by him, one of which was a scene at La Villette, "sortie d'usines," and the other a view in the valley of the Meuse (Belgium).

THE MEDICI SOCIETY have just published as their first two plates for 1911 the little 'Head of St. Catherine Crowned with Flowers,' by B. Veneziano, from the Glasgow Corporation Art Gallery, and 'Viscount Althorp aged Four,' after Reynolds, from Earl Spencer's collection.

THE Society will publish immediately a reproduction after the brilliant Watteau 'Leçon d'Amour,' reproduced by special permission from the original in the Potsdam Collection of the German Emperor; the Raeburn 'Boy and Rabbit,' from the Diploma Gallery, Burlington House; and Hoppner's 'Lady Charlotte Campbell as Aurora,' now at Inverary Castle, by permission of the Duke of Argyll.

A SERIES of pictures of the School of Cologne, containing episodes from the legend of St. Gereon, have been presented to the Wallraf-Richartz Museum at Cologne by Herr Alfred Neven-Du Mont. They are the work of two different artists, who show a close connexion with the anonymous painter known as the "Master of St. Severin." As these pictures have been for many years in a private collection in North Germany, they are hardly known to critics, and even Dr. Aldenhoven, in his exhaustive history of the School of Cologne, made no mention of them.

At the meeting of the Società Italiana di Archeologia e Storia dell'Arte in Rome on February 13th, Dr. G. Cantalamessa drew attention to a hitherto unknown work by Bernini, a large bust of Cardinal Domenico dei Ginnasi (d. 1639). Formerly the property of the cloistered nuns of Santa Teresa, it was only after their recent departure for Fano, when the bust was entrusted to the Frati of S. Maria della Vittoria, that it was seen, and recognized as a Bernini, by Dr. Cantalamessa. It is now to be placed in the Borghese Gallery beside the bust of Cardinal Scipione Borghese.

At the same meeting Prof. Venturi spoke about Evangelista da Pian di Meleto, the pupil of Giovanni Santi, and set forth his reasons for considering him to have been Raphael's first master. The documents relating to this painter, on which Prof. Venturi bases his conclusions, were published more than two years ago by Cav. Magherini-Graziani of Città di Castello and were commented upon in *The Athenæum* of February 9th, 1909.

AN influential committee at Milan, which numbers among its members Senatore Luca Beltrami, Prof. Cavenaghi, Comm. Corrado Ricci, and Dr. Modigliano, Director of the Brera, has been discussing the advisability of carrying out extensive restorations in the church of S. Maurizio al Monastero Maggiore at Milan. The committee has issued a report of the actual condition of the frescoes, together with an appeal for financial support to carry out the work.

IN the February number of the *Monatshefte* Prof. Munoz writes on a sculptor whom he is able to identify as Paolo da Gualdo. The tombs of Bartolomeo Carafa and of Cardinal Stefaneschi, respectively in S. Maria del Priorato and S. Maria in Trastevere, Rome, bear the signature "Magister Paulus," and writers have sought to identify this master with various sculptors who bore the name of "Paolo," among them Paolo di Mariano, called Paolo Romano. In the

church of S. Francesco at Vetralla, Prof. Munoz was fortunate enough to discover a tomb, evidently by the same hand as the Carafa monument, which was signed in full: "M. Paulus De Gualdo Cattanie Me Fecit."

THE sculptor is therefore not a Roman, as usually supposed, but an Umbrian from Gualdo Cattaneo, near Spoleto, who worked at first in Viterbo and its neighbourhood, and later went to Rome. The following are the works which Prof. Munoz ascribes to him with certainty: the tomb, at Vetralla, of Briobris, son of Giov. Vico, Prefect of Rome, dating from the close of the fourteenth century or the beginning of the fifteenth; a tablet commemorating a Neapolitan noble, Niccolò de Summa, at Civitacastellana, of 1403; the Anguillara monument at Capranica di Sutri of 1408; and the Carafa and Stefaneschi tombs of c. 1415 and 1417.

AN interesting suggestion was made by Capt. Nevile R. Wilkinson, Ulster King of Arms, in the course of his recent lecture on 'Heraldry in Art' at the Dublin Society. After alluding to the custom which prevailed among German students in the sixteenth and seventeenth centuries of keeping a *Liber amicorum* or *Stammbuch* for recording the signatures and arms of their friends he suggested that the custom might be revived by the Irish Universities, who might institute such a book, which could be signed by distinguished visitors, the arms of the signatories being blazoned after the signature.

THE revival of this practice would, he pointed out, be of great value in maintaining a good tradition of heraldic decoration in Dublin; and he undertook, in the event of the idea being adopted, to give all the help in his power to carry it out.

MESSRS. JACK's spring announcements include a 'History of Painting,' by Mr. Haldane Macfall, in 8 vols., beginning with 'The Renaissance in Central Italy' and ending with 'The Modern Genius'; and 'The Painters of Japan,' two folio volumes by Mr. Arthur Morrison, with 120 reproductions in collotype and colour.

MESSRS. MACLEHOSE will issue very shortly an elaborate study of the *Roman Wall from the Forth to the Clyde*, by Dr. George Macdonald. The substance of this work originally formed the Dalrymple Lectures on Archaeology in 1909, but Dr. Macdonald has greatly added to them; and owing to a grant made by the Carnegie Trustees for illustrations, he has been able to insert a long series of engravings of fragments of the wall itself and tablets recovered from it.

MUSIC

THE WEEK.

QUEEN'S HALL.—Symphony Concert.

WAGNER's Symphony in C, written in 1832, when he was nineteen years old, was produced at a Gewandhaus Concert in the following year. Soon afterwards Mendelssohn became conductor of those concerts, and the ambitious young composer gave him the score, hoping he would look at it, and perhaps give it another trial. Nothing more, however, was heard of the work until 1872, when

the band parts were discovered at Dresden in an old trunk, probably left behind by Wagner when he hurried away from that city in 1849. A fresh score was made, and Wagner conducted a performance of it at Venice shortly before his death. It was given by Mr. Henschel twice at his Symphony Concerts in London in 1887. Last Saturday Sir Henry Wood revived it.

The performance was excellent, but apart from the historical interest of the early work, there was nothing convincing in the music. Wagner himself in his later days noted that Mozart and Beethoven were too strongly reflected in it. M. Moriz Rosenthal rendered the pianoforte part of the Schumann Concerto with impeccable technique and brilliancy, but the interpretation was too modern to satisfy those who knew how Mme. Schumann played it.

BECHSTEIN HALL.—Pianoforte Recital.

In 1907 Ernst Lengyel, aged 14, played Liszt's Concerto in E flat at a London Symphony Concert. It was a wonderful performance, and afterwards at a pianoforte recital he gave further proof of his exceptional gifts. At his recital last Tuesday afternoon at the Bechstein Hall his performance of Liszt's transcription of Bach's organ fugue in G minor was astonishing, not only as a display of technique, but also as a reading of the music. It was not, as is the case with some pianists, a mere exhibition of virtuosity; there was a real attempt to present the music as impressively as was possible on a pianoforte. Afterwards Lengyel played Schumann's 'Etudes Symphoniques,' and Brahms's Sonata in F minor. In these he again proved that difficulties have ceased to exist for him. His interpretation of the works was sound, and instinct with rhythmic life. Now and again in these Etudes, and later in Chopin's G minor Ballade the time was hurried, and the tone in loud passages exaggerated. There is, however, every reason to excuse the young pianist for showing how swiftly, yet how correctly, he can play difficult passages, or what strength of finger he possesses. But one could not help wondering whether he would gradually yield to the temptation to astonish the public, or become a truly great artist.

BECHSTEIN HALL.—Classical Society Concert.

AN unfamiliar composition, a Fugue in B flat by Beethoven, was played at the sixth concert of the Classical Society at Bechstein Hall on Wednesday afternoon, played indeed twice, once at the end of the first, and again at the beginning of the second part, "to aid to a better understanding of this neglected work." Twice was too much; a better understanding can only be secured by many performances, or quicker

still, by a previous study of the score. When Beethoven in 1826, the year before his death had completed his Quartet in B flat, Op. 130, a private performance was given, and of those who had been invited to hear it, some requested Beethoven to make cuts in the final fugue, others to write another finale in its place. The composer adopted the latter course, and wrote his swan's song, the sparkling Finale now always associated with the Quartet. The discarded Fugue was the work in question. There are many stretches of dry, if clever counterpoint in it, and only here and there short passages which recall the noble style of the preceding movements of the Quartet. The rendering of the work by the Clinger Quartet showed that they had carefully studied the music. Some entries of the themes might, however, have been made clearer by keeping down a little the other parts.

MUSIC IN 'THE ENCYCLOPÆDIA BRITANNICA.'

By a convenient arrangement which is a novelty for critics, we have received a collection of the articles (A—H) concerning music in 'The Encyclopædia Britannica.' In the new edition that subject takes a prominent position. The editor was fortunate in securing the services, as departmental assistant, of Mr. Donald Francis Tovey, who is a trained musician, and whose knowledge of the works of the great composers is vast. We do not always agree with him, but of his ability and earnestness there can be no question. Among the articles, when the edition is completed, will be found many by Mr. Tovey, and others bearing the signatures of Mr. J. A. Fuller-Maitland, Mr. W. H. Hadow, and Mr. E. J. Dent. Miss Kathleen Schlesinger embodies the results of her profound study of musical instruments in an important series of articles. A review of this lady's learned work, in two volumes, on 'The Instruments of the Modern Orchestra and Early Records' appeared in *The Athenæum* of July 23rd last.

A few words first about some of Mr. Tovey's articles. There is an excellent account of Beethoven. The remark, however, concerning the harsh treatment he received from his brother Johann at Gneixendorf was taken from Grove, and Dr. Hugo Riemann has since been able to show that the brother was not nearly so black as he has been painted. It is rather surprising to find among the authorities "A. W. Thayer, *Beethovens Leben* (1866–1879)," as if that Life were complete. It consisted of three volumes, which only brought the Life down to 1816 inclusive. The work, however, was completed by a fourth volume by Deiters, and a fifth by Dr. Hugo Riemann, both based on material left by Thayer. Again, Nohl wrote a biography of Beethoven in three volumes, but only the condensed English translation is named. Lady Wallace's

English translation of the Letters, published in 1866, is noted, but there is no mention of the recently published 'Sämtliche Briefe,' by Drs. A. C. Kalischer and Fritz Prelinger. Lady Wallace published under 500 letters; but each of these two editions contain over 1,200.

The notice of Bruckner's art-work is terse, yet says enough to show that the composer's symphonies would scarcely be welcomed by present-day London audiences.

Under 'Cantata' we read that many of Bach's greatest cantatas begin with an elaborate chorus followed by a couple of arias and recitatives, but end with a plain chorale, and that this has often been commented upon as an example of Bach's indifference to artistic climax. Such criticism shows ignorance, as the writer remarks, of the position the church cantata occupied in the Lutheran service. Yet it is a very natural criticism, for when the cantatas are given in concert-halls they lose all point and meaning.

Under 'Counterpoint' Mr. Tovey gives two "striking illustrations" of double counterpoint in the 12th. Both are from Brahms, one being from the 'Triumphlied,' a work which has only been performed a few times in England during the last thirty-two years; moreover, it would scarcely form part of the library of an ordinary student. But why was not one of the many fine examples in Bach's 'Wohltemperirtes Clavier' selected, a work with which every student is, or ought to be, acquainted?

The article 'Concerto' deals with that form only up to Brahms. But what about the Liszt and other still more modern concertos? Surely something might have been said about them. Then, again, in 'Harmony' the writer has much to say about early periods. There is only one brief reference to a cadence by Wagner, after which a return is made to Brahms.

Mr. Tovey's remarks on Handel's plagiarisms are not altogether satisfying. He cannot fathom Handel's motive in copying from the 'Magnificat' of an obscure composer like Erba; but surely he might have just mentioned the theory propounded by Mr. P. Robinson in 'Handel and his Orbit.' He is bound to recognize the fact that Handel in some instances borrowed on a large scale, but the smaller borrowings he describes as "thefts of unattractive details"; Handel, however, did not seem to be of the same opinion. Again, under Gluck the often-repeated statement is given about a 'Piramo e Tisbe' of his having been produced in London, but it is a myth.

The writer (not named) of the article 'Berlioz' states that the French composer produced 'Les Troyens' in 1863. As a matter of fact it was only the second part of that work, namely, 'Les Troyens à Carthage,' which Léon Carvalho brought out at the Théâtre Lyrique in that year, and in a mutilated form. 'La Prise de Troie' is the title of the second part. The writer gives the titles at the end of his article among the list of works, which readers, however, might not notice.

Musical Gossip.

THE CORONATION HYMN, "The King, O Lord, in Thee this day rejoices," words by Dean Armitage Robinson, with music adapted by Sir Frederick Bridge from Mr. Percy Godfrey's stately 'Musicians' Company Coronation March,' has been published by Messrs. Novello.

DR. FREDERIC COWEN's 'The Veil,' produced last September at the Cardiff Festival, and generally regarded as his highest achievement in sacred music, was announced for performance at the Queen's Hall last Tuesday, and under his direction. The Cardiff choir was coming expressly to London for the occasion. Owing, however, to the illness of Dr. Cowen, the engagement had to be postponed, but we hope that he will soon be restored to health, and that his work will be heard in due course.

PROF. NIECKS has just concluded his valuable series of historical concerts for the season at Edinburgh University. There have been four concerts altogether, devoted respectively to (1) a recital of string Quintets by the Verbruggen Quintet; (2) a Couperin-Chopin recital on the harpsichord and piano by Madame Wanda-Landowska; (3) a Schubert and Loewe song recital by Mr. George Henschel; and (4) a recital of wind instrument music (2 oboes, 2 clarinets, 2 horns, and 2 bassoons) by Mozart, Beethoven, and Schubert, conducted by Mr. Henri Verbruggen. Prof. Niecks's introductions to the programmes have been, as usual, instructive.

DURING the Festival of Empire and Imperial Exhibition, at the Crystal Palace, Dr. Charles Harriss will conduct the performances by the Imperial Choir of four thousand voices at the concert on May 12th. The Queen's Hall Orchestra, under the direction of Sir Henry Wood, has been engaged. The whole of the programme will be devoted to British music.

Le Ménestrel of February 18 states that Richard Strauss has decided to make changes and cuts in his 'Rosenkavalier,' and that the new version will be used at Berlin and Vienna. After the production at Dresden the opinion was freely expressed that the opera was too long, and if report speaks true, Strauss accepts the criticism.

PERFORMANCES NEXT WEEK.

SEN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Society Concert, 3.30, Queen's Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday League, 7, Queen's Hall.
MOX.	Mr. and the Hon. Mrs. Clifford's Orchestral Concert, 8.15, Queen's Hall.
TEES.	Miss Margaret Bentwich's Violin Recital, 8.15, Bechstein Hall.
—	Handel Society, 8.30, Queen's Hall.
WED.	Royal Choral Society (The Dream), 8, Royal Albert Hall.
—	Classical Concert Society, 8.15, Bechstein Hall.
FRI.	Orchestral Concert for Young People, 3, Steinway Hall.
—	Mr. Dunhill's Choir, 8.15, Steinway Hall.
—	Miss Helen Sealy's Orchestral Concert, 8.15, Bechstein Hall.
SAT.	Queen's Hall Orchestra (Symphony Concert), 3, Queen's Hall.
—	Barns-Phillips Concert, 3, Bechstein Hall.

Dramatic Gossip.

'Mr. Jarvis' now to be seen at Wyndham's does not please us. He makes a sorry hero; he is the centre of an unsatisfactory play. The authors of the piece, Messrs. Leon Lion and Malcolm Cherry, have taken their story from a novel, and it has the faults of most adaptations and little to compensate for them. It is concerned with history and introduces well-known personages, but it makes of history, and the characters of history, mere playthings of

artificial romance. Bolingbroke, Godolphin, and the Duchess of Marlborough—with these famous names certain puppets are provided; but in the case of the Duchess we get no more than a glimpse of a termagant, while Bolingbroke is represented as the victim of an impostor—a sham Pretender—who is in the pay of the minister's political enemies. The impostor himself claims to be James Stuart, and in such masquerade wins the pity and love of a charming girl-Jacobite. We are expected to give such a rogue as this our sympathy and to conceive that he can restore himself to her favour by a mere act of gallantry. Unconvincing in plot, the play is long-winded, and not redeemed by its dialogue. Mr. Gerald du Maurier as the pretended Pretender, Mr. Esmond as Bolingbroke, and Miss Henrietta Watson as the great Sarah do their best with their parts.

CLEVERNESS of stage-craft may sometimes make amends, especially in melodrama, for a lack of distinction in other ways. Such is the case with 'Bardelys the Magnificent,' Mr. Lewis Waller's new production at the Globe. This is an adaptation from a novel of Mr. Rafael Sabatini's, but the author has called in the services of Mr. Henry Hamilton, who is a skilled craftsman, and a master of theatrical effects. So, while there are scenes which drag in their "romantic comedy," and interludes of farce which it requires all the talent of Miss Lottie Venne to make amusing, and the dialogue approaches the bombastic, the play certainly has the qualities we demand of stage romance—colour and movement.

To a certain extent the story justifies its title; there is magnificence about the Louis Treize costumes, and there is a certain flamboyance about the plot and hero. The setting of the first act, in which Bardelys, the spoilt favourite of fashion, is seen, despite his King's embargo, accepting a wager that he will win within a month the affection of a provincial nobleman's daughter, makes a splendid picture, and gives the story a good send-off. And, though the love-scenes which show the hero accomplishing his purpose drag not a little, there comes a time at which the action justifies the playwright's claim to have written a romance, and rushes along at break-neck speed. When Bardelys, the great noble, finds himself put on trial in the provinces as a rebel, and cannot establish his identity, because the only man who could help him is a rival who is sitting in mock justice upon him, and determined to bring him to ruin, the piece has, at any rate, the superficial characteristics of drama. Heroine and villain and lover may be absurdly melodramatic, but we find force, surprise, and excitement in their adventures.

THE debt of the play to the charm of Mr. Waller's voice and personality it would be difficult to exaggerate, and Miss Madge Titheradge contributes not a little to its effectiveness by her girlish sweetness, though she is not always equal to the emotional demands of the heroine's part. Nor should the truculence of Mr. Haviland's villain go without praise; his seriousness in the delivery of stagey declamation must require an effort.

A CORRESPONDENT writes:—

"Last week, at the Abbey Theatre, Dublin, Mr. W. B. Yeats's 'Land of Heart's Desire' was produced for the first time in Dublin. One is loth to criticize adversely the work of the Abbey Company, which is usually so excellent; but in this case much of the beauty of the lines was marred by defective declamation. This criticism does not apply to Miss Sarah Allgood or Miss

Maire O'Neill, who were admirable in the parts of the heroine and the Fairy respectively. The play was followed by Mr. T. C. Murray's 'Birth-right,' which has been re-written, to its great advantage."

THE ELIZABETHAN STAGE SOCIETY will give two matinées at the Little Theatre on March 6th and 12th, when 'Jacob and Esau,' an interlude of 1568, will be acted, followed by 'The King and the Countess,' episode from the play of 'Edward III.,' which some critics claim as Shakespeare's. 'Jacob and Esau' has never been seen on the stage since it was first acted, probably in the reign of Queen Mary.

INCLUDED in the cast for the two plays are the following: Messrs. Arthur Wontner, Claude King, Clifton Alderson, Percy Anstey, J. H. Brewer, Campbell Cargill, and Mesdames Helen Haye, Cathleen Nesbitt, Mercia Tours, and Grace Leppings.

As subscriptions are invited for the performances, we may add that the honorary secretary is Mr. Allan Gomme, 12, Dryden Chambers, 119, Oxford Street.

At the Shakespeare Memorial Theatre, Stratford, the Birthday Festival will take place from April 17th to May 6th. A series of the plays will be produced, as usual, by Mr. and Mrs. F. R. Benson and their company.

TO CORRESPONDENTS.—H. B.—G. K.—M. R.—E. V.—Received.

E. F.—W. H. C.—Many thanks.

BOHN'S LIBRARIES

1847-1911.

"The new series of Bohn's Libraries, on which judicious bookbuyers have long learned to keep a careful eye."—ATHENÆUM.

NEW AND FORTHCOMING VOLUMES

NOW READY, 3s. 6d.

THE ROMAN JOURNALS OF FERDINAND GREGOROVIVS 1852-1874.

Edited by FRIEDRICH ALTHAUS

and Translated from the Second German edition by

Mrs. GUSTAVUS W. HAMILTON.

Times.—"Of the things and the people he saw, it is impossible to give even an outline here. Few people, one might imagine, could have written a dull diary of events in Rome between 1852 and 1874; yet few could have combined so vivid an account of the steps in the struggle between old and new with so accurate a judgment of the forces at work, and so haunting a spirit of affectionate reverence for the old. He loved Rome, and he understood, if he could not love, the Latin character. To read his journal is to see Papal Rome through keen but reverent eyes."

READY SHORTLY.

2 vols. small post 8vo, 3s. 6d. each.

BIOGRAPHIA EPISTOLARIS.

Being the Supplement of Coleridge's 'Biographia Literaria.' Edited, with numerous Additional Letters, by ARTHUR TURNBULL.

BOHN'S LIBRARIES.

"Messrs. Bell & Sons are still energetically pursuing their task of adding to and improving the famous series of Bohn's Libraries, which Thomas Carlyle pronounced to be 'the usefulest thing I know,' and.....are constantly adding to the Libraries, in the new and certainly pleasanter form, reprints of standard works which no gentleman's library should be without."—MR. FREDERIC HARRISON in the *Daily Chronicle*.

"Messrs. Bell are determined to do more than maintain the reputation of 'Bohn's Libraries.'"—GUARDIAN.

"'Bohn's Libraries' still hold first place in the estimation of those who value scholarly accuracy of text rather than ornateness of binding, and the comprehensiveness of the scope has never yet been excelled in a uniform series."

OUTLOOK.

BOHN'S LIBRARIES.

This famous series now includes nearly 750 volumes in all departments of Literature.

THE NEW CATALOGUE

of the Libraries, with full particulars as to recent and forthcoming additions, and details of

LITERATURE

PUBLISHING NEW AND OLD.

'GETTING ON: THE CONFESSIONS OF A PUBLISHER' suggested to the present writer a crowd of successful novels, varied by a strong line in religious literature, some popular school-books, perhaps, and a volume or two in which the name was not worth the money. One does not readily conceive of a publisher who has virtually nothing to do with books, but such is the career of Mr. John Adams Thayer, set before us here in that nervous and vivid style of English which is essentially American, and in its way highly effective. Mr. Thayer obviously had his whole heart in his work; his writing is marked with sincerity on every page, and the unwearied enterprise which led him to one house of business after another is a lesson in energy and optimism. The book holds one persistent refrain, disapproving a time-honoured maxim:

"I was and have ever been a stout heretic regarding the rolling stone adage, which my old-time employer tagged to his sober Godspeed for Chicago. Moss is for ruins. In change lie possibilities."

"Possibilities" in this case were "good gifts," if not gifts for literature. Mr. Thayer, after thinking that he would become a preacher, launched in his teens

Getting On: the Confessions of a Publisher.
By John Adams Thayer. (Werner Laurie.)

A Publisher and his Friends: Memoir and Correspondence of John Murray. By the late Samuel Smiles. Condensed and edited by Thomas Mackay. (John Murray.)

"a four-page monthly paper, about four by six inches in size," called *The Printer*, and he was concerned with the technical side of type and printing for several years. He next became an advertising manager with *The Ladies' Home Journal*; passed on to Mr. F. A. Munsey, who did not believe in him; again on to *The Delineator*; and finally took part in the publishing of *Everybody's Magazine*, which made a huge success with Mr. Thomas W. Lawson's articles on 'Frenzied Finance.' These were gathered in due course into a volume, and that is almost the only book of which we hear in these pages, though the author once set up a new edition of 'Uncle Tom's Cabin,' and sold at a commission of forty per cent an illustrated volume about Bar Harbour, which we are tolerably safe in ranking among *biblia abiblia*.

The book before us, which includes 'Astir' in its American title, and a tribute to its special quality in the French title "Souvenirs d'un 'Business Man' Américain," is, indeed, a remarkable record. Never dismayed by a set-back, the author was always eager to gain experience in a fresh line of business. He believed in himself, and, if he disappointed Mr. Frank A. Munsey in a month, he could fairly point to his further successes as a contradiction of the dispiriting view taken at the time of his abilities. The mixture of candour and forbearance in the letters which passed between employer and employee at this time makes them curiously attractive. But the sentiment of genuine pleasure and attachment which binds together those who are joined in work seems almost wholly submerged in the "hustling" for advance. After Mr. Thayer had been six years in one office, he was but a spoke in the wheel, and had failed to interest his chief beyond the day's work. Born in Boston, perhaps the most conservative of American cities, Mr. Thayer was uneasy at the deadweight of the past there, and moved himself on as relentlessly as the policeman propelled poor Jo in 'Bleak House.'

The management of advertisements was his most profitable employment, and in 1892 he got a place on *The Ladies' Home Journal*, which, "though not the great publication it is to-day," had already made itself famous by such features as 'Unknown Wives of Well-known Men' and 'Unknown Husbands of Well-known Women.' Then one day the publisher conceived the idea of "issuing a periodical which should be artistic from cover to cover." This means, we gather, better illustrations and lighter styles of types in advertising—nothing more. Trade announcements, however, were greatly advanced, and we can applaud the insight which saw the powers of so attractive an illustrator as Miss Jessie Wilcox Smith. At this time the author entered with success his only prize contest:—

"Allecock's Porous Plasters were my theme, and as they had alleviated the penalty of too long hours at my desk, I

wrote in full sympathy with the subject. In one inspired evening I produced a series which brought me one hundred and fifty dollars, the first prize."

On the *Delineator*, a monthly periodical chiefly concerned with paper dress patterns, Mr. Thayer did a most useful and courageous work which is briefly indicated by the title 'Bleaching a Black Sheep' attached to a chapter. He waged ceaseless war against objectionable advertisements, beginning with a hair-restorer which brought three thousand dollars, and putting the case before an official who was bald.

"Do you believe in such things?" I asked. "I!" he exclaimed. "Do you think that if there was a remedy, I'd have stayed bald for thirty years?"

The reform was thorough, and

"it was not long before we announced that not only patent medicines and objectionable advertisements would be declined, but all which were extravagantly phrased."

Mr. Thayer by no means confined his crusade to *The Delineator*, and he adds an account of the "divine healer," Francis Truth; the "Three Star Ring Lucky Box"; and "Five-hundred-and-twenty-per-cent" Miller. Truth, whose very name seems a fine inspiration,

"showed a trophy-room decorated with discarded canes, crutches, and braces. Among these convincing relics were also displayed the charred ends of many expensive cigars, for even the smoking habit came within the range of his divine activities. When the crash came, the office boy testified that these stumps had been smoked by the Healer himself after his exhausting labours for ailing humanity. But there were profits before the crash; ten months of profits, which accumulated at the astounding figure of thirty thousand dollars a week. Then Francis Truth was placed under arrest. The publishers [of his advertisements] escaped."

Of the Lucky Boxes over 75,000 were sold,

"and when the postal authorities intervened, 20,000 letters still awaited delivery. The newspaper publishers of the Modern Athens, who ran this advertising, shared in the loot at the rate of three dollars and a half per inch."

We make our congratulations to Mr. Thayer on this fight against fraud, for which he failed to raise a regiment of helpers. The chapter on *Everybody's* reveals Munsey by sheer force of will producing "serial stories for his magazines at the rate of six thousand words a week," and on the next page we find an answer to a query which may naturally occur to an ordinary reader:—

"But, the novice will ask, what about the editor? The prosaic answer is, that with a few notable exceptions, editors do not make magazines financially successful. It is far more difficult to secure a capable advertising manager, and he will demand, and probably receive, twice the editor's salary."

Napoleon, when he found a learned person mismanaging a mission to Geneva, remarked :—

“Bon Dieu ! que les hommes de lettres sont bêtes ! tel qui est propre à traduire un poème n'est pas propre à conduire quinze hommes.”

Such deficiencies are lamentable, of course, but one would have thought that the editor was an important part of the business, unless, indeed, in these up-to-date days only advertisements are read.

It is right, however, to add that *Everybody's* had literary talent to boast of ; it published Mr. Hall Caine. It led to a great national journal, *Ridgway's—A Militant Weekly for God and Country*, but Mr. Thayer had left his partners before this last venture failed. He has since, we gather, been engaged in travel, but he cannot escape the signs of his trade.

“Even in India my eyes fell upon the hoary advertisement, ‘Mother Almost Gave Up Hope,’ and as I recognized one after another familiar nostrum, exiled from its native land, I perceived that the heathen in his blindness bows down to more than wood and stone.”

We wonder if a long and arduous attachment to the business side of publishing forces Mr. Thayer even now to scan every advertisement he comes across. Can he read with undiluted pleasure masterpieces which failed as serials, or were always hopeless for a magazine public ? He is probably happy in not realizing what standards of composition prevail in such circles.

It is a far cry from Munsey to Murray, and with such maxims as “The valuable idea is the idea which delivers the goods” ringing in our ears, an agreeable change to turn to ‘A Publisher and his Friends,’ the very title of which shows that there are benefits in trade which are not to be counted in money. The book has been well condensed by Mr. Thomas Mackay, and the present head of the famous firm adds to it a brief Preface : we wish a new success to a familiar friend. The Preface says not a word too much when it indicates that the book supplies “an important, if not an indispensable, chapter on the literary history of England during the first half of the nineteenth century.” Apart from the name of Byron, which everybody associates with that of Murray, a crowd of witnesses whose fame belongs to the world attest the eminence of the house, and that graceful and considerate tact which made a publisher at once a friend and a man of mark.

Byron's John Murray had to face some troublous occasions, but his acumen was seldom at fault, though modified by a romantic spirit of enterprise. When he did fail, as in the collapse of the *Representative*, his temper remained excellent, though one of the chief actors in that drama must have been at once a youthful and an irritating phenomenon.

Good judgment is a good certificate for the world, but, as Maeterlinck says, to be

right is to be so little. More significant when the life comes to be reviewed is the generosity to the distressed, the helping hand to those who are down. The letter in which John Murray gave up to Walter Scott his share in ‘Marmion’ is a model of generous practice and expression. We are happy to think that there are still men who will do these things, even if the dominating advertiser grumbles about bad business. And, after all, they may be delivering the goods to the right address.

Encyclopædia of Religion and Ethics.—Vol. III. *Burial—Confessions.* Edited by James Hastings, with the Assistance of John A. Selbie and other Scholars. (Edinburgh, T. & T. Clark.)

THE new volume of this *Encyclopædia* is, like the two parts which preceded it, so packed with interesting, important, and well-ordered information that the reviewer has to exercise a considerable amount of self-control in order not to dwell on too many topics or mention too many points relating to any single topic. Our aim must be to introduce for special notice, in however brief a form, a carefully selected number of representative articles, and to add here and there a few comments.

From ‘Burial’ we are merely referred to ‘Death and Disposal of the Dead’ in the next volume. There follows an exhaustive article on the ‘Buriats,’ who form a branch of the Eastern Mongols, by the Russian scholar M. Demetrius Klementz. A contribution like this shows how large a number of religious ideas may be exemplified in a single and little-known section of the human race. In the better-known topics of ‘Burma’ and Buddhism in ‘Burma and Assam,’ written respectively by Lieut.-Col. Sir Richard Temple and Sir James George Scott, a considerable extension of religious history is in the nature of things brought before us. A topic which takes us to a different range of ideas is ‘Cæsarism,’ dealt with by Principal James Iverach. This article is of great interest, partly on account of its bearing on the “Apocalypse” and on the resolute stand made by the early Christians against emperor-worship. But one would have liked to see greater stress laid on the analogy between the worship of the ancient Pharaohs and that of the Roman Cæsars. Nor has Prof. Iverach chosen to dwell, when he considers the motives underlying the rise of Cæsar-worship, either on the extraordinary personal success of Augustus or his inheritance of a title to glory as the adopted son of Julius Cæsar, with whom, surely, Cæsarism, though in a limited sense, began.

A long series of articles, occupying pp. 61–140, is provided under the heading ‘Calendar,’ a topic which is everywhere closely interwoven with religious observances, and ultimately also with important religious ideas. The introductory paper

was written by Dr. J. K. Fotheringham, and there are no fewer than twenty-three other contributions, dealing, amongst others, with the American, the Buddhist, the Egyptian, the Jewish, and the Persian branches of the subject. From ‘Calendar’ we pass to the entirely different subject of ‘Calvinism,’ by Prof. James Orr. Of this contribution we may say that, though it is written from a Calvinistic point of view, the author only affirms that “the perennial elements of truth in Calvinism will no doubt survive,” but he considers it questionable “whether it will ever occupy so dominant and exclusive a place in the future as it has done in many periods of the past.”

Passing over the interesting topic of ‘Cambodia,’ and even leaving the attractive subject of ‘Cambridge Platonists,’ we come upon one of the most valuable contributions to the present volume, namely, that on ‘Canaanites,’ by the American Professor Lewis B. Paton. As a former Director of the American School of Archæology in Jerusalem, Prof. Paton has had the opportunity of studying the subject on the spot, and he has in the present article given us the full benefit of his own researches and those of other scholars. We have here a notable instance of the value of excavations for the reconstruction of the history of human belief, for a veritable wealth of evidence has been unearthed on the gods, the sanctuaries, and the religious rites of both the pre-Semitic aborigines and the Semitic Canaanites. The grouping of the material adopted by Prof. Paton is admirable, and he has taken care to exhibit clearly the influence of Babylonia and Egypt on Canaanitish religion. On the still burning question as to the extent to which the name of the God of Israel was known in the ancient East outside the Hebrew people, he decides, after a succinct survey of the data, that “on the whole, the evidence seems favourable to the idea that Jahweh was known to the Amorites in Canaan and in Babylonia as early as 2000 B.C.” On a number of points other scholars will no doubt differ from Prof. Paton. A remarkable omission is the absence of the name Melchizedek from the paragraph dealing with the god “Sedek.” This name must surely belong to the same category as Adonizedek. Some scholars will also think that the “sons of Resheph” mentioned in Job v. 7 (usually translated by “sparks”) should have been referred to under the heading ‘Resheph.’

The topic ‘Cannibalism’ is ably treated by Dr. J. A. MacCulloch, who also contributes a long article on ‘Celts.’ Under the title ‘Cappadocian Theology’ Dr. J. A. Srawley gives an instructive account of the teaching of Basil of Cæsarea, Gregory of Nazianzus, and Gregory of Nyssa. An effective article on ‘Carlyle’ is contributed by the Rev. D. Macfadyen. The interesting paper on ‘Carnival,’ by Rector C. Rademacher, provides an alternative derivation of the term to that adopted in the Oxford Dictionary and by

lexicographers generally. The suggestion is that "Carnival" might be derived from "currus navalis," as Greek writers show that "a ship of this kind, dedicated to Dionysus, was driven through the streets of Athens, and that satirical songs were recited" from it. The subject of 'Catacombs' is dealt with by Dr. Giorgio Schneider; and the philosophical terms 'Cause, Causality,' are treated by Dr. F. R. Tennant.

An imposing series of articles, occupying pp. 392-472, is provided on the highly interesting folk-lore subject of 'Charms and Amulets.' The first paper, entitled 'Introductory and Primitive,' was written by Miss Barbara Freire-Marreco, and the twenty-four other contributions include the Abyssinian, the American, the Celtic, the Christian, the Egyptian, the Hebrew, the Jewish, and the Tibetan sections. The entire series will no doubt be carefully scanned both by professed students and by the perhaps larger number of the curious. We will here only point out a diversity in definition which might have been prevented by editorial adjustment. The definition of "charms" given in the introductory article is in accord with the Oxford Dictionary, the word having acquired the meaning of both a "magical formula" and a magical "object." But Dr. M. Gaster, in his article on the Jewish branch of the subject, fills quite half a column with a sprightly, but imperfect definition of his own, rightly laying stress on the derivation of "charm" from *carmen*, but being apparently unaware of the fuller sense of the word in present-day usage.

Other interesting series of articles are those on 'Chastity' ('Celibacy' having been similarly treated before) and 'Children'; and, passing over a number of other contributions, we arrive at 'Christianity,' the article being contributed by Principal A. E. Garvie. Under the heading 'Standpoint of the Discussion,' the author formulates the objections which may justly be raised against the all-sufficiency of the "religious historical" as against the "dogmatic" method of dealing with the subject. Elsewhere he discusses 'Definitions of Christianity,' 'Divergent Tendencies in Christianity,' and other matters. But the most interesting section to modern students is the fourth, which is concerned with "origins." After reviewing the Liberal-Protestant view as represented by Prof. Harnack, the Modernist Roman Catholic theory with Prof. Loisy as protagonist, and the Radicalism of such men as Dr. Pfleiderer, Dr. Garvie states that he cannot "accept the theories of the origin of Christianity which have been sketched as characteristic of modern thought," and he maintains

"that the Christian religion had its origin not in a mythology, not even in the transformation by religious affection and imagination of a good and wise teacher into a Divine Saviour and Lord, but in the historical reality of Jesus Christ,"

as recorded in the Gospels and interpreted in the Epistles.

There are several articles on 'Church,' dealing with the subject from different points of view, and there is a special paper headed 'Church of England.' 'Coins and Medals (Western)' are dealt with by Mr. G. F. Hill; and Prof. Rapson writes on 'Coins and Medals (Eastern).' A paper on 'Coleridge' is contributed by Dr. M. J. Ryan of Rochester, N.Y. There is a short series of articles on 'Communion with the Dead,' and a longer one on 'Communion with Deity.' Among the topics which follow are 'Communism,' 'Communitistic Societies of America,' 'Concept,' 'Concubinage' (Introductory; Christian; Greek and Roman), and 'Conditional Immortality.' On the last topic—which is more fully defined as "the doctrine that immortality is not inherent" in man, but depends "on the use made by the individual in this present life"—the Rev. H. W. Fulford, who writes the article, says in his summing up that "although Conditionalism presents certain difficulties of its own, it is free from many others which have been urged against its rivals," and he adds that "some important considerations of a scientific and ethical character are in its favour."

The volume closes with a long and exhaustive article on 'Confessions' by Prof. W. A. Curtis. After some preliminary sections on the scope of the article, definition, &c., the author gives first a brief survey of the development of Creeds in the undivided Church, and then proceeds to supply a full account of the "longer and more minute and systematic" statements, which are technically styled "Confessions." We are thus presented with chapters on the history of doctrinal evolution, beginning with "the Greek and Oriental Churches," and ending with "the Socinian and Unitarian Churches, and in the rest of Christendom." An 'Historical Table of Confessions of Faith in Christendom' follows the article.

Notes of a Life. By John Stuart Blackie. Edited by his Nephew, A. Stodart Walker. (Blackwood.)

FROM the house of Blackwood we have already had the 'Life' of Blackie, which was founded partly on the book before us, and two years ago appeared a volume of his letters chiefly to his wife. We cannot, however, have too much of so delightful and vigorous a character, and the 'Notes of a Life,' begun by Blackie in 1869, at the age of 60, have those qualities in abundance which made the letters such excellent reading. No professor of whom we have ever read or heard can be said to equal Blackie in sustained enthusiasm, wide intellectual curiosity, and the gift of self-revelation. Naturally, this volume is not so naive as the 'Letters,' which are, indeed, almost as astounding as Pepys; but it has the rare charm throughout of absolute sincerity, and at its best a grace of expression which is the more effective

for being unsought. The Professor had his flights of animated rhetoric, being early distinguished as one who was never at a loss for a word, but such devastating fluency has little place in this fragment of autobiography. Here the steam is shut off to the advantage of the style; the books have been written; the speeches and other protests—a speech was generally a call to battle with Blackie—have been made; and the comments on them are sobered by the light of advancing years. The narrative is rich in pungent sentences, but they are couched in the reflective pungency of Gibbon, which has genuine thought at the back of it.

There are seven chapters printed here, others mainly concerned with notes of travel being omitted. The first three deal with politics, the rest with 'The Aberdeen Chair of Humanity,' 'Edinburgh: Greek,' 'Politics,' and 'Religion: Types.'

It is easy to fix on things overstrained or absurd in Blackie's exposition of the many subjects which interested him, but it is clear that he showed a good deal of practical wisdom; he was a keen judge of character; and he was something like a prophet in teaching as well as in politics. His chapter on the latter subject, for instance, foreshadows the very situation with which the country is at present confronted. The futility of much of the lecturing practised in English universities is such as to justify his comments. His ideas as to the study of language, though in practice disappointingly vague, were exceptionally sound, and he would have done more if he had been less combative. But "the wild, mad, abrupt, harum-skarum Blackie manner"—we quote his own expression—was hardly calculated to convince scholars whom education had rendered sensitive and cautious, especially of their reputations. To Blackie an inoffensive manner was offensive. "I hope to get some squabbling," he wrote in a letter from Rome in 1831, and throughout his life that delight was his.

Nothing but credit, however, is due to him for the firm way in which he maintained his own religious opinions against the narrow theology of his time. He says frankly that he found his boyish years pleasant enough, but rather empty and stupid, and he emerged from "a severe ordeal of self-torturing religiosity" with a resolve to use his own judgment and form his own dogmas, though he retained a strong affection for divines, unlike himself, innocent of the research made by great German teachers. He nearly lost his Professorship at Aberdeen through his modified adhesion to the religious tests demanded, and some years before the "great heresy case" of Robertson Smith he records his warning to that "keen and sharp-witted offender":

"'You belong to the Free Church,' said I: 'you are free indeed, but allow me to tell you, that, if you proclaim such canons of criticism on the house-tops at Aberdeen, you will be free to leave their Communion

with all speed. If there be one thing in the whole theological world that your zealous Free Churchman fears more than the Pope, it is a large, liberal, and enlightened handling of the sacred volume.' And I was a true prophet."

On this occasion he did not interfere prominently, but he prints a song which he wrote in the character of a champion of orthodoxy, and which contains no fewer than a hundred and thirty-two lines. Singing with him was a natural means of expressing himself, and he sang not of nature, but of man. For him a landscape was nothing, unless it was a background for human figures, and he describes himself in this respect as "perfectly Homeric without knowing it."

Smuggled into the educational world as a Latinist, he stayed at Aberdeen eleven years, and passed on to the Greek chair at Edinburgh, when everything seemed against him except his translation of *Æschylus*.

"Some of the electors had heard me lecture in the Philosophical Institution, and how could solid learning be expected from an excitable gentleman of such agility of limb, such eccentricity of sentiment, such explosiveness of passion, and such volubility of tongue?"

The wearing of a Scotch plaid and a shirt collar turned down in Byron's style were other objections. A few days before the election he had neither proposer nor seconder, but one of the Town Council of Edinburgh went to Aberdeen to test the truth of the disadvantageous reports; the plaid and collar and their owner were kept out of the way; and the professorship was secured. Blackie visited Greece as soon as possible, and took a keen interest in modern Greek. Prostrated by the heat, he went everywhere, and tells us that by the aid of Pausanias's 'Description of Greece' he became "familiar with every turn and winding in ancient Athens," thereby achieving a feat which many patient workers in archæology have been unable to accomplish.

Henceforth he enjoyed himself to the full, if indeed he had not done so always, though he complained that he had to suffer for the original sin of being a Scot, and a Professor of Greek, not in Oxford, but in Edinburgh. His books as a whole were not successful, but his verse was of the free and natural sort that survives any rebuff. His 'Lays of the Highlands and Islands' deserved, he thought, a better reception:—

"In the course of nearly fifty years' wandering, ample opportunity was given of versifying local legends, and giving utterance to the pleasant emotions which a healthy habit of recreation had a tendency to inspire, and thus arose a book of local sketches which, whatever its defects may be, is thoroughly Scottish, eminently happy, and replete in every line with the most salubrious realism."

With such a critic at home one can afford to despise the remarks of the newspapers.

His book 'On Beauty' leads to a very

sensible reflection on a want which must have occurred to many. He remarks that

"on the philosophy of taste, English literature is almost a blank, and nine hundred and ninety-nine out of a thousand British people, though they will have their opinions about pictures and poetry rather than vex their brains for half an hour in the endeavour to lay down a scientific principle of æsthetic judgment, will start off with a *de gustibus non est disputandum*, and he [sic] will buy his picture or praise his poetry simply because he likes it."

Before Blackie became a Professor he had made his way into the world of periodical writing, but he never liked such work, and his judgment on it is worth quoting to-day when more than ever any one who can write, or rather form a sentence which will pass muster with journalists, offers himself as qualified to criticize books:—

"I count it one of the great misfortunes of the literary young men of the present day that they are drawn so much into the field of literary and general criticism. I will not at present inquire whether it be a necessary evil or not, but certainly it is an evil, and a great evil, that the function of literary judgment, which naturally belongs to those who possess age, knowledge, and long experience, should be usurped by every crude sciolist and shallow witling who may find a pen fit easily into his fingers. Literary criticism, like every other form of energising of which judgment is the staple, in the very nature of the case cannot belong to the young and inexperienced. A young person with a ripe judgment is a monster from which every healthy human instinct is repelled. And yet it is a fact that a great number, perhaps the majority, of our young men, who either make literature a business or flirt with it as a recreation, enter the field as literary critics."

We could supply some interesting endorsement of these views. A copious ignorance of foreign languages is one of the characteristics in which these young lions rejoice.

Apart from his main business Blackie made a considerable stir by his occasional letters to the press, samples of which are printed here. You woke in the morning at peace, as you thought, with all mankind, and found in the paper at your breakfast table an attack on you by Blackie which insisted on a personal combat which you had not invited, and in which he decided all the rules.

A crushing reply to one of these sudden and Homeric calls to battle may be found in the 'Life' of Jebb, and it is pleasing to notice that the really amiable, if fiery, Scotchman soon simmered down, and bore no malice. Naturally fond of strong language, he was by no means devoid of discrimination, and many of his verdicts on men and things are at once pointed and pertinent. Continental travel and education widened Blackie's views, and gave him an advantage over the men of his day. He notes of Gladstone and Homer that

"if, in his intense admiration of this old patriarch of the Hellenic Muses, he sometimes saw, with overstrained optics in the

dark, what no healthy eyes in broad daylight could see, and at other times, specially in mythology, recognised slippery analogies which piety might excuse, but learning could not justify, this was the effect of his country and his training, which impress a certain local type even on the stoutest intellects."

We close our notice with a detail of Blackie's home life which shows the state of Scotland in his day and his perseverance in battling with narrow-mindedness. Shortly after he married he asked his wife to supply a little psalmody on the piano on a Sunday as a change after reading. She refused, because the servants would not like it. The master protested against being made a slave of the servants.

"Besides, do you imagine, my dear, that the servants are such fools as to mistake the Hundredth Psalm on the piano for 'Maggie Lauder'?" In vain: she persisted in her pious negation; and I, determined not to give in to such superstition in my own house, immediately rose, and set myself to tinkle the keys, the best way in my extreme ignorance I could, and persevered in this practice, Sunday after Sunday, till at length I got *Artaxerxes* and *St. Asaph*, two of my favourite tunes, pretty fairly at the end of my fingers."

The result was that the servants one day took occasion to remark to the lady of the house: "Ay, it's wonderfu' what a pious man oor maister is! he spends the whole Sabbath eve, frae tea-time to dinner, singing the Psalms of David!"

After that the piano on Sunday evenings became innocent, and we can well imagine that the picking out of *Artaxerxes* by an ignorant hand had its distressing as well as its pious aspect. Blackie, while advertising severely on the harshness of much Scotch religion, notes that his own purity of life was largely due to early Evangelical influences. Few were the boyish crimes that he had to report, one of them being the odd habit of persecuting with opprobrious names a servant whom he disliked, but who gave him no cause of offence. His bark throughout his life was certainly loud and sometimes bitter; but his bite was non-existent. When well over eighty, he was as keen to learn and to enjoy as any boy of twenty. Such breezy, tireless optimists are apt to be laughed at by the world, which owes them much, and profits by their virtues while it steadily discredits them.

Mr. Stodart Walker or his publishers should have taken more trouble with the proofs of the volume. Here, as in the 'Letters,' foreign languages are badly treated. Thanks are expressed to an Oxford scholar for verifying Greek quotations, but "Tam vero" (p. 21) should clearly be "Jam vero"; in front of "librorum" (p. 31) should stand another word, perhaps "helluo"; and "Redex" (p. 45) is easily emended German. It happens that one of our quotations is a little loose in form, but as a whole the 'Notes' are carefully written and show no signs of haste or disorder.

The Sanctuaries and Sanctuary Seekers of Mediæval England. By the Rev. J. Charles Cox. (George Allen & Sons.)

DR. COX has written an interesting book on a subject which has not hitherto received the attention it deserves. Both as a factor in the perpetual struggle between Church and State and a benign influence on social conditions in mediæval England, sanctuary laws and privileges merit closer examination. The author has gone to original sources for his information. He has consulted the episcopal registers, and studied legal records and State papers preserved in the Public Record Office. If, in the result, he has felt himself obliged to discard some picturesque conventions and theories commonly held, he has, nevertheless, brought to light much that is new and interesting on a topic more, perhaps, exploited by the novelist and painter than the historian.

The first chapter is devoted to a discussion of sanctuary laws and customs. The author traces the growth of sanctuary from the cities of refuge instituted by the Mosaic Code, and the traditional idea of asylum common among Greeks and Romans, to the Christian Church, which replaced the pagan shrine. From the altar itself the limits of immunity were, by a natural development, extended to the churchyard and sacred precincts. In Anglo-Saxon times permanent, as distinct from casual and ordinary rights of sanctuary, were granted to certain famous shrines, of which Durham and Beverley are noted examples. The well-known custom of "abjuration of the realm," always associated with the coroner's office, was introduced at the beginning of the thirteenth century. Dr. Cox shows that this practice was confined to England, and not, as some writers maintain, a universal Continental custom. As to the number of those who availed themselves of sanctuary in any given year, Prof. Trenholme puts the figure at no fewer than 1,000 persons.

The reader who has the patience to study closely the earlier pages will be in a much better position to appreciate the remainder of the volume. From this account of sanctuary laws and usages in the abstract Dr. Cox passes to a review of some famous historical incidents. The sensational murder of Thomas à Becket at Canterbury, an event possessing a literature of its own, he dismisses in a few paragraphs, but describes in detail other less-known, though scarcely less important political events connected with the violation of sanctuary. A notorious example occurred in May, 1471, after the battle of Tewkesbury, when Edward IV., ignoring the immunities of the Abbey, put to death a number of Lancastrian leaders who had taken refuge there.

Westminster held high place amongst chartered sanctuaries. Dr. Cox disposes, somewhat contemptuously, of the tradition of special sanctuary buildings at Westminster, where, as in the case of other

privileged places, the whole precincts of the Abbey enjoyed immunity for refugees. Eleanor Cobham, Duchess of Gloucester, took sanctuary here in 1441, but was refused admission on the ground that those guilty of heresy, necromancy, or witchcraft, were excluded from these privileges. In the autumn of 1470 Queen Elizabeth fled for refuge to Westminster, and there gave birth to the infant prince who was afterwards Edward V. After eleven years had elapsed she paid this shrine another visit, the sequel to which was the foul murder of the boy princes in the Tower of London. A state paper dated 1532, printed in full by Dr. Cox, gives a list of fifty fugitives who were under the protection of the Abbey for life. Sixteen were guilty of felony, eleven of homicide, eighteen were there for debt, and two for sacrilege.

Few to whom St. Martin le Grand suggests the great modern postal system are aware of the old traditions which belong to that ancient foundation. Wide privileges of immunity granted by William I. were so much abused in later times that in 1457 a series of ordinances was issued for the better government of St. Martin's sanctuary. There were some curious provisions. All games of hazard were prohibited; all artificers (*barbers* as well as others) were to keep holy Sunday and the great festivals; and no subtle pickers of locks, forgers, or coiners were to abide in the sanctuary. In 1815 the site of this ancient collegiate church and sanctuary was occupied by the buildings of the General Post Office.

A chapter devoted to the famous sanctuary of Durham gives the author an opportunity to disprove some picturesque theories widely prevalent with regard to so-called "sanctuary knockers," of which Durham possesses a fine example dating from the twelfth century. These, he says, were not genuine knockers, but merely ornamental rings provided for the purpose of closing heavy doors. The general reverence for sanctuary was such that a fugitive was safe as soon as he passed the churchyard gate. Beverley was another sanctuary possessing special rights granted by King Athelstan in 937 in honour of St. John of Beverley. Sanctuary extended from the minster a mile and a half (Domesday *leuca*) in every direction. Penalties for violation increased in severity as the culprit approached the sacred building. A fine of 144*l.* was inflicted for the crime of seizing a fugitive within the choir, whilst violation of the High Altar might incur the death penalty. The frith-stool at Beverley dates from the time of Athelstan, and there are still remains of sanctuary crosses which marked the various limits of immunity. Another celebrated relic, the "chair of peace," still preserved at Hexham, was in all probability the actual chair used by St. Wilfrid, Bishop of Hexham.

One of the best-known sanctuaries in the south of England was the Cistercian Abbey of Beaulieu, founded by King John in 1205, of which little but the plan

now remains. Beaulieu played an important part in the Wars of the Roses. The widow of Neville, Earl of Warwick, fled here for refuge in 1471 after the defeat of Barnet, and remained in sanctuary for fourteen years. Another famous fugitive was Perkin Warbeck. He was granted his life, though it was much debated whether one guilty of high treason could claim immunity. When the Abbey surrendered to Henry VIII., there were within the precincts thirty sanctuary men who lived there with their families and constituted the entire population of Beaulieu.

Cornwall possessed two of King Athelstan's chartered sanctuaries in St. Buryan and Padstow. Some of the ancient crosses in St. Buryan, thirteen in number, are thought by the author to have marked sanctuary limits, but this is a debatable point. Dr. Cox gives a list of Cornish churches which are noted in the Assize Rolls as receiving fugitives, among them the church of St. Mary Magdalene of "Donnefde." He is wide of the mark in identifying this place with Doydon in Endellion. "Donnefde" and "burgus de Donehened" (*sic*), quoted in his note, are the Domesday *Dunhevid*, the ancient name of Launceston, the parish church of which is dedicated as above. Launceston was one of the eight "cities of refuge" appointed by Henry VIII. when he abolished chartered sanctuaries in 1540. There are in Somerset two other *Dunhevids* or Downheads, doubtless known to the author.

A portion of the book is occupied with verbatim extracts from episcopal registers, printed calendars of Close and Patent Rolls, and the original Assize and Coroners' Rolls preserved in the Public Record Office. Of these latter Dr. Cox speaks rather slightly in his introduction, but they have given him much valuable information. The Coroners Rolls are less numerous than the Assize Rolls, and somewhat irregular, as they were prepared only for purposes of indictment before the itinerant justices, and cannot be regarded as a complete official record. The Assize Rolls number 1,550, and extend from John to Edward IV.

Dr. Cox attributes the decay of sanctuaries mainly to the scant respect shown by later monarchs for these immunities when granted to political enemies. The act of 1540 abolished chartered sanctuaries, and appointed in their stead the eight towns of Wells, Westminster, Northampton, Norwich, York, Derby, Manchester, and Launceston, as places of refuge, a privilege which was not at all appreciated by their inhabitants. The scheme was a failure, and was brought to an end by James I. on his accession. Twenty years later all forms of sanctuary in church and churchyard were abolished once and for all.

We note a short chapter on the sanctuaries of Wales, Scotland, and Ireland, although these districts did not come within the original scope of the work, and an appendix on secular or civil sanctuaries. An illicit survival of sanctuary for debtors

continued in certain parts of Westminster and Southwark till the legislation of 1727 put an end to a discreditable abuse, but with this development of the practice the author is not concerned.

Dr. Cox has made good use of his materials, and put his facts together in a clear and readable fashion. Besides the slip noted above concerning Launceston, there are a few others. Crancumbe (p. 41) should be Craucumbe. "An unknown man" is not a correct translation of *quendam extraneum* (p. 117). St. Edellion (p. 300) is a misprint for Endellion, and Kilhampton (p. 301) should be Kilkhampton. University dons will object to "Frumpington" as a variant for Trumpington, near Cambridge. Bruges (p. 143) is not the suggested Bridgnorth, but Bruges in Belgium, as appears from an entry in the Patent Roll of 4 Edward III., relating to John Acreman and other men of *Flanders*.

But these are trifles in a work that covers so large and varied a field, and the book can be heartily recommended alike to the student and the general reader. The text is not over-weighted with notes, and there is a useful, though not exhaustive, index. The book is well illustrated with reproductions of photographs and prints, and some clever drawings of sanctuary knockers and relics by Miss Purser, and is attractively produced.

NEW NOVELS.

The Lone Heights. By B. Paul Neuman. (John Murray.)

THIS book is admirable in its structure, full of vivid and sometimes subtle portraiture, while episodically it is exceptionally strong. The interest circles around the imposing figure of Horace Verner, an eminent novelist and playwright, who is an almost superhuman personification of altruism. We make his acquaintance at the age of fifty, when his popularity as an author has hardly begun to wane, and follow the course of his declining years with interest and a certain degree of sympathy and understanding, although the complete surrender of his artistic career to the exigencies imposed by the character of his selfish, pretty daughter make some strain on the imagination. The virtual motive of the story is the sacrifice of a great nature to a shallow one, and the conclusion, although not altogether convincing, is very skilfully manipulated, and harmonious in tone. None of the effects is forced, while the dialogue is pleasantly natural without being commonplace.

The Straits of Poverty. By Ella MacMahon. (Chapman & Hall.)

WITH regard both to characterization and construction this novel seems to us the strongest piece of work which Miss MacMahon has yet done. It contains a

remarkable study of two contrasting and mutually antipathetic types of men as seen from the woman's point of view. The heroine, a lovable, but ethereal creature, almost too refined for common life, has to choose between a scholar and gentleman, superior and world-weary, and a self-made "bounder" overflowing with vitality and the joy of life. She unhesitatingly decides for the latter, and though some grave trials befall her, does not, on the whole, repent of her choice. An atmosphere of sympathy touched with humour pervades the story, which is well written and well sustained.

A Woman on the Threshold. By Maud Little. (Chatto & Windus.)

AN original and imaginative theme, partially indicated by the title, forms the basis of this story; but it rests upon an assumption which we find some difficulty in accepting—that the heroine is a woman of genius whose natural development has been checked by circumstances. We are by no means persuaded that the world sustained an irreparable loss in that novel which domestic occupations prevented her from writing, and our sympathy turns perversely to the commonplace husband who, after a hard day's work, yearns for warm slippers and muffins with his tea. The author has the gift of suggesting an atmosphere, but seems more successful in her minor than in her principal characters.

Zoë the Dancer. By Ida Wild. (John Lane.)

THE author of this somewhat weakly constructed story seems to have come under the influence of Meredith without the requisite equipment of strength, or realization of life, to follow his mannerisms with good effect. The scene is laid mainly in Brussels in what we should imagine to be the middle years of the last century; and the tale is concerned with the fortunes and misfortunes of a beautiful dancer, whose popularity is only equalled by her rectitude. Unhappily, such good qualities of vivacity and observation as the author possesses are somewhat spoilt by an affectation of superiority, while the characterization throughout is too superficial to engage our interest.

The Imperfect Branch. By Richard Lluellyn. (Martin Secker.)

IF this be the author's first novel—and we understand that it is—it deserves to be welcomed as a work of high promise. Its faults, all the more conspicuous because of its merits, are mainly attributable to a lack of craftsmanship. The opening scenes, in which Lady Lætitia, a fashionable maiden with a queenly figure and an emotional temperament, is wooed

by John Aveton, a rich, middle-aged, austere Devonshire squire in search of an heir rather than a wife, raise expectations of an interesting study in wedded life which are promptly disappointed. Lady Lætitia dies long before the real story begins, and her husband remains but a shadowy figure in it. The central figures of the episodic narrative are Stephen Aveton, an "imperfect branch" on the family tree for which a fascinating Hungarian fiddler was responsible, and his cousin Betty, who, but for the accident of his birth, would have inherited the family estates, and they both possess, despite a certain want of intimacy in their drawing, the quality of life. The story, if unconvincing, is never commonplace in its telling. It is, on the whole, a clever and attractive book.

EGYPTOLOGICAL BOOKS.

Facsimiles of Egyptian Hieratic Papyri in the British Museum. With Descriptions, Translations, &c. By E. A. Wallis Budge. (British Museum Publications.)—The British Museum continues to publish its Egyptological treasures in a magnificent way, and the huge folio before us, with its photographic reproductions of the actual papyri, its hieroglyphic transliteration, and its English translations certainly puts the student who purchases it in as good a position as the possessor of the original texts. The documents here given comprise the Papyrus of Nesi-Amsu and the Harris Magical Papyrus, both of which have long been known to Egyptologists. The first of these, which was introduced to the notice of the learned public by Dr. Budge in *Archæologia* for 1891, was written in 312 B.C., although it certainly contained transcripts of documents far more ancient. It comprises three separate books of great importance, the first being styled the Festival Songs of Isis and Nephthys, the second the Litanies of Seker, and the third the Book of Overthrowing Apep.

Of these, the Songs of Isis and Nephthys is really a service-book containing, with rubrical directions, the chants sung in the Temple of Osiris during the Festival of the month of Choiak, when the dead god was bewailed; and it is very valuable, not only as giving, almost for the first time, some idea of what a service in an Egyptian temple was like, but also because it confirms in most of its details the legend of the Death and Passion (as it was called by the Greeks) of Osiris as related by Plutarch. Seker, whose name appears in the title of the 'Litanies' which follow, was a god of the dead, worshipped in the Delta in very early times, and the chapters relating to the "Kingdom of Seker" in the Book of the Dead form some of the most incomprehensible in that document. He was later formed into a triune god with Ptah of Memphis and Osiris under the name of Ptah-Seker-Osiris, and Dr. Budge is no doubt right when he says that his name is preserved in the modern Saqqarah, the great pyramid field near Cairo, where the Pyramids of Kings Unas, Teti, and Pepi, and others are to be found. Although these litanies are directed to be recited in "the bringing of Seker into his shrine," they are addressed not to him, but to Osiris, Isis, and Hathor. They therefore supply no fresh light upon the nature and attributes of the god, which

were probably at the date of the papyrus entirely forgotten; but they afford an instance of the way in which the unchangeable Egypt, as we used to think her, altered her religious ideas from time to time. The Book of the Overthrowing of Apep will probably secure the most attention from the general reader, since it contains, along with a very curious cosmogonical fragment, directions for a ceremony which was performed for the destruction of the Serpent who was regarded as the enemy alike of Osiris and of Râ, the Sun-god. This took the form of making a wax figure of Apep which was spat upon, trampled under foot, bound and pierced with lances and knives, and finally destroyed by fire with appropriate cursings. In this we can hardly fail to see an early instance of the attempt to destroy an enemy by means of a wax figure which plays so important a part in the magic of the Middle Ages, which is immortalized for modern readers in Ingoldsby's 'Leech of Folkestone,' and which perhaps even now is not absolutely extinct among us.

The Harris Papyrus, which forms the second part of Dr. Budge's book, was made known to scholars by the famous French Egyptologist Chebas, who luckily copied it when it was in a more perfect state than it is now. This is also magical in character, and mostly consists of spells against crocodiles which were supposed to protect those who journeyed on the Nile. Added to these, however, is a Calendar of Lucky and Unlucky Days, some short hymns to Râ-Harmachis as the rising sun, and to Aahu the Moon-god, and a fragment of the Teaching of Ptah-hotep, a book of Moral Aphorisms of extreme antiquity. Dr. Budge's careful translation puts these important documents within the reach of all, while his preface is very interesting reading, even for those who are not Egyptologists. Both he and the Museum are heartily to be congratulated on the publication.

The Early Dynastic Cemeteries of Naga-ed-Dêr. Part II. By Arthur C. Mace. (Leipsic, Hinrichs.)—In this volume, one of the University of California's publications, Mr. Mace continues the account of the careful exploring and recording work begun by Dr. Reisner, at the expense of Mrs. Hearst of California. A vast quantity of tombs seem to have been opened at Naga-ed-Dêr, which possesses cemeteries used apparently by the same community at successive periods, and therefore affords much valuable evidence of the growth and development of Egyptian burial customs. Dr. Reisner, in the Preface which he contributes to Mr. Mace's volume, expresses himself very strongly concerning the plundering and wrecking of sites which has hitherto been pursued in the search for valuable or beautiful objects, and even speaks of "the search for Museum specimens" as "an offence against historical and archaeological research which is utterly unworthy of any institution which pretends to be devoted to the advancement of knowledge." His own method, he explains, is to take off the rubbish covering such tombs as those here excavated "layer by layer," recording by photography and otherwise every step of the process. Using these methods, he says he has found it possible to record every tomb in the cemetery in question, and he proposes to publish the records of them in the same way. This may seem like a counsel of perfection, but it has certainly been carried out in the present volume, the 60 plates of which contain all necessary—and, one is tempted to think, some unnecessary—details of the work carried on during the

years it covers. At first sight this mode of procedure is rather disappointing to the reader, who finds himself confronted with a great mass of burials and funeral furniture differing very little among themselves. Gradually, however, he will discover a perfect storehouse of archaeological facts, so carefully and methodically arranged that it is easy after mastering the system to put one's hand at once on the evidence one wants. Our pleasure at meeting with such facilities is only damped by regret on thinking how many useful and important facts might have been preserved for us had the same method of working been adopted on other and far richer sites.

In the chapters which precede the Plates, Mr. Mace deals with the great burial question, as to which his views are very clearly defined. "Among the poorer classes," he says, "the sharply contracted burial is universal up to the Sixth Dynasty. From then onwards the contraction becomes generally less." The Twelfth Dynasty, he thinks, saw the almost universal adoption of the full-length position, which was entirely unknown before the Fourth Dynasty. As to mummification, which most people are inclined to regard as the chief characteristic of an Egyptian burial, it came in very gradually, and the elaborate process of embalming was not reached until the Eighteenth Dynasty. All these things may be true, but some of them are yet to be proved.

Churches in Lower Nubia. By Geoffrey S. Mileham. (University Museum Philadelphia.)—*Karanôg, the Romano-Nubian Cemetery.* By C. Leonard Woolley and D. Randall MacIver. 2 vols. Text and plates. (The same).—These volumes together make up the record of the University of Pennsylvania's Expedition to Egypt in 1907-1908, which was directed by Prof. Randall MacIver, the expenses of it being found by Mr. Eckley B. Coxe, jun., of Philadelphia. The early religious history of Nubia is curious, for the Mohammedan conquerors in the seventh century found the country, as Mr. Mileham tells us, "a stronghold of Christianity" to which it had been converted less than a century earlier. Although tempted by a Monophysite mission sent by the Empress Theodora, it remained faithful to the Jacobite missionaries who first converted it after the overthrow of the Pagan Blemmyes by the Christian King Silko. As it was thus subject to Byzantium, most of the buildings before the coming of Islam show traces of Byzantine art, but afterwards it developed an architecture of its own of which Mr. Mileham writes learnedly. Altogether he gives a full account of a church near Deberch, two at Faras, two at Addendan, four at Serreh, and one near Wady Halfa. At all these places he excavated, and from some of them he obtained Coptic inscriptions and a few other objects. A description of these with full plans and other illustrations make up a volume very interesting to the student of Coptic Christianity.

The other two volumes in the same series deal with Prof. MacIver's excavations at the great Roman fort of Karanôg, which commands, he tells us "the great plain of Tomâs, perhaps the most fertile stretch of Lower Nubia." He found there and in the cemeteries attached, abundant remains of a negro race apparently subject to a foreign aristocracy which was not negro in a manner which he compares to the similar conditions existing at Uganda under the supremacy of the Bahima. They practised a religion containing chiefly Egyptian elements, but

the absence of mummification leads Prof. MacIver and Mr. Woolley to conclude that they did not carry their worship of the dead so far as the Egyptians, and that their notions about the soul took a different shape. Their writing in the Meroitic script has lately excited much attention among the learned and still awaits decipherment, and their art seems to have been fairly developed along independent lines. On the whole, Prof. MacIver and Mr. Woolley have little doubt in pronouncing them to have been "an outpost of the great Ethiopian empire," of which they supply a summary history. The graves opened, which are here recorded as carefully as those explored by Mr. Mace, although on a slightly different system, yielded a great quantity of objects, including statues which, the excavators think, were intended to represent the soul of the dead. The earlier of these—the whole series of excavations range from the first to the sixth centuries of the Christian Era—are in the form of a hawk, which changes into a human-headed bird, and then into a complete representation of the human figure which is evidently a portrait of the deceased with bird's wings arranged almost like a mantle. Beside these were stelae inscribed in Meroitic, some carved and some painted, many offering-tables with Meroitic formulas, a great quantity of pottery, wooden and ivory articles of luxury in the shape of highly decorated toilet-cases, and kohl boxes, some glass, a few bronzes, and a great quantity of pottery and beads which are here all classified and arranged in the most scientific fashion. The plates, which are in a separate volume, are beautifully executed, some of them being coloured. The general reader will perhaps turn with most interest to the chapter on 'The Blemmyes and the Roman Frontier,' in which Prof. MacIver and Mr. Woolley give as good a history of them as can be written, with all the quotations from classical authors in its support appended. It will be news to many that a white, or at least non-negro, race of nomads appeared on the Egyptian frontier during the first century, when so little was known about them that they are described by Pliny as the "men whose heads do grow beneath their shoulders." Defended by armour of bull's hide and armed with light missile weapons, they kept the Roman garrison in Egypt on the *qui vive* for centuries, sometimes raiding down the Nile as far as Thebes, and siding with Zenobia and her Palmyrenes against Rome. One of them is even said to have proclaimed himself Emperor, and Diocletian had finally to withdraw his frontier to Assuan and the First Cataract to ensure himself against their attacks. In spite of this, they again invaded Egypt, and compelled the Christian Emperors much against their will to grant them access to the temple of Isis at Philae, to which they were much attached. It was only their overthrow mentioned above by Silko, king of the Nobata or Nubians, which finally put an end to their power.

The Eleventh Dynasty Temple at Deir El-Bahari. Part II. By Edouard Naville. (Egypt Exploration Fund.)—In this memoir, which forms the thirtieth issued by the Egypt Exploration Fund, Dr. Naville completes his description of the Eleventh Dynasty temple that he found at Deir El-Bahari, when his excavation of the Queen Hatshepsut's temple there was nearly closed. The subterranean shrine he believes to be the "valley (or cave) of Neb-hapet-Ra" described in a stela found therein, and the place where the *ka* or double of the dead

king was worshipped. Another feature of the temple which, he thinks, occurs nowhere else is the shrines of six princesses, all of them priestesses of Hathor, who were buried near the king. All these are described by him in full detail and with excellent and abundant illustrations, and we also have a chapter by him dealing with the list of kings of the Eleventh Dynasty which his discoveries have enabled him to some extent to reconstruct. Another chapter by Mr. Somers Clarke on the architecture of the temple gives an expert's view of the matter, and 24 plates, some of them in colour and due to the artistic brush of Madame Naville, complete the volume. Although the Egypt Exploration Fund has not, like the other excavators whose works we get for review, the long purse of American millionaires to draw upon, it has here produced a volume which will compare favourably in every respect with any of them.

OUR LIBRARY TABLE.

Young Gaol-Birds. By Charles E. B. Russell. (Macmillan & Co.)—We hope that many people, who may have found Mr. Charles Russell, in his more scientific mood, too grave a writer, will be induced to take up this little volume, in which, with a lighter but a no less vigorous hand than in his earlier work, he shows how the young criminal is made. All his portraits are deftly painted, and several of them stand out from the canvas with extraordinary vividness. Yet the story of each boy is told with the utmost simplicity, without the faintest approach to sentiment or fine writing. Some of these dramas of decline and fall are wholly sordid and depressing; through others there runs—for all the efforts of the author, whose aim it is to present the unadorned facts of each case—a streak of romance. There are instances in which the facts themselves are so moving that the most severe practical handling cannot obscure the appeal which they make to our pity. Such is the history of "Humpy," a deformed boy who, in spite of disastrous beginnings, by sheer unsuspected strength of character painfully dragged himself up to the level of respectability when all the odds seemed to be on the side of a descent into deeper degradation. Although disreputable parents and homes that are no homes are shown to play their part in fitting Mr. Russell's young friends for the dock and the convict prison, youthful companions with a taste for crime appear to be more certain instruments of a boy's destruction. In the many cases where "bad companions" have been the beginning of a lad's undoing, the only hope of his ultimate reformation is to remove him altogether from their neighbourhood and influence. This seems to be a necessary precaution even after a long term of Borstal treatment has apparently effected a radical change. On the other hand, Mr. Russell holds that the most effective influence for good is that of the upright work-mate, and has some severe things to say of the indifference of the respectable older workman with regard to the boys with whom he is daily brought into contact in shop and factory. This man might do so much, if he would, to hold back the boy who is about to take the wrong turning. Mr. Russell confirms the general belief as to the ruinous effect of even a slight acquaintance with the interior of the common lodging-house. It is one of the strongest arguments in favour of the prohibition of street trading by boys, that this

calling frequently enables them to become independent of their home, even as a place of sleep. When the young newspaper-seller's earnings wax large enough to enable him to pay for the price of his own bed, he has often taken the first step towards qualifying himself for a place in Mr. Russell's gallery of young gaol-birds.

The Life of Benvenuto Cellini. A New Version by Robert H. Hobart Cust. 2 vols. (Bell & Sons.)—The number of translations, even of prose works, that have permanent value in any language is exceedingly small, and in the case of the autobiography of Benvenuto Cellini—who, for all his reckless disregard of grammar, was called "the best master of style that Italy possesses" by a writer so hard to please as Barette—the difficulty of producing a successful version is enormous. Roscoe's inaccuracy rightly discredited his well-known rendering; and John Addington Symonds, realizing the hopelessness of trying to reproduce the effect of "the most perfect extant monument of vernacular Tuscan prose" in another language, produced an admirable free translation of his own, which has become the standard English version. Yet even Symonds is not always complete, and there is certainly room for an unexpurgated translation of so genuine a classic. But, apart from this fact, we imagine that the average reader will prefer the earlier rendering, which has all Symonds's charm of style at its best.

Mr. Cust tells us that his object is to "reproduce as far as possible the Italian spirit"; but he admits that his version "does in places read awkwardly, confusedly, and even absurdly," and it can hardly suggest the original to any one unacquainted with it. Those, however, who know enough of the language to enjoy Cellini's own Italian, and can thus realize the difficulty of Mr. Cust's task, will not fail to appreciate the greater accuracy and scholarly qualities of the new rendering; and the fullness of the notes, together with Mr. Churchill's bibliography and the list of Cellini's authentic works still in existence, many of which are excellently reproduced in the illustrations, gives the book distinct value.

Medieval Italy from Charlemagne to Henry VII. By Prof. Pasquale Villari. Translated by Costanza Hulton. (Fisher Unwin.)—Prof. Villari tells us that in this volume he wishes to show that his countrymen are not "by nature a people indifferent to religion," as has sometimes been maintained. He considers that hitherto sufficient attention has not been given to trade in the history of the communes; and, like a loyal Neapolitan, he resents the contempt expressed for the South by the North, and proposes to bring out the important part played by the South, especially by Sicily, in the civilization of Italy, and indeed of Europe at this period. There is hardly any trace of a purpose in the book itself, which strikes us as a lucid and well-arranged summary of the facts, with scarcely a word of commentary, and no apparent attempt to emphasize any particular aspect of the vast period which is covered. We find ample justification for the general opinion as to religious indifference in Italy. The spiritual revivals that established the Orders of St. Francis and St. Dominic, and the reforming zeal of the Catharists, are barely mentioned; only the political aspect of the Church and the Papacy, to which its religious side was then entirely subordinate, is set before us; and the Romans, who had

good reason to know the head of their Church, treated him with scant respect. Prof. Villari points out that in the South at least there was genuine enthusiasm for the Crusades; but surely this was largely due to the influence of the Normans, who at that time were certainly not merged in the conquered peoples. Due prominence is, however, given to the wonderful Court of Palermo, where art and letters flourished and the first genuine school of Italian poetry arose; where Christian and Saracen lived side by side in peace, and only heretics were persecuted. But we think the general reader will expect more warmth and colour in a story of the romantic Norman conquest of Sicily.

Leaves from my Diary, 1894-1896. By the Right Rev. Abbot Gasquet. (Burns & Oates.)—In *The Athenæum* for Feb. 11th we noticed Mr. T. A. Lacey's 'Roman Diary,' concerned with the circumstances of Leo XIII.'s Bull condemning English orders. Now Abbot Gasquet gives us "extracts from" his Diary too. After reading it we may, perhaps, expect to have the diaries of Lord Halifax, Mgr. Duchesne, and the Abbé Portal also made public. The disclosure will hardly be complete without the diary of the Holy Father himself; but then he was probably far too wise to keep one. Abbot Gasquet's little volume is rather of personal and social than historical interest. He fully confirms the view which we obtained from Mr. Lacey's book, that the essential point was the supremacy of the Pope as "the foundation of the Catholic religion." He shows that the greatest importance was attached to the Bull of Paul IV., *Praeclara charissimi*. He admits the joint authorship of the *Risposta*, but does not deal with the charge concerning its facts, for which Mr. Lacey appeared to bring chapter and verse. So far Mr. Lacey must be considered to be in the ascendant on this point: but we await developments. As regards purely personal matters, Abbot Gasquet has a quaint story of a lady who came and told him what the Abbé Portal said at a meeting where he "opened his heart to those who thought with him"; and he is very severe and rather contemptuous about the abbé. As to the secret proceedings of the Commission his statements do not seem to be consonant with those of Mr. Lacey.

MR. CATLING AND BLANCHARD JERROLD.

I HAVE just read in your issue of the 18th February a review of Mr. Catling's book 'My Life's Pilgrimage.'

Your reviewer refers to my father, who edited *Lloyd's* for many years—from 1857 to 1884, the year of his death; and says that he "seems to have interpreted his duties in an easy spirit. Mr. Catling declares that during eighteen years he only once visited the office." I do not dispute the accuracy of Mr. Catling's statement, which agrees with my own recollection, and what I have heard. But your reviewer's remark may very easily be misunderstood. It certainly suggests that my father was guilty of a curious dereliction of duty. As he remained editor up to the day of his death—that is, for twenty-seven years—the proprietor of the paper must have been of a complaisance and angelic meekness beyond the dreams of the youngest journalist, if, for nearly three decades, he endured a persistent neglect of duty on the part of his editor. Mr. Edward Lloyd was an admirable man of

business, and, as Mr. Catling shows, a disciplinarian; and it may safely be said that he would never have tolerated a state of things which he deemed to be prejudicial to the paper. I always understood that my father's duties were practically confined to the furnishing of editorial matter, and did not extend to what is generally understood by editing.

I can say nothing as to the other points connected with my father's editorship to which Mr. Catling and your reviewer refer, for I know nothing, though I was pretty closely connected with my father's literary work during the last years of his life.

I should like to make it clear that I do not in the least dispute Mr. Catling's accuracy. No one would do that.

SIDNEY JERROLD.

'HOW TO WRITE THE HISTORY OF A FAMILY.'

124, Chancery Lane, W.C.

As my little manual with the title above-mentioned, which met with an amount of appreciation due rather to the increasing interest in genealogy than to its own merits, has been out of print for many years, I am now rewriting it, or, to be more strictly accurate, am writing an entirely new hand-book. Will you allow me space to say that I shall welcome any suggestions from fellow-students of genealogy which may render it more generally useful?

W. P. W. PHILLIMORE.

THE ORIGIN OF THE GREAT GAMES OF GREECE.

IN a recent lecture on Pindar at Cambridge Prof. Ridgeway endeavoured to show that the Olympian, Pythian, Nemean, and Isthmian games did not originate in the cults of Zeus, Apollo, and Poseidon, as generally held, but simply arose out of the games celebrated in honour of local heroes upon whose cults the worship of the great divinities was later superimposed. Working from the simple and better known to the complex and less known, he showed that Pindar composed odes for victors in smaller games, such as the Iolaia at Thebes, sometimes termed the Heracleia. As he mentions that "the tomb of Iolaus" testified to the victory of a certain winner, that hero's grave was the object of reverence, and the name of Heracles was only a later addition. Similar local games were held in honour of Trophonius at Lebadea, and of Amphiaraus at Oropus, and on both these cults that of Zeus was later superadded, giving us Zeus Trophonius, Zeus Amphiaraus. The Nemean games, according to the ancients themselves, solely originated in the honouring of Opheltes, son of Lycurgus, chief of Nemea, and the games were held close by the tombs of father and son. Zeus was but a later addition. Again, the ancients agreed in assigning the foundation of the Isthmian games to the cult of Pelamon, the local hero, whose grave was shown in the enclosure of Poseidon. The latter was therefore a later addition, like Zeus at Nemea. With regard to the Olympian games, Pindar (Ol. I.) definitely tells us that Pelops from his tomb beside Alpheus looked on at the races (termed the races of Pelops), and he only alludes to the connexion of Zeus with them. This distinctly looks as if we had here also a case

like Nemea. Of course there may have been ancient games in honour of older heroes at Olympia before the coming of Pelops, as is indicated by other stories.

Finally, Prof. Ridgeway was inclined to the belief that the Pythian games had a like origin in the cult of the grave of some old worthy, which later the cult of the Hyperborean Apollo overshadowed and absorbed. But he admitted that the ancient statements are scanty, vague, and conflicting. Yet it had to be remembered that a beehive tomb has been found at Delphi, and that famous heroes, such as Neoptolemus, were also buried there.

THE SADDUCEAN CHRISTIANS OF DAMASCUS.

As Mr. E. N. Adler hopes to develop his view at greater length in another place, it would not be fair on my part to criticize the brief outline he published in *The Athenæum* of the 4th inst.

Of the "many objections" which prevent him from accepting the theory sketched by me in *The Athenæum* for November 26th, 1910, he specifies only one, namely, "the Messiah's descent from Aaron, and not from David." Stated in this form, the objection applies, of course, only to the first of the two great religious leaders mentioned in the document, for of the "Teacher of Righteousness" no descent is given. But is it not significant that in the 'Testament of Levi,' a pseudepigraphon expressly quoted in the text, the Messianic functions are assigned to a priest? (For a critical treatment of the 'Testament' see Kautzsch's German edition.) Decisive evidence to the same effect is, moreover, found in the New Testament itself. For how could there have been a disposition to regard John the Baptist as "the Christ" (see St. Luke iii. 15; St. John i. 19-20) if the belief in the Davidic descent as an essential element of Messiahship was as universal as Mr. Adler supposes it to have been? Nor should it be forgotten that, according to a very influential critical view, the author of the 'Didache' evinced his doubt of the Davidic descent by referring to Christ as "David's God" instead of "David's son."

Much more might be said on this point in addition to my remarks on it in *The Athenæum* of November 26th, but what has here been set down may perhaps induce Mr. Adler to modify his view of this particular "difficulty."

G. MARGOLIOUTH.

SALE.

At Messrs. Sotheby's sale of books and manuscripts on Thursday, February 23rd, and the following day, the few lots of importance included the following: Milton, *Paradise Regain'd*, 1671, 15l. 10s. Seemann, *Flora Vitiensis*, 1865-73, 12l. Hume and Marshall, *The Game-Birds of India*, 3 vols., 1879-1881, 12l. 5s. Ackermann, *The Microcosm of London*, 3 vols., n.d., 12l. 15s.; another copy, 11l. Markham, *How to Chase, Ride, Train, and Diet Horses*, 1595, 25l. 10s. J. G. Millais, *The Mammals of Great Britain and Ireland*, 3 vols., 1904-6, 15l. The total of the sale was 893l. 18s.

At the sale of the library of the Rev. G. Lockhart-Ross, held by the same firm on Monday, February 27th, the following prices were realized: Scottish History Society publications, 60 vols., 1887-1909, 16l. English Historical Review, 11 vols., 1886-1910, 26l. 10s. Henry Bradshaw Society publications, 37 vols., 1891-1909, 18l. Wilkins, *Concilia*, 4 vols., 1737, 20l. Dugdale, *Monasticon Anglicanum*, 8 vols., 1846, 12l. 10s. The total of the sale was 511l. 17s.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Bennett (W. H.), *The Moabite Stone*, 2/6 net.

This little volume is intended to meet the needs both of students who wish to study the Hebrew, or rather Moabite, text of the Stone, and also of such of the general public as may desire to know the history, contents, and significance of this famous inscription.

Clergy List, with which is incorporated the Clerical Guide and Ecclesiastical Directory, 1911.

Cook (Albert S.), *The Authorized Version of the Bible and its Influence*, 3/6

This essay was originally written as a chapter for Vol. IV. of the *Cambridge History of English Literature*, and contains some passages which were omitted in that book.

Lunn (Sir Henry S.), *The Love of Jesus: a Manual of Prayer, Meditation, and Preparation for Holy Communion, with the Order of Administration of the Lord's Supper, and an Introductory Letter to the People called Methodists*.

Lushington (Rev. F. de W.), *Sermons to Young Boys, delivered at Elstree School*, 3/ net.

Third edition.

MacFadyen (Dugald), *Truth in Religion: Studies in the Nature of Christian Certainty*, 4/6 net.

Moore (Rev. Herbert), *The Club Feast of Christ's Appointment*, 8d.

A text-book and manual for confirmation candidates.

Order of Confirmation, 1/ net.

With coloured decoration.

Studies in the Synoptic Problem, 12/6 net.

By members of Oxford University, edited by W. Sanday.

Underhill (Evelyn), *Mysticism: a Study in the Nature and Development of Man's Spiritual Consciousness*, 15/ net.

Law.

Trial of the Stauntons, 5/ net.

Edited by J. B. Atlay. Part of the Notable English Trials Series.

Fine Art and Archaeology.

Dunn (Eliza), *Rugs in their Native Land*, 10/ net.

With 16 colour plates and 23 other illustrations.

Poetry and Drama.

Blatchford (Robert), *The Dolly Ballads*, 6d. net.

Litchfield (Frate Denio), *Baldur the Beautiful*, 3/6 net.

Ream (Harry), *Through the Mists, and other Thoughts in Verse*.

A few of these verses have already appeared in newspapers and magazines, but the greater part now make their first appearance.

Music.

Hymns for the Coronation of His Majesty King George V., 1/ net.

Matthay (Tobias), *Some Commentaries on the Teaching of Pianoforte Technique*, 1/6

A supplement to 'The Art of Touch' and 'First Principles.'

Philosophy.

Ostwald (Wilhelm), *Natural Philosophy*, 4/ net.

Translated by Thomas Seltzer.

History and Biography.

Benneville (James S. de), *Saitō Musashi-bō Benkei (Tales of the Wars of the Gempei): being the Story of the Lives and Adventures of Iyo-no-Kami Minamoto Kurō Yoshitsune and Saitō Musashi-bō Benkei the Warrior Monk*, 2 vols., 16/ net.

Both volumes contain many illustrations.

Butler (Sir William), *An Autobiography*, 16/ net.

With 4 portraits in photogravure and 2 maps.

Chase (Ellen), *The Beginnings of the American Revolution, based on Contemporary Letters, Diaries, and other Documents*, 3 vols., 25/ net.

With 75 full-page illustrations.

Colles (Ramsay), *In Castle and Court House: being Reminiscences of Thirty Years in Ireland*, 12/6 net. With 17 illustrations.

Fulton (Thomas Wemyss), *The Sovereignty of the Sea: an Historical Account of the Claims of England to the Dominion of the British Seas, and of the Evolution of the Territorial Waters: with Special Reference to the Rights of Fishing and the Naval Salute*, 25/ net. With 30 illustrations.

Gregg (William H.), *Controversial Issues in Scottish History: a Contrast of the Early Chronicles with the Works of Modern Historians*, 25/ net.

With over 300 facsimile reproductions from Old Chronicles and Authentic Works, and with maps and illustrations.

Hale (John Richard), *Famous Sea Fights*, from Salamis to Tsu-Shima, 6/ net.

An account of naval warfare from the days of the oar-driven galleys that fought in the Straits of Salamis to those of the steel-built armour clads that met in battle at Tsu-Shima. The book contains 13 illustrations and 17 plans.

Hollander (Jacob H.), *David Ricardo: a Centenary Estimate*.

One of the Johns Hopkins University Studies in Historical and Political Science.

Isabella of Milan, Princess D'Aragona, and Wife of Duke Gian Galeazzo Sforza: the Intimate Story of her Life in Milan told in the Letters of her Lady-in-Waiting, as set forth by Christopher Hare, 10/6

With 18 illustrations.

Papal Envoy during the Reign of Terror: being the Memoirs of Mgr. de Salamon, the Intermuncio at Paris during the Revolution, 1790-1801, 10/6 net.

Edited by the Abbé Bridier, translated by Frances Jackson.

Geography and Travel.

Brown (Rev. J. Wood), *Florence Past and Present*, 6/

With 3 maps and many illustrations.

Hare (Augustus J. C.), *Cities of Southern Italy*, 5/ net.

Edited by St. Clair Baddeley. With 27 illustrations, maps, and plans.

Hutchinson (Horace G.), *A Saga of the "Sunbeam"*, 6/6 net.

With photogravure portrait and 12 illustrations from photographs.

Woods (H. Charles), *The Danger Zone of Europe: Changes and Problems in the Near East*, 10/6 net.

Contains information acquired and gives impressions gained during two extended tours which the author has made in the Near East, since the advent of the Constitutional régime in Turkey. The book has 52 illustrations and 3 maps.

Philology.

Gaspey-Otto-Sauer Method: Arabic Grammar of the Written Language, by the Rev. G. W. Thatcher, 10m.; A Conversation-Grammar of the Hindustānī Language, by the Rev. W. St. Clair Tisdall, 8m.

Journal of English and Germanic Philology, Vol. X. No. 1, January, \$1

Longstaff (John C.), *Notes on Wiltshire Names—Vol. I. Place-Names*, 3/6 net.

Pocket Dictionary of the Greek and English Languages: First Part, Greek-English, compiled by Prof. K. Feyerabend, 2/ net.

With an introduction to the history of Greek sounds.

Shewan (Alexander), *The Lay of Dolon (The Tenth Book of Homer's Iliad): Some Notes on its Language, Verse, and Contents, with Remarks by the Way on the Canons and Methods of Homeric Criticism*, 10/ net.

Skeat (Rev. Walter W.), *Concise Etymological Dictionary of the English Language*, 5/ net.

New and corrected impression.

School-Books.

Melhuish (Sara), *English History Illustrated from Original Sources, from the Earliest Times to 1066*, 2/6

In Black's Historical Series. The book contains many illustrations.

Snape (H. J.), *The British Isles: Geographical Diagrams and Land Forms, with Questions, Statistics, and Tables*, 1/6

Contains 56 illustrations from photographs.

Science.

Bastian (H. Charlton), *The Origin of Life*, 3/6 net.

An account of experiments with certain superheated saline solutions in hermetically sealed vessels. With 10 plates, containing illustrations from photomicrographs.

Bickerton (Prof. A. W.), *The Birth of Worlds and Systems*, 2/6 net.

Part of Harper's Library of Living Thought. The book has a preface by Prof. Ernest Rutherford, and 16 illustrations.

Darwin (Charles), *The Origin of Species by Means of Natural Selection*.

New impression of the corrected edition, issued with the approval of the author's executors. Part of Murray's Shilling Library.

Davenport (Charles Benedict and Gertrude C.), *Elements of Zoology, to Accompany the Field and Laboratory Study of Animals*, 5/6 net.

Revised edition with 421 illustrations.

Geological Survey of India Memoirs: Vol.

XXXIX., Part I. The Geology of Northern Afghanistan, by H. H. Hayden, 2/8

Huxley (T. H.), *Aphorisms and Reflections*, 6d.

Selected from the author's works by Henrietta A. Huxley.

Norton (Arthur P.), *A Star Atlas and Telescope Handbook (epoch 1920), for Students and Amateurs*, 5/ net.

Covers the whole Star Sphere, and shows over 7,000 stars, nebulae, and clusters, with short descriptive lists of objects suitable for small telescopes, and with notes on planets, star nomenclature, &c.

Parker (George W.), *Elements of Mechanics, with Numerous Examples, for the Use of Schools and Colleges*, 4/6

With many diagrams.

Reynolds (M. H.), *Veterinary Studies for Agricultural Students*, 7/6 net.

New and revised edition, with 86 illustrations.

Speer (A. E.), *Annual and Biennial Garden Plants: their Value and Uses, with full Instructions for their Cultivation*, 7/6 net.

With many illustrations, some of which are coloured.

Juvenile Books.

Dalton (William), *Lost in Ceylon, in the Woods and the Wilds of the Lion King of Kandy*, 2/6

Part of Boys' Holiday Library.

Dalton (William), *The War Tiger: a Tale of the Conquest of China*, 1/6

Part of Schoolboy Series.

Lee (M. and C.), *The Oak Staircase: a Narrative of the Times of James II.*, 2/

Part of Pilgrim Series.

Fiction.

Afterdeath (The), set in Order by Henry Brandon, 3/6 net.

A psychological romance.

Barelay (Mrs. Hubert), *Trevor Lordship*, 6/

The history of a husband and wife who fell in love after marriage.

Basevi (Col. Charles Edward), *Victimised*, 6/

A farcical story in which a tall man is reduced by magic to a child's proportions.

Batchelder (W. J.), *The 'Wine-Drinker,' and other Stories*, 6/

A volume of stories of the sea and fishermen's lives.

Calthrop (Dion Clayton), *Perpetua, or The Way to Treat a Woman*, 6/

Perpetua is introduced to us at seven, and is after many trials happily mated.

Cameron (Mrs. Lovett), *Remembrance*, 6d.

Crawford (Mary S.), *Hazel Grafton*, 6/

Deals mainly with Irish characters.

Crichton (F. E.), *The Soundless Tide*, 6/

The scene of this novel is laid in County Down, and presents a picture of life among the gentry and cottagers in the North of Ireland.

Everett-Green (E.), *The Lady of the Bungalow*, 6/

The heroine is engaged to the "lion" of the season, who suddenly informs her that he must break off the engagement. Many exciting scenes follow.

Forbes (Ethel M.), *A Daughter of the Democracy*, 6/

Deals with the present unrest which exists in the mind of the modern woman and the desire to break away from the old conventional life.

Gorst (Mrs. Harold E.), *The Leech*, 6/

A study of life among the working classes.

Gould (Nat), *A Bird in Hand*, 6d.

New edition.

Jepson (Edgar), *Captain Sentimental and other Stories*, 6/

Stories dealing with people in many worlds and various circumstances.

Le Queux (William), *The Mask*, 1/

New edition.

Luk-Oie (Ole), *The Green Curve and other Stories*, 1/ net.

New edition.

Mason (A. E. W.), *The Broken Road*, 3/6

Seventh impression (second edition in the Waterloo Library) of this excellent novel.

Niven (Frederick), *A Wilderness of Monkeys*, 6/

Deals with a man who has ideals and is faced with lies and hypocrisies.

Ohnet (Georges), *The Woman of Mystery*, 1/6 net.

Translated by Fred. Rothwell. Part of the Lotus Library.

Oppenheim (E. Phillips), *The Falling Star*, 6/

A sensational story of hypnotism.

Orcutt (William Dana), *The Lever*, 6/

A picture of the inner workings and the corruption of vast combinations of capital.

Pendered (Mary L.), *The Secret of the Dragon*, 6/

A romance, ancient and modern.

Pickthall (M. W.), *Pot au Feu*, 6/

Short stories concerning England, Switzerland, and the East.

Smith-Dampier (E. M.), *Oil of Spikenard*, 6/

Deals with the career of Corinna and the period when 'Clarissa' was in vogue.

Swayne (Martin), *Lord Richard in the Pantry*, 6/

An idle and impecunious young lord is persuaded to propose to an heiress, and is accepted on condition that he earns his own living for six months.

Thackeray's Works: *The History of Pendennis, and Vanity Fair*, 10/6 net each.

Part of the Harry Furniss Centenary Edition.

Trent (Paul), *The Vow*, 6/

Deals with an attempt to improve the state of affairs in the Congo.

Tweeddale (Violet), *A Reaper of the Whirlwind*, 6/

The plot concerns hereditary insanity, the incidents being drawn from real life.

Vivian (E. Charles), *Following Feet*, 6/

A tragedy in which the hero's sins come home to him.

Wentworth (Patricia), *A Little More than Kin*, 6/

A novel by the successful author of 'A Marriage under the Terror.'

Wynne (May), *The Master Wit*, 6/

A story of Boccaccio.

General Literature.

Barkley (H. C.), *Studies in the Art of Rat-Catching*.

Popular edition, in Murray's Shilling Library.

Benett (W.), *Justice and Happiness*, 3/6 net.

Bertram (James) and Russell (F.), *The Starlit Mire*, 7/6 net.

A collection of maxims. With 10 drawings by Austin Osman Spare.

Bray (F. E.), *British Rights at Sea under the Declaration of London*, 1/ net.

Chesterton (G. K.), *Appreciations and Criticisms of the Works of Charles Dickens*, 7/6 net.

With 8 portraits of Dickens.

Diary of a Refugee, \$1.25 net.

This book reproduces the diary kept by a Louisiana woman in 1862, and is full of glimpses of the every-day life in the extreme South during war days. Edited by Frances Fearn, with 16 illustrations by Rosalie Urquhart.

Diefendorf (Mary Riggs), *The Historic Mohawk*, 9/

An account of a region rich in annals, legends, and stories, in which are depicted the hardships of the early era of settlement and conflict and the homely comfort of the good old days of ease. The book contains 24 illustrations.

Fleet Annual and Naval Year Book, 1911, 1/ net.

Compiled by Lionel Yexley.

Green Book of London Society, 1911.

Edited by Douglas Sladen and W. Wigmore.

Hammond (Joseph), *How and Why King George will be Crowned*, 1/ net.

Third impression, with illustrations by Muriel F. L. Readhead, and a plan of Westminster Abbey.

Harley (J. H.), *The New Social Democracy: a Study for the Times*, 6/ net.

Irish Review: a Monthly Magazine of Irish Literature, Art, and Science, No. 1, March, 6d. net.

Letters from Fleet Street, 5/ net.

Letters from a father to a daughter.

Lloyd (Henry Demarest), *Lords of Industry*, 6/ net.

Devoted to the exposure and condemnation of certain abuses in industry and politics and to the championship of the rights and aspirations of the masses.

Meath (Murray), *Adam and Eve of To-day: Some Thoughts and Ideas on Life*, 1/6 net.

In three parts: (1) men and husbands, (2) women and wives, (3) parents.

More (Paul Elmer), *Shelburne Essays*, 5/ net.

Seventh series.

Salwey (Charlotte M.), *The Giants of the Earth: a Rhapsody in Five Visions*, 1/ net.

With a preface by the Rev. Arthur Chambers.

Studies in Language and Literature.

In celebration of the seventieth birthday of James Morgan Hart, November 2, 1909.

Thoughts on Paradox, 2/6 net.

By the author of 'Stories of the English.'

Webb (Henry Law), *The Silences of the Moon*, 4/6 net.

A series of reflections on various subjects.

Wehberg (Hans), *Capture in War on Land and Sea*, 5/ net.

Translated from Das Beuterecht im Land- und Seekriege. With an introduction by John M. Robertson.

Yates (Margarita), *The Glory of the Almond-Trees and other Essays*, 2/6 net.

These essays, with the exception of the last two, have appeared in various journals and reviews.

Literary Gossip.

MESSRS. LONGMANS will publish this spring the 'Life and Letters of Sir John Hall, K.C.B.,' well known for his medical work in the Crimea and elsewhere, by Mr. S. M. Mitra (author of 'Indian Problems,' 'Hindupore,' &c.), with an introduction by Rear-Admiral Sir R. Massie Blomfield, who served throughout the Crimean Campaign.

'THE MEDIAEVAL MIND: A HISTORY OF THE DEVELOPMENT OF THOUGHT AND EMOTION IN THE MIDDLE AGES,' a new work by Mr. Henry Osborn Taylor, may be expected shortly from Messrs. Macmillan. The book is in two volumes, and seeks to set forth directly from mediæval writings the emotional and intellectual growth of the twelfth and thirteenth centuries.

THE same publishers announce the early publication of a book by Mr. T. C. Hodson on 'The Nāga Tribes of Manipur.' The tribes described are the Tangkhuls, the Mao and Marām Nāgas, the Kolyā, Khoirao or Māyang Khong group, the Kabuis, the Quoirengs, the Chirus, and the Marrings. The work is illustrated.

'THE CHURCHMAN'S GUIDE' is the title of a cyclopædia on ecclesiastical matters shortly to be issued by Sir Isaac Pitman & Sons. Questions of law and history, church architecture and liturgiology will be among the matters discussed under the editorship of Mr. Arthur Reynolds.

PASTOR WAGNER'S treatise on 'The Simple Life,' which everybody was reading a few years ago, is about to be reissued by

the same publishers, who brought out the original English version.

MR. ELKIN MATHEWS includes in his announcements in poetry the 'Canzoni' of Mr. Ezra Pound; 'Flints and Flashes,' by Mr. E. H. Visiak; 'Angels and Symbols,' by Mrs. A. V. Montgomery; and 'Confessional and Other Poems,' by Mr. Wilfrid Thorley, with an introduction by Mr. Maurice Hewlett.

HE is also issuing a new and enlarged edition of Mr. J. Nield's very useful 'Guide to the Best Historical Novels and Stories' and 'Postliminia,' gathered from the Critical Papers of the late Lionel Johnson.

MR. EDWIN H. GOMES writes regarding a point raised in our review of his 'Seventeen Years among the Sea Dyaks of Borneo':—

"The word *nyarong* is quite unknown to me, and it does not occur in the Bailey-Howell Sea Dyak Dictionary. I wrote to several friends, who have lived many years among the Sea Dyaks and made a study of their language and customs, and they all said that the word was not known to them. It would be interesting to many of us to learn what this word *nyarong* really means, and to be told something more about the institution."

THE authorities of Glasgow are arranging for the tercentenary of the Authorized Version an exhibition of MSS. and printed copies of the Bible. Some 20,000 volumes were bequeathed to the University by William Ewing, and from these nearly three score exhibits, including four MSS. of Wycliffe's translation, will be drawn. A catalogue of the exhibits is being prepared with an introductory note by Prof. Milligan.

DR. GEORGE H. FOTHERGILL writes to thank us for our notices of his books on Old Edinburgh, and adds concerning the latest:—

"May I point out that I have only been guilty of one historical slip so far, viz., 1827 instead of 1823—the date, you say, of the institution of the Bannatyne Club? Even here I am not quite certain that I am wrong. New rules were drawn up in 1827, I know, and whether the Club was reconstituted or not in that year and named the Bannatyne Club I have yet to look up and make certain about."

"Re Scott and Ravelston, you will note I said 'some of the features,' of Tullyveolan were furnished by his memory of Ravelston Gardens; and my authority is his son-in-law, Lockhart (see p. 89, vol. i., 'Life of Scott')."

'THE HERMIT OF DREAMS' is the title of a book of stories by Mrs. Lindsay which Messrs. Herbert & Daniel will publish next week. Like the verses she contributed to 'Eyes of Youth,' these tales illustrate the current revival of interest in mystical theology. Drawings by Mr. Claude Shepperson are to accompany the text.

PROF. J. G. FRAZER has been appointed Gifford Lecturer in the University of St. Andrews, 1911-12 and 1912-13.

THE first part of the third edition of the Professor's 'Golden Bough' will

be published immediately by Messrs. Macmillan. This part deals with 'Magic Art and the Evolution of Kings,' and in its revised and enlarged form occupies two substantial volumes.

IN the excellent 'English Catalogue of Books' the subject indexes begin in 1837. The books of the earlier part of the nineteenth century are difficult to trace, and it is now proposed to compile from various sources a volume of the 'Catalogue' covering the period 1801-36. It will be issued by subscription, it is hoped in the spring of next year, and those who send orders to the manager (Eng. Cat. Dept.), *Publishers' Circular*, 19, Adam Street, Adelphi, before the end of next May will secure it at a price subsequently to be raised. Mr. R. A. Peddie is editing the volume, with the assistance of Mr. Quintin Waddington.

THE death is announced from Lausanne of M. Léon Boucher, Honorary Professor of Literature at Besançon, at the age of 73. M. Boucher was a contributor to the *Revue des Deux-Mondes*, but his chief claim to notice here is the fact that he was the author of a 'Histoire de la Littérature Anglaise.'

FRIEDRICH SPIELHAGEN, whose death took place at Charlottenburg on February 25th, was one of the German novelists whose names are known far beyond the limits of their own country. That a man of his age (he was over eighty) should have outlived his influence is a matter of course, but the indirect influence which a master of style and composition exercises on his contemporaries and successors, and for which he does not always receive the credit due to him, can scarcely be disputed.

SPIELHAGEN was born at Magdeburg. On completing his studies he took up scholastic work, but he soon changed his profession for a literary career, and his lengthy novel 'Problematische Naturen,' with its passionate appeal to liberalism, speedily won him a position among the foremost writers of his time. Among his best-known novels and short stories are 'Hammer und Ambos,' 'Sturmflut,' 'Plattland,' 'Röschchen vom Hofe,' 'Quisiana,' 'Deutsche Pioniere,' and 'Das Skelett im Hause.' He did valuable work as a critic, wrote several dramas, and translated among other things Emerson's 'English Traits' and Roscoe's 'Lorenzo de' Medici.'

RECENT Parliamentary Papers of interest are: University Statute for Magdalen College, and London University Statute No. 129 (post free 1d. each); Ancient and Historical Monuments, Scotland, Second Report, County of Sutherland (post free 1½d.), and Inventory of Monuments and Constructions in Sutherland (post free 6s. 4d.); Historical MSS. Commission, Marquess of Ormonde, Vol. VI. (post free 3s.); Poor Law Commission, Vol. XXV., Statistics (post free 11s. 9d.); and Statistical Abstract for Foreign Countries, 1898 to 1908-9 (post free 2s. 1d.).

SCIENCE

OUR LIBRARY TABLE.

The Feeding of Crops and Stock. By A. D. Hall. (John Murray.)—The author of the present work, early in his career, made the study of soils peculiarly his own, and he has contributed exact knowledge on the subject in a former volume. Owing to the fact that his writings are based upon experiments, he is trusted by practical men in a greater measure than usually falls to the lot of scientific teachers. His appointment some years ago as Director of the Rothamsted Experimental Station gave him unique opportunities to continue his experiments and researches, not only into the nature of soils, but also into the values of fertilisers and manures. The second volume in his series of three, therefore, dealt with manures, and in a manner which has proved no less intelligible to the practical cultivator than informing to the student. The book before us is another stage in the study, approached, as we have said, first by obtaining a sound knowledge of soils and secondly by a series of experiments with manures. Here the reader is introduced to the science of the nutrition, first of the plant and then of the animal. The author explains in the opening chapter what a plant is made of and how it is able to make use of the food materials within its reach. This leads to a consideration of the functions of leaves and roots, the changes of composition that occur within the plant, the origin and nature of soils, cultivation and the movements of soil water, the living organisms it contains, and its chemical composition. Then follow three chapters devoted to the nutrition of animals, and in these the author describes the composition of cattle foods in detail, also the utilization of food by the animal, this latter subject being treated in such a practical manner as to indicate the best methods of feeding for particular purposes, such as increasing the weight rapidly and repairing waste of tissue. Ignorance upon these important matters is frequently the cause of extravagant feeding of farm stock, and this in turn prevents the stock-keeper from reaping the full profit of his industry. The two following chapters deal with natural and artificial manures, and the work concludes with a scientific description of the processes in the manufacture of milk, butter, and cheese. The text is provided with twenty-four illustrations.

We heartily recommend the volume to the notice of students who are about to take a course of agriculture, and to intelligent farmers and stock-keepers who desire to obtain accurate knowledge of the principles which underlie their every-day practice.

The Natural History of Coal. By E. A. Newell Arber. (Cambridge University Press.)—This little work is one of the "Cambridge Manuals of Science and Literature." Palæobotany has in recent years found much favour at Cambridge, and a volume on coal, giving the results of modern research, is an appropriate contribution to the series, especially as one of the editors, Prof. Seward, is himself an eminent authority on fossil plants. Mr. Newell Arber, writing from the Sedgwick Museum, occupies the

position of University Demonstrator in Palæobotany, and is known also for his work on fossils at the Natural History Branch of the British Museum. His present volume, though slender, gives evidence not only of close knowledge of the literature of his subject, but also of practical acquaintance with the various types of coal from different parts of the world, and the associated fossil relics. Mr. Arber has done well to remind us that all coal is not the same coal, nor has it all been formed in the same way—a proposition which, though generally admitted, is not infrequently forgotten. At any rate when an observer has satisfied himself that a certain coal has been formed in a particular way, he seems in many cases unable to resist the temptation of seeking to apply his explanation to all kinds of fossil fuel. Mr. Arber discusses the various hypotheses of coal-formation in an eminently judicial manner and endeavours to reconcile conflicting views. Three main types of coal are recognized: first, the sapropelic fuels, like cannel and Boghead coal, derived mainly from what Prof. Potonié terms sapropel; then the humic coals, including our ordinary domestic fuel; and finally the anthracites, formed probably in a different way from the others and from different material. The student who trusts himself to Mr. Arber's guidance will find here a trustworthy introduction to our present knowledge of the nature and origin of coal.

Electricity in the Service of Man. Vol. I. By R. Mullineux Walmsley. (Cassell & Co.)—This book, we learn from the Preface, is modelled upon a German work of Dr. A. R. von Urbanitzky, which was translated into English under the title given above. It has passed through many editions, but on a new one being called for, it was found that so many fresh discoveries had been made since the last, that it was necessary to rewrite it entirely, and also to divide it into two volumes, the first dealing with the 'History and Principles of Electrical Science,' and the second with its practical applications.

The first of these is before us, and deals effectively with such matters as the electric current, its production and effects, electromagnets, the telegraph and telephone, electric transmissions of power and radio-activity, and the very important section of electric measurements. As the head of the Electrical Engineering Department of the Northampton Institute, Dr. Walmsley has had abundant experience in making such matters intelligible to the beginner, and the present volume is, as might be expected, above all things terse, clear, and practical. The illustrations are numerous and well chosen, and we have little doubt that an intelligent student after reading the volume would find himself in possession not only of the elementary electrical facts concerned in the practical application of electricity, but also of a clear idea of the steps by which they have been acquired.

Electrical science, however, differs from most forms of human knowledge in two particulars. In the first place, we have no idea what the thing electricity, the conduct of which it has to teach us, really is; in the second, we have no physical faculty by which we can appreciate it. With the first of these problems Dr. Walmsley—we think wisely—does not concern himself; the second, as he knows perfectly well, presents grave difficulties. Give a mechanic interested in his subject, as, for instance, an engine-driver, the model of a steam-engine, and he will soon be able to puzzle out for

himself the principles of its working which it alone concerns him to know. Of electricity some years ago, perhaps, the same thing might have been said. A sufficient number of experiments with a frictional machine, a galvanic cell, a compass, and perhaps an induction coil, would give the student a sort of foundation fitted to receive the superstructure of practical instruction. But it is not so now. He will hardly thus find out that, when a current is suddenly interrupted or renewed, phenomena occur which so exactly resemble those called in mechanics inertia and momentum that we can best describe them by the same words. Not again will he be able to discover that a conductor cutting the lines of force of a magnet will itself become the vehicle of a current, nor realize the phenomena of induction and self-induction. And why? Because there are no obvious means by which these effects can be made evident to the senses, and they can only be appreciated by a delicate and roundabout system of measurement.

This difficulty has been got over in several ways. The orthodox and perhaps the most logical is that of mathematical analysis. By diagrams and equations all the problems of electricity can be stated without fear of mistake; but then this method is a trial to those not mathematically-minded, and demands besides a considerable equipment. Then there is the experimental method of Prof. Kolbe, whose 'Electrizität,' a marvel of ingenuity in its way, was reviewed a year or two ago in these columns. Dr. Walmsley uses both of these methods, but adopts neither *in toto*. Instead, he mixes with them a plan first adopted, we believe, by Sir Oliver Lodge in his 'Modern Views on Electricity.' He assumes Faraday's lines of force to have a real existence, and pictures them in every case to which they can be conveniently applied. This is excellently done, but will the student always remember the pictures? If he does, would it not be as easy for him to remember the experiments into which they enter, or, with a little more trouble, the equations that can be drawn from them? Moreover, the system breaks down just when it begins to be most useful. Dr. Walmsley applies it to Faraday's "ice-pail" experiment and the local action of a voltaic cell. He does not do so, we suppose, because it would be too cumbersome, when he is dealing with apparatus like dynamos. Yet here it might make many things plain to the student. This is the only criticism we have to offer concerning an excellent book.

SOCIETIES.

BRITISH ACADEMY.—Feb. 18.—Lord Reay in the chair.—Prof. Haverfield, Fellow of the Academy, gave a summary of his second annual report on the principal explorations of Roman Britain during the past year, which, he said, constituted in some ways almost an epoch in Romano-British research. Work had ceased at Silchester in 1909, and at Caerwent and Newstead in 1910. Exploration at Corbridge was still in full course. Good hopes were entertained that the scheme for the uncovering of Wroxeter, near Shrewsbury, would be carried out. Prof. Haverfield referred to small excavations at Hucclecote, near Gloucester, and at Holt. Much had been written during the past year: the Professor's own monograph on the military aspects of Roman Wales; Mr. James Curle's valuable work on his excavations at Newstead, one of the most important contributions made to Romano-British archaeology during recent years; and Dr. George Macdonald's forthcoming work on the Wall of Pius, which would stand with Mr. Curle's as a distinct addition to our knowledge of Scotland in Roman days.

ROYAL.—Feb. 23.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Transmission of Flagellates living in the Blood of certain Freshwater Fishes,' by Miss M. Robertson,—'Report on the Separation of Ionium and Actinium from Certain Residues, and the Production of Helium by Ionium,' by Mr. B. B. Boltwood,—'The Secondary Rays produced by β -Rays,' by Mr. J. A. Gray,—'The Specific Heat of Water,' by Messrs. W. R. Bousfield and W. Eric Bousfield,—and 'On the Measurement of Specific Inductive Capacity,' by Prof. C. Niven.

March 2.—The following papers were read: 'Reversal of the Reflex Effect of an Afferent Nerve by Altering the Character of the Electrical Stimulus Applied,' by Prof. C. S. Sherrington and Miss S. C. Sowton,—'Carbon Dioxide Output during Decerebrate Rigidity,' by Dr. H. E. Roaf,—'The Alcoholic Ferment of Yeast Juice, Part VI., The Influence of Arsenates and Arsenites on the Fermentation of the Sugars by Yeast Juice,' by Dr. A. Harden and W. J. Young,—'Experiments to Ascertain if Certain *Tabanidae* Act as the Carriers of *Trypanosoma pecorum*,' by Col. Sir D. Bruce and others,—and 'Experimental Studies in Indian Cottons,' by H. M. Leake.

SOCIETY OF ANTIQUARIES.—Feb. 23.—Dr. C. H. Read, President, in the chair.—Mr. R. R. Marett, Reader in Social Anthropology, Oxford, read a paper on recent archaeological researches in the island of Jersey, the object of which was to give some account of the contents of the cave of St. Brelade, clearly of pleistocene age; to notice the contents of the cave of St. Ouen, the period here being more uncertain, though not improbably pleistocene, and to discuss the general relation of the pleistocene to the post-pleistocene traces of prehistoric man in Jersey in the light of the available archaeological and geological evidence.

The excavation of the cave of St. Brelade was undertaken by the Société Jersiaise in July, 1910, and some digging was also done by Mr. Marett himself later in the year. Among the animal remains discovered were bones and teeth of *Rhinoceros tichorhinus*, *Rangifer tarandus* (reindeer), a small species of horse and of deer. From these remains two deductions can be made: (1) that this is a pleistocene fauna, though of what period it is not easy to decide, and (2) that, when these animals were alive, Jersey was connected with the Continent. Among human remains nine teeth from a lower jaw were found lying in their original position, but the bone had unfortunately been completely absorbed by the surrounding clay. A rich spoil of flint implements was discovered. This is peculiarly interesting, as no flint is now found *in situ* on the island, although chalk occurs near the opposite coast of the Cotentin. It may well be, then, that the sea has eroded away or now covers beds of chalk a good deal more accessible to the pleistocene inhabitants of Jersey than the existing chalk deposits of the Cotentin.

The cave of St. Ouen was explored in 1881, but some digging which Mr. Marett undertook towards the end of 1910 has led him to believe that the cave will bear fuller investigation, and the Société Jersiaise, it is satisfactory to know, intends to take the matter up without delay. Of osteological remains, except the lower jaw of a deer found in 1881 and traces of bone waste, nothing has hitherto come to light that recognizably belongs to the anatomy of any particular species, human included. The cave has yielded a large number of implements of a somewhat ambiguous character, it not being quite clear that they are Mousterian, as those from St. Brelade undoubtedly are. The reader was inclined, provisionally, to believe the St. Ouen industry slightly the earlier of the two, but considered that further exploration was necessary to settle the point.

With regard to the relation of the pleistocene to the post-pleistocene traces of man in Jersey, from an archaeological standpoint, attention has to be drawn to a series of implements found on the Jersey moorlands. Some of these have been classed as Chellean, but the ascription seems far from clear; the others are Mousterian. Geologically attention has to be directed to the complicated question of the raised beaches of the island. These beaches occur at levels of 140 ft., 70 ft., and 25 ft. above mean sea level. It is to the period of submergence corresponding to the 90 ft. raised beaches that has been assigned the scooping out of the two caves. Unfortunately no marine remains are found in any of these beaches, which makes it impossible to determine the relative age of the pebble beds. Secondly, the loess which crowns the heights of the island

may be considered in this connexion, and its deposition may be ascribed to sub-glacial conditions operating at intervals through the so-called Ice Age. Of evidence which may serve to correlate the archaeological and geological position may be mentioned the discovery of a bone of *Bos primigenius*, and of a human skull found at the bottom of the loess bed on Green Island. This loess lies immediately upon the diorite rock, and is capped by a more or less peaty stratum containing neolithic pottery and implements. The skull has not been measured with sufficient accuracy to establish its claim to a pleistocene origin, but in appearance it lacks those primitive characters associated with the Spy and Gibraltar crania. It is also to be noted that, as it, as well as the *Bos primigenius* bone, occurs in low level clay such as might be brought down by floods from higher ground, it may belong to the later stages of the loess formation.

Mr. Harold Brakspear exhibited a series of ornamental lead panels found at Bardney Abbey, Lincolnshire.

ZOOLOGICAL.—Feb. 21.—Dr. A. Smith Woodward, V.-P., in the chair.—Mr. E. G. Boulenger read a paper on the varieties of the Spotted Salamander (*Salamandra maculosa*).—Mr. G. A. Boulenger contributed a paper based on a collection of fishes from the Lake Ngami Basin, Bechuanaland.—Dr. F. D. Welch communicated a paper on Gibbons of the Genus *Hylobates*, and on a Siamang Gibbon, recently living in the Society's gardens.

CIVIL ENGINEERS.—Feb. 21.—Mr. Alexander Siemens, President, in the chair.—Mr. W. T. Douglass read a paper on 'Coast-Erosion,' its causes and the best remedies. Beach-removal and dredging in adjacent waters were ineffective. Details were given of works carried out at Hornsea, Sheringham, and Lowestoft.

ROYAL ANTHROPOLOGICAL INSTITUTE.—Feb. 21.—Prof. W. Gowland, in the chair.—A paper was read on 'Pre-Historic and Aboriginal Pottery Manufacture,' by the Rev. J. W. Hayes. The lecturer contended that some of the most wonderful pottery ever made was made without a wheel—specimens of which he showed, direct from the mounds of the American valleys. These pieces were wrought by the fingers of the native women, and put together by "the coil system," i.e., a long coil of plastic clay was wound around a circular stone, or a calabash, and built up, coil by coil, to the shape required, the coils being simply wider for the middle of the urn and narrower for the neck. As the work proceeded, the marks of the stands were obliterated by "patting" the sides together with a mallet, and the article finished by rubbing with a stone. Vessels of this sort were then, in most cases, placed rims downward on a prepared spot (from one or two large ones to a dozen smaller ones fitted in between one another) and covered over with bushes, animal dung, and bark; the whole was set on fire, and in a few hours serviceable pottery came to light. It was by such simple methods that the larger part of aboriginal sepulchral pottery urns was executed, some pots being manufactured in strips or sections, and afterwards united, to form a complete whole. The lecturer mentioned what he saw during his visits to the rude "country potteries" of Dorset; explained the various mixtures of clay used, showed how the zigzag and other decorations were produced by the roughest instruments; how the glazes were mixed and applied, both here and abroad; referred to the Indian evidence as to round-bottomed vases being increased in diameter by "beating out" after they left the wheel; and some other facts, hitherto considered impossible by many English potters. After dealing in detail with the various kinds of primitive ovens or kilns, both of earth and brick, he asserted, that the best pottery clay came from the beds of lakes and the surface of marshes and estuaries, where a good proportion of silica, in the form of sand made "tempering" comparatively easy. Hence it was probable that the native tribes of our own islands, like the Indians of North and Central America, paid periodic visits to the marshes and estuaries of the coast, for the purpose of moulding and "firing" much of the rough domestic and sepulchral vessels found from time to time; the fragments of which exhibit, when broken, a mixture of sand, sea shell, crushed potsherds, small cavities left by rushes and marsh grass. This opens the question whether some of the mounds, or heaps, found round the coast, and usually called "Redhills" may not be the refuse of such marsh kilns? Mr. Hayes was not prepared to say that they were, since the

Red Hills offer peculiar difficulties which must be accounted for first, but he exhibited upon the screen several objects, like pedestals, found in the American mounds, and by American antiquaries supposed to be used in pottery manufacture. These resemble in shape objects found in the Red Hills and up to the present not satisfactorily explained. Of the existence formerly of small circular marsh kilns the lecturer had no doubt, and certain circular patches of burnt earth found at Upchurch, and at Tilbury when the tide was out, suggest that they were in use. In concluding, the lecturer dwelt on the influence of Roman civilization on the Britons. Although the Romans caused the natives—under their supervision—to improve their methods of manufacture in the Roman colonies, yet, after this influence was withdrawn, and even during the period of Roman occupation, no doubt the most antiquated modes of manufacture were pursued in obscure districts of these islands.

BRITISH NUMISMATIC.—Feb. 22.—Mr. Carlyon-Britton, President, in the chair.—Mr. Alfred Anscombe was elected an Honorary Member and Mr. J. F. Mallett a Member.

Mr. Shirley Fox read a further instalment of the 'Numismatic History of the First Three Edwards,' by himself and his brother, Mr. H. B. Earle Fox, and showed, from the evidence of contemporary chronicles and official documents, that the long-cross coinage bearing the name of Henry III. continued to be issued until the end of 1278, and remained the sole currency of the country until the middle of the following year. Two varieties of it were identified as having been issued under Edward I., and the later of these bore the names of moneyers—Phelip in London and Joco at St. Edmundsbury—who were not appointed to their office until May, 1278. In the summer of that year the king's attention was drawn to the clipped and worn state of the coinage, and, in consequence of statutes passed by the Parliament held at Gloucester, inquiry was made into the clipping of coin by the Jews, many of whom were convicted and hanged. In the meantime the king, having taken the administration of the mints of London and Canterbury into his own hand, appointed Gregory de Rokesley and Orlandino de Podio to be keepers, in place of Bartholomew de Castello, and preparations were made for the issue of a new coinage, the dies for which were delivered to them in May, 1279. The new money, however, was not ready until nearly three months later, and pending its issue, the king, who had forbidden the circulation of mutilated coin, supplied, from his own treasure, whole and unclipped money of the old type, which was exchanged, at ten cities, for clipped. The most conspicuous reforms in the new coinage were the suppression of the practice of cutting the penny into halves and quarters to serve as small change, and the issue of the first round farthing. Another innovation was the striking of a *grossus sterlingus*, equal to four ordinary sterlings. An exchequer memorandum, which has been preserved, shows that the pound tower (=5,400 grains troy) of sterling silver was to be coined into 243 pence, but, as farthings of the same standard would have been inconveniently small, it was ordered that they should be made of baser metal, and that only 812 of them should be coined out of the pound tower instead of 972, so that their normal weight would be 6.65 grains troy, instead of 5.55 grains troy, which would be that of a quarter of a penny. Base farthings were not struck after Christmas 1280, when the small coins were ordered to be of the same fineness as the pence, and the identification of those of 1279 is therefore easy. Identical in style with them were the pennies reading EDW. REX ANGL. DNS HYB. and others on which the word Rex was abbreviated to R. with a mark of contraction placed across the tail of the letter. The groats, the issue of which did not last more than four or five years, were the well-known pieces misdescribed as patterns by Hawkins. All the coins of 1279 were struck in London only. At the end of the year a new agreement was drawn up by which Master William de Turnemire was appointed master moneyer throughout England, and was to work mints at Canterbury, Bristol, and York, as well as in London. He does not seem to have struck groats in the provinces, but the pence and farthings issued under this instrument are easily distinguished, the dies having been made, in part, with the irons used for the previous issue. A noteworthy characteristic is the invariable use of the inverted S, which was found mixed with the normal form in 1279, but after this issue disappears for many years. The agreement does not provide for halfpence, which, the chronicles state, were put into circulation on August 15th, 1280, when the long cross coins

were finally demonetised, and no halfpence were mentioned in the mint accounts closed on May 19th, though a large amount of them figures in the account running from that date to October 18th. The year 1280 saw the opening of royal mints at Lincoln and Newcastle, in addition to the cities already named, and the Bishop of Durham's coinage began with the first type issued by William de Turnemire. At St. Edmundsbury considerable delay was caused by a dispute between the Abbot and the King over the former's claim to receive an "assay," or test piece of standard silver, and no coins were issued until the end of June. One consequence of this appears to have been the irregular production of a die of local workmanship, differing widely in style from the official type, and recognisable by the spelling HIB for HYB. Another consequence was the survival of the name of the moneyer, Robert de Hadeley, on the coin, when moneyers' names had been suppressed at all other mints. An inquiry was ordered into the matter a couple of years later, but, though the result cannot be ascertained, a lenient view must have been taken by the authorities, since Hadeley remained in office until 1287. The Archbishop of York did not succeed in establishing his claim to two dies without litigation, and his mint did not begin to work until near the end of the year. His coins, which are all of a single type peculiar to north country mints, are of great assistance in establishing the chronology of the various issues.

Mr. J. B. S. MacIlwaine supplied an account of an interesting discovery near Dundrum, co. Dublin in 1893 of 650 half crowns, shillings, and sixpences of the gun-money coinage of James II., contained in a large earthenware vessel which he exhibited. The find added twelve varieties to the recorded list. About 1885 some 200 half crowns of this issue had been found near the same site.

Presentations:—By the King of Italy, the first volume of the 'Corpus Nummorum Italicorum': Miss H. Farquhar, 'Medallic History,' 1802; Mr. L. L. Fletcher, 'Australian Copper Coinage,' by M. H. Long.

Exhibitions:—By Mr. Shirley Fox a series of Edwardian coins in illustration of his paper; Mr. Bernard Roth, a new variety of the stater of Dubnovellaunus, reading DUBNOV, somewhat resembling the class 'Evans,' pl. iv, fig. 10; Mr. W. C. Wells, a long-cross penny of Henry III. issued by Lucas of Northampton from a die which appeared to have been used for a previous type before being recut; Mr. Westropp, a forgery of Charles I.'s half crown with mint mark (R); Mr. L. L. Fletcher a series of 41 varieties of the early eighteenth century copper tokens of Ulster; Mr. MacIlwaine, an unrecorded fourpenny piece of 1852, Britannia type; Mr. Henry Garside, the pattern half crown of 1875.

MEETINGS NEXT WEEK.

- MON. Aristotelian, 8.—'Knowledge by Acquaintance and Knowledge by Description,' Hon. B. Russell.
— Royal Society of Arts, 8.—'Applications of Electric Heating,' Prof. J. A. Fleming. (Cantor Lecture.)
— Zoological, 8.30.—'Habits of Moose,' and 'Carl Hagenbeck's Tierpark' (lantern exhibitions); 'Some new Siphonaptera from China,' Hon. N. C. Rothschild; 'Contributions to the Anatomy of the Anura: I. Some Anatomical Notes upon the Frog *Megalophrys (Leptobrachium) ferox*,' and 'On the Spermatophores in Earthworms of the Genus *Perelima (=Pericheta)*,' Mr. F. E. Beddard; 'A Rare Beaked Whale' and 'Age Phases of the Rorqual,' Mr. R. Lydekker; 'On Longevity and Relative Viability in Mammals and Birds,' with a Note on the Theory of Longevity, Mr. P. Chalmers Mitchell.
- TUES. Royal Institution, 3.—'Crystalline Structure: Mineral, Chemical, and Liquid,' Lecture II., Mr. A. E. H. Tutton.
— Institution of Civil Engineers, 8.—'Modern Railway Signalling: Some Developments upon the Great Western Railway,' Mr. A. T. Blackall.
— Anthropological, 8.15.
— Zoological, 8.30.
- WED. Archaeological, 4.30.
— Geological, 8.—'Contributions to the Geology of Cyrenaica,' Prof. J. W. Gregory, and Messrs. R. B. Newton, F. Chapman, and D. P. Macdonald; 'The Teeth of *Ptychodus*, and their Distribution in the English Chalk,' Mr. G. E. Dibley.
— Royal Society of Arts, 8.—'Plague and its Dissemination,' Mr. J. Canille.
- THURS. Royal Institution, 3.—'Ruskin,' Lecture II., Mr. A. C. Benson.
— Royal, 4.30.—'The Absorption Spectra of Lithium and Caesium' and 'Dispersion in Vapours of the Alkali Metals,' Prof. P. V. Beman; 'On the Ionic Solubility-Product,' Mr. J. Kendall; 'Note on the Electrical Waves occurring in Nature,' Dr. W. H. Eccles and Mr. H. M. Airey.
— Institution of Electrical Engineers, 8.—'The Laying and Maintenance of Transmission Cables,' Mr. C. Vernier.
— Antiquaries, 8.30.
- FRI. Royal Institution, 9.—'Recent advances in Turbines,' Hon. C. A. Parsons.
- SAT. Royal Institution, 3.—'Radiant Energy and Matter,' Lecture II., Prof. Sir J. J. Thomson.

Science Gossip.

THE CAMBRIDGE UNIVERSITY PRESS have made arrangements for the publication of a Flora of an elaborate kind in every way by Dr. C. E. Moss, the Curator of the University Herbarium. The author will be assisted

by specialists, and the descriptions of the plants will be new and taken from living specimens. The illustrations will include careful drawings by Mr. E. W. Hunnybun, whose work in this way is remarkable; numerous photographs of plants in their natural habitat; and maps showing the distribution of the more interesting species. The first volume of the ten which the work will probably occupy will deal with the earlier Dicotyledonous families from the Salicaceæ to the Chenopodiaceæ.

THE Tropical Diseases Research Fund Report has just been published as a Parliamentary Paper (post free, 1s. 5d.).

MADAME CERASKI, in the course of her examination of the photographic plates taken by M. Blazko at the Moscow Observatory, has detected variability in three faint stars, one in the constellation Triangulum, and two in Pisces. The first (var. 6, 1911, Trianguli) varies between the eleventh and twelfth magnitudes, and is probably of short period. The second (var. 7, 1911, Piscium) diminishes from the 10½ magnitude to below the twelfth, and its period probably long. From a discussion of the registrations of the third (var. 8, 1911, Piscium), M. Blazko thinks that the magnitude changes from the 9½ to below the twelfth, and that the period amounts to either about 11½ months or half that duration.

At the meeting of the British Astronomical Association on the 22nd ult., the Rev. T. E. R. Phillips communicated an interesting series of observations of Nova Lacertæ, which, from the middle of January to that of February diminished gradually and nearly uniformly in brightness by about a magnitude, being at the latter date a little above the ninth. There were some peculiar features in the spectrum, as others have also noticed.

A REMARKABLY bright appearance of the zodiacal light was noticed at the Engelhardt Observatory, near Kasan, on the 26th and 27th of January, when it reached as far as Saturn in the south-western part of the constellation Pisces. As compared with the Milky Way, it was reddish in colour and of the same order of brightness.

THE Società degli Spettroscopisti Italiani has begun the fortieth volume of its *Memorie di Astrophysica ed Astronomia*, edited as before by Prof. Riccò, Director of the Society. The first number contains sets of observations at two elevations on Mount Etna by Profs. Platania and Bemporad of radiation as affected by atmospheric absorption and of meteorological matters; also a continuation of the spectroscopical images of the solar limb taken at the Capitol Observatory, Rome, from the 4th of November, 1879, to the 13th of April, 1881.

FINE ARTS

PASTELS BY MR. J. R. K. DUFF AT THE GOUPIL GALLERY.

VISITORS to this exhibition must be warned not to judge it hastily on a casual first impression. Mr. Duff's work has not the stylistic charm which comes of a perfect instinct for the genius of his special medium: he has come to be on fairly good terms with it, but laboriously. He is rather heavy-handed—a quality not so much

physical as the result of an habitual slight miscalculation of the scale of form suitable for his point. He seems to be trying to render details which his stick of pastel is just too clumsy to do other than coarsely—when, by reading the form in rather more generalized sense he might be dealing with shapes which it would be possible to set down with delicate nicety. His instinct for colour is not unerring. He is no more a born colourist than a born designer or draughtsman or stylist, and the fairies at his birth refused him those natural gifts, any one of which lavishly bestowed may make of a painter the young Fortunatus adored of journalists. When all the others had refused their favours, however, there was evidently one kindly spirit who palliated their neglect by decreeing that, if he were to do nothing easily, he should not only thus be saved the vulgarizing effect of too early success, but should also acquire the habit of making good his deficiencies. Already his work gives strong evidence of the existence of such a law of compensations. The obvious aptitudes which seem to suffice for success in early youth are inclined with the coming of middle age to look already a little threadbare and betray their limitations. It is precisely this period, however, which shows the value of character, seriousness, and continuous study, and Mr. Duff's talent, slow in forming, opens out every year in a manner which promises him a modest but solid position in the art of our day.

The advance most obvious in this exhibition on the previous work of the artist is in the matter of colour. There are still a few examples of the essentially black and white vision which in earlier shows had led us to adjure Mr. Duff to renounce as beyond his range the analysis of effects of sunlight and the like, and to content himself with unpretentious objectivity. We must now admit that this criticism was rather premature. Mr. Duff is not only developing a delicate sense of colour-structure, but is also beginning to realize the power of colour as a means of abstract expression—to choose as a motive a colour scheme which enhances the particular sentiment of each theme. We may note as an instance the tender treatment of an ordinary subject which gives to No. 42, *The Lilac Bush*, its early morning charm, the original treatment which keeps the garishness of *The Blue Pond* (11), yet endows it with decorative subtlety, and the full suave colour of No. 70, *Welsh Hillside*, with its sheep sweeping grandly across the expanse of country. In his studies of broken passages of contrasting sunlight and shadow which a year or so back were the occasion, as in so much modern naturalism, of mere gaudiness, he is getting a surer hold on the delicate sequences of colour presented by different coloured surfaces under the same illumination—relations which it is easy to lose in themes so interrupted by unexpected juxtapositions. It is this continuity of scale of all the surfaces in sunlight on the one hand, and all those in shadow on the other—however each group of tones may break across the other—which gives to No. 12 (*A Dark Lane*) its look of the steady unalterable glare of midsummer noon, and which in No. 61, a bright study of flickering sunlight on broken forms, charms us with the justness of the colour of the warm sunbaked earth—the summer earth, which has so delicate an aroma, which when you lie upon it leaves on your clothes such a fine dry powder that you can shake it off at once. Before not a few of these pastels we are conscious of the temptation to slightly sentimental rhapsody. If we were ever to be converted to the use of pastel for purposes of naturalistic painting, it would be by such

a picture of Virgilian content in bucolic surroundings as No. 1 (*The Fowl-house*). So also No. 51 (somewhat doubtfully entitled *The Vineyards*) puts you on the spot with convincing thoroughness, and the painter who is citizen by force of circumstances is conscious of an envious nostalgia—"Hoc erat in votis."

The pleasantness of the best of these pastels is perhaps rather enhanced by the slight clumsiness of the artist. Taxed to invent ingenuities of handling to make his blunt point render what he is drawing, he seems but the more absorbed in a delightful task. It is not work of the most creative sort, but, when it is at its highest pitch of sincerity, it is work of a kind we are not likely to have too much of.

DAUMIER'S LITHOGRAPHS AND THE EXHIBITION BY MEMBERS OF THE FRIDAY CLUB.

LIKE the inclusion of drawings by Puvis de Chavannes on a former occasion, the presence of Daumier in this Exhibition may be taken as an indication of direction on the part of the members of the Club, and we may hope that invention and the use of human anatomy for purposes of expression are among the ambitions of the younger generations of art students. Such a revival is indeed to be welcomed at a time when dependence upon the model has been carried to an extreme. As a guidepost to the art of the future, Daumier has the disadvantage that belongs to complete mastery. Puvis de Chavannes, with his vague aspiration after an art, the canons of which he never quite confidently grasped, would tempt to literal imitation only the weaklings. One can imagine Daumier's influence on the other hand, as somewhat overpowering. There could hardly be any question of intensifying the means of expression further. Certainly the work of the members of the Friday Club, which looked confident and sure in intention beside the tentative drawings of Puvis, seems a little vague and timid compared with the terrific force of Daumier. Michel Angelo would be suave and academic by comparison with such vitriolic outpourings of satanic insight. No. 110, which would need, one imagines, the inspiration of the ferocity in some artists, represents with Daumier his extreme of geniality. The horror of the *Rue Transnonain* (94) or that extraordinary invention, *Baissez le rideau: la farce est jouée* (80) may be quoted as more typical, but perhaps the most astonishing example of the artist's hold on human anatomy is in the *Prelude* (73). One performer tunes his fiddle; another has a preliminary blow at his nose; the third is clearing his throat; and the rather subtle variations of physiognomy which express this last action are hurled upon the paper with a certainty and grasp of essentials which take one's breath away. Daumier was a truly magical draughtsman.

It is the draughtsmen of the club who show the strongest work—Mr. R. Ihlee in *The Bad Girl of the Family* (26), Mr. Bernard Leach in the strikingly imaginative plates *The Beggar and the Bird* (15) and *The Sirens* (18), and Mrs. Bernard Darwin in a well-observed *Baby Washing its Hands* (42). There is good colour in the water-colour landscape of Mr. Derwent Lees (52), and the flower-pieces of Miss Ursula Tyrwhitt (57, 58).

Among the oil paintings, Mr. Roger Fry's flooded valley (135) is expressive in the planning of its tones, which is the typical virtue of the better post-impressionists, but it has the typical fault that the actual touch and texture of the work, while they add nothing to the expressiveness of the general plan, are too insistent and varied to leave it uninterfered with. A severer uniformity of weight of paint seems deserved by so carefully studied a design. As it is, the execution has a look of false carelessness, or of the swiftness of notation which comes not from the glee of creation, but from scorn for one's own design. A defiant brutality of manner is imposed upon a subject-matter refined and thoughtful enough. More or less of the same school are *The Mountain Top*, by Mr. Duncan Grant (136), and the *Apples* (138), by Mrs. Clive Bell, which derive a certain advantage of reserve in their more steadily built-up impasto. The more smeared paint of Mr. Fry should be associated technically with modelling by weight of pigment. The post-impressionist usually models severely by mixture of pigment, and his smearing is thus distressing because it is idle.

The careful little picture (145) by Mr. T. H. Shepherd is attractive in its rare conscientiousness of detail, but it suffers heavily from the fault referred to above of being conceived in a scale of form so small as to result in clumsiness of drawing. One knows all the time that to a draughtsman of insight there were other groups of form wanting to be discerned as ready to the painter's hand. The shadows of eye-socket and cheek might have been delicately done when eyelid and eyeball could not. This weakness separates his painting from the somewhat analogous work of Vermeer, whose personages always look as if they had been obligingly created to suit a brush of just that size.

FLOWER PIECES AND THE WORK OF MR. FREDERICK CARTER AT THE BAILLIE GALLERY.

MISS MARGARET WATERFIELD, among many works of slightly mechanical, but still notable dexterity, shows two, *Almond Blossom, Kew* (4), and *Wild Cherry and Pheasant-eyed Narcissus* (8) of considerable beauty. In both of these she does what the flower-painter too often forgets to do in that she prepares a powerfully contrasted bed of deeper tones on which to set her sprays of foreground blossom. Much of the flower painting here, which is otherwise cleverly done, flashes out at once from a ground without depth. Miss Ursula Tyrwhitt (20 and 21) is again to be congratulated on the way in which, by apparently the simplest means, she renders her flowers in their environment of air and shade. Mr. Frederick Carter's etchings and drawings, mainly of subjects from the Italian Comedy, show great cleverness, though as yet they are somewhat over-full of accent. He is inclined to crowd his designs with angular and slender forms which contradict one another rather than cohere. *Pierrot, the Columbine* (27) is perhaps the most poignant of the designs, but *Pierrot qui aime la lune* (22), *La Femme de Polichinelle* (32), and *Captain Matamoros* (49) are also good examples of his work.

ARCHÆOLOGICAL NOTES.

IN the current number of the *Recueil de Travaux*, M. de Mecquenem describes M. de Morgan's work at the Acropolis of Susa from the architectural standpoint. He points out how, in a country where there was neither wood nor stone, the first inhabitants of Elam were forced to build in unburnt bricks, and how—for these could not be re-used—this meant a gradual transference of fresh clay to the site. He also goes at some length into the pottery found at Susa, the lowest and therefore the earliest stratum of which is, curiously enough, the most delicate and best made, being of a thin and brittle paste beautifully decorated. On the top of this comes rough and unpainted pottery and alabaster vases, and then some painted pottery, the earliest of which the author would put at 2,000 B.C. The earliest temple at Susa which has walls still standing was dedicated by Dungi, King of Ur, to the Elamite god Nin-Chuchinak, and was of burnt bricks, to which construction may no doubt be attributed its survival. M. de Mecquenem gives in his article the fragment of a limestone vase found here showing two bulls lying before a coniferous tree, the workmanship of which is of great merit.

On the site of the still earlier temple of Nin-Harsag or goddess of the Mountain, whom he identifies with the Babylonian Nana, the expedition found the statuette of Manichtusu, King of Kish, which seems to have been placed on an alabaster plinth secured to the foundations by bitumen, and this must have been in place on M. de Mecquenem's showing not later than 4,000 B.C. These and other contemporary statuettes from the same site all show male standing figures in the curious flounced petticoat called *kaunakes*, and much resemble those found at Telloh. They are also all made of alabaster or white marble. But whence did the Elamites get these materials? The same question, which the author of the paper makes no attempt to answer, may be asked with even greater pertinence with regard to the alabaster vases and statuettes found among the foundation deposits of the Temple of Nin-Chuchinak. Those reproduced in the *Recueil* are mostly representations of women kneeling and exceedingly curious.

To the current number of the *Proceedings* of the Royal Philosophical Society of Glasgow Dr. Elliott Smith contributes an article on the 'History of Mummification in Egypt,' a subject on which his prolonged work as Professor of Anatomy to the Government School of Medicine in Cairo enables him to speak with great authority. He thinks that the discovery of the possibility of preserving the bodies of the dead was in the first instance accidental, and that the shallow pits of "hot, dry sand" which formed the graves of predynastic times desiccated the corpse without allowing it to corrupt. Moreover, the "natron," or salts of soda, which was the chief factor in mummification, existed "in enormous quantities" in the deserts on either side of the Nile where the earliest inhabitants buried their dead, and the preservative qualities of this could not have remained unknown for long. Dr. Elliott Smith also tells us how he has been led to the gradual pushing back of the date to be assigned to the earliest instances of mummification, the oldest mummy in the Cairo Museum being certainly not older than the end of the Seventeenth Dynasty, or 1580 B.C. He now, however, is convinced that a mummy found by Mr. Lythgoe and Mr. Mace at the Lisht Pyramids is of the date of the Twelfth

Dynasty, and that another brought to light by Mr. Quibell at Saqqarah four years ago was buried about the time of the Tenth and Eleventh Dynasties, or, as he puts it, about 2100 B.C. The fact that the mummified flesh in these last two cases fell to powder as soon as they were moved explains to Dr. Elliott Smith why mummies of this early date are so rare. The very earliest known to us is, he thinks, that exhibited in the Museum of the Royal College of Surgeons, and it owes its preservation to the fact that it is encased in a sort of shell of resinous paste, which has kept it like a fly in amber. He thinks that this mummy found at Medum some twelve years ago by Prof. Petrie can be referred to the time of the Fifth Dynasty, or 2700 B.C., and that attempts at mummification were probably made during six or seven centuries before this time.

In the current number of the *Revue de l'Histoire des Religions* appears a fuller report of Capt. Weill's and M. A. J. Reinach's work at Coptos last season than appeared at the time in these Notes. We now know that among the discoveries of these two excavators were seven stelas piled one upon another in what appears to have been a foundation deposit. One of these belongs to Pepi I. and three to Pepi II., whom Manetho puts among the last kings of his Sixth Dynasty. Of the others, one belongs to Nefer-kau-Hor, whose Herus or hawk-name was Neter-bau, and who is known to us from the Abydos Tablet as the last king but one of the Eighth Dynasty. The remaining two were made for Uatch-ka-Ra, whose Horus-name was Demd-ab-tau, and whose place in the dynasty was up till now uncertain. MM. Weill and Reinach give reasons for thinking that both these last-named kings should be assigned to the Eighth Dynasty, that they followed at no long interval the Pepis, and that consequently the Seventh Dynasty of Manetho had no separate existence. All this will be doubtless clearly set out in the work of M. Weill on 'Les Décrets royaux de l'Ancien Empire' already announced, but not yet published.

In the same number of the *Revue* last quoted mention is made of the myth or legend of the lion-headed goddess Tefnut, a study of which by Prof. Hermann Junker (of Vienna) is about to appear in the *Abhandlungen* of the Berlin Academy. Researches by him at Philæ and in Nubia lately made at the expense of the Academy in question lead him to believe that Tefnut was at a late period identified with Hathor and fabled to have been brought from the Nubian desert into Egypt by Shu the sky-god and Thoth the Egyptian Hermes. He goes on to describe how all three deities were civilized by being introduced to the use of wine and music, an idea which seems peculiarly Nubian in its origin. No doubt many of these syncretistic myths were brought in in Ptolemaic times, when Greek and Ethiopian admixture had already materially altered the dying religion of Egypt; but we do not think they can be made use of to explain the origin of the different cults of the Pharaonic period.

Lesser points in Egyptology are treated in the number of the *Recueil* mentioned above, and include a note by Baron von Bissing on the always interesting question of the identity of the animal sacred to Set. He combats Prof. Wiedemann's contention that this beast was a conventionalized giraffe, and seems rather to lean towards the theory of Gaillard and Lefébure that it was a greyhound, in which M. Loret would, we believe, support him. Prof. Newberry's theory, mentioned last year in these Notes, that the

Set-animal was a river-hog, will shortly form the subject of an article in the *Recueil*. M. Hippolyte Boussac in the same number gives reasons for thinking that the long-tailed duck of the hieroglyph generally read *pa* is the teal, and M. Pierre de Marestaing devotes a long article to the discussion of Clement of Alexandria's so-called explanation of the Egyptian system of writing. His conclusion that this Father of the Church had entirely failed to grasp the method employed will probably be accepted by all impartial Egyptologists.

The *Revue de l'Histoire des Religions* above quoted also devotes much space to an article by M. Salomon Reinach on 'The Odes and Psalms of Solomon,' and Dr. Rendel Harris's recent publication on the subject. He rightly draws attention to the fact that although five of the Psalms were already known to us from their quotation in the 'Pistis Sophia,' and extracts from another appear in Lactantius, they do not seem to have been appealed to by any other Christian writer. This is the more extraordinary inasmuch as they contain allusions which can be easily turned into "prophecies" of the mission of Jesus, and which, as M. Reinach hints, have already driven Prof. Harnack into a theory, adopted, perhaps, in spite of his better reason, of Christian interpolation. The gravamen of M. Reinach's article doubtless lies in the suggestion taken over from Prof. Harnack himself that, if the Odes are really Jewish, and written long before Christ, the "vorchristliche Jesus" of the American professor Mr. Benjamin Smith is already found, and considerable doubt is thrown upon the Gospel narrative. This might be, if the allusions in question were really clear and distinct. That they are not so may be gathered from the fact that while Prof. Harnack regards them as clearly among the material which gave birth to the Gospel of St. John, other critics think that they as clearly borrowed from the Johannite literature. So, too, the "Temple" mentioned in one of the Odes is thought by one critic to be the Temple of Jerusalem, by another that of Leontopolis, and by a third the "heavenly city" or Paradise. Is it necessary to remind M. Reinach that, as a writer who certainly had no predisposition to the Christian faith has said, a description in general terms of the death of Louis XVI. could, if no names were mentioned, be applied with equal precision to that of Charles I.?

The last *Comptes Rendus* of the Académie des Inscriptions contains the report of a discovery by the Abbé Eugène Tisserant among the Syriac MSS. at the British Museum of fifty-four palimpsest sheets of a Syriac MS. of Isaiah, which, its discoverer claims, are the oldest dated Biblical MS. known. The last claim is proved by the colophon, which runs: "Glory to the Father, Son, and Holy Ghost for ever and ever. This book was finished in the year 771" of the Greek reckoning, which corresponds to the year between October, 459, and October, 460 A.D. It is in the Estranghelo script, each page being divided into two columns containing from twenty-three to twenty-six lines. The part which is complete includes Isaiah xxxii. 14 to liv. 12, and the MS. antedates the incomplete Pentateuch in the National collection, which was written at Diarbekir about four years later.

In the last number of the *Journal Asiatique* for last year M. François Martin announces the discovery of what he imagines to be the Babylonian original of the story of Job in three cuneiform tablets of the age of Hammurabi. M. Martin thinks it possible, however, that the story may be much older

than the First Babylonian dynasty, and have been edited many times before it reached the shape in which it has come down to us. As they stand, the tablets describe how "a Just Man" falls into undeserved misfortune, and is treated as an impious person, although he has always faithfully discharged his duties towards the gods. Thanks to the assaults of an evil demon, he is paralyzed, and is compelled to spend his days on an unclean couch while waiting for death. The likeness of this to Job on his dunghill is fairly close, but, when M. Martin goes on to tell us that the evil demon is the ghost of a man who has escaped from his tomb, and that the afflicted one is cured by the intervention of the god Marduk, the resemblance vanishes, although the patient has a dream in which he sees a "mighty man crowned with a tiara." Evidently the story is one of the magical spells for the use of disease common in Babylonia.

In the same *Comptes Rendus* appears a study by M. Perdrizet, Professor at Nancy, on the 'Cultes et Mythes du Pangée,' in which he deals with the earlier history of the worship of the Thracian Dionysus, of whom comparatively little is known. M. Perdrizet considers this began with the bloody rites of animal worship perpetuated in the Orphic sacrifice of an animal torn to pieces and devoured raw, and that with this was associated a religion of spontaneous vegetation as manifested in the ivy, which, he thinks, was associated with the worship of Bacchus before the coming of the vine into the Balkans. Orphism he would interpret as a philosophic reform of these mysteries produced when they came into contact with more civilized people than the Thracians. But he does not apparently account for the fact that according to the Thracians themselves their peculiar worship came from Phrygia, and that this legend of a dismembered and "resurrected" god is to be found about 500 B.C. in every country bordering on the Eastern Mediterranean.

THE NEW WING AT THE NATIONAL GALLERY.

For some years past the enlargement of the National Gallery has been a constant source of uneasiness to the Trustees and Directors, while latterly it has been recognized that the rooms originally erected in 1838 and added in 1876 and 1887 were wholly insufficient for the proper exhibition of the pictures. So long ago as 1890 attention was drawn in the Annual Report to the crowded state of many of the rooms, and the impossibility of maintaining a systematic classification of the paintings, unless further accommodation were provided. Yet, we have had to wait until now for any structural additions, although the collection has been increasing rapidly, and has, indeed, risen during the last twenty years from 1,330 pictures to about 2,730. During this period, however, the National Gallery of British Art has been built, but pictures on loan and the proper display of the Turners have further diminished the available space.

Three years ago provision was made in the Civil Service Estimates for heavy additional expenditure on the new buildings, and part of a sum of 10,900*l.* was allocated to the purpose, the amount increasing during the last two years to 19,270*l.* and 47,600*l.* respectively.

The present extension at the north-west corner of the building includes five new galleries on the first floor, and three rooms

on the ground floor, together with an engine room for the heating of the building with radiators. These galleries are lined throughout with dark green and black marble, while the roofs are made of arched girders in reinforced concrete, and panelled with wired glass and finished with fibrous plaster. They are in a great measure constructed of concrete, and to render them as fireproof as possible Kahn reinforcement has been used.

Much time has been expended on the selection of suitable wall decoration, and ultimately it was decided to use painted embossed canvas of low relief. Green was the colour selected for the three rooms opening out of the octagonal dome gallery, which is decorated a rich red. The main gallery in the west of the new building is of a dull gold, which is decidedly effective. This new wing will be opened to the public next Saturday, a private view taking place on the previous day.

When the south-eastern and south-western portions of the old building have been reconstructed with fireproof material, the disposition and numbering of some of the rooms will have been altered. Thus the two French Rooms (XVI. and XVII.), according to the old plan, have been knocked into one, a method which will fortunately be also adopted in regard to the old Reynolds and Hogarth Rooms (XVIII. and XIX.).

The five galleries on the first floor of the new wing will accordingly be numbered XXI. to XXV., and access to them will be obtainable in about two years from the old Constable and Turner rooms. The scheme devised by Sir John Taylor in 1887, when the building was last extended, has, with certain modifications, been carried out, and the rooms he then built now form a central axis of communication for the whole National Gallery.

Access to the five new rooms on the first floor will next week be obtained by passing through the old Sienese Room (Room II.), which a few months ago was rehung with pictures of the Tuscan School. In the first of these new rooms (Room XXV.) have already been hung the paintings of the Ferrarese and Bolognese Schools which in recent times have had, for lack of space, to be piled up to the cornice of Room V. Lorenzo Costa's five-panelled altar-piece is now hung at least two feet lower, and we can see more clearly than ever that the garments of the figures trail upon the ground in meaningless tags, while the whole composition has a want of force. Francia's magnificent Buonvisi altar-piece is at last exhibited to the greatest advantage, and Sir Charles Holroyd, who during the last four years has made the gallery infinitely more attractive to the general public, is to be heartily congratulated on placing together in a single frame the main panel and the lunette which have hitherto been hung separately. This altar-piece, as originally painted, is now proved to be akin in its general composition to the 'Madonna di Sant' Antonio' by Raphael which hangs in the Umbrian room.

Correggio's "side-long grace" and subtle gradations of tone are revealed in the 'Mercury Instructing Cupid in the Presence of Venus.' It forms a "centre" on the right hand wall, where it is hung below the much earlier 'Ecco Homo' by the same painter. The sub-title of the latter picture is, of course, still given in the official catalogue—copies of which are, apparently, now not easily obtained—as 'Christ presented by Pilot [*sic*] to the People'!

The large, over-ecstatic and trivial 'Vision of St. Jerome' by Parmigianino is hardly worth the place given it in the centre of the

opposite wall. However, unwieldy panels of this type are the constant despair of those who have to hang pictures systematically both according to the school to which they belong, and with some eye to their general effect. On the other hand, it is remarkable how well Cosimo Tura's large 'Madonna and Child' accords with its environment. Moreover, the dark green of the background matches exactly the colour of the wall upon which it is placed.

It is, doubtless, due only to the fact that the Director is still short of space that the seriousness and dignity of Ferrarese art has here to be tempered by the fitful sentimentalisms and idealized abstractions of Guido Reni, whose unlovely 'Lot and his Daughters Leaving Sodom' and 'Susannah and the Two Elders,' in spite of certain painter-like qualities, somewhat spoil one's enjoyment of this room. Being hung on either side of the door leading into Room XXIII., which is given up to Rigaud, Philippe de Champaigne and other French painters of the seventeenth century, they prepare us for the qualities favoured under Louis XIV. This room corresponds architecturally with the octagonal hall on the east side of the building, but by a careful consideration of the structural conditions involved it has been made much more suitable for the hanging of pictures in a good light.

Passing into the next room (Room XXIV.) on the left we come to the paintings of the later French and the modern Continental Schools. 'The Shipwrecked Fisherman,' by Josef Israels, is used as a "centre" on the right or west wall, while a similar position on the left wall has been reserved for Rosa Bonheur's 'Horse Fair.' We may perhaps express the hope that the crowding together in this room of such widely different productions as those of Greuze, Mauve, Lancret, Georges Michel, Vallin, Daubigny, and Vigée Le Brun is only temporary. Fantin Latour's powerful and sympathetic portrait group of 'Mr. and Mrs. Edwin Edwards,' presented to the National Gallery in 1904, but never yet included in any of the official catalogues, stands out prominently. Indeed, the lady in the picture seems to disdain the sentimentality of the 'Head of a Girl Looking Up' and the 'Young Girl carrying a Lamb' by Greuze which are among the most popular canvases in the whole collection.

Although the Trustees have thought fit to remove the great majority of Turner's masterpieces to Millbank, the Director has certainly obtained a striking effect by his arrangement of the sixteen of his works that remain at Trafalgar Square, and include the 'Sun Rising through Vapour' and the 'Dido Building Carthage,' which, in accordance with the terms of Turner's will, have to be hung by the side of the two canvases by Claude.

During the next few months large crowds will assuredly pass into Room XXI., which runs north and south, and so corresponds architecturally on the west side of the building with the large gallery which on the east side is hung with Dutch pictures. This new room is given up entirely to Reynolds, Gainsborough, Wilson, Romney, Raeburn, Crome, and other eighteenth-century painters of the British School. The present grouping of these pictures could hardly be improved. The 'Three Graces,' by Sir Joshua, dominates this room, and, as it is placed in the middle of the long west wall, is seen at some distance. Here we have the unexampled sight of several score of English masterpieces. To the right follow one after another Reynolds's 'Lady Cockburn and her Children,' which for six years was included in the

collection of the late Mr. Alfred Beit, Romney's 'Mrs. Mark Currie,' Gainsborough's 'Baillie Family' on the end wall, old Crome's 'Mousehold Heath,' Gainsborough's 'Musidora,' and, by the door, Crome's superb 'Poringland Oak.' On the south-east wall Gainsborough's 'Market Cart' is flanked by Constable's 'Hay Wain,' and so helps to mark the revolt from the "brown tree" tradition.

On the floor below are other new galleries. That to the right contains Paul Delaroche's unmoving 'Execution of Lady Jane Grey,' which was lately brought from the National Gallery of British Art; curiously enough it is hung between Annibale Carracci's 'Erminia' and Charles Poussin's 'Pardon Day in Brittany,' while the vast and characteristically British 'Death of the Earl of Chatham' and the 'Death of Major Pierson' by Copley are exhibited at the other end of the same room. A 'Landscape' by Gainsborough is at present hung over the doorway that leads to the small staircase, at the foot of which is the engine room.

Another large gallery on the ground floor is lighted by a large number of side windows, the pictures by English, French, and Ferrare painters being exhibited on screens, the final disposition of which does not at present seem to have been made. There can be no doubt that the public will thoroughly appreciate the careful consideration which during the last three years has been expended by the Trustees and the Director of the Gallery as well as Sir Schomberg McDonnell and the Office of Works on the construction of this new wing. Until, however, the old rooms along the south front of the gallery have been reconstructed with fire-proof material, freshly decorated and rehung with pictures, a really scientific arrangement of the whole collection by country, school and period cannot reasonably be expected. This is not likely to take place for another two years, by which time it is not unreasonable to hope that other important works will have been acquired which will make the National Gallery secure in its pre-eminent position among the national collections of the world.

M. W. B.

SALES.

MESSRS. CHRISTIE sold on Saturday last the following pictures: Early English School, Portrait of a Gentleman, in blue coat with powdered hair, 126*l.* M. Hondecoeter, Poultry and Pigeons, 336*l.* Carlo Crivelli, Saint John the Baptist, in grey hair shirt, and green cloak knotted at the neck, 168*l.* Early Florentine School, A Group of Horsemen and Figures, 131*l.* P. Perugino, The Martyrdom of Saint Sebastian, 189*l.*

The same firm sold on the 28th ult. the following engravings by Samuel Cousins and after Sir T. Lawrence: Lady Acland and Children, 81*l.*; Countess Gower and Daughter, 99*l.*; Countess Grey and Children, 84*l.*; Master Lambton, 162*l.* After Dubufe: La Surprise, by the same, 141*l.* After Sir J. Reynolds: The Duchess of Devonshire and Lady Georgina Cavendish, by G. Keating, 105*l.* After Greuze: Le Baiser En voyé, by C. Turner, 157*l.*

Messrs. Sotheby's sale of engravings on Wednesday, March 1st, included the following interesting lots:—II. Bunbury, twenty illustrations to Shakespeare's plays, printed in colours, 65*l.*; a series of twenty drawings in colours of fancy costumes, by a French artist of the seventeenth century, 82*l.*; Seymour Haden, By-Road in Tipperary, 47*l.*; Breaking-up of the Agamemnon, 23*l.*; Études à l'eau-forte, 200*l.*; Meryon, Abside de Notre-Dame, 53*l.*; Rembrandt, Cottage with the White Pales, 32*l.*; T. Watson, after Reynolds, The Ladies Waldegrave, 65*l.*; Dürer, St. Jerome in his Cell, 46*l.*; The Great Fortune, 40*l.*; The Apocalypse of St. John, 16 woodcuts, 30*l.*; The Life of the Virgin, 118*l.*; and a drawing, The Death of a Knight, by a German artist of the late sixteenth century, 51*l.*

Fine Art Gossip.

REMBRANDT'S 'MILL' is, apparently, for sale, and Lord Lansdowne has given the Trustees of the National Gallery the first refusal of this famous painting at a price of 100,000*l.*, promising 5,000*l.* towards its purchase for the National Collection. The Trustees of the National Gallery have lately, it is said, suggested to the Government the need for a large contribution towards the purchase.

THE picture, painted about 1650, belongs to the period of Rembrandt's full maturity, and is of about the same date as the 'Portrait of a Jew Merchant' in the National Gallery and the 'Hendrickje Stoffels' in the Louvre. On it about 1806-10 Turner seems to have based his magnificent 'Windmill and Lock' in the collection of Sir Frederick Cook at Richmond.

The 'Mill' has not been exhibited since 1899, when it was sent to Burlington House, where it was shown also in 1878 (No. 172) and in 1888 (No. 174), having been previously exhibited at the British Gallery in 1815. It is unsigned, and painted on canvas. Its pedigree has not been traced further back than the end of the eighteenth century, when it was in the Orleans Collection. In 1798 it was sold to a Mr. W. Smith for 500 guineas, and eventually passed into the collection of the third Marquis of Lansdowne for 800 guineas. It has ever since been at Bowood.

FOR those who know the amount of the Annual Grant to the National Gallery, 5,000*l.*, and the difficulties experienced by the National Art Collections Fund in the purchase of the Rokeby 'Venus' and Holbein's 'Christina, Duchess of Milan,' it is hard to see how the nation can hope to get this magnificent work, unless there is a large Government grant. The price is very high, but is regarded as not excessive in these days of millionaires. There is only one landscape at Trafalgar Square assigned in the official catalogue to Rembrandt, but it is an inferior work and not certainly his.

THE forthcoming exhibition of pictures to be held at the Burlington Fine-Arts Club will illustrate the latest period of Venetian art.

IN the March issue of *The Burlington Magazine*, which brings to a close the seventeenth volume, Mr. Roger Fry attributes to Baldinovetti a picture in the National Gallery officially ascribed to Piero della Francesca. Mr. Fry shows how widely Baldinovetti's method of handling tempera differs from that of contemporary artists. 'Plato's Atlantis re-discovered,' by Dr. Charles H. Read, is illustrated from photographs of a terra-cotta head and a bronze sacred head found at Ifé, the former of which is now in the British Museum.

THE number also includes a well-illustrated essay by Sir Martin Conway on the influence which the Housebook Master exercised on Dürer; an article on 'Genoese Lintel-Reliefs in Chios,' by Mr. F. W. Hasluck, and another by Mr. Dudley Faleke on 'Old Marcasite Jewellery.'

THE distinguished painter Fritz v. Uhde, whose death in his sixty-third year is announced from Munich, was originally in the army and took part in the war of 1870, but from his boyhood he had cultivated his artistic talents, and in 1877 he gave up his military career and devoted himself to

painting. He soon threw off the influence of Makart and Munkacsy, which can be traced in his earlier pictures, and after a visit to Holland rapidly developed his style, till he became a pioneer of the modern German school of painters. His religious paintings created something like a revolution by their treatment of Biblical subjects. During his last years he had turned his attention to portrait painting with much success.

LAST week we mentioned that Prof. Venturi had been lecturing in Rome on Evangelista da Pian di Meleto, whom he regards as Raphael's first master. It now appears that he has discovered a picture by this painter in the Gallery at Budapest—a large Madonna and Saints hitherto attributed to Giovanni Santi—and has for his attribution the support of the Director of the Gallery.

To complete and illustrate the portrait exhibition in the Palazzo Vecchio at Florence, which opens on March 12th, it is proposed to hold a show of engraved portraits in the Cabinet of Engravings in the Uffizi.

CONSIDERABLE progress is being made with the Handy Guides to County Churches issued by Messrs. George Allen & Sons under Dr. Cox's editorship. A revised edition of Dr. Cox's two volumes on Norfolk is in the press; Cambridge, by the Rev. C. H. Evelyn-White, will very shortly be ready; and Mr. P. M. Johnston's two volumes on Sussex will appear during the summer. Among those who are preparing other volumes may be mentioned Mr. T. H. Bryant (Suffolk), Mr. Keyser (Berkshire and Buckinghamshire), Rev. P. H. Ditchfield (Oxford), and Mr. A. Hamilton Thompson (Northamptonshire).

MUSIC

THE WEEK.

QUEEN'S HALL.—*Philharmonic Concert.*

MR. ALBERT COATES, who conducted the fifth Philharmonic Concert, on the 23rd of February, had already offered proofs of his ability at the orchestral concert which he gave last year. At the one in question there were a couple of Bach Preludes transcribed by Siloti and Steinberg, and a Vivaldi Concerto for strings. With the exception of the second Prelude, which was less satisfactory, the performances were sound, but there was no symphony or important modern work to further test his powers. Of three orchestral pieces by Russian composers, the first and best, a Fantasia by Liadoff, describes in appropriately fantastic, cleverly coloured tones the folk-legend of 'Kikimora.' M. Alfred Cortot, the excellent French pianist, gave a brilliant rendering of the solo part of Saint-Saëns's fourth Concerto in c minor, but the music, if effective and popular in its appeal, is somewhat meretricious. It was in Liszt's Hungarian Rhapsody in c sharp minor and major that M. Cortot was heard to best advantage. Its themes are characteristic, while all the embellishments

and cadenzas are essential elements of such music. The performance was instinct with rhythmic life and poetic feeling. Miss Mignon Nevada sang the florid 'Charmant oiseau' from 'La Perle du Brésil' with skill and good taste.

STEINWAY HALL.—*Mr. Thomas Dunhill's Chamber Concert.*

MR. Thomas Dunhill gave the first of the fifth series of Chamber Concerts on February 24th. His programmes are largely devoted to the music of native composers. The first opened with the concert-giver's Quintet for strings and horn in F minor (Op. 6), which was composed and performed in 1900, but which has not been played for several years. It is a very pleasing work. The composer expresses and develops his thoughts in an easy, refined manner; there is nothing forced or sensational in the music. But at times it seemed to us as if, for proper balance of tone, the addition of a double-bass were needed. A very good performance was given by the Langley-Muckle Quartet, with Mr. Oscar Borsdoff as horn player. The programme included Sir Charles Stanford's String Quartet in A minor, recently produced at a Broadwood Concert, and already noticed in these columns.

BECHSTEIN HALL.—*Classical Concert.*

THE three numbers in the programme of the seventh Classical Concert on Wednesday evening were interesting and by no means hackneyed. First came Schubert's romantic string Quartet in G, which he wrote in ten days. There are fascinating themes in it, also many touches of genius, and these strong qualities enable one to forgive, though not entirely to forget, that the art of development was not Schubert's strong point. It was followed by Spohr's Violin Duet in D, Op. 67, No. 2, effectively written and remarkably concise. The first and last movements are very bright, while the middle cantabile movement is smooth and melodious. One curious, but welcome feature in the whole work is its diatonic character; for Spohr's besetting sin was over-indulgence in chromatics. An able performance was given by Prof. Klingler and Mr. Joseph Rywkind. Mozart's Quartet in D minor, which came last, is a masterpiece from beginning to end. The renderings of both quartets by the Klingler Quartet were very fine.

Musical Gossip.

THE production of a pianoforte Trio at Vienna last December by a boy of fourteen, Erich Wolfgang Korngold, created a sensation, and prominent musicians have spoken in the highest terms of his gifts. Korngold was born at Brünn on May 28th, 1897. At the age of eleven he wrote music to a pantomime 'The Snowman,' and he has also composed a Sonata and smaller pieces for the pianoforte. Last Monday evening the

Trio was performed for the first time in England at a meeting of the Concertgoers' Club, held at the Royal Academy of Music, the excellent interpreters being Messrs. Richard Epstein, John Saunders, and Jacques Renard. It is a remarkable work. The four movements as regards form may be termed classical, but the music shows modern influences, notably that of Strauss. Though remarkable, it is not, however, altogether convincing: one is struck by the manner rather than by the matter. We shall be interested to know more of Korngold's earlier music—the Trio appears to be a recent work—and to watch his future career. The programme at the Academy included a new and interesting pianoforte Trio by Mr. Hubert Bath.

THE syndicate announces a season of German opera to be given at Covent Garden in the autumn, which will include two cycles of the 'Ring.'

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Society Concert, 3.30, Queen's Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday League, 7, Queen's Hall.
MON.	London Symphony Orchestra, 8, Queen's Hall.
TUES.	New Quartet, 3.15, Bechstein Hall.
—	Queen's Hall Choral Society, 8, Queen's Hall.
—	Walton Quartet, 8.15, Aeolian Hall.
—	Prof. Mario Lorenzi's Concert, 8.30, Broadwood's.
—	Miss W. Churcher and E. Coyle's Concert, 8, Bechstein Hall.
WED.	Classical Concert Society, 3, Bechstein Hall.
—	M. Alfred Laliberté's Pianoforte Recital, 3.30, Steinway Hall.
—	Mr. Smallwood Metcalfe's Choir, 8.15, Queen's Hall.
THURS.	Mr. T. Byard's Vocal Recital, 3.15, Bechstein Hall.
—	Messrs. Maurice Farkas and Hayden-Coffin's Matinée, 3.30, Steinway Hall.
—	Miss Daisy Koettgen's Concert, 8, Bechstein Hall.
—	Broadwood Concert, 8.30, Aeolian Hall.
FRI.	New Thought Matinée, 3, Bechstein Hall.
—	Mr. Dunhill's Chamber Concert, 8.15, Steinway Hall.
—	Misses Trewhman and Myrtle Meggy's Vocal and Pianoforte Recital, 8.15, Aeolian Hall.
SAT.	Chappell's Ballad Concert, 2.30, Queen's Hall.
—	Mr. Harold Bauer's Pianoforte Recital, 3, Bechstein Hall.
—	Mozart Society, 3, Portman Rooms.

DRAMA

THE WEEK.

KINGSWAY.—*The Lily*. Adapted by David Belasco from the French of Pierre Woolfe and Gaston Leroux.

AGAIN, and it is not so often nowadays, we have to thank Paris for a good play. How much that simple phrase implies in story, construction, carefully developed characterization, scenes of emotion, clash of will, only the expert theatre-goer will understand. All these elements are to be found in 'The Lily' and it also works out very ingeniously one of the most characteristically modern of themes—the claim of youth to live its own life and to have its share of happiness as against the authority and restrictive tendencies of age. We had this theme in 'Magda'; we have it again in 'Le Lys,' but with a different story and a Gallic setting. Again we are shown a conflict between a parental martinet and a daughter who breaks loose from the prison-bars of her home and snatches rashly at the first chance of joy and love. But the Comte de Maigny is no autocrat on principle, being a libertine who has spent his daughters' dowries and expects them to have no other interests except that of ministering to his creature comforts.

What this father's policy of suppression has meant in one case is brought home poignantly in the author's portrait of the Comte's elder daughter, Odette, a meek and submissive woman who has grown grey

in his service and sacrificed her one possibility of romance. Never has the type of the old maid who seeks consolation in the petting of some poodle or spaniel for the baulked instincts of maternity been more pathetically suggested on the stage. But there is a younger and more full-blooded daughter, and with the spectacle of Odette constantly under her eyes, Christiane, innocent though she is, has made no scruple about accepting such pleasures as come her way, among them the attentions of a married lover. It is the exposure of her secret, adroitly connected as this is with the breaking off of a match between the Comte's son and a plebeian millionaire's daughter, which brings about the great scene of the play. Harried by both her father and her brother, Christiane makes defiant confession of her love, and receives unexpected aid. For Odette, seeing all her joyless life behind her, stands up for her young sister, declares that the girl has done right to give way to her sex impulses, and exposes so mercilessly the hypocrisy of the old profligate that he runs away from his revolting daughters.

The play might, so far as its minor parts are concerned, have been better cast than it is at the Kingsway. But there are three performances, and these all-important to its action, which possess distinction. Mr. Lawrence Irving has done nothing quite so good hitherto in the way of a character-study as the over-bearing Comte. The man's petulance, irritability, and egoism are insinuated with delightful subtlety, and from first to last he grips the attention of his audience. It would be difficult to say which of his two chief women supporters renders him the more valuable assistance. There may be more authority and passion about the tirade of Miss Geraldine Olliffe, as the elder sister (made, by the way, ten years too old), but there is the cry of nature and youth in Christiane's plea, as it is urged with hysterical vehemence by Miss Mabel Hackney. Between them all three players furnish acting which it is worth going a long distance to see.

GARRICK.—*The Merry Wives of Windsor*.

THE feature of Mr. Oscar Asche's revival of 'The Merry Wives' is its setting of snow. All the open-air scenes glitter in frosty white. The characters stand about, hold long conversations and sit out of doors in the midst of snow. Falstaff's page puts Nym and Pistol to rout by pelting them with snowballs. The children who take part in the forest revels lie about in their thin garments as they await the appearance of the Fat Knight as Herne the Hunter upon banks of snow. The scheme may make for a superficial picturesqueness, and certainly we get some pretty effects of black and white, thanks to the dark shadows falling on the frosty foreground, in the dance of the masquerading fairies, but it is characteristic of the short-sighted and wrong-headed policy often noticeable nowadays in Shakespearean stage management.

Since the play is furnished with a setting that recalls the conventional Christmas card it is perhaps not surprising, and certainly in keeping with the pictures, that the comedy should approximate to a pantomime or rather a harlequinade. Mr. Benson has accustomed us to a Dr. Caius who indulges in acrobatic displays of buffoonery, but the Master Ford of the current revival flings himself about in the buck-basket episode with an extravagance worthy of the most frenzied of Dr. Caius's, and makes his exit, when he has paid his surprise visit, with two or three of his servants turning somersaults on the floor. The mock-duel scene at the Garrick ends in a rough-and-tumble in which seven or eight persons are shown struggling on the ground in a confusion resembling that of a pantomime. Surely this is carrying the spirit of mirth and fun too far. After all, though 'The Merry Wives' has its farcical developments, the idea of the story is one of comedy—indeed of a rather grim and unpleasant comedy.

That we obtain only selections from Shakespeare's text, it is no doubt too late in the day to complain, and there is no denying that the interpretation supplied at the Garrick is cheerful and spirited as well as boisterous. But, since its note is that of rollicking farce at any cost, it almost necessarily lacks distinction. Mr. Asche has obvious physical qualifications for the part of Falstaff, he looks the character, and his is a triumph of make-up. Perhaps a man so soaked in sack as Sir John should be wheezy in speech, and the guttural notes Mr. Asche employs are well-sustained. But his humour is dry and not unctuous; he lacks the geniality which should mark Falstaff even in his decline; we miss the gusto and the brain-power which reconcile us to the knight's most shameless exhibitions of greed and cowardice.

Miss Lily Brayton makes a buxom and very lively Mrs. Ford, and there is good nature about the Mrs. Page of Miss Constance Robertson; sometimes, however, the explosions of laughter of the two merry wives seem a trifle mechanical, and do not carry across the footlights. Mr. Grimwood's studies of jealousy in the case of Ford are good until he forces the pace, and the Mistress Quickly of Miss Bessie Major deserves honourable mention. But it is popular audiences that the revival will please.

DUKE OF YORK'S.—*Loaves and Fishes, a Satire in Four Acts*. By W. Somerset Maugham.

THE hero of Mr. Maugham's stage satire is intended to be a second Archdeacon Grantley—a worldly clergyman eager for promotion, but he is a parson without the clerical atmosphere. Unlike Trollope, his imitator does not show the worldling surrounded by worthier colleagues, does not present his clergyman as acting like a clergyman. You can hardly believe that Canon Spratte ever took orders; except for his dress he might be any sort of professional man aiming at honours and

social advancement. The result is that on the one hand you have the feeling that the playwright has not been fair to the cloth, and on the other you are conscious that he lends his Canon—who is patently an exception—no subtle and individualizing traits. Spratte is a humbug and a self-deceiving humbug, but he does not impose on his audience; they know well he does not represent his class; they are assured that it is not from his sort that our bishops are recruited. He may provoke their laughter, for there are many amusing things which he says and does, but he fails to be convincing.

In point of fact Canon Spratte does not live up to the ideals of his own world—he does not play the game. You may forgive him for being a snob, since he more or less openly avows his snobbery and has to stand the ridicule of his peer brother—a veritable backwoodsman—who does not scruple to remind him of the family's lowly origins. You can smile over the feverish efforts he makes to escape from marrying a rich widow, when he discovers that she forfeits her fortune if she takes a second husband. But, when a man in his position, planning to disillusion a daughter of his who is infatuated with a Socialist orator, invites this lover's mother and sister to his house, only to play on the old lady's weakness for gin and the girl's hysterical ardour for the cause of the suffragists, he is surely outraging even the rules of "good form."

Mr. Maugham, in fact, has been determined to carry through his joke, and has not troubled very much about the means, so long as he could raise a laugh. At the moment you respond to his demand, for no dramatist can be wittier or has a keener instinct for comic situation than the author of 'Smith.' But afterwards you have your misgivings. A character like Canon Spratte will not bear serious examination.

The artificiality of the Canon seems to infect the interpreter of the part. Except Sir Charles Wyndham there is not an actor on our stage who can boast such virility and unflagging spirits as Mr. Robert Loraine. Yet even he cannot make the future Bishop real; not all his alertness can succeed in achieving more than a *tour de force*. Miss Florence Haydon and Miss Mary Barton score in the scenes of cheap fun provided by the Canon's tea-party. Mr. Soane, with his imperturbable manner, as the peer, and Miss Ellis Jeffreys, with her vivacity and charm, as the widow, make only too rare, but always welcome appearances. Indeed, all the players work hard for their author.

Dramatic Gossip.

We scarcely expect new departures from veterans, especially veteran playwrights. Sir William Gilbert, however, has provided a surprise at the Coliseum this week. He, the great exponent of fantasy and humour in the playhouse, has challenged, as it were, our new school of stage-authors on their own ground and taught them that an old hand is

as capable as they of turning out studies in dramatic realism. Mr. Galsworthy has exposed to view the grimmer traits of 'Justice,' and the horrors of solitary confinement. Sir William has gone further; in his new "sketch" of 'The Hooligan' he takes us into the cell of a condemned murderer and shows him being roused and prepared for his doom on the very morning of his execution.

THE dramatist spares nothing, but he exaggerates nothing. We see the poor wretch wakened out of his sleep; we watch the warders trying to encourage him into making a brave end by telling him of the fortitude of other tenants of his cell. We hear him describing the nightmares that have haunted his dreams. We listen to him as he prays for a reprieve, and assures the officials that he had never meant to kill, but only to wound his sweetheart. With the entry of the governor and chaplain he loses all self-control, and his whole behaviour is one long frenzy of hysteria. When he is at last informed of the arrival of a reprieve, the strain is too great, and he falls dead from heart failure.

THE very strength of this play depends on the austere restraint of the treatment. Mr. Galsworthy has never been more severely realistic than Sir William. The author is greatly indebted for the success of his new experiment to the fine acting of Mr. James Welch. Never can we remember to have seen the agony of fear so convincingly and poignantly realized on the stage. Too long condemned to farce, Mr. Welch reveals in this performance an almost unsuspected side of his talent.

PART of a scheme for establishing a Welsh National Dramatic Company is a prize of one hundred pounds offered for the best play, in Welsh or English, suitable for such a company. The subject may be of any period, so long as it is Welsh. All plays should bear an assumed name or motto, and should be addressed by September 20th, if in English, to Mr. T. E. Ellis, Seaford House, Belgrave Square, S.W., plainly endorsed "Welsh National Drama," and, if in Welsh, to the Secretary, Drama Genedlaethol, Educational Publishing Co., Cardiff.

CORRIGENDUM.—No. 4348, p. 225, col. 1, paragraph 2, line 6, for "Pundus" read *Punans*.

WEBSTER'S NEW INTERNATIONAL DICTIONARY

CONTAINING OVER

400,000 DEFINED WORDS and PHRASES.
2,700 PAGES. 6,000 ILLUSTRATIONS.

EMINENT AUTHORITIES

ON THE

NEW INTERNATIONAL.

VISCOUNT CURZON OF KEDLESTON.

"It seems to me to reproduce all the features of uncommon excellence to which I have been accustomed for years—and some new ones in addition."

SIR ARCHIBALD GEIKIE.

"I have no hesitation in saying that, full as the last edition was acknowledged to be, it is surpassed to an almost incredible degree by the new issue which you have just published."

THE ARCHBISHOP OF CANTERBURY.

"I congratulate you upon the production of a volume which is at once so lucid in its presentment of facts and apparently so exhaustive in its range."

MR. THEODORE WATTS-DUNTON.

"I have no hesitation in affirming that it is the most marvellous and exhaustive one-volume dictionary in the English language. Altogether, the book is a monument of human intelligence and ingenuity."

PROFESSOR SAINTSBURY.

"I shall continue to use and to recommend 'Webster' as long as I can use or recommend anything."

DR. SIDNEY LEE.

"No more complete and satisfying presentation of our language in all its forms has yet, I think, been achieved in a single volume..... 'Webster's New International Dictionary' is indeed a library in itself, and no collection of books, whether small or large, should be, in my opinion, without a copy."

SEND A POST CARD mentioning the *Athenæum* and Messrs. Bell will forward a copy of the Illustrated Booklet, with Specimen Pages, and a full description of the NEW INTERNATIONAL.

LITERATURE

The Life of Sir William Howard Russell, the First Special Correspondent. 2 vols.
By John Black Atkins. (John Murray.)

THE career of "Billy" Russell suggests a book instinct with vivacity and good things, and we record with regret our verdict that Mr. Atkins's work is a disappointment to us. He has written two solid and closely packed volumes about one of the airiest, brightest, and jauntiest personalities that even the usually lively order of newspaper correspondents can point to as its particular star. How did he manage it? He says himself that he followed the example of Montesquieu in separating biography from history. Instead of writing the history of the wars which Russell reported with signal vivacity, "the background of those wars has been sketched...in exact accordance with what seemed to be their relevance to Russell's career." The principle is unexceptionable, but its application is open to two objections. Russell's career was virtually made up of his doings and writings during those wars, and therefore so long as he was with the colours almost everything is relevant. In the second place the "backgrounds" are so vaguely sketched that readers of the present generation will lose themselves among disjointed fragments of history and gain but a confused idea of the operations on the description of which Russell's fame chiefly rests. The life of a correspondent is nothing without the correspondence, and Mr. Atkins has apparently laid down for himself a severe rule that as little as

possible of Russell's published letters shall be quoted. If the style is the man, the famous correspondent's letters should give a vivid impression of himself. The few extracts given in the biography are quite insufficient, and an important—we should say the most important—aid to the interpretation of his character is deliberately set aside. We are not here and now concerned with the qualities of Russell's war correspondence, which is scarcely presented to us in these volumes, and is probably unknown to most readers who are under middle age; but it was the work of his life, and to try to tell his life without the help of the letters which described the chief part of it seems on the face of it an odd attempt.

Nor do the private letters make up for the exclusion of the biographical element in the public letters. Mr. Atkins considers that the "virtually complete series of letters which present all the relations of a special correspondent with his employers—editor, manager, and proprietors" fully justify the expansion of what he at first intended to be a moderate biography into the conventional corpulent two volumes. The discovery of "the full apparatus," he says, "entirely overbore all my prepossessions" against two-volumehood: "the whole story, I told myself, must be put on record." We do not see the necessity. If the "full apparatus" of the correspondence between editors and contributors is to be printed in future biographies, we are sorry for the public. Delane's letters are certainly interesting, though they show him frequently wrong-headed; but this is not Delane's life. Russell's are too often querulous, in spite of his strong friendship both for Delane and Mowbray Morris, and they deal too much with questions of pay which, however important to himself, are of little interest to the reader, and bear but a small relation to his intellectual life. Russell was an improvident Irishman, careless of money and frequently in want of it, but, the fact once stated, there is little object in printing letters about it. No doubt the private letters to Delane put matters at the seat of war in a sharper light than the published correspondence, just as the private letters of a Foreign Secretary to an Ambassador, at least in the old days, told much more than the formal despatches which accompanied them. But Russell's private letters were too hurried and impulsive to be accepted as substitutes for his more careful correspondence prepared for publication, and the new lights they cast may possibly be distorting and unreal.

But, if these private letters add something to the public ones, and describe fully Russell's relations with the editor and manager of *The Times*, they do not show us the man himself except in his work as correspondent. Those who did not know "Billy" Russell—and there must be few now living who were among his intimates—will not realize in these volumes the astonishing charm of his delightful personality. The fascination

is indeed often referred to, and we are told that he was a born raconteur, the life of the jovial supper parties that gathered in his chambers in the Temple or in the old Garrick in the palmy days of Douglas Jerrold, Albert Smith, Dickens, and Thackeray. All this is perfectly true. The present writer remembers surprising "Billy" in his "tub" at the hotel at Luxor (at a date when Mr. Atkins makes him resident with the Dufferins at Cairo), and how his shouts of welcome rose out of a vigorous accompaniment of splashing, and how on the voyage down the Nile Russell and his old friend Henry Lemesurier, the genial President of the Egyptian Railways, kept up a perpetual stream of anecdote until the boat stuck on a sandbank near Minyeh. Lord Curzon, who was of the party, doubtless remembers it too. Yet there are few "good stories" of Russell's besides Langford's hair-cutting, in the 800 pages of this biography, and, except from stray references in his friends' letters, and not many of these, we get no adequate idea of Russell as the beloved of clubs, the bon vivant, the essential supper man, with his delightful talk and Irish wit. Nor do we get an adequate idea of his home life, except the fact of his love and devoted attention to his first wife during her long illness. In fact, Russell in society and at home does not live in these pages at all.

The book is fortunately enlivened by fragments of the autobiography which Russell more than once attempted to write in old age. These include some amusing recollections of his childhood spent near and in Dublin, where his grandparents received a visit from Mrs. Hemans and her very "superior" children, which "Billy" never forgot, and also of his first experiences as reporter for *The Times* during Irish elections of the true truculent sort, varied by poaching near Clonmel, and some interesting relations with Dan O'Connell. He recalled his cousin, John Russell, an Irish arch-deacon engaged with Dickinson, the future Bishop of Meath in an unaccustomed game:—

"I remember seeing these ecclesiastics practise with boomerangs, and as the long, lean gentlemen in knee breeches and black gaiters, frock coats and shovel hats, solemnly throw their curved sticks in the air, the gaping labourers watched the boomerangs skimming back over the meadows. 'Thim's the devil's own boys,' was the remark of a haymaker on the top of a fence as he crossed himself. 'I'd like Father Laffan to see thim.'"

His recollections of his sporting maternal grandfather, Capt. Jack Kelly of Tallaght, contrast vividly with others of the corresponding paternal William Russell of Baggot Street, Dublin, who had been a Moravian, but abjured the sect on his marriage, when his bride represented to him the inconvenience of "the kiss of peace to sisters in the faith." It is disappointing to find no reminiscences of his own life at Trinity College, where, however, he did not distinguish himself in any way. Nor did he succeed at

the London bar. He broke down over his first brief, and did not "turn up" in Court in time for his second. Nor was he always in his early days to be relied upon as a punctual reporter for *The Times*, though that was the career which suited him best and led to his fame as a correspondent, who is, after all, only a reporter on a large scale. In fact, as Mr. Atkins admits, "his high spirits sometimes got the better of his industry and discretion." He much preferred social enjoyments to work, and found it impossible to write continuously in solitude. He was essentially a man of the clubs and supper-rooms, and nothing but the "res angusta domi" induced him to desert them for necessary intervals. Mr. Atkins realizes much of this, and need hardly have devoted so much space to defending Russell from the attacks to which two or three venial indiscretions or mis-expressions exposed him. It was sufficient to say, as Mr. Atkins does, though not in so many words, that Russell was an impulsive, chivalrous, warm-hearted, hotheaded, exaggerative Irishman, who was bound to commit himself now and then, and to take his punishment in a fiery manner; and the wonder is how seldom he did get into trouble. His indignation at undeserved calumnies was beautifully reprov'd by his friend, that interesting but little-known personage, the second Duke of Wellington:

"Why can you wish to probe to the bottom a piece of calumny which you are bound not to notice? Those things happen to every one and have very often to me; but I am more patient than you are. I have been accused behind my back of nearly everything except stealing and murdering, but I considered the inconvenience of being angry."

"The inconvenience," in the sense of *inconvenance*, "of being angry" is excellent. But Russell was hardly the man to profit by the advice. Besides the sensitive pride of an Irishman he had his countrymen's peculiar tendency to be "agin the Government," if not against or at least out of sympathy with his own paper. His fame was made, of course, by his assaults on the management of the Crimean War, where his picturesque exaggeration hastened the oiling of the rusty War Office machinery. During the American Civil War, when he was not allowed to accompany the troops, his personal sympathies were with the North, while *The Times* was then all for the Southerners, and naturally Russell had to bear the brunt of the Northerners' indignation. It may be imagined that both in the Crimea and at Washington his berth was nearer hot-water than a bed of roses. During the Indian Mutiny he took the unpopular line of denouncing reprisals for outrages, and in South Africa he exaggerated a few acts of possible ruthlessness and attacked Sir Bartle Frere's policy and Lord Wolseley's command. Whether this delight in exposing the shortcomings of the British officer was due to innate chivalry and sympathy for the weaker side, or to the Irishman's inherent attitude of revolt and dislike

of "the Saxon," it did not make Russell at the time a *persona grata* with the authorities, however popular he was in the tents of his friends; and Delane's habit of dotting his correspondent's *i* with a mighty black blob in his leading articles caused Russell to appear much more truculent than he was.

All this comes out in the biography, but it comes slowly and "wi' deeficulty," like the proverbial Scots joke. The few brilliant paragraphs in Kinglake's 'Invasion of the Crimea' give a better picture of Russell's personality than can be pieced together out of these two volumes. There is also a great deal of extraneous matter, such as many letters from Mr. John Bigelow and others, unimportant letters from Dickens, which throw hardly any light upon Russell's relations with the novelist, and are not interesting in themselves, much examination of trivial points, and, as we have said, too much of his editor and manager. There are several small slips which need correction, such as "T. Max Müller," "Darshour," and "cheval de bataille."

Journals of Ralph Waldo Emerson. With Annotations. Vols. III. and IV. 1833-1838. Edited by Edward Waldo Emerson and Waldo Emerson Forbes. (Constable & Co.)

In these additional volumes of Emerson's Journals, which cover some five years of his life, we do not assist at the bursting of a chrysalis, the birth of a soul; consequently, they lack the vivid interest of the opening volumes already noticed in these columns. On the other hand, we no longer suffer much that is mawkish and puerile. The man and his style—in Emerson's case at any rate these are but two aspects of one fact—are in their golden prime.

For Emersonians, then, every word in these pages will be wholly satisfying. In this country, however, Emerson is hardly the object of a cult. Nor is the reason far to seek. He is extraordinarily exotic. To-day when England and the United States are rapidly assimilating each other, one is the less prepared for this remoteness and incommensurability in an American and a classic to boot. The very first page teems with neologisms; for we plunge in *medias res*, or, more precisely, into the midst of the Atlantic, wherein the brig Jasper, Captain Ellis, 236 tons, is labouring—

"A long storm from the second morn of our departure consigned all the five passengers to the irremedial chagrins of the stateroom, to wit, nausea, darkness, unrest, uncleanness, harpy appetite and harpy feeding; the ugly 'sound of water in mine ears,' anticipations of going to the bottom, and the treasures of the memory. I remembered up nearly the whole of 'Lycidas,' clause by clause, here a verse and there a word, as Isis in the table the broken body of Osiris. Out occasionally crawled we from our several holes, but hope and fair weather would not; so there was nothing for it but to wriggle again into the crooks

of the transom. Then it seemed strange that the first man who came to sea did not turn round and go straight back again. Strange that because one of my neighbours had some trumpery logs and notions which would sell for a few cents more here than there, he should thrust forth this company of his poor countrymen to the tender mercies of the north-west road. We study the sailor, the man of his hands, man of all work; all eye, all finger, muscle, skill and endurance: a tailor, a carpenter, cooper, stevedore and clerk, and astronomer besides. He is a great saver, and a great quiddle, by the necessity of his situation."

But, after all, it is not so much in the words that the foreigner is bewrayed. "Quiddle" and the rest are chiefly due to the phrase-maker that ever dwelt in Emerson. Indeed, it was an age of phrase-makers. This is good King's English as compared with our own Carlyle. But when we have safely crossed the Atlantic with Captain Ellis's melancholic passenger and are on Italian soil, by his side, listening to his comments on the monuments that are the world's common possession, we are all the while conscious that he is of another continent. True, he will be individual at all costs:—

"And what if it is Naples, it is only the same world of cake and ale, of men and truth and folly. I won't be imposed upon by a name. It is so easy, almost so inevitable, to be overawed by names, that on entering this bay it is hard to keep one's judgment upright, and be pleased only after your own way. Baiæ and Misenum and Vesuvius, Procida and Posilipo and Villa Reale sound so big that we are ready to surrender at discretion and not stickle for our private opinion against what seems the human race. Who cares? Here's for the plain old Adam, the simple, genuine self against the whole world. Need is, that you assert yourself, or you will find yourself overborne by the most paltry things.... Therefore it behoves the traveller to insist first of all upon his simple human rights of seeing and of judging here in Italy, as he would in his own farm or sitting-room at home."

In this spirit he visits the Italian churches, and judges relentlessly.

"Who can imagine the effect of a true and worthy form of service in these godly piles! It would ravish us. I do not mean the common Protestant service, but what it should be if all were actual worshippers. It would have something of this Catholic ceremony too, and yet not show a priest trotting hither and thither, and buzzing now on this side then on that."

The Lucrine Lake is "not above three times the size of Frog Pond, nor quite three times as pretty." In Rome he finds the Torso Hercules "as familiar to the eyes as some old revolutionary cripple"; and turns gratefully to a living friend—"glad I was amidst all these old stumps of the past ages to see Lewis Stackpole, as fresh and beautiful as a young palm tree in the desert." When the Pope in scarlet robes blessed the palms in the Sistine, "It was hard to recognize in this ceremony the gentle Son of Man who sat upon an ass." Apparently he neither sought nor obtained an audience. "These

beggarly Italians!...If you are presented to the Pope, it costs you five dollars." He gets near Trasimene a taste of fresh air which savours more of New England than of Italy. "Old Cathedral, and all around architectural ornaments of the Middle Ages. But were I a proprietor in Perugia, I would sell all and go and live upon the plain." Venice pleases him no better. "I pity the people who are not beavers, and yet are compelled to live here."

So much for this traveller who visits Italy as "a being of another planet... a freeman amongst slaves." We cannot follow him to England. Are not the best of his experiences related in 'English Traits'—for instance, what he thought of Wordsworth, though not what Wordsworth thought of him? Back then he goes to America—to lectures in Boston, preaching at New Bedford and Plymouth, and the meditative life of the Old Manse at Concord. But into the life of social service he carries the same resolute determination to play the independent.

"If you ask me whether I will be so good as to abstain from all use of ardent spirits for the sake of diminishing by my pint *per annum* the demand, and so stopping the distiller's pernicious pump, I answer, Yes, with all my heart. But will I signify the same fact by putting my name to your paper? No. Be assured, I shall always be found on your side in discouraging this use and traffic. But I shall not deprive my example of all its value by abdicating my freedom on that point. It shall be always my example, the spectacle to all whom it may concern of my spontaneous action at the time."

Then follows an idyll of which we are told as much as we need to know.

P. 446. January 30. I spent at Plymouth with Lydia Jackson.

P. 543. September 14. I was married to Lydia Jackson.

No "chatter about Harriet" here. We pass on to the opening of the next act in the drama.

"Last night, at 11 o'clock, a son was born to me. Blessed child! A lovely wonder to me, and which makes the universe look friendly to me. How remote from my knowledge, how alien, yet how kind, does it make the Cause of causes appear!..."

"Now am I Pygmalion...."

"But what is most beautiful is to see the babe and the mother together, the contrast of size makes the little nestler appear so *cunning*...."

But perhaps he occasionally caught a glimpse of another side of domestic life; for we read,

"A man must have aunts and cousins, must buy carrots and turnips, must have barn and woodshed, must go to market and to the blacksmith's shop, must saunter and sleep and be inferior and silly."

So let us leave him there, thankful for this second sheaf of the literary whittlings of one of America's greatest and best.

A Diplomatist's Wife in Many Lands.
2 vols. By Mrs. Hugh Fraser.
(Hutchinson & Co.)

ANIMATED and rather indiscreet, these reminiscences should secure a wide public, more especially as beneath their sparkle there lies much sound reflection. Mrs. Hugh Fraser, who is the daughter of a well-known American sculptor, a sister of the accomplished novelist Marion Crawford, and the wife of an English diplomatist, has enjoyed an unusual upbringing. During a girlhood spent in Italy, she acquired an intimate acquaintance with society as it existed before the achievement of political unity, and she remains to this day an enthusiastic defender of the old order. Her arguments do not always carry persuasion, but it is well to be reminded that the conquered cause was by no means destitute of ability and devotion. It had also its quaint exercises of paternal authority. Thus Gregory XVI. displayed his zeal for morality by ordaining that the dancing girls at the opera should wear green Turkish trousers, whatever the rest of their costume might be, and by swaddling the figures on the tomb of Paul III. in cast-tin draperies painted to match the colour of the marble! Officials, if Prince Massimo can be taken as a type, were not over-scrupulous:—

"He was for many years Postmaster-General, and utilized his facilities to make a valuable collection. America was a long way off from Rome at that time; and every letter that my people received from the United States had had the stamps boldly cut out of the envelope before it was handed over to the postman."

We get a pretty picture of priestly discipline in the Alban hills.

"The great preoccupation in the 'Castelli,' as the mountain villages are called, is to keep the girls out of harm's way; I have heard the preacher say to the women: 'Never mind about the men; they were made of different stuff to you! They can be sometimes bad and sometimes good. But you cannot! A woman must be either an angel or a devil; there is no place between for *her*!'"

The good priest, therefore, used to make them work in the fields in twos and threes, and he would count them at the entrance of the town when they returned to see that no girl was loitering alone.

Mrs. Fraser does not pay compliments to those whom others would call the liberators of Italy—Victor Emmanuel, for instance, Farini, and Garibaldi. But we do not understand why a mystery should be made of "Garibaldi's Englishman." His name was John Whitehead Peard; he was a member of a well-known West Country family, and he died in 1880. Mrs. Fraser is definite, however, about that staunch champion of the Temporal Power, Cardinal Antonelli, whom she draws with vigorous strokes:—

"In appearance he was a typical South Italian, small in build, dark-skinned, with

piercing narrow black eyes that seemed to see everything and tell nothing of what was passing in the busy brain behind them. His face was meant to be mobile, but usually wore a fixed smile which had become a part of his armour. He was a rapidly fluent talker, and at once took all the burden of conversation upon himself, evidently pleased with our naïve admiration of the many beautiful things gathered round him in the room where he received us."

The Italian chapters in this book are, on the whole, the most interesting. But Mrs. Fraser seems to have a happy knack of making amusing acquaintances wherever she goes. She sits opposite a benevolent old gentleman at an hotel dinner, and he reveals himself as Edward Lear, the author of 'The Book of Nonsense.' A firm believer in ghosts, she has collected some gruesome stories about them; and it appears that Julius Hare so excelled as a narrator in that vein that he made a cousin of hers faint away.

In the second volume we are transported to Peking, and confronted by the fascinating theory that there have been actually two Dowager Empresses, of whom the first died during the Boxer rebellion, whereupon the second, who had been trained for the purpose, promptly took her place. Mrs. Fraser's argument seems to be that the redoubtable lady was too wicked at fifty to have lived to be eighty, and that when eighty she looked as if she was not more than forty-five or fifty, and instead of being a tyrant had become most considerate. Be that as it may, she illustrates the pride of the Chinese by a significant story: after the looting of the Palace an officer offered to return some of the spoils to the Imperial family through the Chinese Ambassador. "Take them away," exclaimed the Minister, "they are desecrated, filthy—we never want to see them again."

Mrs. Fraser concludes with Vienna from 1880 to 1882. She does not spare the Court, and some of her stories about the Empress are a little unkind. She writes of the unfortunate, however, in a chivalrous spirit, notably of Benedek, the defeated at Sadowa, whom she considers to have been the victim of the incompetence of others, and who went to the grave without an attempt to exculpate himself. In taking leave of these agreeable volumes we may remark that it was Sir Henry Wotton, not Sir Thomas More, who defined an ambassador as "an honest man sent to lie abroad for the good of his country" (p. vii.).

L'Anglomania e l'influsso inglese in Italia nel secolo XVIII. By Arturo Graf.
(Ermanno Loescher, Torino.)

ALL those interested in the matter must have felt that there was room for a good book on English influence in Italy during the eighteenth century, and they have every reason to congratulate themselves on the way in which the want has been supplied.

Poet, critic, and scholar, Arturo Graf brings to his task a rare combination of qualities, and his profound knowledge of the period has enabled him to carry it out with a thoroughness that makes his book a mine of information on every aspect of the subject.

Just as their antidotes are said to grow in the neighbourhood of some poisonous flowers, so Gallomania brought with it Anglomania as a supplement and a corrective. Voltaire and Montesquieu discovered England for eighteenth-century Europe, and their followers in Italy were bound to feel a due enthusiasm for a country so much admired in France. The result was a serious outbreak of Anglomania which lasted till the Revolution, when England's hostility to France and above all to Napoleon, who gave Italy her first taste of freedom, caused her to be regarded as the arch-foe, and "fede inglese" to become a by-word in the land.

What was the cause of this enthusiasm? In the first place our constitution and the power and prosperity that went with it; the genuine liberty and freedom of speech in a country where a man's opinions were his own affair and where Alessandro Verri's servant could abuse the King a hundred times a day, if he chose. When living at the court of his admirer, Frederick the Great, Algarotti could declare, in a dedication to an Englishman, that no country in his day "gives an image of ancient Rome so truly as your own fortunate isle." This is certainly the greatest compliment an Italian of the period could pay us. A man of Filangeri's ability thought he saw all the signs of a coming revolution in England; but he stood alone in his opinion. Anglomania soon took other forms. Our education, our men of science, and our doctors were in high repute. English goods of all kinds were freely imported, and our commercial prosperity made a knowledge of English of great value in business. The many enthusiasts for trade at this time studied our business methods, and Goldoni says that fixed prices, in the English style, were beginning to be asked in shops. Roast beef, cider, beer, pudding, and above all tea were in demand. A poet speaks of "nebbia di Scozia e sillabub inglese." Can this "Scotch mist" be Italian for mountain dew?

"Italians keep the English nobles quite distinct from the English common people," says Prof. Graf, "and though they admire the former, they have no admiration for the latter." Our nobility were thought to be the most cultivated in Europe and were praised for their readiness to enter the professions and even business. They were the most munificent art-patrons of their day. They often appear in plays of the period, e.g., Milord Runebif in Goldoni's 'Vedova Scaltra,' or Lord Stunkle in Albergati's 'Ciarlator Maldicente.' Our author tells us that the typical Englishman is "grave, polite, honest, sincere, staid, phlegmatic, and imperturbable, a man of few words and fewer compliments." Goldoni introduces

a lady singer affecting our laconic speech. Englishmen may have faults. They are too fond of the bottle and not too ready to receive foreigners with open arms. But there is only one opinion concerning English women. Their modesty, their simplicity, their grace and charm, and their bewitching straw hats won all Italian hearts. Moreover, there was no mistaking them. They were either models of virtue or frankly the reverse. Angiolini places the ladies of Cambridge above all others in England, but even they had to yield to the Scotch lasses.

Rolli, Baretti, and Alfieri knew us best and have most to say about us. Rolli returned home with a fortune after praising England and all its ways to the skies, and Prof. Graf treats with proper contempt the epigrams he left unpublished in 'Marziale in Albion,' which contradict all he had said before and convict him of the basest ingratitude. Baretti railed against us when the mood seized him, and was well aware of our faults, but our author well calls these attacks the petty outbursts of a lover, for Baretti used "Lovanglia" as a pseudonym, and his writings are full of praise of England, its men, and above all its women.

Alfieri, with his love of horses and hatred of France, was a confirmed Anglomanic, but could never learn English. Voltaire said that Englishmen gained two hours a day by eating their words, and this was Alfieri's view.

Capitano ; è parola
sonante, intera, e nella Italia nata :
Capitèn ; già seconsola,
nasalmente dai Galli smozzicata :
Keptu poi, dentro gola
dei Britanni aspri sen sta straspolpata.

But it is in literature that English influence was most pronounced, and six chapters are devoted to it in the book before us. The chapter on Shakespeare should interest all students of the poet, for it is the most complete account of the gradual growth of his fame in Italy that we know, and is more exhaustive than Schiavello's monograph. Addison, Swift, Thomson, Gray, Fielding, Sterne, Aken-side, Milton, Dryden, and Johnson were all known in Italy in a greater or less degree, and Prof. Graf discusses their influence. A French version of *The Spectator* was in everybody's hands, and Richardson, especially his 'Pamela,' which inspired several plays, had a wide repute. But Pope, Young, and Ossian produced the most important results. The first was much admired, and often translated. The 'Rape of the Lock' was specially popular and no fewer than three versions of it appeared in 1822. Young's 'Night Thoughts' founded a school of melancholy poetry. "In the shade of one of these funereal trees (cypresses)," runs a contemporary skit, "stood Young, sadly singing of night and death. French and Italians hung round him with listening ears, taking down on bright ivory tablets the rarest thoughts of the Prince of melancholy

poets with their pencils." Behind him, meditating on a mossy tomb, was Hervey, talking in feeble tones of skulls and bones. One enthusiastic admirer even dedicated a grave to Young in his country house, and his influence on Pindemonte, Foscolo, and others is well known. Ossian, in Cesarotti's admirable blank verse translation, took Italy by storm, and became the favourite reading of the earlier romantics. It inspired Monti's 'Bardo della Selva Nera,' and influenced, among others Pindemonte, who loved our parks and gardens. Lord Bute paid all the expenses of the publishing of Cesarotti's version. Newton has to thank Algarotti's 'Newtonianismo per le donne,' translated into English by Elizabeth Carter, for some of his popularity. Taruffi said that he had worshipped three idols—Pitt, Hume, and Rousseau, and Locke and Bacon had large followings.

We have only been able to touch on a few points in this most interesting book. It is pleasing to find a man of Prof. Graf's standing declaring, with reference to Dante scholarship in this country, "sopra i più munificenti estimatori e curatori dell' opera sua primeggiare gl' Inglese."

We have noticed a few trifling errors. The instance given on p. 145 hardly rebounds so much to our credit as Verri thinks, for the crowd dispersed on the reading of the Riot Act, after which they knew the troops would fire upon them. On p. 331 "Milcolomb Flemings" Latin poem on hypochondria must be Malcolm Flomyng's 'Neuzopathia' (1740). On p. 385 we find "Wiew." "Wauxhall" and "Halmac" on p. 178 may be Verri's mistakes. The first line of Pope's epitaph on Newton should run,

Nature and nature's laws lay hid in night.

The translation of Ariosto, which appeared under Croker's name in 1755, is the version with which Baretti helped Huggins, elsewhere mentioned by our author, and was reprinted two years later with a new title-page in which Huggins is duly credited with its authorship. Croker seems to have written the Preface only.

In the eighteenth century Italy, which had once been the mistress of Europe, had sunk to the position of pupil. "The genius of England helped us in many ways," says Prof. Graf in conclusion, "and the best minds of our eighteenth century bear traces of it. That influence, when all is said and done, served to strengthen us.... It gave vigour to our thought and breathed a new spirit into our literature. Wherever a reform was suggested, attempted, or carried out among us, we are sure to find it at work, whether in institutions or methods of procedure, law or custom, industry or art. Our Risorgimento would have taken place even without that influence; but it would have taken place later; we might perhaps be waiting for it still." Surely no Italian ever paid England a higher tribute.

NEW NOVELS.

Account Rendered. By E. F. Benson.
(Heinemann.)

THE lie about the right man, which hurries a girl into marriage with the wrong one, has often been told in fiction; but, although it imposes on the heroine of the present novel, it fortunately fails to mar the effect produced by the author's masterly character-drawing. The heroine is introduced to the reader as a beautiful governess, bubbling over with the droleries of a lively imagination, who has awakened the amative interest of her employer's eldest son and of a young peer. The principal female characters are portrayed with unerring skill: the heroine's charm is not only suggested but successfully conveyed to the reader, and critical admiration is deserved by the cleverness which successfully associates voluble breeziness, self-depreciation, and the appearance of generous sympathy with hypocrisy and selfishness, in the character of the peer's mother. The heroine's lovers are not particularly interesting. If it were not for his mother's baseness the peer would be little more than a figure symbolic of golf; but, on discovering the blow she has dealt to his honour, he becomes tragically noble. The novel has so much brilliance that the one or two feeble platitudes it contains are almost startling.

The Camera Fiend. By E. W. Hornung.
(Fisher Unwin.)

IN this sensational story readers interested in psychical research will enjoy some forcible satire at the expense of official indifference or hostility to the aims of "occultists." The principal character is a German doctor desirous of demonstrating by photography the immortality of the human soul. Theorising that the soul's departure from the body occurs simultaneously with death, he vainly seeks access to scaffolds and hospital deathbeds, and conceives that he is driven to the expedient of committing murder in order to photograph people in the act of quitting the flesh. An asthmatic school-boy, courageous and honourable, plays the part of Nemesis, and is a cleverly drawn character. Mr. Hornung's criminal savant is unconvincing, and by taking more trouble he might have lifted his story above sensationalism. As it is, despite obvious flaws, it has the elements of popularity.

The Card. By Arnold Bennett. (Methuen & Co.)

MR. ARNOLD BENNETT has a lighter vein which he alternates with his more serious work. In this he is not concerned to use the large canvas which apparently modern critics have agreed to call "the grand style." To some of his readers the alterna-

tive may come as a relief, for 'The Card' is a delightfully humorous story of a "character" in the Five Towns. Mr. Bennett's method in this book has affinities with the old picaresque narrative, which is to say that its interest is mainly episodic. Several of these chapters might stand alone as humorous incidents. The interest is, to a certain extent, artificially engineered, but none the less triumphantly holds the reader. "The Card" himself is a genuine creation, and his success is justified by the excuse for him proffered in the last chapter, "He's identified with the great cause of cheering us all up," which this bright, brisk book certainly ought to do.

The Unseen Barrier. By Morice Gerard.
(Hodder & Stoughton.)

THE hero of this sensational story aspires to Parliamentary honours; the heroine, a child of mystery, works as, "Sister Elizabeth" among the poor in his constituency, a South London borough. The two environments, political and religious, are well suggested. They give the book a little human interest. The author sentimentalizes rather freely; and we object to the hero's blind friend as a needless sentimental character. There is no lack of incident; the secret concerning the heroine is not divulged until the very end; and the conduct of the plot displays a certain skill.

The Downsman. By Maude Goldring.
(John Murray.)

THIS work comes as a disappointment to admirers of 'The Tenants of Pixy Farm'—a novel careful to a fault in plot and treatment. Here the scheme is undigested; the style relaxed and often ungrammatical. An aged squire of violent passions; a one-eyed villain, also aged; two rival heirs who turn up unexpectedly; a charming gipsy who annexes one of the heirs; an abduction; all these, with the inevitable marriage-lines, with caverns, subterranean passages, phantoms and crystal-gazing, seem inconsistent with the twentieth century and the author's wise discourse concerning social problems. We find abundant evidence of talent in the book, but no talent could contend with the details we have mentioned.

The Simple Life, Limited. By Daniel Chaucer. (John Lane.)

IT is no difficult matter to make a shrewd surmise concerning the identity of "Daniel Chaucer," the pseudonymous author of this entertaining book, whom we take to be a writer who has worked with some success in a widely different field of fiction. The story, which balances between comedy and extravaganza, and closes in what we may describe as a light vein of melo-

drama, is virtually a satire, compositely mordant and humorous, on the fads and insincerities generated by certain movements, and—as the title indicates, by the Communal crank in particular. Here the votaries of the Simple Life are displayed in signally unpleasing colours, laid on with an unsparing and skilful hand, and depicted with a candour that occasionally leaves us a little breathless. A suave cynicism that is eminently agreeable pervades the tale, which, in spite of a certain jerkiness of method, is amusing and readable throughout.

Jack and Three Jills. By F. C. Philips.
(Eveleigh Nash.)

THE meanderings and philanderings of a commonplace young man, however innocuous, and artlessly related, are not necessarily entertaining, even although they are punctuated by descriptions of various pleasant and occasionally luxurious repasts. Neither Jack nor his Jills provide us with much amusement. For the rest, the story includes a crude sketch of a rich American; and one incident which strikes us as in doubtful taste.

SHORT STORIES.

At a Venture. By H. B. Marriott Watson. (Methuen & Co.)—In this collection an admired craftsman mixes the products of industry with those of artistic inspiration. The best of the stories is 'The Mutiny of the Boyne'—a tale of the tragic results of a fib on sensitive patriots. It would not, however, be fair to ignore the ability of Mr. Watson's dialogue, sentiment, and characterization to detain and occasionally to captivate the reader of other tales—e.g., 'The House Party at Shirlands,' where the writer shows the kindly influence of Christmas, felt in a village fête, upon fashionable people with tendencies to gravitate towards the divorce court and the marriage-market. In 'Full Moon' the humour of a typical parlour game is cleverly interlaced with love and jealousy; and in 'The Vixen' the brutality and arrogance of a husband, in a time when wifehood and serfhood were synonymous, are grimly and tersely realized.

The Ring of Ug, and other Weird Tales. By E. Elliot Stock. (John Ouseley.)—The author of these four tales twice succeeds in evoking a justifiable curiosity, and twice he relates what, we think, a foundation on "absolute fact" would not render particularly worth telling in fictive form. The successful stories are 'The Ring of Ug' and 'A Cry from the Ice.' In the former story occult power is attributed to individuals of the Bronze Age, and we are introduced to a prehistoric king, supernaturally alive in his sepulchre in Cumberland, whose features embodied intense "lust and hatred." In the latter story a ship is unable to progress on its homeward voyage until the head of a defunct Eskimo, feloniously acquired by a scientific collector, has been given to the sea. The author occasionally exaggerates the impressiveness of the supernatural, and overdoes the attempt at

solemnity by the aid of italics. He has, however, some talent for reflection as well as for narration; and for half its contents his book is worth reading.

Here and Hereafter. By Barry Pain. (Methuen).—At one time Mr. Barry Pain promised to develop into a novelist of standing. He had the equipment for it, and, one felt, a good deal of the necessary feeling. This was in the early days, but he has never followed up 'Lindley Kays' in the direction of serious fiction. He seems to have decided that the short story and the sketch are his medium. In this assumption it is perhaps hard to contradict him. At any rate there are few writers to-day who can make a short story or a sketch more amusing. This Mr. Pain has demonstrated frequently in his Cockney tales, in which *genre* he must be left to contend with Mr. Pett Ridge. The stories before us are described by the publishers as a "collection of Mr. Barry Pain's serious short stories." Notwithstanding this prefatory warning, we are glad to find many tales in the lighter vein included. The story which is at once the longest and introduces the volume is tinged with a "sensationalism" which does not rightly belong to Mr. Pain. Of the others which may be considered serious or deal with the supernatural, the best are 'Post Mortem,' 'The Unfinished Game,' and the 'Four-Fingered Hand.' Perhaps the neatest of all these is 'Post Mortem'; but to turn from these more serious efforts to the frankly humorous stories such as 'The Act of Heroism' is to enjoy Mr. Barry Pain's quality at its best, and most characteristic.

To write a good ghost-story is a test of several qualities in union. A man must possess imagination, a sense of horror, a certain elusiveness, a vagueness, as it were, and not too close a definition; he must adumbrate and sketch rather than state, and he must be content to get his effects by contributions to atmosphere rather than to action. Some great writers, we are sure, could never successfully attack a story dealing with the supernatural; and some inferior writers have just the equipment.

Mr. Onions is not to be classed as an inferior writer, except in the sense that he is not among the greatest; but he certainly has all the qualities required to write a ghost-story. His latest volume, *Widdershins* (Martin Secker), is a collection of nine tales, to which he prefixes an apocryphal litany: "From ghaisties, ghoulies, and long-leggity beasties and things that go bump in the night—*Good Lord, deliver us.*" As if that warning were not sufficient on the threshold, we are informed that 'Widdershins,' the title, means "contrary to the course of the sun," and one recalls the lines in the 'Lowlands o' Holland,'

And my love and his bonny ship
Turned withershins about.

Of the nine tales, the first and longest, 'The Beckoning Fair One,' is vastly the best. It is, indeed, a very successful example of what a ghost-story should be, without improper definition or ruthless explanation—merely atmosphere. 'Phantas' might have been conceived in the spirit of Mr. Kipling, yet displays the author's individual temperament. Of the others the best are 'Io,' 'The Accident,' and 'The Cigarette Case.'

The stories are by no means all to be dismissed as "ghost" stories. They deal rather with various forms of supernaturalism which man does not profess, or is unable, to account for. The last, 'Hic

Jacet,' strikes us as rather an elaborate study, in the manner of Mr. Henry James, of the obsession of one soul by another for the purpose of a prohibition. It is delicate, sensitive, and intellectual work, but it has not the simple effects of the atmospheric story 'The Beckoning Fair One.' This begins to be ghostly from the first page, and slowly accumulates its influences until the crisis of the horror.

Mr. Onions has not yet received the recognition he deserves among writers of fiction. Perhaps it is too much to hope that a delicate and subtle talent such as his will soon be popular.

Pot au Feu. By Marmaduke Pickthall. (Murray).—Many of those who hailed the author of 'Säid the Fisherman' as a new star in the literary firmament fail to find in his subsequent English work the qualities which they had admired in his Oriental studies. We were not, however, among those who wished to banish him permanently to the East, which he painted with such brilliance and truth, and the successive stories which came from his hand proved his adaptability to the conditions of home life.

Of this vivid and various collection of stories those dealing with English life are as distinctive and arresting as those concerning the Levant. The former he calls, for some reason or other, 'Crotchety Stories.' These mainly deal with East Anglian scenes, and one is interested to gather that his interpretation of the East Anglian nature is almost as pessimistic as that of other writers on this district. His stories break through many of the conventions of the short story, but always have a curiously individual property, which gives them point and renders them engrossing.

The second section in the book contains four stories of a lightly humorous character, dealing with a Swiss canton. The Eastern stories, in which Mr. Pickthall returns to Syria, are marked by the dispassionate detachment which has always characterized his attitude to the Oriental. Some deal with horrible subjects, but that curious sympathy and knowledge which the author brings to bear upon his Eastern studies somehow relieve the oppression for the reader, who is all the time conscious that he is getting at the very heart of the Levantine. Mr. Pickthall will be found in time to have done as great a service in interpreting the Syrian to the English reader as did Mr. Kipling in revealing the Indian. His humour is delightful in these tales, his sense of tragedy is sane, and he holds the balance without any determining bias in favour of Occidental civilization.

Four stories of varying length and merit compose Mrs. Alfred Sidgwick's volume *Odd Come Shorts* (Mills & Boon). The first and longest has the most power, but appears to us slightly marred by the author's growing tendency to paint all her Philistines as spotless heroes and heroines, and all her Bohemians as unmitigated villains—a tendency which we cannot but regret as likely to detract from her delightful gift of delicate and discriminating characterization. The second and third are slight studies, sympathetic, with a pleasant seasoning of sarcasm, according to Mrs. Sidgwick's wont. The fourth seems best adapted for the serial form in which it originally appeared, but contains many shrewd and humorous reflections.

There is point, if not always inspiration, in every one of the eight tales contained in Mr. R. H. Davis's *Once Upon a Time* (Duckworth). Our preference is for two which respectively touch on a mystical aspect of the migration of birds and on the efficacy of loving prayer. The latter tale ('A Charmed Life'), dealing with the return from Porto Rico to his sweetheart of a newspaper correspondent, at the end of the Hispano-American War, is a clever satire on the unimaginativeness of the average man. The most ambitious of the tales is 'A Question of Latitude,' in which human cruelty on the Congo is attributed to influences of climate. This story is inevitably unconvincing, the author having chosen a journalist, with a reputation for conscientiousness and good breeding, to exemplify by brutality and a rabid declaration of love to a married woman, the demoralizing effect of Darkest Africa upon newcomers. 'The Spy' is a grim and clever study in crooked loyalty, the atmosphere being that of the American financial spider's vast web; and those who like farcical fiction will appreciate a tale which exhibits the discomfiture of an amateur detective.

OUR LIBRARY TABLE.

In *What America is Doing: Letters from the New World* (Blackwood), Miss Annette M. B. Meakin gives us the impressions of a visit to the United States extending from the beginning of June to the early part of November. This is a limited experience on which to form opinions about a great country, and we cannot say that her views, though intelligent enough, rise above the ordinary level of traveller's jottings. She took her Tocqueville with her, and supplemented his information with the works of Senator Beveridge, Mr. Percy Robinson, Mr. Booker Washington, and others. Applying a sound English judgment to her studies, Miss Meakin touches upon American social developments in a manner always void of offence and sometimes refreshing. But she has naturally little that is new to relate about "sky-scrapers," pork-packing, the surroundings of Congress, and Mr. John D. Rockefeller. The statement that "the America of the future will belong to a race owing its origin as much to Jewish as to Anglo-Saxon blood" needs, surely, a good deal of qualification. It is a small matter, but baseball is a development rather of rounders than of cricket. Some of Miss Meakin's remarks on American slang are beyond us. We should have said that "thrown over" in the sense of "refused" was in common usage in this country, though Miss Meakin seems to think that it became obsolete with the eighteenth century; and we cannot understand why "a wise policy" should be regarded as a British, and "a sane policy" as an American expression. On the other hand she might have pointed out that their use of "sick" is more correct than ours.

An Atlas of Textual Criticism. By Edward Ardon Hutton. (Cambridge University Press).—Mr. Hutton's book is intended to be "a kind of atlas" to any modern text of the New Testament, such as Tischendorf, and an "atlas to modern works on textual criticism." There is, however, a further use for it. A thorough

preliminary survey of every MS. is wanted, Mr. Hutton says,

"and such a survey can only be made by collating them in a uniform series of specially selected passages which, if numerous enough, would give us a perfect idea of their mutual relationship.... We must have exactness and this can only be secured by submitting all alike to the same process, and such is the object of the present work."

Griesbach's recognition of the authorities as falling into three chief groups, the Alexandrine, the Western, and the Byzantine, is noted; and, as there are many passages in the New Testament where the three groups "offer mutually conflicting evidence," it is obvious "that by a careful collation of such we can separate our authorities and find out how far mixture interferes with their evidence." Having divided our documents into three classes, we may ask which is the best; and Mr. Hutton suggests that the probable answer would be that the best is that having the support of the oldest of the witnesses and the widest geographical area, and, further, our own approbation. That approbation, however, is not to be a mere exercise of private judgment. We are to follow rules of internal evidence, and the reader is told that the best *résumé* of these will be found in Alford's Greek Testament. In the tables of readings, given in this book, there is no decision in favour of any reading; and, though Mr. Hutton approves the choice of B as the representative of the Alexandrine text, he confesses in these strange words that "B is human and far from perfect, and its singular and even subsingular are often open to grave question." In a very elaborate appendix examples are supplied of triple readings of passages in the Gospels, the Acts, the Catholic Epistles, the Pauline Epistles, and the Apocalypse; and in the atlas proper these passages are again used and indication is given of Alexandrine, Western, Syrian, and "peculiar" readings in the New Testament MSS. and the writings of certain Fathers. By means of these selected passages a version may be tested and its character revealed. Prof. Burkitt furnishes a "note upon some agreements between the Sinai Palimpsest and the Textus Receptus in St. Mark's Gospel."

Historical Antiquities of Ackworth. Compiled by W. A. Green. (Chiswick Press.)—In his Preface Mr. Green explains that his information, drawn chiefly from manor records, was compiled originally "with the object only of tracing the connexion with Ackworth of the family who derive their name from the place," and "at the instigation of Dr. Acworth of Brondesbury." He has himself, we believe, a family interest in the inquiry; and both he and Dr. Acworth may be congratulated on its fruitful results.

A topographical work such as this may be of two kinds: it may be popular, making no appeal except to the local and unskilled reader; or it may have a more comprehensive and useful end, the writer being an enthusiast who compiles, for the benefit of future workers, an exhaustive account of his subject—an account such as is aimed at by the writers of parish history in the Victoria County Histories, but with more ornament and circumstance than are there possible. Our criticism of the work before us is that Mr. Green has fallen between the two ideals. He obviously inclines towards the second. Thus he makes the fullest use of all documentary evidence, rentals, subsidies, court-rolls, and so forth: doubtless in another case he would have preserved for us—a most useful work—many private deeds of the greatest interest, such as are apt, under modern requirements for the proving of

title, to be neglected, to stray and perish; but he is fortunate in having as his subject a manor which formed part of the Duchy of Lancaster and consequently has its deeds among the records of the kingdom. The result is a detailed and generally accurate account, with some careful transcripts, a good map and illustrations, and a fair Index. But we must insist again that such a work (there are only 100 copies printed, by the way), compiled so exhaustively from such sources, is not popular; it is material for the specialist, and should have been fashioned accordingly; and here the author seems to us to spoil a good book at more than one point.

Our first doubt concerns the treatment of references. We question the policy of leaving out all that is contained in Mr. Saywell's "parochial" history—a book not to be found at the British Museum; but, apart from that, the references both to documents and to books are often inadequate. The writer is setting out the information to be obtained upon an important point in the early history of the Lacy family; and he leaves the matter unsettled, with no further explanation of the sources he has used than the word "Charters": 'Mon. Ang.' as a reference to the eight volumes of Dugdale's 'Monasticon' is also inadequate: and in one case "Close Rolls" might mean any one of about thirty entries in the index to a Calendar. These are only three out of many instances, emphasized by the fact that from time to time the author gives full and correct information on such points.

Again, we can but suppose in certain places that the account has been cut short for fear of tiring the reader. The result is sometimes an obscurity (we should have found the Lacy history very difficult without the printed pedigree; and other instances occur, e.g., on pp. 46 and 66); sometimes it is a habit of statement without the proof, which the writer no doubt possesses himself, or with an accompanying "probably"; and sometimes a deplorable omission: for instance, Mrs. Ackworth (whose husband is much more frequently mentioned by Pepys than herself) may have been "a trusted emissary of Charles II. in an event unrecorded in history," but we should have liked evidence for this, while a bad case of omission is found in the whole account of the Acworth family. This family history is the author's original and particular subject; yet he gives us nothing more than a number of isolated instances of persons called Acworth up to the seventeenth century, together with a statement that they undoubtedly came from Yorkshire (though all we hear about one is that he held land in Bedfordshire and Suffolk), without any attempt to connect them so far as they go, and followed by a sudden leap into the nineteenth century and present-day bearers of the name. The book contains pedigrees, but Acworth is not among them.

To mention another point, the same mistaken consideration, as we conceive it, for the general reader has led Mr. Green into occasional rather irritating innocencies, such as his explanation that "miller" and "milner" are the same word, that the name Lincoln's Inn still survives, and that "marriage fines and the like would appear galling to the present-day small farmer"; and, on the other hand, into such speculative irrelevancies as "She was forcibly abducted.... and one wonders what sort of woman was this daughter of many earls who was twice carried off by force, as is said."

We have criticized this book at some length because it belongs to a class, founded on private zeal, which we would gladly see multiplied.

The Archbishops of St. Andrews. Vol. III. By John Herkless and Robert Kerr Hannay. (Blackwood & Sons.)—The third volume of 'The Archbishops of St. Andrews' is not a more entertaining work than its predecessors. No doubt the grey monotony of the style is the result of conscious and conscientious method. No characters are lovingly drawn, much less are they painted. With figures in the piece so original and peculiar as that sister of Henry VIII. who shocked him by her marriages and divorces; with Albany, the Regent who had been known to throw a dozen of his hats into the fire; with the Earl of Angus who married the Queen Mother when he was so young, and, like his brother George, became such a weather-cock of treachery before he was old; with the pell mell of wild Hamilton and Homes; with the flights, and arrests, and betrayals, with the young James V. for a central figure, we might expect our authors to produce work less uniformly austere. They have conscientiously entered into all the particulars of clerical and papal negotiations about livings, and abbacies, and sees; by aid of the State Papers of Henry VIII. they have traced the tangled skein of French and English cajolements and bullyings of Scotland; and the various kaleidoscopic combinations into which Henry VIII., Angus, Henry Stewart ("Lord Muffin," as the other Henry called him), Margaret, Albany, Arran, Hume, Lennox, and Beaton himself were thrown as Fortune shook the glass. The old familiar story of the burning of Patrick Hamilton, and of the worthies commemorated by Knox and Calderwood is narrated once more. But we see no clear pictures of the persons and the times, though we may perceive that, when Knox called Beaton "a leprous bishop," he was only seeking a change from his usual alliterative epithet for bishops as a species. When Alesius writes (p. 183) that Beaton was "affinitate conjunctus" with Patrick Hamilton, he is thinking, presumably, of the fact (p. 228) that, as King James wrote, the Archbishop "married his niece.... to James, Earl of Arran, whose issue the present Earl of Arran, is next heir to the throne, after the Duke of Albany, who is not married." James V. accused Beaton (apparently an honest patriot) of expecting to live till he had crowned his great-nephew. This was unjust. Beaton was a very respectable and honourable man for a Scottish prelate of his period.

Cat's Cradles from Many Lands. By Kathleen Haddon. (Longmans & Co.)—There is a piece of academic folk-lore which is to the following effect. Once upon a time an Oriental potentate visited a great university. The university, in the person of all but one of those who were representative of its learning, attempted to amuse, by instructing, their distinguished visitor. His apathy, however, resisted their charm. Then came that other one. He was an anthropologist. Whipping a piece of string out of his pocket, he made a cat's cradle. Instantly a light came into the sulkymonarch's eye; the genuine human being in him shone forth; and, man with man, he and the anthropologist played at the ancient world-wide game, whilst the doctors and the proctors looked on and marvelled.

For the benefit, then, of learned men and others Miss Haddon—to whom the tale, and the bearing thereof, may not be unknown—has composed a most handy and compendious manual of the cat's cradling art. Has one a desire for the trigger-fish

from Torres Straits, or the Calabash Net from Africa, or dressing a skin from the American Indian, or the Kayak from the Eskimo, or the leashing of Lochiel's dogs from nearer home—why, one has only to learn the trick; though "trick" in this book is used in a more special sense, and the cat's cradle proper is something in its own right, though tricky enough in all conscience. Then let us all try this most excellent of parlour games. Incidentally, we may enmesh the sun, and cause it to stand still in the heavens, as the Eskimo aspire to do.

Manual of Library Bookbinding, Practical and Historical. By Henry T. Coutts and G. A. Stephen. With an Introduction by Douglas Cockerell. (Libraco.)—This valuable handbook should be studied by every librarian, indeed, by everybody interested in the binding of books. It is a thoroughly practical exposition of all the processes involved in modern bookbinding, cheap or relatively high-priced. Accordingly it includes a study of papermaking and testing, of the materials in use for cheap binding and casing, and of modern methods of machine sewing and binding. This section of the book is exceptionally good; no other work known to us gives anything like so clear or full an account of the machinery at the disposal of the modern book-producer. The chief difficulty in the way of machine binding is the necessity of adjusting accurately the machines for each new job, as otherwise the back may be broken or imperfect. Wire-sewing seems to be on the increase, and some of the more serious objections to its use appear to have been eliminated. We learn incidentally from Mr. Stephen that an ordinary novel can be lent out about thirty times before its cover comes off. The authors add an historical section of general accuracy and good judgment, a Glossary, and an Index. The fact that Mr. Douglas Cockerell, the most distinguished bookbinder of recent years, has written an Introduction is in itself a guarantee of the importance of this book.

THE admirable "Dickens Centenary Edition" (Chapman & Hall) grows apace, the latest appearances being *Martin Chuzzlewit* (2 vols.) and *A Tale of Two Cities* (1 vol.). Re-perusal of Dickens is always fruitful of suggestion, and the Preface to the first edition of the latter work—with its tribute to "Mr. Carlyle's wonderful book" (i.e. 'The French Revolution')—hints at a side-light on Mr. Pecksniff which has, we believe, hitherto escaped comment. In 'The French Revolution,' vol. iii. book vi. ch. iv., Carlyle wrote of his "sea-green Incorruptible," Robespierre, that "he went always elegant and frizzled, not without vanity even,—and had his room hung round with sea-green Portraits and Busts." Have we here the original inspiration of the "Portrait of myself by Spiller. Bust by Spoker," which were the distinguishing ornaments of the Pecksniffian parlour?

In both novels the illustrations have the clearness of detail we have already praised, and the general excellence of production is maintained.

In "The Readers' Library" (Duckworth), a series which is well worth following, Mr. H. W. Nevins's *Essays in Freedom* are now available. Excellent reading they make, being full of spirit and enterprise, both in the world of thought and that of action, for the author combines with the enthusiasm of the scholar the practical energy of the reformer.

Visitation Articles and Injunctions of the Period of the Reformation. Edited by Walter Howard Frere for the Alcuin Club. 3 vols. (Longmans & Co.)—Dr. Frere has for a long time been engaged in a study of the period of the Reformation, so far as it is illustrated by contemporary Visitation Articles and Injunctions, with the result that three substantial volumes, each of about 500 pages, have been issued under the auspices of the Alcuin Club. The whole forms a work of distinct value to all historical students, and it ought speedily to find its way into every library of importance. As it is announced that supplemental volumes will before long be added to the series, it may be well, in the first instance, to state plainly the defects of this issue, in the hope that its successors will be edited with greater care.

It is not creditable either to the editor or the Council of the Alcuin Club, in dealing with documents of historic worth, to be obliged to add to the first volume eight pages of closely printed "corrigenda." Moreover, these corrections might with advantage have been considerably extended. Carelessness of method characterizes these books. It is risky "to print the documents in modern spelling, and with no regard to the use of stops and capitals which prevail in the original." The genuine meaning of records may be materially changed by the alteration of stops. Many copyists are probably employed in such work as this, and it would be wise for the Alcuin Club to follow the example of the Canterbury and York Society and insist on the production of faithful transcripts.

Notwithstanding these drawbacks, the worth of the books is beyond question. There is no exaggeration in the first paragraph of the Preface, wherein it is stated:—

"There is no set of documents that gives such a vivid picture of the religious changes of the sixteenth century in England as these that belong to ecclesiastical visitation. In them the alterations may be followed year by year, or even at times month by month, with an amount of detail which is enough to be illuminating and not enough to be burdensome."

Many of these Visitations and Injunctions have been already printed, but they are dispersed in a variety of works not always easy to consult. Some appeared in Sparrow's 'Collection' of 1661, and others in Strype's various volumes; whilst Cardwell printed a further series in his 'Documentary Annals,' issued in 1839. Additions were also made to documents of this class, ranging from 1560 to 1730, in the Second Report of the Ritual Commission (1868). But the industry of Dr. Frere and his colleagues has brought many fresh examples to light, and the whole has been arranged in chronological sequence. The cross-references and notes, together with a splendid Index, add materially to the value of the work as a quarry for future writers on the gradual development and changes of the Church of England.

Another admirable and much-needed feature of this undertaking is the Introduction, wherein Dr. Frere has set out with lucidity and care, in some 150 pages, the origin and development of the practice of Visitation, with special relation to the Reformation changes. The chorepiscopate, designed to provide deputies for the diocesan bishop; the rise of the archdeacon, as the bishop's deputy for visitation; the appearance of rural deans; the pastoral, administrative, and judicial purposes of visitation; the exemptions from visitations, both episcopal and archidiaconal; and the contests as to metropolitan visitation, are one and all

treated in a scholarly style in the earlier part of the Introduction. The only flaw we notice in Dr. Frere's statements, which cover the whole range of episcopal Church history, is the adoption of the somewhat careless, but customary view as to the visitation of convents. The republication of the Introduction in a separate form is much to be desired.

It only remains to note that the documents here printed range from the royal visitation of 1536 to the close of Parker's primacy in 1575.

ANTONIO FOGAZZARO.

By the death of Antonio Fogazzaro Italy has lost her foremost novelist of this generation. He was born at Vicenza in 1842 and the Abate Zanella was his private tutor. He early came under the influence of Hugo, Chateaubriand, and Heine, and then for a time his faith was unsettled by modern scientific doctrines. A mystic and an idealist, he owed much to Rosmini in his thought. He first turned his attention to poetry with 'Miranda' (1874), a romantic tale in verse, and 'Valsolda' (1876), in which nature is spiritualized and made to reflect man in the Northern way. But his neglect of form, which he always considered far less important than content, greatly mars his poetical work. In 1881 appeared his first novel, 'Malombra,' the merits of which, in spite of its excessive length, its melodramatic character, and the prominence given to spiritualism, were at once recognized. Fogazzaro was a great admirer of Dickens, and his humour—not a specially Italian quality—is nowhere better displayed than in the old German Steinegge in this book. It has been said that the hero Corrado Silla, a dreamer and a mystic, was drawn from himself at this time. Fogazzaro was a slow writer. In 'Daniele Cortis' (1885) his idealism reached its climax. Then came 'Il mistero del poeta' (1888), his poorest book, 'Piccolo Mondo Moderno' (1901), and 'Il Santo' (1906), the placing of which upon the Index by the Vatican helped its author to a world-wide reputation. In his last novel 'Leila' (1910) he considerably modified his modernist views.

In all these books Fogazzaro sacrifices art to purpose, for to him the novel is simply the best means to a higher end. The chief characters lack vitality and exist only to fulfil the mission set them by their creator. The love-element predominates, but in every case it ends in renunciation in obedience to a higher law. Elena's renunciation of Daniele to follow a worthless husband to America is the most extreme instance, and Fogazzaro has been severely criticized for continually harping on this aspect of love. The minor characters, however, who are not required to move in such an exalted moral atmosphere, are thoroughly alive. What could be better than the opening of the 'Piccolo mondo moderno' and the great question of the egg or the descriptions of the Municipal Council in the same book?

'Piccolo mondo antico' (1895) is different from Fogazzaro's other novels, and may be called the writer's masterpiece, though others maintain that 'Daniele Cortis' is a more perfect work of art. It is alive with the spirit of the stirring days of preparation between 1852-9, when the author was a boy, and it is known to have been the book it was always his ambition to write. Franco Maironi is his own father, and the excellent priest his uncle. The action takes place

in Valsolda, where Fogazzaro had made his beautiful home, overlooking Lake Lugano. In this book alone are the real and the ideal perfectly blended, while the genial humour is as rich as ever. Such scenes as the storm on the lake, the drowning of the child Ombretta Pipi, in which we may see the reflection of Fogazzaro's life-long grief at the death of his own brilliant son at the age of 20, or the searching of the house by the Austrians, make it worthy to rank with the 'Promessi Sposi' itself. The practical Luisa, whose faith, like that of most of Fogazzaro's women, is weaker than her husband's, and the dreamer Franco, roused to action by his wife, are thoroughly real, and the psychology is brought out by the story instead of being analyzed by the author.

Artistically, the short stories in 'Racconti brevi' and 'Fedele' are perhaps superior to the novels, but they are less important. Fogazzaro's style is considered slipshod, and he makes his characters talk in dialect as they would do in real life, which is a heresy against Manzoni's theories. Whatever the ultimate judgment upon his work may be, there is little doubt that his idealism has exercised a thoroughly healthy influence upon the best of his countrymen at a time when materialism reigned almost supreme in Italy.

THE TEUBNER CENTENARY FESTIVAL AT LEIPSIK.

THIS very characteristic celebration of the success of the great printing and publishing house, known as B. G. T. in monogram, came off with great *éclat* on the 3rd of March. There were representatives from a vast number of universities, academies, and other scholastic bodies, who brought with them illuminated addresses. There were present not only Saxon Ministers and high officials, but also the Emperor sent a Minister, who decorated with the Red Eagle the two senior members of the firm. Saxon honours were widely distributed; even the senior workmen in the house receiving official ribbons or buttons, so that the whole affair assumed a State importance quite foreign to British ideas. Nevertheless it seems a very wise policy that royalty should honour trade and tradesmen as such, if by that means a greater solidarity can be attained between the various sections into which modern societies are unfortunately divided.

The feast began with a reception in the great working shop of the firm, which was cleared for the occasion. The programme consisted, beyond the conferring of honours, in more than fifty speeches of congratulation! Nor were they all quite brief. But the patience of a German audience is magnificent. At the end of three hours thus employed, Messrs. Ackermann and Giesecke, the present heads of the house, must have felt themselves near to the gods in public estimation. The only note of any hitch in their victorious course came from the Postmaster, who alluded playfully to some friction that had once existed between his office and the firm regarding the great item of their book postage. This passing shadow only tended to enhance the brilliant sunlight cast upon the house of Teubner.

There followed an informal, but hospitable lunch, and then a performance at the theatre of the last act of the 'Meistersinger,' wherein the Leipzig orchestra did ample justice to its lovely music. One felt disposed to wish that human singing, as it

now exists in Germany, had not interfered with the intense pleasure of the rich and melodious accompanying symphony. Older men can remember the day when the human voice was sweeter than any other instrument. Between the vices of shouting and of using tremolo, that pleasure of their youth seems almost extinct. The day closed with a feast to 600 guests in the huge hall of the Palmengarten, where there was an ample banquet, and many further attempts were made, mostly unsuccessful, to interest the audience with more speeches. The Kultus-Minister, Herr von Beck, made a really able and eloquent speech, but one too long and serious for the occasion. The rest was noise, for the tyranny of a band (as is usual) was added to the turmoil of the feast, so as to make conversation almost impossible. When will the great people of the world learn that with 600 guests any additional noise is not only superfluous, but even vexatious? The indefatigable hosts and guests spent the rest of the evening (for the feast had begun at 6.30) in those beer-cellars for which Leipzig has always been famous. A very handsome volume on the history of the firm was presented to each of the guests.

AUGUSTE ANGELLIER.

LAST week, Auguste Angellier, who was only sixty-two, died after a severe and protracted illness. His loss will be mourned by the many friends whom the French critic and poet possessed in this country.

With Angellier disappears a strong man with a big heart and splendid brains, one who had always the courage to be himself, in his thoughts and in the expression of them, an intense steady worker, who believed in thoroughness, a critic of rare insight, whose firm grasp seized on essentials. He was a reader of men too, more indulgent to their foibles than to their pride or pretences. His sincerity brushed aside conventions and artificiality.

He was loved by his students, to whom he gave his time unsparingly. He did not deliver lectures, he led them with Shakespeare into the "quick forge and working-house of thought." He thought aloud and invited others to think, being ever willing to listen to different opinions and to answer questions. He was tolerant of everything except intolerance. His strong individuality did not oppress others, but quickened them into originality.

His was a rich human nature, seeming ever in full growth, and his wide range reminded one of the Renaissance poets, as there was a ring of Rabelais in his genial laughter. He loved moral and sensuous beauty, art, and life, his country and his friends; he was kind and prized kindness above learning. He was deeply devoted to his mother. It was this large humanity which he infused into his poems; in point of fact, into everything he wrote.

He began his literary work, apart from some journalism, by contributing verse to various local papers, but the war of 1870 broke out, he enlisted, fell seriously ill, and having recovered crossed to England; then he entered the French university and lived in Paris for some time in the company of artists. To this period belongs his 'Étude sur le peintre Henri Regnault' (1879). Appointed Maître de Conférences at Douai in 1881, and shortly afterwards Professor of English Literature at Lille, he spent the next twelve years in forming future teachers of English and preparing his doctor's theses

—the Latin one being 'De Johannis Keatsii carminibus' and the French one modestly calling itself 'Étude sur le Vie et les Œuvres de Robert Burns.' His admirable sonnet-sequence 'A l'aimée perdue,' which appeared in 1896, was followed *longo intervallo* by a collection of lyrics 'Le Chemin des Saisons.' Then he began the series called "Dans la Lumière Antique," which opened with the 'Dialogues d'Amour' in 1905, continued with the 'Dialogues Civiques' and two books of minor poems, which include the fine elegy 'Luctus Matris.'

To judge from his continuous production he might of late have been deemed at the height of his powers. But those who knew him intimately were aware that for the last few years he had been ordered south every winter, and advised not to overwork, as his heart was weak. Nothing could daunt him; he continued to write as the inspiration came (and it came often) sometimes far into the night. He had braced himself to meet the terrors of death, and even suffered its agony in the poem entitled 'Decenter Mori,' although he failed to imagine anything like the grim reality.

J'ai la mort en moi, non la mort lointaine
Celle qu'on suppose et qui doit venir
Mais la mort déjà fixée et prochaine
Et je sais le point dont je vais périr.
Elle est là, je sens son travail paisible
Qui jusqu'à présent n'est pas douloureux,
Mais dans quelques mois deviendra terrible;
J'en ai vu mourir, je mourrai comme eux.

Je ne souffre encor que par la pensée
De l'adieu prochain qui va s'accomplir;
Mais dans quelques jours sera commencée
L'agonie affreuse où je dois finir.

These lines were not written, as one might infer, only five or six months ago, but at least seven years before the end. Yet, as brave as his words then was the Stoic courage of him who wrote at the close of the same piece:—

J'essaierai pourtant d'avoir du courage,
De serrer les dents, de garder mes cris;
Je suivrai la mort à son sombre ouvrage
Cachant ma défaite avec mon mépris.

Since last October, when a bronchial attack prevented him from leaving his house at Boulogne, he watched the slow approach of death; struck with aphasia, condemned to be silent, yet retaining his full consciousness, he refused henceforth to see any one but his long-life friend Dr. L. Ovion, who nursed and helped him through his sufferings.

MR. ELLIOT STOCK.

WE record with regret the death of Mr. Elliot Stock, which occurred at his residence in Highgate on the 1st inst., only some three years after his retirement from the business so long associated with his name in Paternoster Row. He was born in 1838, the son of a man of independent means who belonged to an old East Anglian family settled in Essex. While he was still in infancy, his father died, and he was brought up by his widowed mother, a member of the Huguenot family of Collard, whose influence powerfully affected his mind, character and career. He was educated at Amersham Grammar School and then proceeded to his first business experience with the firm of Piper, Stephenson, and Spence, which subsequently became that of Simpkin, Marshall, Hamilton, Kent & Co. In 1857 his mother apprenticed him to Mr. B. L. Green, bookseller, of 62, Paternoster Row, and two years later he acquired the business which has continued to be known by his name since 1859.

Mr. Stock's predecessor was a son of a well-known Baptist minister, and a brother of Dr. Green, of the Religious Tract Society. The house had become a centre of the Sunday School movement; and Mr. Stock used to relate that a writing room was set apart for the use of clergymen, Congregational ministers and others. This was typical of the time when the bookseller's shop was still a *rendezvous* for book-lovers, and when business connections revolved upon the pivot of personality. Under the name of Elliot Stock, the business became developed on more general lines, but the original impress remained, and Mr. Stock never lost the habit of personal contact with his clients. In the earlier period of his publishing activity, the issues were mainly, if not solely, of a religious character; but he had many interests of his own outside this category. His love of nature and his knowledge of bird-life were instinctive, probably inherited, together with his tall and well-built figure and healthy complexion. Always an energetic worker, he found his recreation in sports: horse-riding, fencing, boxing, mountaineering when possible, and above all rowing. A member of the Ilex Rowing Club at Putney, now merged in the Leander Rowing Club, he was a winner in a four-oared race on May 17th, 1865, for which he held a silver cup, and in another race the following year, for which he held a silver goblet. By his marriage in 1866 with Fanny, daughter of Samuel Bellin, the artist and engraver, he entered a circle of artists and literary men, and became an amateur of painting as well as a collector of first editions.

Mr. Stock's distinctive note as a publisher was struck by the issue in 1877 of "Three Seventeenth Century Rarities," being facsimile reprints of the first editions of 'The Pilgrim's Progress,' 'The Temple,' and 'The Complete Angler.' Another notable facsimile reprint was the reproduction of the autograph MS. of the 'De Imitatione Christi,' preserved in the Royal Library, Brussels, followed by a facsimile of the first printed edition, 1470, and later still by a translation, in rhythmical form, by "A Clerk of Oxenford," with a preface by Liddon. Other similar facsimiles were issued, including reproductions of 'The Dictes and Sayings of the Philosophers,' as originally printed by Caxton; 'The Boke of St. Albans,' by Dame Juliana Berners, 1486; 'A Treatise of Fysshynge with an Angle,' 1496; the original editions of 'Paradise Lost,' with an Introduction by Masson; of Vaughan's 'Silex Scintillans,' 1678; and of 'Robinson Crusoe,' 'Rasselas,' and 'The Vicar of Wakefield.'

These interests were further maintained in 'The Antiquary,' a magazine of which the publication began in 1880, and in *The Bibliographer*, another magazine, started under the editorship of Mr. H. B. Wheatley about two years later. The publication of a series called the "Antiquary's Library," was cognate with the former; the latter gave place to "The Book-Lover's Library," a series which led to the issue of some useful books on bibliographical subjects. To the *Bibliographer* succeeded *Book-Lore*, a similar magazine on less technical lines, and to this again *The Bookworm*, a miscellany of avowedly popular intent, at half the price, which closed the experiment. On the other hand, *The Antiquary* had discovered its function as a means of keeping in touch with archaeological activities and discoveries in all parts of the country; it continued in its old form till about 1890, when the new and current series was begun at a reduced price. When these changes were

contemplated, a new series, the "Camden Library" was started, with the object of providing a vehicle for the treatment of subjects beyond the limits of the magazine in its smaller form; but this venture became merged subsequently in the "Antiquary's Library."

A valuable service was rendered to the book-hunter and collector by Mr. Stock's publication *Book Prices Current*, which began in 1886. Another widely useful publication was "The Gentleman's Magazine Library." The volumes of the old magazine were a storehouse of information not obtainable elsewhere, but they were not easily accessible, and the labour of search was very irksome. By classifying the principal contents in a series of 30 well-indexed volumes with introductions, these difficulties were overcome once and for all, thanks to the enterprise of the publisher, Mr. Stock, and the labours of the editor, Sir Laurence Gomme.

Another undertaking which deserves mention in a general survey of Mr. Stock's accomplishment as a publisher, is "The Popular County Histories," a series in which some useful topographical accounts have been brought together.

In the department of poetry, a curious interest would attach to the examination of the numerous books of verse of various calibre which were issued by Mr. Stock. Himself an amateur in this kind, he was perhaps too ready to abet the publication of the unknown; but some notable performances occur in his lists, like the 'Footsteps of Proserpine' of Mr. Newman Howard, the poems of the Rev. Frederick Langbridge, besides writings in verse and prose of William Sharp, Mr. Austin Dobson, and others.

One of the most delightful books he issued was 'Ros Rosarum,' by E. V. B. (the Hon. Mrs. Boyle). Another was 'In a Minster Garden,' by Dean Stubbs of Ely. Both books were constant companions with their publisher; he read them again and again and loved them. In his own book of verse 'A Publisher's Playground,' issued by Messrs. Kegan Paul in 1888, his favourite was a little poem which has been set to music, "We all do fade as a leaf":—

The wind goes by,
The dead leaves fall
Silent beneath
The churchyard wall.
Man, like the leaf,
Doth quiet lie,
Though deeper, he
Shall rise and fly
By Christ his aid
And shall not stay
Where men and leaves
Do aye decay.

SWINBURNE'S "UNPUBLISHED VERSES."

In the catalogue of books and manuscripts to be sold by Messrs. Sotheby, Wilkinson & Hodge on March 15th and two following days, lot 118 is described as "Swinburne (A. C.) Unpublished Verses [1866]: printed and circulated in 1883," and it is stated that

"the following notes appear on the fly-leaf—'These verses were originally intended for Poems and Ballads, Second Series, but the MS. sheet was mislaid. The MS. afterwards came into the possession of Mr. Wise, who had 50 copies printed for presentation.' 'Mr. Wise tells a very different story to the above.'"

Mr. Wise does indeed tell a different story in his 'Bibliography of Swinburne.' The verses were printed not by him, but by the

late Richard Herne Shepherd, who had managed by some means or other to get possession of Swinburne's manuscript. But Mr. Wise does not tell the whole of the story. He says that these lines,

As the reffluent sea-weed moves in the languid exuberant stream,
Stretches and swings to the slow passionate pulse of the sea, &c.,

are certainly the work of Mr. Swinburne, and were written in or about the year 1866. But they were not only written in or about that year; they were actually published in it. They will be found, with a few alterations, at p. 202 of the 1866 edition of 'Poems and Ballads,' and form a portion of the poem called 'Hesperia.' It will thus be seen that these so-called 'Unpublished Verses' were not unpublished, but had been in print since 1866, and that they could not have been intended for the second series of 'Poems and Ballads,' as they had already been published in the first.

Whether the manuscript from which Shepherd printed the lines was a first draft which escaped the oblivion of the waste-paper basket, or was written by Swinburne for a friend, it is impossible to say, but I have thought it right to draw attention to these facts in order that intending purchasers may know the exact position. The leaflet has sometimes fetched large sums at auction, and not long ago I saw a copy priced in a bookseller's catalogue at 5*l*.

W. F. PRIDEAUX.

DUBLIN UNIVERSITY FRENCH TEXTS.

My attention has been drawn to an announcement in *The Athenæum* that Messrs. Sonnenschein are about to issue, under the editorship of Prof. Gerthwohl (of Bristol University), the first volume of a series of "Dublin University French Texts." I should be obliged if you would allow me to state that I am in no way responsible for the issue of this series, of which I consider the general title to be misleading.

THOMAS B. RUDMOSE-BROWN,
Professor of Romance Languages in the University of Dublin.

SALE.

On Thursday, March 2nd, and the following day Messrs. Sotheby held a sale of books and manuscripts which included a portion of the collection of Mr. C. E. Stewart, and the library of the late H. Literary Gossip.

MESSRS. SMITH & ELDER will publish
on the 23rd inst. 'The Belmont Book,' by
"Vados," with a preface by Mr. Arnold
Bennett. The author describes life in
Normandy and among Norman peasants
as seen through English eyes.

A VOLUME entitled 'Turkey of the Otto-
mans,' by Miss Lucy M. Garnett, will
shortly be published by Sir Isaac Pitman
& Sons in their "Countries and Peoples"
Series. Miss Garnett has both travelled
and lived in the Near East. Another forth-
coming volume in the same series is
'Belgium of the Belgians,' by Mr. D. C.
Boulger, who has already written more
than one work on Belgian life and history.

MR. HEINEMANN'S spring announce-
ments include 'The Modern Parisienne,'
by M. Octave Uzanne; and in "The
Modern Criminal Series" 'Modern Theories
of Criminality,' by C. Bernaldo de Quiros,
translated by Dr. Alphonse de Salvio;
'Criminal Psychology,' by Prof. Hans
Gross, translated by Dr. Horace Kallen;
'Crime: its Causes and Remedies,' by
the late Prof. Lombroso; and several
other volumes concerning the philosophy
of wrong-doing and punishment.

MR. HEINEMANN will have ready shortly
in fiction 'South Sea Stories' and 'Burn-
ing Daylight,' by Mr. Jack London;
'The Vocation,' by Mr. Mark Ryce;
and 'A Portentous History,' by Alfred
Tennyson.

MESSRS. PUTNAM'S spring announce-
ments include 'In the Time of the
Pharaohs,' by Prof. A. Moret, translated
by Madame Moret; 'Little Cities of
Italy,' by M. André Maurel, translated
by Helen Gerard; and 'Criminal Man—
according to Lombroso,' summarized by
his daughter, Signora Guglielmo Ferrero.

THE REV. DR. WILLCOCK of Lerwick,
author of various historical biographies, is
now engaged on a Life of Sir Henry Vane.

MR. S. E. WINBOLT has in the press
with Messrs. Constable 'The Iliad Pocket
Book,' the third of his pocket series of
classics, with an introduction by Dr. T. H.
Warren.

THE catalogue of rare books from the
library at Birch Hall, near Colchester,

which Messrs. Hodgson will sell on the
